Mr. Speaker, McCloskey never won the election, nor has he ever contested that, and the 500,000 people in the Eighth District of Indiana sit there and know that that race was won and they sent a man to this Congress, McIntyre, with a certificate, and this body refused to seat him.

We have flouted the laws of the sovereign State of Indiana and we continue to do so. We have shown a degree of contempt for the processes in one of our 50 States. That, Mr. Speaker, is a shame. That is a disgrace.

Mr. MONSON. Mr. Speaker, will the gentleman yield?

Mr. STRANG. I yield to the gentleman from Utah.

Mr. MONSON. I thank the gentleman for yielding, and more importantly, I appreciate the material and the thoughts that he entered into the RECORD this evening that help to clarify the situation as it occurred in Indiana. Being one who does not like to see a situation complicated if it is not necessary, I have been very troubled by this whole event and I appreciate very much the sequence of events in Indiana being clarified for us tonight.

Mr. Speaker, one of the things that has troubled me most about what has transpired in the 3 months since Mr. McIntyre has been denied his seat is the reference that is made to the disenfranchisement of over 5,000 voters in that State. This occurred during the recount that took place when the questions began to be raised as to whether or not the 34-vote margin that Mr. McIntyre received on election night was sufficient and whether or not there were irregularities, so a recount was asked for, and it is true that about 5,000 votes were thrown out in the process of that recount.

The thing that troubles me is that those on the other side of the aisle would have us believe that somehow if we count those 5,000 votes, Mr. McCloskey is going to emerge the winner. They seem to feel that 5,000 people who they claim were disenfranchised are going to change the outcome of the election.

As you have so very ably pointed out this evening, you count all those votes that were thrown out during the process of the recount and Mr. McIntyre still wins by 34 votes. Let them count the 5,000 votes. Mr. McIntyre still wins. We do not need to worry about that. If they are so concerned about being disenfranchised, we will count them. He still wins, and that is the thing that is not being addressed in the conversation that takes place on the floor of this House when this subject is brought to a vote. Each time they have tried to mislead the voters of that State and of the Nation into believing that somehow those 5,000 votes are going to change the outcome. They do not, and we need to dispel that rumor once and for all.

Mr. STRANG. I thank the gentleman.

Mr. MONSON. If the gentleman will yield further, I also think that it is important that we point out that those 5,000 votes were not in question on January 3; that Mr. McIntyre was denied his seat in Congress without those 5,000 votes coming into question. Those have only come into question since January 3, since the recount has been completed and it became known that 5,000 votes has in fact been thrown out.

So again we are being led into believing that that was a factor in the first instance where Mr. McIntyre was denied his seat. Once again we have a situation that does not tell the true story to the American people.

I am reminded of a basketball game that was held a few years ago between the Soviet Union and the United States. At the end of the regulation game, the United States was ahead, but somehow it was decided that the last few seconds of that game should be replayed. Once again the United States emerged the winner. Somehow it was decided they sould replay it again. Eventually the Soviet Union emerged as the winner. At that point they quit.

The thing that is different in this situation from that basketball game is that at least the same rules were applying as they continued that game, even though they should not have continued it as many times as they did. In this instance, we are continuing the game, but we are also changing the rules in the process of continuing that game. We are going back and we are saying that the rules that were in place on November 6, are somehow wrong and that those rules need to be changed in order to have a fair election.

Whether those rules are wrong or not is not really the issue. We should not change the rules of a game after a game has been played. We need to play by the same rules. Now, whether or not Indiana's laws are inadequate and unfair remains to be seen, but again, as the gentleman has just pointed out, even the State legislature of Indiana has not found any reason yet during their session to question whether those rules need to be changed. In fact, the only attempt that has been made to change those rules has left, in essence, the same rules that they already had, and as I understand it, the bill that is before the State legislature of Indiana would only deal with computerized ballots and has no reference at all to recounts or anything of that nature that might indicate that they feel that their own laws are inadequate in this situation.

So once again we are being led to believe that rules are inadequate and unfair when, in fact, the State of Indiana does not even apparently believe that. They are not making any effort to change them, and as was very well pointed out yesterday by our distinguished colleague from California, Mr. THOMAS, 15 or 16 other States have rules very similar to those used in Indiana and they have not found any reason to change their rules yet either.

So the only way you can justify changing these rules is if you want to change the outcome of the game after it has been played, and that appears to be what is happening here. The precedents that we are setting are disastrous to our country. They say that we in this House of Representatives can decide who the winner of an election is, not whether the qualifications of that person are adequate, but who actually won the election, and we can even go to the extent that it is necessary to change rules in order to come out with the winner that we want.

We cannot allow this to happen. We cannot allow the process that has served this country so well of allowing the States to conduct their elections and to tell us who the winners of those elections are to be superceded.

Mr. STRANG. I thank the gentleman from Utah, and I would like to, Mr. Speaker, run down very briefly the issue that is central to this entire discussion. The issue is that a sovereign State, the sovereign State of Indiana, certified legally a Congressman. He won an election. They sent him here and this House has refused to recognize the validity of that certificate.

□ 2110

Indiana law does not require the secretary of state to certify the winning candidate within 10 days after election, as has been alleged over on this side, Mr. Speaker, constantly. The law is that he must wait 10 days, and in fact the bulk of the certification done after the November 6 election for congressional candidates was done on November 26, 20 days after the election. Indiana law in fact prevents the secretary of state from certifying a winning candidate until a 10-day period after the election has passed to permit recanvassing of the votes and the correction of errors at the county level.

That is exactly what happened in the Eighth District of Indiana. The precincts of Gibson County were canvassed, were found to be in error, and were recounted—"retabulated" is really the word.

Indiana law does not require the secretary of state to certify a winning candidate based on county certificates he knows to represent incorrect totals. The secretary of state of Indiana, Mr. Speaker, certified McIntyre the winner based upon corrected election day totals, not on the basis of any recount certificate from any county. They were corrected totals. No court has ever questioned the validity of the certificate issued to McIntyre by the Indiana secretary of state, and Mr. McCloskey, who lost the election, has never contested that certificate.

This is a dangerous precedent, Mr. Speaker.

Mr. BOULTER. Mr. Speaker, will the gentleman yield?

Mr. STRANG. I yield to my distinguished colleague, the gentleman from Texas.

Mr. BOULTER. Mr. Speaker, I thank my colleague for yielding.

I am hopeful that the gentleman can clear up some confusion that exists in my mind, and that confusion, I say to the gentleman from Colorado [Mr. STRANG], is this: The leadership for the majority, the Democratic Party in the House, claims that there is confusion about the results of this election on election night.

I am wondering if the gentleman from Colorado knows what that claim is based on, what evidence it is based on?

Mr. STRANG. The claims by this House of Representatives, as led by the majority party, have created deliberate confusion.

Mr. BOULTER. Mr. Speaker, if the gentleman will yield, it seems to me that this is a big, big bootstrap operation. I remember on January 3 the majority leader, the gentleman from Texas [Mr. WRIGHT], made this statement when he introduced House Resolution 1:

> • • • that the election procedures employed in the Eighth Congressional District have been neither timely nor regular and serious questions have been raised as to their fairness. The election procedures to date have simply not yielded a result on which the House can judge.

I am quoting from the CONGRESSIONAL RECORD.

I am a lawyer, and I have been involved in this and I thought perhaps I missed something, but in my heart and in my mind I know that not a shred of evidence has ever been produced to suggest that the results on election night or the certificate of election naming McIntyre the winner were not based upon a full and fair counting of those votes on election day.

Does the gentleman disagree with that?

Mr. STRANG. Mr. Speaker, I appreciate the gentleman's remarks, and he is absolutely correct.

Mr. Speaker, the only way the election in Indiana can be changed is, as my colleague, the gentleman from Utah, observes, to change the rules. The State of Indiana has laws, as do all the States, and they follow those laws, Mr. Speaker.

They sent us a certified winner. This House has a right under its rules to question and analyze the results of any election of any Member, and it is proper that it do so, but it is not proper, Mr. Speaker, that they refuse to seat the gentleman who has the only existing certificate of winning the election in the Eighth Congressional District of the State of Indiana. Mr. McIntyre is legally the winner, pending evidence that there were irregularities or that the election was falsely won.

The issue is not whether this House has the right to conduct an investigation. This House does have that right. My distinguished colleague, the gentleman from California [Mr. PANETTA],

for whom I have extraordinarily high regard, is working as hard as he knows how to analyze what happened in the State of Indiana, to analyze if there were problems with the ballots, and to analyze if there were problems with the election in any way. That is the right of this House. What is not the right of this House and what is a blatant attempt to grab a seat is to change the rules, to ignore the laws of the State of Indiana governing election, and to deny Richard McIntyre the seat that even his defeated opponent, Mr. McCloskey, has not contested, a seat which was won by a very close count of 34 votes.

That is close, Mr. Speaker. I agree with that. But the recount being conducted by the task force is a blatant and unfair attempt to give the loser a third chance. There is no provision in Indiana law which permits anybody to change the methods of counting specified under that law. There is no such provision. Consequently, the House of Representatives is intruding into the sovereign rights of the State of Indiana.

The examination of elections is our right. Our rules say that we can look at anybody's election. But, Mr. Speaker, the precedent being set here for the first time in 200 years is this: For the first time, despite the smokescreen of precedent, they have said—

We don't care what a State says about its candidate. We don't care if they have a certificate. We choose not to seat this one because he comes from the wrong party.

That is what this is all about. He comes from the wrong party. Mr. Speaker, that shoe can go on both feet, and if I were another Member, I personally would feel threatened by that.

Mr. Speaker, last November I was blessed not to have a close election. I won by some 3,200 or 3,000 votes in a Democratic district. But, Mr. Speaker, that is not the point. If you can deny the validity of any State's election process and take a seat away from a certified winner with 34 votes, why can you not do it with 34,000? Where do you draw the line, Mr. Speaker? This is a crass and crude attempt to grab power, to take a seat through raw, brutal political power.

Mr. Speaker, unless any other of my colleagues wish to have me yield to them, I shall yield back the balance of my time.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. DELLUMS (at the request of Mr. WRIGHT), for today, on account of illness.

Mr. YATES (at the request of Mr. WRIGHT), for today, on account of illness.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. RIDGE) to revise and extend their remarks and include extraneous material:)

Mr. IRELAND, for 5 minutes, today.

Mr. EMERSON, for 5 minutes, today.

Mr. ROBERT F. SMITH, for 60 minutes, today.

Mr. STRANG, for 60 minutes, today.

(The following Members (at the request of Mr. WOLPE) to revise and extend their remarks and include extraneous material:)

Mr. DINGELL, for 5 minutes, today.

Mr. ST GERMAIN, for 5 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. MONTGOMERY, for 5 minutes, today.

Mr. PANETTA, for 5 minutes, today.

Mr. MILLER of California, for 30 minutes, today.

Mr. ECKART of Ohio, for 15 minutes, today.

Mr. FRANK, for 60 minutes, April 16.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. LOWERY of California, immediately prior to the vote on the Walker substitute amendment to H.R. 1714, National Aeronautics and Space Administration Authorization Act, 1986, in the Committee of the Whole today.

(The following Members (at the request of Mr. RIDGE) and to include extraneous matter:)

Mr. HYDE.
Mr. RITTER in three instances.
Mr. MCKERNAN.
Mr. GREGG.
Mr. RINALDO.
Mr. PORTER.
Mr. BROOMFIELD.
Mr. PARRIS.
Mr. FRENZEL in two instances.
Mrs. HOLT.
Mr. CONTE.
Mr. GRADISON.
Mr. KEMP in two instances.
Mr. LENT.
Mr. HUNTER.
Mr. BOEHLERT.
Mr. HILLIS.
Mr. ROWLAND of Connecticut.
Mr. SHUMWAY in two instances.
Mr. GEKAS.
Mr. COLEMAN of Missouri.
Mr. YOUNG of Florida in two instances.
Mr. LIGHTFOOT.
Mr. LAGOMARSINO in two instances.
Mr. SMITH of New Jersey.
Mr. CHENEY.
Mr. DAUB.
Mr. MACK.

(The following Members (at the request of Mr. WOLPE) and to include extraneous matter:)

Mr. TORRES.
Mr. HAMILTON.
Mr. FLORIO.
Mr. COLEMAN of Texas.
Mr. MILLER of California in six instances.
Mr. FUSTER.
Mr. SIKORSKI.
Mr. GEPHARDT.
Mr. LEVINE of California.
Mr. ADDABBO.
Mr. ST GERMAIN.
Mr. KILDEE.
Mr. DOWNEY of New York.

Mr. HUBBARD.
Mr. MATSUI.
Mr. BONKER.
Mr. DERRICK.
Mr. TRAFICANT.
Mr. CHAPPELL.

ENROLLED BILL AND JOINT RESOLUTIONS SIGNED

Mr. ANNUNZIO, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill and joint resolutions of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 1239. An act making urgent supplemental appropriations for the fiscal year ending September 30, 1985, for emergency famine relief and recovery in Africa, and for other purposes;

H.J. Res. 74. Joint resolution to designate the week of September 8, 1985, as "National Independent Retail Grocer Week"; and

H.J. Res. 186. Joint resolution designating April 2, 1985, as "Education Day, U.S.A."

SENATE ENROLLED BILL AND JOINT RESOLUTIONS SIGNED

The SPEAKER announced his signature to an enrolled bill and joint resolutions of the Senate of the following titles:

S. 781. An act to amend the Biomass Energy and Alcohol Fuels Act of 1980 to clarify the intention of section 221 of the act;

S.J. Res. 35. Joint resolution to authorize and request the President to issue a proclamation designating April 21 through April 27, 1985, as "National Organ Donation Awareness Week";

S.J. Res. 50. Joint resolution to designate the week of April 1, 1985, through April 7, 1985, as "World Health Week," and to designate April 7, 1985 as "World Health Day";

S.J. Res. 62. Joint resolution commemorating the 25th anniversary of U.S. weather satellites; and

S.J. Res. 79. Joint resolution to designate April 1985 as "Fair Housing Month."

JOINT RESOLUTIONS PRESENTED TO THE PRESIDENT

Mr. ANNUNZIO, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, Joint Resolutions of the House of the following titles:

H.J. Res. 121. Joint resolution to designate the month of April 1985 as "National Child Abuse Prevention Month";

H.J. Res 134. Joint resolution authorizing and requesting the President to designate the week of March 10 through 16, 1985, as "National Employ-the-Older-Worker Week"; and

H.J. Res. 160. Joint resolution designating March 22, 1985, as "National Energy Education Day."

ADJOURNMENT

Mr. STRANG. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 9 o'clock and 20 minutes p.m.), the House adjourned until tomorrow, Thursday, April 4, 1985, at 11 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

964. A letter from the Secretary of Education, transmitting the 1985-86 guaranteed student loan family contribution schedule, pursuant to 20 U.S.C. 1078nt. (Public Law 97-301, 9(c) (97 Stat. 481)); 20 U.S.C. 1089(a)(2); to the Committee on Education and Labor.

965. A letter from the Attorney General, Department of Justice, transmitting a report on the business of the Department of Justice for the last preceding fiscal year, pursuant to 28 U.S.C. 522; to the Committee on the Judiciary.

966. A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to amend section 901(b) of the Merchant Marine Act, 1936; to the Committee on Merchant Marine and Fisheries.

967. A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to amend the Merchant Marine Act, 1936, to authorize the foreign acquisition of subsidized U.S.-flag vessels; to the Committee on Merchant Marine and Fisheries.

968. A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to approve the interstate cost estimate and permit the apportionment of funds authorized for fiscal year 1987; to the Committee on Public Works and Transportation.

969. A letter from the Administrator, Veterans' Administration, transmitting a draft of proposed legislation to amend title 38, United States Code, to repeal provisions relating to setting the interest rate on guaranteed or insured housing loans to veterans and inspecting manufactured homes purchased by veterans, to increase the VA loan fee, to authorize direct appropriations to the loan guaranty revolving fund; to the Committee on Veterans' Affairs.

970. A letter from the Secretary of Agriculture, transmitting revised regulations governing operations under title I of the Agricultural Trade Development and Assistance Act of 1954, as published in the Federal Register on January 23, 1985, pursuant to the act of July 10, 1954, chapter 469, section 408(d) (91 Stat. 957); jointly, to the Committees on Agriculture and Foreign Affairs.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. UDALL. Committee on Interior and Insular Affairs. H.R. 1088. A bill to impose quantitative limitations on the importation of Canadian softwood for a 5-year period, to require an investigation, report, and recommendations on the management of the National Forest System, and for other purposes; with an amendment (Rept. No. 99-37, Pt. I). Ordered to be printed.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ROSTENKOWSKI (for himself and Mr. DUNCAN):

H.R. 1930. A bill to provide for the tax treatment of the transfer of ownership of the Consolidated Rail Corporation [Conrail] to the private sector, to amend the Regional Rail Reorganization Act of 1973 with respect to such transfer, and for other purposes; divided and referred as follows: title I to the Committee on Ways and Means; and title II to the Committee on Energy and Commerce.

By Mr. MICA (for himself, Mr. FASCELL, Mr. KOSTMAYER, Mr. SMITH of Florida, Mr. WEISS, Mr. MACKAY, Mr. FEIGHAN, Mr. BROOMFIELD, Ms. SNOWE, and Mr. GILMAN):

H.R. 1931. A bill to authorize appropriations for fiscal years 1986 and 1987 for the Department of State, the U.S. Information Agency, the Board of International Broadcasting, and for other purposes; to the Committee on Foreign Affairs.

By Mr. ARMEY (for himself, Mr. LOTT, Mr. BLILEY, Mr. GINGRICH, Mr. WEBER, Mr. WALKER, Mr. DELAY, Mr. YOUNG of Alaska, Mr. CRANE, Mr. HUNTER, Mr. BOULTER, Mr. DANNEMEYER, Mr. GROTBERG, Mr. CALLAHAN, Mr. SMITH of New Hampshire Mr. SILJANDER, Mr. MONSON, Mr. COBEY, and Mr. CRAIG):

H.R. 1932. A bill to authorize tax incentives for urban enterprise zones, youth employment opportunity wages, a program of urban homesteading, and to improve equal educational opportunity; jointly, to the Committees on Ways and Means; Banking, Finance and Urban Affairs; the Judiciary; and Education and Labor.

By Mr. BREAUX (for himself and Mr. YOUNG of Alaska):

H.R. 1933. A bill to amend the Central, Western, and South Pacific Fisheries Development Act; to the Committee on Merchant Marine and Fisheries.

By Mr. CHENEY:

H.R. 1934. A bill entitled, the "Mineral Lands Leasing Act Amendments of 1985"; to the Committee on Interior and Insular Affairs.

By Mr. CONTE:

H.R. 1935. A bill to provide for daylight saving time on an expanded basis, and for other purposes; to the Committee on Energy and Commerce.

H.R. 1936. A bill to authorize the Secretary of the department in which the Coast Guard is operating to establish fees for certain Coast Guard services, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. DUNCAN:

H.R. 1937. A bill to amend the Tennessee Valley Authority Act of 1933 to provide a qualified immunity for certain officers and employees of the Tennessee Valley Authority; to the Committee on Public Works and Transportation.

H.R. 1938. A bill to amend the Internal Revenue Code of 1954 to provide that interest credited on a deposit or account in a bank or other financial institution shall not be included in income if such interest cannot be withdrawn because of a bankruptcy or other insolvency proceeding; to the Committee on Ways and Means.

By Mr. EVANS of Iowa (for himself, Mr. ROBERT F. SMITH, Mr. ROBERTS, Mr. EMERSON, and Mr. FRANKLIN):

H.R. 1939. A bill to provide for shipment of a percentage imported agriculturally related products on vessels of U.S. registry and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. FAZIO (for himself, Mr. FLORIO, Mr. MOODY, Mr. GUNDERSON, Mr. MORRISON of Connecticut, Mr. DURBIN, Mr. STUDDS, Mrs. BOXER, Mr. MARTINEZ, Mr. OWENS, Mrs. BURTON of California, Mr. RODINO, Mr. BOLAND, Mr. STOKES, Mr. LEVINE of California, Mr. HUGHES, Mr. FRANK, Mr. BEILENSON, Mr. HOWARD, Mr. TOWNS, Mr. BARNES, Mr. SAVAGE, Mr. RANGEL, Mr. FAUNTROY, Mr. SEIBERLING, Mr. HEFTEL of Hawaii, Mr. TORRES, Mr. DICKS, Mr. HERTEL of Michigan, Mr. BIAGGI, Mr. ROE, and Mr. SABO):

H.R. 1940. A bill to clarify certain responsibilities of the Department of Defense under the Comprehensive Environmental Response, Compensation, and Liability Act

of 1980, and for other purposes; jointly, to the Committees on Energy and Commerce, Public Works and Transportation, and Armed Services.

By Ms. FIEDLER (for herself, Mr. MITCHELL, Mr. FISH, Mr. NOWAK, Mr. GINGRICH, Mr. GARCIA, Mr. LAGOMARSINO, Mr. KOSTMAYER, Mr. LIGHTFOOT, Mr. RAHALL, Mr. STANGELAND, Mr. SENSENBRENNER, Mr. SHELBY, Mr. GROTBERG, Mr. LOWERY of California, Mr. SMITH of New Jersey, Mr. BADHAM, and Mr. KRAMER):

H.R. 1941. A bill to amend the Internal Revenue Code of 1954 to make funds available to the small business community; to the Committee on Ways and Means.

By Mr. FISH:

H.R. 1942. A bill to prohibit the enforcement of certain interstate compacts, which may be discriminatory in nature, and to which Congress has not granted its consent; jointly, to the Committees on the Judiciary and Banking, Finance and Urban Affairs.

By Mr. FUSTER:

H.R. 1943. A bill to include Puerto Rico within the definition of State for purposes of the requirement imposed on the Secretary of the Treasury to withhold State income taxes from the income of Federal employees; to the Committee on Post Office and Civil Service.

By Mr. HILLIS:

H.R. 1944. A bill to impose a surcharge on the importation of Japanese products until such time as the President determines that Japan has made significant progress in eliminating its nontariff barriers to American products; to the Committee on Ways and Means.

By Mr. HUBBARD:

H.R. 1945. A bill to strengthen certain currency reporting requirements; jointly, to the Committees on Banking, Finance and Urban Affairs and the Judiciary.

By Mr. HUNTER:

H.R. 1946. A bill to amend the Controlled Substances Act and the Controlled Substances Import and Export Act to provide mandatory penalties for certain drug offenses involving the importation or exportation, or the manufacture, of controlled substances; jointly, to the Committees on Energy and Commerce and the Judiciary.

By Mrs. KENNELLY (for herself, Mr. PEASE, Mr. CLINGER, Ms. OAKAR, and Mr. BOEHLERT):

H.R. 1947. A bill to promote training programs for individuals receiving unemployment compensation; to the Committee on Ways and Means.

By Mr. LUNDINE (for himself, and Mr. BEREUTER):

H.R. 1948. A bill to provide for increased participation by the United States in the International Bank for Reconstruction and Development, the International Finance Corporation, and the African Development Fund; to the Committee on Banking, Finance and Urban Affairs.

By Mr. McHUGH (for himself, and Mr. LUNDINE):

H.R. 1949. A bill to provide for a U.S. contribution to the special facility for Sub-Saharan Africa administered by the International Development Association; to the Committee on Banking, Finance and Urban Affairs.

By Mr. GUARINI (for himself, and Mr. DUNCAN):

H.R. 1950. A bill to give the Nation's performance in international trade appropriately greater importance in the formulation of Government policy, to modernize the remedies available to U.S. producers regarding unfair and injurious foreign trade practices, and for other purposes; jointly, to the Committees on Ways and Means and Energy and Commerce.

By Mr. MACK:

H.R. 1951. A bill to require the Secretary of Defense to submit an annual report to the Congress regarding accidents involving military aircraft; to the Committee on Armed Services.

By Mr. MATSUI:

H.R. 1952. A bill to amend the Internal Revenue Code of 1954 to encourage individuals to make long-term equity investments in small companies by reducing the capital gains tax on such investments; to the Committee on Ways and Means.

H.R. 1953. A bill to amend title XVIII of the Social Security Act to extend the Medicare prospective payment transition period; to the Committee on Ways and Means.

By Mr. MATSUI (for himself, and Mr. THOMAS of California):

H.R. 1954. A bill to provide that the provisions of section 252 of the Economic Recovery Tax Act of 1981 (relating to transfers of property to employees subject to certain restrictions) shall apply to certain transfers occurring during 1973; to the Committee on Ways and Means.

By Mr. MATSUI (for himself, Mr. STARK, Mr. MINETA, and Mr. ZSCHAU):

H.R. 1955. A bill to amend the Internal Revenue Code of 1954 to provide that income otherwise eligible to be taken into account in computing the section 936 credit shall not be ineligible merely by reason of being received in the United States; to the Committee on Ways and Means.

By Mr. MICA (by request):

H.R. 1956. A bill to amend and extend the Hostage Relief Act of 1980, and for other purposes; jointly, to the Committees on Foreign Affairs, Post Office and Civil Service, and Ways and Means.

By Ms. MIKULSKI:

H.R. 1957. A bill to amend title I of the Marine Protection, Research, and Sanctuaries Act of 1972; to the Committee on Merchant Marine and Fisheries.

H.R. 1958. A bill to authorize appropriations for the National Ocean Pollution Planning Act of 1978 and title II of the Marine Protection, Research, and Sanctuaries Act of 1972 for the fiscal years 1986 and 1987, and for other purposes; jointly, to the Committees on Merchant Marine and Fisheries and Science and Technology.

By Mr. MILLER of California (for himself, Mrs. BURTON of California, Mr. PANETTA, and Mr. BERMAN):

H.R. 1959. A bill to amend the Federal Power Act and for other purposes; to the Committee on Energy and Commerce.

By Mr. MILLER of California (for himself, Mr. SEIBERLING, Mr. VENTO, Mr. BATES, Mr. BEDELL, Mr. BEILENSON, Mr. BERMAN, Mrs. BOXER, Mrs. BURTON of California, Mr. CLAY, Mr. DELLUMS, Mr. ECKART of Ohio, Mr. EDWARDS of California, Mr. FAUNTROY, Mr. FAZIO, Mr. HAYES, Mr. HUGHES, Mr. MARTINEZ, Mr. MORRISON of Connecticut, Mr. OWENS, Mr. PEASE, Mr. PETRI, Mr. ROSE, Mr. SCHUMER, Mr. SMITH of Florida, Mr. WEISS, Mr. WHEAT, and Mr. WOLPE):

H.R. 1960. A bill to amend the act of February 25, 1920, commonly known as the Mineral Leasing Act, to require competitive bidding for leases on Federal lands with oil or gas deposits, and to require diligent exploration for, and development and production of, such oil or gas deposits, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. MITCHELL:

H. Con. Res. 106: Mrs. BENTLEY and Mr. KLECZKA.

H. Res. 60: Mr. MILLER of Ohio, Mrs. BENTLEY, Mr. GRADISON, Mr. WHITEHURST, and Mr. PACKARD.

H. Res. 68: Mr. SCHUMER, Mr. GARCIA, Mr. BIAGGI, Mr. FISH, Mr. WAXMAN, Mr. LEVINE of California, Mr. WEISS, Mr. SAXTON, Mr. DIOGUARDI, and Mr. ADDABBO.

H. Res. 72: Mr. WRIGHT, Mr. STRATTON, Mrs. COLLINS, Mr. TRAXLER, Mr. EDWARDS of Oklahoma, Mr. OBERSTAR, Mr. BRYANT, Mr. WEAVER, Mr. BOEHLERT, Mr. GRAY of Illinois, Mr. DOWNEY of New York, Mr. EDGAR, Mr. FLORIO, Mr. FORD of Tennessee, Mr. BONER of Tennessee, Mr. BROOKS, Mr. GEJDENSON, Mr. GONZALEZ, Mr. GUARINI, Mr. LEHMAN of Florida, Mr. LEVIN of Michigan, Mr. LIPINSKI, Mr. PRICE, Mr. SUNIA, Mr. YATRON, Mr. WOLPE, Mr. STAGGERS, Mr. PEASE, Mr. SMITH of Iowa, and Mrs. LLOYD.

H. Res. 94: Mr. RANGEL and Ms. OAKAR.

DELETIONS OF SPONSORS FROM PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, sponsors were deleted from public bills and resolutions as follows:

H.R. 1401: Mr. ROSE.
H.R. 1402: Mr. ROSE.
H.R. 1403: Mr. ROSE.

PETITIONS, ETC.

Under clause 1 of rule XXII,

76. The Speaker presented a petition of Erwin W. Watkins, attorney at law, Shaker Heights, OH, relative to the Equal Employment Opportunity Act; which was referred to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

WE NEED A SELECT COMMITTEE ON WATER RESOURCES

HON. G. WILLIAM WHITEHURST

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. WHITEHURST. Mr. Speaker, in 1979, I introduced a resolution calling for the establishment of an ad hoc committee on water resources. At that time, the resolution gained a number of cosponsors, but was never acted upon.

The problems of water supply have by no means lessened since that time, and indeed, in many areas of our country they have become even worse. For this reason, I am introducing today a resolution to establish a select committee, to be known as the Select Committee on Water Resources, which I hope will take steps to ensure a wise and viable long-range plan to provide an adequate water supply for future generations.

This is a national issue, not a State or local one, and I hope that we will not wait too much longer to deal with it. I am taking the liberty of sharing with my colleagues at this point in the RECORD the statements which I made in October 1979. At that time, I said that we are an "11th hour" Nation. I think it is not overstating the case to say that we are now moving closer to 5 minutes to 12.

The statements follow:

[From the CONGRESSIONAL RECORD, Oct. 12, 1979]

WATER CRISIS EXPECTED

Mr. WHITEHURST. Mr. Speaker, for some time I have been telling my constituents that we may well be facing a water crisis before the end of this century. The editorial from the Friday, October 12, 1979, edition of the Washington Post makes as cogent a statement on this issue as I have yet seen, and I am taking this opportunity to share it with my colleagues. It seems to me that we in the Congress have the responsibility to make every effort to anticipate the seriousness of the problem and deal with it before it actually reaches crisis proportions.

We have always been an "11th-hour" Nation—I recall so well, for example, that the great majority of my history students always wrote their book reports and term papers the night before they were due—and we have always had great resourcefulness on our side when the crunch came, whether it be Sputnik, synthetic rubber, or even World War II. Indeed, Bismarck once said that there is a special providence that favors fools, small children, and the United States of America. However, we cannot expect that happy situation to last forever, and we would do well to let our present energy woes serve as a warning; I think we will make it this time, but let us try to be better prepared before the water crisis strikes—that way, it will not need to reach crisis proportions.

The article follows:

WATER SHORTAGE EVERYWHERE

Why is water scarce and growing scarcer, approaching the status of a genuine shortage? In large part because we waste it. Anyone who has ever visited Los Angeles, for example, knows that the leaf rake is an endangered species there—these days leaves are blown off lawns and driveways with a spray hose. That's called progress. But agriculture is the truly big waster: the General Accounting Office recently concluded that at least half of the water used for irrigation in this country is wasted.

And why does wasting water comes so easy? In large part because of billion-dollar federal subsidies that provide water for irrigation at a fraction of its real cost. A utility in Utah, for example, recently paid $1,750 per acre-foot of water while not far away, in California's San Joaquin valley, farmers were paying less than $10. In addition, there is increasing concentration of growth in areas where water supplies are lowest—in the Sun Belt. Many of these booming cities, like Phoenix, for example, have been built on non-renewable supplies of ground water. Phoenix prides itself on having "made the desert bloom," but the price is a water table that has dropped 400 feet and more. With a measly 10 inches of annual rainfall, Arizona ranks among the top 10 states in per-capita water consumption.

In the East, where flooded basements are more common than falling water tables, a less familiar type of shortage may be developing. This is not an absolute shortage, but a shortage of usable water: water that is, in the vernacular of the trade, "fishable and swimmable." Some years ago Congress decided to try to reach that goal—fishable and swimmable—for the nation's waters by 1983. It won't be met, though not for want of trying. The construction of waste-water treatments facilities is now the nation's largest public works project, outdistancing even the pork-barrel dams and various Corps of Engineers boondoggles. But despite the nearly $30 billion in federal money that has been spent, the goal of clean water keeps receding. And the list of hazardous substances that should be removed from water to ensure safety grows.

The chairman of one congressional committee on water resources said the other day that "if we don't do something," the water shortage could make the energy crisis look like "a pink tea party." But there doesn't have to be a national water crisis. The country has about as much water available as it ever had—about 600 billion gallons per day. It is simply being used faster that it can be replenished. And since part of the reason is the price, which has been held by federal policy way below water's real value, and part the wasteful practices for which there are many technological alternatives, the similarities to past mistakes with oil and gas should be too obvious to ignore.

[From the CONGRESSIONAL RECORD, Oct. 24, 1979]

ENOUGH WATER?

Mr. WHITEHURST. Mr. Speaker, a crisis looms on the horizon that threatens to make our present energy difficulties pale by comparison. And, as in the case of energy, this possible crisis involves a potential shortage of a valuable national resource-water.

I do not want to sound like an alarmist but I am deeply concerned about the future prospects of water availability in this country. It has been estimated that 1980 demands on national water resources will nearly double those of 1954, and that by the year 2000 demands will triple those experienced in 1954. And by the turn of the century, it is estimated that 85 percent of our country's population will live in urban centers.

While there are many concomitant concerns associated with such a dramatic shift in population, of primary concern should be how we are going to provide these vast concentration of people with water. I underscore this point with the knowledge of predictions that much of this growth is projected to occur in cities located in semiarid regions of the West, many of which are built on nonrenewable supplies of water.

While it is true that from a national perspective there is sufficient water to meet our Nation's needs for some years to come, a region-by-region breakdown indicates serious supply problems ahead for many areas. Indeed, such supply problems exist or are anticipated in southern California, the Great Basin, the Lower Colorado, the Rio Grande, the High Plains of Texas, and the southcentral portion of the Missouri River Basin.

Many of these same areas are rich in coal and oil shale and are being counted on to be centers of energy conversion processes, which require large quantities of water. In large measure, then, our Nation's commitment to become more energy independent of foreign oil suppliers is directly tied to our success or failure to better manage, develop and conserve our water resource. And, while many Federal agencies and congressional committees are involved in some aspect of the water resources issue, I believe our Nation's effort is too fragmented.

Indeed, I believe President Carter recognized this when he presented his Federal water policy directives on July 12, 1978, one of which called for improved planning and evaluation of Federal water resources programs and projects. The responsibility for carrying out the President's directives was given to 19 Federal interagency task forces with the Secretary of the Interior charged with oversight. I think, however, that the Congress must play a more visible role and assert itself more in this critical area. That is why I have introduced House Resolution 445 to establish an ad hoc committee on water resources. This committee would consider and report to the House on any bill, resolution, or message or communication from the executive branch on any matter dealing with water resources for this Nation.

● This "bullet" symbol identifies statements or insertions which are not spoken by the Member on the floor.

It is my hope that one of the first steps taken by this body would be to give serious consideration to the establishment of a select committee charged with the responsibility of insuring a wise and viable long-range plan to provide an adequate water supply for future generations. We simply must grasp the severity of the problem now not wait until the 11th hour until we are handcuffed and panicked into action as we have been in the case of energy. Let us open our eyes and survey the present situation. Let us recognize our responsibility. Already water use approaches or exceeds the dependable supply in some cities, and there are potential shortages in other areas once believed blessed with inexhaustible supplies.

It was not too long ago that we once believed our oil supply would never run short. The parallels of energy and water are many. It has been a painful lesson for many of us, but I believe we realize the value of a gallon of gasoline and the importance of deriving every drop of energy from it. But I cannot say this is true for water. Americans simply do not appreciate the value of water and the importance of using it wisely. Not long ago, the General Accounting Office reported that nearly half of the water used in this country for irrigation purposes is wasted. This trend must be stopped and stopped now. Just as we have reached the end of an era of cheap energy, so too is the era of cheap water nearing an end.

Indications of a pending water crisis abound. In many areas of the country where municipalities rely heavily on ground water supplies, there is a clearly established pattern of diminishing returns as the water is removed at a faster rate than it is replaced. This not only lowers the water table in those areas but also can result in salt-water intrusion into our freshwater supplies and reduce flows of surface water that we so casually inject a seemingly endless array of pollutants.

Even in parts of the country with seemingly abundant supplies of water, antiquated distribution systems may result in a city losing up to half of its water supply through old pipes and water main breaks. In 1977 the Pennsylvania Gas and Water Co. reported "unaccounted for water" rates of 35 percent of its Wilkes-Barre service area and 46 percent for Scranton service area. Simillar unaccounted-for water statistics have been compiled in other cities, including Boston and New York.

I want to direct your attention to a few specific cities caught in the throes of planning for water scarcity.

In El Paso, Tex., a growing city of more than 322,000, the average annual rainfall is a paltry 8 inches. Like other southwest cities, El Paso gets 90 percent of its water from ground water sources. But current withdrawals are occurring at a rate of 10 times faster than the water is being replaced; and at a time when El Paso's water needs are increasing rapidly.

In Boston, the demand for water already exceeds the dependable supply. The Army Corps of Engineers has identified the Boston area as having a critical supply problem. The Metropolitan District Commission is the major water supplier in the State, providing water to about 2.3 million persons in Boston and about 40 other cities and towns. The dependable supply of the commission's system is 300 million gallons per day. The average daily use in 1976 was 317 million gallons per day. A 1977 Army Corps of Engineers report projected that the commission would need a dependable supply of 441 million gallons per day by 1990.

In my district of Norfolk and Virginia Beach, Va., studies show that average daily demand will exceed the system's dependable yield of water by the late 1980's. In Virginia Beach, a city whose economy is underpinned by the tourist dollar, spot water shortages already have occurred during the tourist season during periods of heavy consumption. Although Norfolk does not project a significant increase in population by 2000, Virginia Beach—the fastest growing city on the east coast and which receives its water from Norfolk—is expected to have a population of 359,000 by that time. At present, my district is engaged in a desperate struggle to locate future water supplies and wrestling with the delicate issue of an inter-basin transfer of water.

In conclusion, I implore you not to look away from this issue, for it begs our attention as energy did in 1973. The battle for water rights in this country promises to intensify on all fronts. It is an issue that will not soon be resolved.●

A BILL TO DISCOURAGE U.S. CORPORATIONS FROM USING FOREIGN TAX HAVENS

HON. JAMES A. TRAFICANT, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. TRAFICANT. Mr. Speaker, enough it enough. Too often, we have seen this country allow itself to be trounced in international trade circles and be taken advantage by foreign countries who use America's tax loopholes against us to lure U.S. manufacturing plants overseas.

It is utterly amazing that every year, the U.S. Government allows American-based corporations to develop technology and manufacturing processes here, then suddenly—many times without prior notice—pack up their manufacturing plants, layoff workers, and move the production abroad. Only to resell the products made back in the U.S. markets. The motivation of moving overseas? The tax-free incentives corporations can take advantage of in many developing Third World countries.

As I have stated, under the existing law, the income of these corporations operating abroad is generally not subject to current U.S. taxation. To address this loophole, I have introduced the following bill that will discourage U.S. corporations from developing technology in the United States and then transporting the manufacturing operation overseas in order to take advantage of tax breaks and lower labor costs.

Enactment of the taxation of foreign controlled manufacturing corporations would eliminate the tax advantages which some U.S. companies can obtain by investing in countries offering tax holidays, or by investing in manufacturing facilities in countries with low tax rates where a significant portion of their products are intended for the U.S. market. Simply, the intent of this legislation is to discourage tax-motivated foreign investment.

This bill will add new rules to the Internal Revenue Code to require current U.S. taxation of earnings and profits of controlled foreign manufacturing corporations which benefit from tax holidays or constitute runaway plants. The new rules will provide that a U.S. shareholder of a controlled foreign manufacturing corporation will be treated as having received his pro rata share of the corporation's earnings and profits for a taxable year if the corporation is considered a "foreign tax haven manufacturing corporation" by definition. This is accomplished by incorporating the new rules into the existing subpart F of the Internal Revenue Code.

The revenue received from the taxes imposed will be directed two ways: 75 percent of this revenue will be used to reduce the public debt and the historical Federal deficit exclusively; 25 percent will provide assistance to economically depressed areas through the newly created economic assistance trust fund.

I urge my colleagues to review this legislation and join me in sponsorship.

H.R. —

A bill to discourage domestic corporations from establishing foreign manufacturing subsidiaries in order to avoid Federal taxes by including in gross income of United States shareholders in foreign corporations the retained earnings of any such subsidiary which are attributable to manufacturing operations in runaway plants or tax havens, to provide that revenue from taxes imposed on such income shall be used to reduce the public debt and provide assistance to economically depressed areas, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. INCOME FROM RUNAWAY PLANTS OR FROM MANUFACTURING OPERATIONS LOCATED IN A COUNTRY WHICH PROVIDES A TAX HOLIDAY INCLUDED IN SUBPART F INCOME.

(a) FOREIGN BASE COMPANY MANUFACTURING RELATED INCOME ADDED TO CURRENTLY TAXED AMOUNTS.—Subsection (a) of section 954 of the Internal Revenue of 1954 (defining foreign base company income) is amended by adding at the end thereof the following new paragraph:

"(6) the foreign base company manufacturing related income for the taxable year (determined under subsection (i) and reduced as provided in subsection (b)(5))."

(b) DEFINITION OF FOREIGN BASE COMPANY MANUFACTURING RELATED INCOME.—Section 954 of such Code is amended by adding at the end thereof the following new subsection:

"(i) FOREIGN BASE COMPANY MANUFACTURING RELATED INCOME.—

"(1) IN GENERAL.—For purposes of this section, the term 'foreign base company manufacturing related income' means income (whether in the form of profits, commissions, fees, or otherwise) derived in connection with the manufacture for or sale to any person of personal property by the con-

trolled foreign corporation where the property sold was manufactured by the controlled foreign corporation in any country other than the United States if such property or any component of such property was manufactured—

"(A) in a tax holiday plant, or

"(B) in a runaway plant.

"(2) OTHER DEFINITIONS; SPECIAL RULES.—For purposes of this subsection—

"(A) TAX HOLIDAY PLANT DEFINED.—The term 'tax holiday plant' means any facility—

"(i) operated by the controlled foreign corporation in connection with the manufacture of personal property, and

"(ii) with respect to which any economic benefit under any tax law of the country in which such facility is located accrued—

"(I) to such corporation,

"(II) for the purpose of providing an incentive to such corporation to establish, maintain, or expand such facility, and

"(III) for the taxable year of such corporation during which the personal property referred to in paragraph (1) was manufactured.

"(B) RUNAWAY PLANT DEFINED.—The term 'runaway plant' means any facility—

"(i) for the manufacture of personal property of which not less than 25 percent is used, consumed, or otherwise disposed of in the United States, and

"(ii) which is established or maintained by the controlled foreign corporation in a country in which the effective tax rate imposed by such country on the corporation is less than 80 percent of the effective tax rate which would be imposed on such corporation under this title.

"(C) ECONOMIC BENEFIT UNDER ANY TAX LAW DEFINED.—The term 'economic benefit under any tax law' includes—

"(i) any exclusion or deduction of any amount from gross income derived in connection with—

"(I) the operation of any manufacturing facility, or

"(II) the manufacture or sale of any personal property,

which would otherwise be subject to tax under the law of such country;

"(ii) any reduction in the rate of any tax which would otherwise be imposed under the laws of such country with respect to any facility or property referred to in clause (i) (including any ad valorem tax or excise tax with respect to such property);

"(iii) any credit against any tax which would otherwise be assessed against any such facility or property or any income derived in connection with the operation of any such facility or the manufacture or sale of any such property; and

"(iv) any abatement of any amount of tax otherwise due and any other reduction in the actual amount of tax paid to such country.

"(D) MANUFACTURE DEFINED.—The term 'manufacture' or 'manufacturing' includes any production, processing, assembling, or finishing of any personal property or any component of property not yet assembled and any packaging, handling, or other activity incidental to the shipment or delivery of such property to any buyer.

"(E) CORPORATION INCLUDES ANY RELATED PERSON.—The term 'controlled foreign corporation' includes any related person with respect to such corporation.

"(F) SPECIAL RULE FOR DETERMINING WHICH TAXABLE YEAR AN ECONOMIC BENEFIT WAS OBTAINED.—An economic benefit under any tax law shall be treated as having accrued in the taxable year of the controlled foreign corporation in which such corporation actually obtained the benefit, notwithstanding the fact that such benefit may have been allowable for any preceding or succeeding taxable year and was carried forward or back, for any reason, to the taxable year.

"(3) LIMITATION ON APPLICATION OF PARAGRAPH (1) IN CERTAIN CASES.—For purposes of this section—

"(A) IN GENERAL.—The term 'foreign base company manufacturing related income' shall not include any income of a controlled foreign corporation from the manufacture or sale of personal property if—

"(i) such corporation is not a corporation significantly engaged in manufacturing,

"(ii) the investment in the expansion of an existing facility which gave rise to a tax holiday for such facility was not a substantial investment, or

"(iii) the personal property was used, consumed, or otherwise disposed of in the country in which such property was manufactured.

"(B) CORPORATION SIGNIFICANTLY ENGAGED IN MANUFACTURING DEFINED.—

"(i) GENERAL RULE.—A corporation shall be deemed to be significantly engaged in manufacturing if the value of real property and other capital assets owned or controlled by the corporation and dedicated to manufacturing operations is more than 10 percent of the total value of all real property and other capital assets owned or controlled by such corporation.

"(ii) SPECIAL RULE FOR ASSESSING PROPERTY VALUE.—The value of any property owned by the corporation is the basis of such corporation in such property. The basis of the corporation in any property which was acquired other than by purchase shall be the fair market value of such property at the time of such acquisition. Any property controlled but not owned by such corporation under any lease (or any other instrument which gives such corporation any right of use or occupancy with respect to such property) shall be treated as property acquired other than by purchase in the manner provided in the preceding sentence.

"(C) SUBSTANTIAL INVESTMENT DEFINED.—The term 'substantial investment' means any amout which—

"(i) was added to the capital account for an existing facility during the 3-year period ending on the last day of any table year with respect to which such facility is a tax holiday plant, and

"(ii) caused the sum of all amounts added to such account during such period to exceed 20 percent of the total value of such facility (determined in the manner provided in subparagraph (B)(ii)) on the first day of such period."

(c) TECHNICAL AND CONFORMING AMENDMENTS.—

(1) The last sentence of subsection (b)(4) of such section 954 is amended by striking out "subsection (a)(5)." and by inserting in lieu thereof "subsection (a)(5) or foreign base company manufacturing related income described in subsection (a)(6)."

(2) Subsection (b)(5) of such section 954 is amended by striking out "and the foreign base company oil related income" and by inserting in lieu thereof "the foreign base company oil related income, and the foreign base company manufacturing related income".

(3) Subsection (b) of such section 954 is amended by inserting at the end thereof the following new paragraph:

"(9) FOREIGN BASE COMPANY MANUFACTURING RELATED INCOME NOT TREATED AS ANOTHER KIND OF BASE COMPANY INCOME.—Income of a corporation which is foreign base company manufacturing related income shall not be treated as foreign base company income of such corporation under any paragraph of subsection (a) other than paragraph (6)."

(d) CLERICAL AMENDMENTS.—

(1) Paragraph (4) of subsection (a) of such section 954 is amended by striking out "and" at the end thereof.

(2) Paragraph (5) of such subsection (a) is amended by inserting "and" after the comma at the end thereof.

(e) EFFECTIVE DATES.—

(1) IN GENERAL.—The amendments made by this section shall apply to taxable years of foreign corporations beginning after December 31, 1984, and to taxable years of United States shareholders in which, or with which, such taxable years of foreign corporations end.

(2) INVESTMENTS BEFORE THE DATE OF ENACTMENT NOT TAKEN INTO ACCOUNT.—No facility of a foreign controlled corporation shall be treated as a tax holiday plant (within the meaning of section 954(i)(2)(A) of such Code, as amended by this section) or as a runaway (plant within the meaning of section 954(i)(2)(B) of such Code, as amended by this section) on the basis of any amount paid or incurred with respect to such facility and added to the capital account for such facility before the date of the enactment of this Act.

SEC. 2. REVENUE ATTRIBUTABLE TO SECTION 1 AMENDMENTS TO BE USED TO REDUCE PUBLIC DEBT AND PROVIDE ASSISTANCE TO ECONOMICALLY DEPRESSED AREAS.

(a) 75 PERCENT OF REVENUE TRANSFERRED TO REDUCE PUBLIC DEBT.—The Secretary of the Treasury shall transfer to the account in the Treasury described in section 3113(d) of title 31, United States Code (relating to account resulting from gifts to the United States to retire Government obligations) amounts equivalent to 75 percent of the amounts received in the Treasury which the Secretary of the Treasury determines to be attributable to taxes imposed under the Internal Revenue Code of 1954 on foreign base company manufacturing related income (as defined in section 954(i) of such Internal Revenue Code). Rules similar to the rules contained in section 9601 of such Code (relating to transfer of amounts) shall apply to the transfers required under this subsection.

(b) ECONOMIC ASSISTANCE TRUST FUND ESTABLISHED; 25 PERCENT OF REVENUE TRANSFERRED TO TRUST FUND.—Subchapter A of chapter 98 of such Code (relating to establishment of trust funds) is amended by adding at the end thereof the following new section:

"SEC. 9505. ECONOMIC ASSISTANCE TRUST FUND.

"(a) CREATION OF TRUST FUND.—There is hereby established in the Treasury of the United States a trust fund to be known as the 'Economic Assistance Trust Fund', consisting of such amounts as may be transferred or credited to the Economic Assistance Trust Fund under this section or section 9602(b).

"(b) TRANSFER TO ECONOMIC ASSISTANCE TRUST FUND.—The Secretary shall transfer to the Economic Assistance Trust Fund amounts equivalent to 25 percent of amounts received in the Treasury which the Secretary determines to be attributable to taxes imposed under the Internal Revenue Code of 1954 on foreign base company manufacturing related income (as defined in section 954(i) of such Code).

"(c) EXPENDITURES FROM ECONOMIC ASSISTANCE TRUST FUND.—

"(1) GENERAL RULE.—Amounts in the Economic Assistance Trust Fund shall be available, as provided in appropriation Acts, for providing economic assistance in economically depressed areas.

"(2) "ECONOMICALLY DEPRESSED AREA DEFINED.—For purposes of this section, the term 'economically depressed area' means any area which is either—

"(A) a qualified census tract (as defined in section 103A(k)(2)), or

"(B) an area of chronic economic distress (as defined in section 103A(k)(2))."

(c) CLERICAL AMENDMENT.—The table of sections for subchapter A of chapter 98 is amended by adding at the end thereof the following new item:

"Sec. 9505. Economic Assistance Trust Fund."

(d) EFFECTIVE DATE.—The amendments made by this Act shall apply with respect to taxable years beginning after December 31, 1984.●

MY PLEDGE TO AMERICA

HON. WILLIAM F. CLINGER, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. CLINGER. Mr. Speaker, I would like to take this opportunity to share with my colleagues an essay written by Miss Carrie Hooper, a constituent from my congressional district. Miss Hooper is a member of the senior class at Cameron County High School in Emporium, PA.

Miss Hooper's well-written and patriotic essay entitled, "My Pledge to America," captured first place honors in a writing contest sponsored by the Cameron County Veterans of Foreign Wars [VFW]. I applaud the VFW for holding this worthwhile contest and I congratulate Carrie for her efforts in providing us with such an inspirational message.

MY PLEDGE TO AMERICA

A pledge is a promise and should not be taken lightly, especially if it is a pledge to your country. My first pledge to America is to stand behind her in all she does and to give her my support. Without my devotion, she falters. It has been said that a house divided against itself will not stand. I realize how true this is. This has been proven by the fallen civilizations in the past. What other country offers me more than America? None can compare to her. I can criticize the way my government is doing something and not live in fear of being imprisoned or killed for it. I am free to decide what career I will pursue. Just because a person is a woman, that doesn't mean she must stay at home and be a housewife. She is free to go into any field of work she wishes. I am also free to decide what religion I will follow. If the presiding President is of X denomination, that doesn't mean that I have to be of X denomination. I can be assured that I will not be persecuted by my Government for believing in God. I do not have to denounce my faith in God.

Second, I promise to vote as long as I am able to in every election held. America gives me the privilege to help decide what President will guide me. I realize so many people in other countries would love to have the chance to have a voice in their government so I will not throw away this honor. America gives me so much that the least I can do is take advantage of what she offers me.

Third, I pledge to America to use any talents I may have to enrich her. It is my duty and honor to help make her the best possible place in which to live. I would be glad to be given the chance to enhance her. She allows me to receive the best education regardless of my gender, so I will, in turn, give back what she has given me.

Last, I pledge my life to America. If she should ever again become involved in a conflict with another country, I promise my loyalty and to be here ever waiting her call. I will not question why or try to beg out of my mission. I have faith in my country to know that she will not lead me astray. If she believes justice needs to be done somewhere, I will believe it also. America believes in freedom, just as I do. I love America and I will do everything within my power to preserve her. Therefore, I will pledge my life, my talents, my loyalty, and my faith so that America will stand for eternity.●

THE TROUBLE WITH RAILROADS: WE'VE GOT THE CURE

HON. NICK JOE RAHALL II

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. RAHALL. Mr. Speaker, many of us in the Congress are beginning to hear from concerned constituents on matters relating to the railroad industry. One item which is receiving attention involves the manner in which the Interstate Commerce Commission is implementing the Staggers Rail Act of 1980.

In short, there is concern that the Commission, by determining that the Nation's Class I railroads are all revenue inadequate, has increased the likelihood for some very real abuses of market power which will lead to unreasonable rates on traffic with no viable transportation alternative other than a single railroad.

As this was never the intent of Congress when enacting the Staggers Rail Act, legislation has been introduced to provide a remedy which seeks to restore consideration of the plight of captive shippers, and ultimately the consumer, in the ICC's railroad ratemaking process.

The proposal to sell financially profitable Conrail to another healthy railroad, the Norfolk Southern, shows that being branded as a revenue inadequate corporation by the ICC certainly does not adversely impact a railroad's ability to generate cash and profit.

And of course, the Nation's railroads for obvious reasons should and must be financially healthy. Yet, the method used to determine railroad revenue adequacy by the Commission has deep-seated flaws and is inherently unfair in that the consumer, through captive shippers, ends up subsidizing a system slanted toward allowing unreasonable rates to be levied on traffic where transportation competition simply does not exist.

In effect, a monoply exists on this traffic and maintaining a system by which captive shippers can seek redress from unreasonable railroad rates is proper, in the public interest and was provided for under the Staggers Rail Act.

However, through a number of proceedings and proposals, the ICC has ignored congressional intent that captive shippers be protected from being unfairly charged for rail service. While the act sought to balance the revenue needs of the railroads with the established public interest in seeing that unreasonable rates are not imposed on captive traffic, the former is being achieved with little consideration to the latter. The Commission—under the formula it has advanced to make market dominance, revenue adequacy and ultimately, maximum rate reasonableness determinations—has subverted the balance worked by the Congress.

The effort to amend the Staggers Rail Act is simply intended to restore this balance. Administrative consideration of this problem has met with little success. Litigation continues but has produced a view that congressional intent must be more clearly established in the law.

The "Consumer Rail Equity Act," H.R. 1190, represents a legislative remedy that is fine-tuning in scope. This moderate proposal has the backing of a number of our colleagues from across the Nation and consumer groups, labor and shippers are rallying behind the measure.

This, then, is what the trouble is with railroad transportation today as defined by that transportation which is not being moved under contract and which is captive to a single railroad. Following is a brief description of H.R. 1190. Its main sponsors—BILLY TAUZIN, HAL ROGERS and myself—stand ready to assist our colleagues in their deliberations of this bill.

SUMMARY.—CONSUMER RAIL EQUITY ACT

I. INTRODUCTION AND OVERVIEW

This bill would retain the basic structure of existing law. The Commission will continue to have jurisdiction over a rate only if it first finds the rail carrier has "market dominance." The bill would also continue the conclusive presumption that market dominance can exist only if the rate is in excess of the jurisdictional threshold, currently 180 percent revenue-variable cost ratio. Contract rates would remain free from Commission jurisdiction.

The amendments made by the bill are summarized below.

II. MARKET DOMINANCE (SECTION 3 OF THE BILL)

(a) Amend to eliminate consideration of product and geographic competition.

(b) Add a provision that if shipper is served by a single rail facility, railroad is presumed market dominant unless it can show effective competition from other carriers or modes of transportation for the movement to which the challenged rate applies.

(c) Market dominance determination to be made in all cases within 90 days after initiation of rate reasonableness proceeding.

III. RATE REASONABLENESS (SECTION 4 OF THE BILL)

(a) Place burden on carrier to demonstrate the reasonableness of a challenged rate.

(b) Add a rate reasonableness standard: in order to approve a rate above fully allocated costs, Commission must find that the rate is no higher than it would be if the rail carrier, to the extent practicable, were to equitably allocate the burden of producing revenues necessary to achieve or maintain revenue adequacy to the challenged rate and all other rates above the jurisdictional threshold (*i.e.*, its "captive traffic").

(c) Require Commission to make affirmative findings on the consistency of the rate with the national rail transportation policy and the Long-Cannon factors.

(d) Expand the element of the national rail transportation policy regarding the promotion of energy conservation to include as further objectives the reduction of reliance on foreign energy supplies, and encouraging the competitiveness of domestically produced agricultural commodities.

(e) Rail cost adjustment factor to reflect actual railroad costs and productivity improvements.

(f) Rail Form A accounting systems to remain in place until replaced by principles promulgated by Railroad Accounting Principles Board and implemented by Commission.

(g) Time limits on rail rate investigation proceedings to remain in effect; all other rail rate reasonableness proceedings to be concluded within twelve months.

IV. REVENUE ADEQUACY (SECTION 5 OF THE BILL)

(a) Add a provision that in making revenue adequacy determinations, Commission shall—

(1) identify revenues, expenses and investment base reasonably related to providing rail service,

(2) include in railroad investment base only railroad assets valued at straight-line depreciated original cost, and exclude deferred tax reserves, and

(3) determine cost of capital using actual cost of embedded debt and reasonable estimates of cost of equity.

(b) Any revenue adequacy determination shall include inquiry into and consideration of the Long-Cannon factors, several market-based indicators of the rail carrier's financial health, and the rail carrier's history and financing of mergers and acquisitions.

(c) Revenue adequacy determinations to be made annually, and to be opened to public participation, including the opportunity to specifically comment on data submitted by rail carriers.

V. EXEMPTIVE AUTHORITY (SECTION 6 OF THE BILL)

Exercise of the exemption authority is to be discretionary rather than mandatory, and Commission is prohibited from issuing an exemption if rail carrier has market dominance over the transportation involved.

VI. ENHANCEMENT OF COMPETITION (SECTION 7 OF THE BILL)

(a) Commission to require rail carriers to participate in competitive joint rates or publish proportional rates where necessary to achieve or maintain competition.

(b) Change discretionary authority in current law to mandatory direction that the Commission order use of terminal facilities and provide for reciprocal switching in any circumstance where such an order is found to be in the public interest or necessary to provide competitive rail service. If parties cannot agree on compensation, Commission to set compensation based on costs.

(c) Provide improved protection against cancellation of reciprocal switching.

VI. ABANDONMENTS (SECTION 8 OF THE BILL)

(a) Prohibit a railroad from applying to abandon a facility for which the ICC has refused an abandonment request unless one year has elapsed since the denial of the request has become final, or the railroad can show a material change of circumstances that would affect the abandonment of the facility.

(b) Require that upon protestants' request, the Commission provide an opportunity for a hearing on the proposed abandonment in the community or communities affected by the abandonment, unless Commission determines that such a hearing would be impractical or unnecessary.

(c) Require that the rail carrier proposing the abandonment submit, and the Commission base its decision upon, financial data based upon the operations of the facility proposed to be abandoned, rather than system-wide or industry-wide averages.

VIII. INTRASTATE RATES (SECTION 9 OF THE BILL)

Commission's review of a state agency decision on reasonableness of an intrastate rate is limited to an appellate review function, and any party to the state proceeding could seek review at ICC. Certification of state agencies is eliminated.

IX. TRANSITIONAL PROVISIONS (SECTION 10 OF THE BILL)

(a) Amendments to be made applicable to cases pending on February 20, 1985 at Commission or on judicial review.

(b) All rates deemed conclusively reasonable under Section 229 will remain free from challenge under these amendments, except any rate—

(1) not challenged under Section 229 of Staggers because a contract was in effect or entered into during the 180 day period,

(2) unsuccessfully challenged under Section 229, or

(3) the subject of a challenge under Section 229 which was terminated by entering into a contract.

(Contracts to remain in effect; challenge may be made only to underlying rate which would be applicable once a contract expired.)●

PESTICIDES USED IN FOOD PRODUCTION SHOULD BE SAFE

HON. JOHN F. SEIBERLING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. SEIBERLING. Mr. Speaker, today I am introducing legislation to prohibit the sale of pesticides and herbicides for agricultural production uses unless laboratory tests prove that the substances will not endanger human beings.

I am concerned that the use of dangerous pesticides and herbicides may pose serious health threats to consumers as well as to agricultural workers. Once these pesticides and herbicides enter the food chain, the long-term effects of these substances are largely unknown. We are also unsure to what extent these chemicals are contaminating our ground water. Because of these concerns, I think that pesticides and herbicides should not be used unless it is proven that they are unlikely to cause harm in human beings.

The ethylene dibromide [EDB] crisis demonstrated just how little we know about the long-term effects of pesticide use on food production. First marketed in 1948, EDB was used primarily as a fumigant for treating soil, stored grain, and boxed citrus fruit. It was approved for these uses because the then available detection technologies found no traces of the chemical in grain or fruit on which EDB had been used. However, studies in the mid-1970's indicated that EDB caused cancer in animals, and by 1980 improved detection technologies indicated that EDB residues might be present on grain and fruit and that EDB was probably leaching into ground water.

In 1977 EPA began an extensive review of the use of the chemical, but the agency did not suspend use of the pesticide during these studies. As soon as EPA learned of the cancer risks associated with EDB and that EDB residues were present in food and ground water, the pesticide should have been immediately pulled off the market. But EPA refused to ban the pesticide. By 1983, the EDB problem and EPA's lack of action caught the attention of the media. In December 1983, frustrated by EPA inaction on this matter, several States began ordering food products off grocery shelves because of EDB contamination. EPA procedures were totally inadequate to handle the crisis.

The EDB crisis demonstrated the gross inadequacies of our system of regulating pesticides and herbicides. Under the current system, when the dangers are unknown, the use of the pesticide or herbicide is automatically approved. The EDB crisis showed the folly of this approach. I think we should reverse the assumption, and not approve the use of any agricultural herbicide or pesticide unless adequate tests indicate that it is unlikely that it will endanger human beings.

Under our current regulatory framework, EPA has no idea whether certain pesticides or herbicides already in use are safe or if they are highly dangerous. The chemical manufacturers perform certain tests to determine the

safety of their own products. EPA is supposed to oversee the tests and their results, but the amount of information available is frighteningly small. The current law requires EPA to weigh the dangers and the supposed benefits of the use of each pesticide. However, it is very difficult to make this determination when so little is known about the long-term dangers of these chemicals.

It has been argued that reducing the availability of pesticides and herbicides will hurt farmers by curtailing farm production. However, to the extent that farmers are not forced by competition to buy pesticides and herbicides their costs will be lower. And to the extent that agricultural production is reduced, crop surpluses will be reduced or eliminated, thereby saving crop price support costs borne by the American taxpayer.

My bill would change the current regulatory structure to ensure that pesticides and herbicides used in agricultural production are truly safe. Under this legislation, before EPA could approve the use of any new agricultural pesticide or herbicide, the agency would be required to conduct tests within the agency to determine if the pesticide would endanger human beings. If the tests indicate that the pesticide or herbicide is likely to endanger human beings, it could not be approved. In determining if a pesticide or herbicide is likely to endanger humans, EPA should err on the side of caution and not approve any pesticides or herbicides if the probabilities are high that use of the substance will endanger human beings.

Reregistration of agricultural pesticides and herbicides already in use would also be prohibited unless appropriate testing, conducted by EPA, indicated that there would be no harmful effects on human beings. If this legislation were enacted, another crisis like the EDB crisis would be avoided. To encourage EPA to move quickly to conduct the proper tests, at the end of 3 years the legislation would revoke the registration of any agricultural pesticide or herbicide already in use which was not proven safe in appropriate laboratory tests conducted by EPA. Surely its time we acted to protect the public against the use of unsafe agricultural pesticides and herbicides.●

MY PLEDGE TO AMERICA

HON. ROBERT LINDSAY THOMAS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. THOMAS of Georgia. Mr. Speaker, the most powerful and important voices in our Nation do not belong to those of us in the Congress. Or to those who are the leaders of the largest companies or the largest labor unions.

The most powerful and important voices in America belong to our young people. It is their voices that make up the chorus that will determine the future of this great land.

For some 37 years now, we have been listening to the youth of America through the "Voice of Democracy Scholarship Program." Since 1961, this outstanding program has been operated solely by the prestigious Veterans of Foreign Wars of the United States.

The VFW invites secondary school students from throughout the United States to compete for scholarships by submitting essays on themes of national importance. This year's subject was "My Pledge to America," and more than 300,000 students participated in the competition for some $32,500 in scholarship money.

The winning essay in the State of Georgia was written this year by Mr. William Wright, a 17-year-old young man from Jesup, GA. I have the great honor of representing William in the Congress.

I know that William's own pride in this award is shared by his father, the Reverend R.G. Wright, his mother, Kathleen M. Wright, and his sisters, Mary Jane, Becky, and Suzie, along with all of the citizens of our district and our State.

It is my honor to submit William's essay for introduction into the CONGRESSIONAL RECORD at this point:

MY PLEDGE TO AMERICA

"I pledge allegiance, to the flag of the United States of America. . . ." For too many Americans those words are little more than part of a half-forgotten gradeschool ritual. "The Pledge" is seen as a casual courtesy to be tossed in the general direction of the United States flag at certain designated times. The simple, direct meaning of this promise to a flag and to a republic is too often overlooked.

During the Middle Ages, pledging allegiance was a serious matter, akin to proposing marriage or making out a will. A man who swore fealty—that is, pledged allegiance—to a liege lord reaped all of the benefits and privileges of his new station, but at the same time submitted himself completely to his superior. He would, therefore, have to do his best to serve the whole hierarchy or nobility. He would honor the King's policy, obey the King's laws, and fight the King's wars. His own property, his personal ambitions, and even his life might have to be sacrificed for the good of "King and country".

To us in the United States has come a heritage much more valuable than any baronial estate. Our land is blessed with liberty and prosperity beside which any other country's pale. Although we swear no allegiance to royalty or traditions, we should remember that our republic was bought with lives earnestly lived and freely relinquished by people who made a promise and kept it. The nation of America is made up of the lives of Americans; layer upon layer, cemented together by a bond of common purpose. Thousands have hoped and prayed and struggled to build the society that we live in today, and thousands gave all that they had . . . for a promise.

Their promise is my pledge to America, too. Like theirs, it's much more than an oath of allegiance to our star-spangled banner, and to the republic for which it proudly stands. The flag itself is a mere symbol, a reflection of our American republic; and the republic, too is a reflection of something far greater.

Our flag has become a respected symbol throughout the world. Our government is the most successful democracy that has ever existed, a bold example for others to follow. Yet my pledge of allegiance is to something more honorable than a flag, and more powerful than government. My pledge is to the people of America. My pledge is to the people who worked for freedom, and who work to maintain it. My pledge is to the people who fought for freedom, and who stand ready to guard it. My pledge is to the heralds of liberty and the agents of justice. I pledge to use my life in an attempt to join that company of true Americans. I pledge allegiance to those that have gone before me and those that will accompany me.

These people are the ones who have earned our loyalty. From them we received our inheritance, our great republic and our noble flag. It is to them that my sworn allegiance goes, to all of those who have worked so long and hard to become . . . "one nation, under God, indivisible, with liberty and justice for all."●

SPEND DOWN FOR MEDICALLY NEEDY UNDER MEDICAID

HON. BARNEY FRANK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. FRANK. Mr. Speaker, I introduced legislation today which corrects the unequal treatment of supplemental security income [SSI] related medically needy persons and SSI related categorically needy persons under the Social Security Act. This complex mosaic of Federal-State public assistance is best explained by the following example of a married couple now receiving about $534 per month in Social Security benefits. The husband worked for 41 years as a longshoreman, bartender, hotel clerk, and clothing alteration checker and paid Social Security taxes during this period. As Social Security beneficiaries, the couple is not automatically eligible for Medicaid assistance. Many States under their Medicaid Program, require such a couple to pay their own medical bills, until they have spent down their income to a point where they have only $400 a month available for nonmedical expenses. At this point, the couple becomes eligible for Medicaid assistance.

SSI beneficiaries are not subject to a spend down before receiving Medicaid assistance. SSI recipients receive a basic monthly income of $513, which is not based on tax contributions but is public assistance, and have their medi-

cal needs met by Medicaid. The different treatment results in the couple who paid Social Security taxes having $100 less per month for food and other necessities, than an SSI recipient. My example of the couple is particularly ironic when it is considered, that if their income was less per month they would be eligible for SSI. The $100 a month loss of income is significant to this couple, because the husband at 68 years of age has glaucoma and is a double amputee confined to a wheel chair. His twice monthly trips to the hospital by ambulance cost $162 per trip. His medication costs are $50 per month, which totaling all expenses make them medically needy.

The unfairness of the disparate treatment is acute when individuals who work long enough to receive Social Security must live on less than those who have paid little or no tax. My bill would correct this situation by requiring that income levels be the same for both SSI medically needy and SSI categorically needy. I invite my colleagues to join me in correcting this harsh treatment toward Social Security recipients with high medical expenses, who have as a result, less income for food and shelter than do SSI recipients.

H.R. —

A bill to amend title XIX of the Social Security Act to require that income levels for the supplemental security income-related medically needy are the same as those for the supplemental security income-related categorically needy

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 1903(f)(1)(B)(i) of the Social Security Act (42 U.S.C. 1396b(f)(1)(B)(i)) is amended by inserting "the greater of (I)" before "133⅓ percent" and by inserting before the period at the end the following: "; or (II) in the case of individuals who, but for income, would be eligible to have supplemental security income payments made with respect to them under title XVI, 100 percent of the highest amount which would ordinarily be paid to such individuals, without any income or resources, in the form of money payments under such title (including any optional or mandatory State supplementary payment otherwise provided)".

SEC. 2. Section 1902(a)(17) of the Social Security Act (42 U.S.C. 1396a(a)(17)) is amended by striking out "and" before "(D)" and by inserting before the semicolon at the end of clause (D) the following: ", and (E) provide that the income standard established for individuals who (but for income and resources) would be eligible to have supplemental security income payments made with respect to them under title XVI, shall be equal to 100 percent of the highest amount which would ordinarily be paid to such individuals, without any income or resources, in the form of money payments under such title (including any optional or mandatory State supplementary payment otherwise provided)".

SEC. 3. (a) The amendments made by this Act shall (except as provided in subsection (b)) apply to medical assistance furnished on or after October 1, 1981.

(b) In the case of a State plan for medical assistance under title XIX of the Social Security Act which the Secretary of Health and Human Services determines requires State legislation in order for the plan to meet the additional requirement imposed by the amendment made by section 2, the State plan shall not be regarded as failing to comply with the requirements of such title solely on the basis of its failure to meet this additional requirement before the first day of the first calendar year beginning after the close of the first regular session of the State legislature that begins after the date of the enactment of this Act.●

THE COMPREHENSIVE NUTRITION ASSISTANCE ACT OF 1985

HON. MICKEY LELAND

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. LELAND. Mr. Speaker, yesterday, I was joined by my colleagues, Representatives PANETTA, MORRISON of Connecticut, HAWKINS, BURTON of California, KILDEE, TRAXLER, GEJDENSON, WEISS, FAZIO, and YOUNG of Alaska. In introducing the Comprehensive Nutrition Assistance Act of 1985. We are submitting this legislation because of our belief that we cannot sit idle while the nutritional status of our citizens—our children, migrant farmworker families, native Americans and elderly—are allowed to run a course of steady decline.

The bill we submit today is not a dream bill promoting overnight overhaul of our domestic food assistance programs. Rather, we are presenting legislation which we feel proposes realistic improvements in these programs. It is a bill which can be supported in a bipartisan fashion and approved by a Congress that is concerned about the Federal budget, but is likewise concerned about the nutritional status of the needy people in this country. We are all in agreement that much more needs to be done. However, we are taking what we feel to be that vital first step in bringing about the changes that are necessary.

We do not know the anguish experienced by the head of a household who cannot provide adequate nourishment for his or her family. We do not know the frustration of not being able to feed our families at the end of the month. We do know that this anguish and frustration is attacking a growing number of our citizens. We do know that people are suffering because they lack the support necessary that assures the availability of adequate food on a consistent basis.

Mr. Speaker, we are confident that our bill can assist in alleviating hunger and in reducing the health consequences which occur in the absence of proper nutrition. We offer the enactment of no new programs, but seek to make modest restorations, building upon and providing limited expansions in programs which have proven effective in addressing these problems.

To date, the bill has received the endorsement of: Bread for the World; United Church of Christ Office for Church in Society, Food Research and Action Center; American Baptist Churches of U.S.A.; Friends Committee on National Legislation; National Council of Churches of Christ in the U.S.A.; Episcopal Church Washington Office; U.S. Conference of Mayors; American Federation of State, County, and Municipal Employees; National Conference of Catholic Charities; Mennonite Central Committee U.S. Peace Section Washington Office; American School Food Service Association; American Public Welfare Association; Children's Defense Fund; Washington Office Presbyterian Church U.S.A.; Public Voice for Food and Health Policy; Community Nutrition Institute, Interfaith Action for Economic Justice; American Public Health Association; and National Council of Senior Citizens.

The following is a section-by-section summary of the bill:

THE COMPREHENSIVE NUTRITION ASSISTANCE ACT OF 1985

(1) Provisions from the School Lunch and Child Nutrition Amendments of 1985 (H.R. 7): H.R. 7 introduced by Chairman Hawkins on January 3, includes provisions of the School Lunch and Child Nutrition Amendments of 1984 as approved by the House last year. The Comprehensive Nutrition Assistance Act of 1985 includes the FY 86 authorization levels provided for in H.R. 7 for the WIC, School Breakfast, School Lunch, Summer Feeding, Child Care Food Program, and Nutrition Education and Training Programs.

(2) Migrant WIC Services: Reinstate special migrant grants to State WIC Agencies to insure that funds are available to migrants as they move from State to State. Recommend the expansion of the EIC Program to include migrant grants as 0.9 percent set aside. H.R. 7 authorizes WIC at $1.7 billion for fiscal year 1986. To maintain current migrant caseload requires $13.46 million. To increase migrant caseload in proportion to total WIC expansion would require a 10 percent increase—bringing the cost for migrant services to $14.8 million or 0.9 percent of the total.

(3) Expanded Food Nutrition and Education Program (EFNEP): The program has been funded at $60.35 million since fiscal year 1982. It is recommended that a set aside of $70 million (within the Cooperative Extension Service authorization) be established for the continuation of EFNEP services. This level would allow EFNEP to expand its existing consumer and nutrition education services, with the funds over the current appropriation to be targeted to the areas with high rates of infant mortality or hunger-related disease.

(4) Food and nutrition projects for migrants and native Americans: Increase Community Food and Nutrition Program (CFNP) authorization level from $2.5 million to $3.5 million with no less then 25 percent of the funds being made available to organizations serving seasonal or migrant

farmworkers, giving priority to organizations which have governing boards composed of migrant or seasonal farmworkers; and Indian tribes and tribal organizations.

(5) Temporary Emergency Food Assistance Program (TEFAP): In fiscal years 1984 and 1985, this program was authorized at $50 million to defray the cost of transporting and storing surplus commodities made available by USDA. It is recommended that this administrative assistance to State and local agencies be increased. Rural areas have reported a particular need for Federal assistance to local emergency food distributors. The additional funds should be targeted to areas which are presently unserved, with priority given to the poor rural areas.

(6) Expansion of Head Start Program: Head Start has been shown to be effective in improving the nutritional status of participating children and their families. It has been estimated by the Department of Health and Human Services that the Fiscal Year 1985 caseload will be 448,250. This increases the caseload to reach nearly 22 percent of the 2,050,000 income eligible preschoolers. It is recommended that the program be further expanded in Fiscal Year 86 to reach one-quarter of those who are income eligible, or 512,500 children.

(7) Reauthorize Commodity Supplemental Food Program for elderly feeding projects: In 1981 P.L. 97-98 authorized the institution of elderly feeding pilot projects for distribution of surplus commodities to help relieve chronic undernutrition among the elderly poor. Under the pilot projects (in Detroit, Michigan; Des Moines, Iowa; and New Orleans, Louisiana) nearly 15,000 senior citizens receive food packages which are tailored to individual dietary restrictions and preferences and valued at double the actual cost to the government. It is recommended that these CSFP projects be reauthorized.

(8) Food Stamp Program provisions: Increase earned income deduction from 18 percent to 20 percent; increase financial resources deduction from $3,000 to $3,500 for households with two or more persons, one of whom is age 60 or older, and from $1,500 to $2,250 for others; Separate Shelter and Dependent Care Deductions; raise shelter deduction cap to $175 and dependent care deduction cap to $160; Revise elderly medical deduction to $35 or 5 percent of income, whichever is lower; Increase maximum Food Stamp allotment to 101 percent of Thrifty Food Plan; Permit States to operate an optional Monthly Reporting and Retrospective Budgeting system.●

A BLEAK VIEW OF AMERICA'S CHILDREN

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. LEHMAN of Florida. Mr. Speaker, as chairman of the Prevention Strategies Task Force of the Select Committee on Children, Youth, and Families, I want to call to my colleagues' attention an excellent commentary on America's children entitled, "A Not-So-Bleak View of Our Kids," that appeared in the Washington Post last week.

The article's author, Lisbeth B. Schorr, as many will recall, was chairperson of the Select Panel for the Promotion of Child Health, created in 1978 under the Department of Health and Human Services, to study and recommend to the Congress ways to improve child health. In 1980 the panel underscored the critical difference that public policy and effective programs can make in the lives of our children, especially those who are at high risk.

Schorr's article in the Post cites the impressive strides we have made in reducing the death rates in recent years for adolescents and young adults. Early education programs, improved and accessible health services, and a variety of family support programs have proven tremendously effective in bettering the life chances and circumstances of many vulnerable children and families.

As chairman of the Transportation Appropriations Subcommittee, I am also pleased that we have seen reductions in deaths on our highways because of tougher laws against drunk driving, other legislative changes and greater public education. That's the encouraging news.

The bad news is that there remain far too many children and young people whose current circumstances are bleak, and whose futures will be made more difficult as a result. They have yet to be part of any improving trends. In fact, we have learned that the life risks for many are on the increase again.

The Select Committee's Prevention Strategies Task Force has had an opportunity to see and document many interventions that work. Ms. Schorr's article further sets forth those issues clearly and with relevance to us all in the Congress.

I hope all my colleagues will read this article, and act on its message.

The article follows:

[From the Washington Post, Mar. 28, 1985]

A NOT-SO BLEAK VIEW OF OUR KIDS

(By Lisbeth B. Schorr)

America's young are dying at an accelerating rate, smashed up by car accidents, homicide, drugs and suicide. Right? Wrong. Death rates for adolescents and young adults have reached an all-time low.

The startling reversal in recent mortality trends for 15- to 24-year-olds goes unheralded in the popular press, as well as by academics, professionals and policy makers—perhaps because of an unwillingness to face up to the currently unfashionable idea that planned and concerted action can make a difference. The overall death rate for 15- to 24-year-olds, which stood at 106 per 100,000 in 1960, reached a high of 129 in 1969. It began falling fairly steadily during the 1970s, and had dropped to 96 by 1983.

The greatest single cause of mortality in this age group, motor vehicle accidents, peaked in 1969 and again in 1979; it has now dropped below the 1960 rate. Although the media reflect a contrary impression, even adolescent suicide rates have been going down slightly since 1979. Birth rates among school-age girls were at their highest in the 1950s; today they are well below the levels of 1960 and 1970. Every indicator of marijuana and alcohol use is down since 1979.

What caused this turnaround? We are not sure. But we can make educated guesses.

Two economic recessions and demographic changes—fewer young people at the specific ages with the highest accident risks—may have contributed to reducing auto accident rates. But deliberate social action also played an important part in each of the improved outcomes. Outraged parents, teachers and students established community programs and lobbied for legislative changes to combat drunk driving. The 55-mph speed limit and greater seat-belt use helped. Some school systems have adopted peer counseling, sex education and other programs. The availability of family planning services and legal abortions reduced the number of births to youngsters unprepared for the responsibilities of parenthood. Pre-school programs, more accessible health services and new kinds of family support programs have all helped to improve the odds that even high-risk children will grow into healthy and thriving adults.

The good news is that the trends are improving. The bad news is that an abysmally large number of youngsters continue to have poor outcomes, many are preventable. International comparisons provide some perspective. They show that young people in the United States still have five times the homicide rate of other industrialized countries. Only Romania and Hungary have higher teen-age fertility rates than the United States.

Many youngsters in our inner cities are still untouched by the forces that have improved the prospects of their more fortunate peers. Young black men remain victims of homicide at five times the rate of whites. Eight percent of 16- to 23-year olds, including 26 percent of blacks and 20 percent of Hispanics, score so low on achievement tests as to be ineligible for enlistment in the armed forces. And as recently as the end of 1984, 44 percent of young black men were still unemployed.

The picture is also bleak for disadvantaged younger children. The longstanding gap between black and white infant mortality continues and has increased in the past four years, especially in areas hardest hit by economic downturns and service cutbacks. Data assembled by the Child Health Outcomes Project of the University of North Carolina indicate that very young poor and minority children seem to be most vulnerable to current cutbacks in health and social services. Their deteriorating health status today may presage new downturns when they become adolescents.

The dramatic reversal we are witnessing today in the rates of adolescent death and damage makes clear that, as a society, we are not helpless. Carefully designed interventions can, and do, make a difference.●

THE REAGAN ADMINISTRATION'S ASSAULT ON OUR CITIES

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. RANGEL. Mr. Speaker, I rise to express my deep concern about the ad-

ministration's continuing war on our cities, and to ask that my colleagues oppose Ronald Reagan's budget cuts in housing and urban development.

Our cities need the Federal Government. They need Federal aid in housing, youth, and jobs programs, urban development, and block grants. The spirit of cooperation between Federal and city governments has been one of the most enduring accomplishments of the Great Society. We have seen the poor given a chance to rise up, the uneducated a chance to learn, and the unskilled a chance to learn a trade.

Urban problems have certainly not been resolved by this partnership, but many people have been given a helping hand who otherwise would have been left stranded. The Federal Government has helped out cities, notwithstanding Ronald Reagan's statements to the contrary.

Mr. Speaker, we must rededicate ourselves to aiding public housing and urban development. The administration would like to reduce housing aid from $11 billion to $.5 billion, and eliminate urban development action grants. I find this to be absolutely unacceptable, especially considering the fact that tens of thousands of people are on waiting lists for admission to public housing projects. I am very concerned about the way Ronald Reagan has attempted to write off the needs of these people.

I will not rest until all of our citizens receive adequate housing and employment opportunities. UDAG must be restored to its former prominence if our cities are to survive. It is incumbent upon us to give our citizens a decent quality of life, and to continue the Federal-urban partnership. This is our duty, and our trust.●

ALZHEIMER'S DISEASE

HON. MICHAEL BILIRAKIS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. BILIRAKIS. Mr. Speaker, I am certain that we will all agree that recent years have witnessed an increase in the amount of public attention that Alzheimer's disease has received. I am very thankful that this has been the case, for there are few illnesses that are as traumatic and as devastating as Alzheimer's disease. This disease currently afflicts approximately 2.5 million Americans. Furthermore, the gradual aging of our population nationwide will, consequently, translate into an increase in the number of people who are afflicted by this illness inasmuch as it is largely a disease that strikes during the mid- to late-life years. Increased attention and research geared toward finding a cure are, therefore, both necessary and important. In the meantime, however, something must be done to assist these victims and their families cope with this emotionally and financially draining situation. For this reason, I have again reintroduced the Alzheimer's relief package, H.R. 66 and H.R. 67, to provide first, emotional support through the establishment of a network of family support groups, and second, demonstration projects to determine the feasibility of providing Medicare coverage for Alzheimer's disease. I am very hopeful that my colleagues will lend these bills their support so that they can be considered by this Congress.

For those who are not yet familiar with Alzheimer's disease and the burdens it imposes upon its victims and their families, I am including herein a very informative article which recently appeared in the February/March issue of the International Medical Centers [IMC] Journal. I think that this article, and its merits, speaks for itself, and I hope that all my colleagues will take a moment to review it.

The insidious affliction creeps at a deadly pace. He lost track of night and day about two years ago. Every night I hear him wandering about the house. He picks something up—like my keys or purse—and will then put it down in the pantry, or somewhere. It will take me an hour to find out where he put them. I can't get upset, though. He forgets where the bathroom is, so, often relieves himself wherever he is standing or sitting. He gets to smelling terribly, but getting him to take a bath is a nightmare * * * the bath involves him remembering so many things: how to undress, how to unzip zippers, how to unbutton buttons, how to step into the tub, how to use the soap. When, and if, I do get him into the tub, he often panics because he can not remember how to manage the flow of the water. There are so many things * * * I'm the one who has to wash his hair, brush his teeth, cut his toenails, feed him. He can't anymore. Eating is a big problem. I had to put a steel lock on the refrigerator, and childproof locks on the kitchen and bathroom cabinets. Otherwise he would get into foods and other things he shouldn't. He will sometimes throw food at me, or throw it on the floor if he doesn't like it. Sometimes he will take off his clothes—all of them—and wander out into the yard. Sometimes, during this self-exposure, he will masturbate. All of his dignity has been stripped away. I must continually tell myself to be patient. I get so upset when the simplest task becomes a mountain to be climbed. I must try to understand what it must be like for him, imprisoned in an ever-deteriorating body, with a mind that does not function anymore.

I remember the nights that we laid in each other's arms * * * I ache to be held that way again. But I must not feel sorry for myself. I must think that tomorrow will be better.—Wife of an Alzheimer's victim, Age 66.

(By Marcia Maze)

Tomorrow. For the victims of Alzheimer's disease and their families, "tomorrow" may be years away as scientists and clinical researchers search desperately for a cure for this devastating disease.

Alzheimer's is being called "the disease of the century" because, if left unchecked, it could become the worst public health problem of the 21st century.

It currently afflicts about three million Americans—roughly seven percent of the 27 million people over 65 in the United States are severely disabled by the disease. Alzheimer's kills approximately 120,000 people every year, making it the fourth leading cause of death among the old, after heart disease, cancer and stroke. Actress Rita Hayworth, and actor Edmond O'Brien suffer from Alzheimer's, and it has claimed the lives of mystery writer Ross MacDonald and artist Norman Rockwell.

The disease is named for Alois Alzheimer, a German neurologist who, in 1906, discovered the twisted nerve cell fibers called "neurofibrillary tangles" in the brain of a woman who had shown all the signs of severe dementia. The causes, however, still remain unknown. Alzheimer's accounts for more than half of all cases of senile dementia (the others being minor strokes, Parkinson's disease, brain tumors, thyroid disorders, depression, deficiencies in certain vitamins, adverse drug reactions, anemia and alcoholism), and usually occurs after age 65, although the disease can strike in the 40's.

Fading memory is the most common early sign, and trouble with language or personality changes are among the first symptoms. Some patients believe the trouble is with their eyes because they aren't able to follow words on a page. Or, they may go for a glass of milk and end up opening the door to a closet instead of the refrigerator door.

The disease progresses slowly, but surely. Signs of true dementia soon begin to appear. The victim has trouble making appropriate judgments; he may confuse the hot and cold handles in the shower and burn himself. Then he may become incontinent, forgetting where to relieve himself. The patient may not know where he lives, or the season of the year, and even may forget the name of his spouse. During the final stage of Alzheimer's, the victim loses the ability to speak, short of saying "yes" or "no" or "O.K." to everything. He gradually becomes unable to walk, and may develop contractures of the face, arms and legs.

Relatives of Alzheimer's disease patients are as much a victim as the patient is. The act of watching someone you love disintegrate before your eyes, little by little, is agonizing. Simply being around an Alzheimer patient is physically and mentally draining. The experience can be a living hell because—until recently—the families have had no outside support and no relief from caretakers. Since insurance policies and Medicare do not generally cover "custodial care," family funds are exhausted on nursing and housekeeping help, with the result that many families resort to nursing homes. These institutions are far from an ideal environment for Alzheimer's patients, who now account for about half the residents in nursing homes nationwide. They are extremely expensive, costing the families of Alzheimer's victims and the government about $30 billion every year.

This is one of the reasons why President Reagan is such a staunch supporter of Alzheimer's disease research. The President has emphasized that: "The emotional, financial and social consequences of Alzheimer's disease are so devastating that it deserves special attention. Science and clinical medicine are striving to improve our understanding of what causes Alzheimer's, and how to treat it successfully. Right now, re-

search is the only hope for victims and families."

As the population of the United States gradually ages, the disease will affect more and more people. In 1983, a conservative estimate of the money spent by the U.S. government on the care of Alzheimer's victims was placed at $28 billion. At this rate, by the year 2025—taking into account that there will by 50 million Americans over the age of 65—the cost to the government of caring for Alzheimer's patients will exceed $750 billion!

Bearing these facts in mind, the Alzheimer's Disease and Related Disorders Association (ADRDA) is one of the most important, and influential, not-for-profit organizations in the country. Its founder, Jerome Stone, scion of the Stone Container Corporation, a Fortune 300 company based in Chicago, suffered from Alzheimer's through his wife, who died of the disease last year. When she was diagnosed of Alzheimer's in 1970, Stone wanted to learn everything he could about it, and was appalled when he found only one page devoted to the disease in a 700-page neurology textbook.

With Stone at the helm, the ADRDA has had tremendous impact and influence in obtaining federal research spending for Alzheimer's. Since 1976, government funding for Alzheimer's research has increased from less than $4 million to $50 million allocated in 1985. Last November, which was officially designated National Alzheimer's Awareness Month, the National Institute on Aging named five medical schools—Harvard, Johns Hopkins, University of California, University of Southern California, and New York's Mount Sinai School of Medicine—as Alzheimer's research centers with a grant of $16.6 million.

With some 120 Chapters and several hundred affiliated Family Support Groups throughout the United States and Canada, the ADRDA has become a powerful voice in the wilderness. We talked with ADRDA's founder and president Jerome Stone in his Chicago office, which is also ADRDA's national headquarters. Thanks to Jerome Stone, the world now knows about Alzheimer's disease. This is what he had to say.

IMC: You have brought Alzheimer's disease to the world's attention because of your wife, who died of the disease last year. How did this come about?

Stone: My wife was a gregarious, loving individual whom everyone adored. I first realized something was amiss in 1968. I thought she was just becoming high-strung and temperamental; she was in her late 40's, and the children had left the house. It is not uncommon for a woman whose responsibilities have suddenly been lifted at home to go into a depression.

To the ordinary person who saw her, she was fine. But her sleeping and eating habits had changed, and I knew something was wrong. I took her to a counseling psychiatrist, and to our family physician, who precribed medication. After one and one-half years and no change, I discussed with our physician that she may need a neurological exam.

This was now 1970, and in those days, the only way to examine the brain was by an "invasive X-ray," in which dye is injected into the brain. It is a painful type of exam, which is no longer done, thanks to the CATSCAN. Anyway, I took her to the University of Chicago hospital to have this exam, and she was diagnosed as having presenile dementia.

I said, "What does that mean?"

The doctors replied, 'She's lost some brain cells, but we don't know why.'

I asked, 'Is there a name for this?'

They said, 'No. We just call it pre-senile demenita.'

I said, 'Well, what's the difference between that and senile dementia?'

Their reply was that if you're over 65, that's a senile dementia • • •

I wasn't satisfied with their answers, so I took my wife to Massachusetts General Hospital, which is reputed to have the best neurology department in the country. Dr. Raymond Adams, who's the head of the neurology department there, as well as chairman of the neurology department at Harvard Medical School, was the first person to say my wife was in the early stages of Alzheimer's disease.

I said, 'O.K. She's got Alzheimer's. Now what do we do for it?'

Dr. Adams said, 'We don't know what to do, everything we do is trial and error. I can experiment, but I can't guarantee results.'

IMC: Was your wife aware at this time what was happening?

Stone: She was aware of my concern for her, but she protested, saying that there was nothing wrong with her. She said she was happy, and couldn't understand why we were fooling around with doctors. The reason I was so concerned was that she began misplacing things, sometimes in a bizarre way. She became worried about driving; she couldn't balance her checkbook anymore; at a restaurant, rather than admitting to me—and everyone else—that she couldn't see the menu, she'd ask what everybody else was having. And she would forget the simplest things . . . The way I describe an Alzheimer's victim, as opposed to the ordinary person who is simply forgetful, is this: I may forget a telephone number, but the victim of Alzheimer's forgets there's a phone • • •

You see, she cleverly learned to work around her own inabilities, as all Alzheimer's victims do in the early stages. Most Alzheimer victims have enough survival resources and intellect to fumble through for a few years without other people knowing. It's a denial, which all of us practice one way or another. The worst thing that a human being can be faced with is that of losing control. So when you think you are losing your faculties, you don't want to admit it—even to yourself. So you learn to work around it.

IMC: Since many of these early stages of Alzheimer's do mimic a depression, how does one know whether it's Alzheimer's, or just a depression?

Stone: This is the entire thrust of our organization: to educate the public so that these tell-tale signs are quickly brought to the family's attention, who can then insist upon a neurological work-up.

IMC: So what happened to the experimentations at Mass. General?

Stone: It didn't work. Nothing was working. I couldn't get answers on the cause of this thing, the cure, or the therapy. The doctors simply told me that Alzheimer's was an irreversible brain degenerative disease. They told me to put my wife in a nursing home, and go out and lead my life • • •

Well, I said, 'That's not what I came here for. I want to know how to lead my life with my wife, and how to manage this situation'.

Their retort was, 'We can't help you then'.

So I went to the medical textbooks myself to see what I could learn on my own about the disease. What I found was unbelievable; out of a dozen neurological textbooks that are used in the nation's top medical schools, only one made any mention of the disease—and this on only one page!

IMC: Through this studying, however, you did find out where research was being done.

Stone: Yes. At Albert Einstein Medical Center in New York City. I went there, and told them I wanted to support their research. Over the years, I began wondering whether there were other people like me, who were going through the same "on-the-job" training, and whether there might be an organization to help such people. Well, there was no such national organization, so Dr. Bob Terry, a research neurologist at Einstein (and the doctor who first described the "neurofibrillary tangles" in an Alzheimer brain), said that I should start an organization devoted to the victims of Alzheimer's.

I had had a good deal of organizational experience, thanks to being CEO and Chairman of the Board of the Stone Container Corporation (which is the largest manufacturer of paper bags and corregated containers in the United States). Yet I had not the faintest idea how to organize a national voluntary health care association, but I sure could lay my hands on people who would and could give free consultation services.

So, I appeared before the National Institutes of Health in Washington and talked about Alzheimer's. There were then six organizations in the country with family support groups which dealt with Alzheimer's, but they also dealt with other forms of mental disease: there was not one organization dealing exclusively with Alzheimer's.

IMC: How did you come up with "ADRDA"—Alzheimer's Disease & Related Disorders Associations?

Stone: The "Related Disorders" was the umbrella under which we could fit other diseases, such as Creutzfeld-Jacob disease, Pick's disease, and even strokes and accidental brain damage. But with 2½ million victims in the United States, the name of the game was Alzheimer's.

IMC: The first ADRDA office opened in New York City in the Autumn of 1980, roughly a year after you appeared in Washington before the N.I.H. How did you get everyone's attention so rapidly?

Stone: About a month after we moved into this tiny office—which a friend had kindly donated—"Dear Abby" printed a letter from a person requesting information on Alzheimer's. Well, Abby called the N.I.H., and they gave her the address of our little office.

Within four days, we had received over 25,000 pieces of mail from people across the country, requesting information and telling their stories of Alzheimer's. Mail was everywhere. And the phone was ringing off the hook.

IMC: In just under four years, then, ADRDA grew to over 120 chapters nationwide. Now the organization is going on an international basis?

Stone: We formed an international organization in October 1984, and we have about a dozen European countries participating, and 35 countries have expressed interest. The problem with Europeans, however, is that they don't know how to raise money because they don't understand self-help, voluntary health care agencies. In Europe, all health care has traditionally been provided by the government's socialized medicine. What they don't understand is that socialized medicine does not take care of the

family: This is what I—the ADRDA—is trying to do.

IMC: What exactly are ADRDA's goals?

Stone: I use the acronym "RECAP" for a recapitulation of our goals, which are: Research; Education; Chapters; Advocacy; and Publicity.

IMC: There must be many other problems besides medical problems that an Alzheimer's family has to learn to deal with.

Stone: Many. There are economic, social, nursing and legal problems involved. That's why ADRDA is so vital. Alzheimer's is a disease in which you have to be either very poor or very wealthy in order to cope. The middle glass family with an Alzheimer victim is completely wiped out. I was able to afford the $100,000 a year it took to care for my wife, but how many people can afford that? Not very many.

For a long time, we couldn't get the Social Security administration to realize that Alzheimer's was a brain disease. They said the person was senile—a normal fact of life—not disabled.

IMC: How is America going to handle the Alzheimer problem, particularly as America gets older?

Stone: 11% of our population—26 million Americans—are now 65 and older. America is aging at approximately 1600 people every day. By the year 2030, over 20% of the population will be over 65—that 60 million people.

By extrapolating these figures to 84 statistics, we get this: in 1983, Alzheimer's cost the U.S. $28 billion (based on $20,000/year nursing home costs, $10,000/year at-home costs at two million victims). Given these figures we come up with a cost of $750 billion a year spent by the government for the care of Alzheimer's victims by the year 2025 * * *

IMC: You presented these figures to Congress?

Stone: At the end of 1983, I appeared before Senator Tom Eagleton's [Dem., Missouri] Senator Sub-Committee on Aging. The figures got their attention: in 1977, there were zero dollars spent on government research for Alzheimer's. In 1985—unless the President cuts it—there will be $50 million devoted to Alzheimer's research.

IMC: The citizens who serve on ADRDA's Board are an influential group. How were they selected?

Stone: Every member of the Board—with the exception of one—has an Alzheimer victim in the family. Rita Hayworth's daughter, Princess Yasmin Khan, has been a tremendous worker in the fight. I have found that, when I call someone who has had a family member with Alzheimer's disease, there is never any hesitation on their part to offer help.

IMC: Is Alzheimer's hereditary?

Stone: We still don't know why some families are struck with the disease, and some are not. The chances of getting Alzheimer's if your sibling had it are probably twice that of the ordinary non-Alzheimer family, however.

IMC: How can the average lay person help ADRDA in the fight against Alzheimer's?

Stone: Volunteer at your local ADRDA chapter is one way; and write to your Congressmen to tell them to do more for research, tax matters and disability insurance for Alzheimer victims. We also have many people who send money to national headquarters, which is used for research, education and staff needs. Many of our chapters have established day-care centers. We also have an autopsy network whereby people who can't afford to pay for autopsies can receive assistance.[1] We've also established two brain banks for research.

IMC: What is the best advice you can give to a family member of an Alzheimer's victim?

Stone: Join a family support group. The children too. You'll learn that you're not alone, and you can share your experiences. For instance, I learned by trial and error that one of the greatest fears of the Alzheimer's victim is fear of the water. I also learned about the victim's need for creativity, and their response to the rhythm of music and the cadence of poetry. I used to read the 18th century romanticists—Byron, Tennyson, and Browning—to my wife, which would give her peace for hours. And, even in the later stages, she would still play notes on the piano * * * It gave her something to do with her hands * * *

IMC: Have you done all this work, then for your wife?

Stone: Inherently, I suppose there is a self-motive for what I'm doing, because I'm concerned about my children getting Alzheimer's. But I'm very concerned about this country—and about what's going to become of the entire world. Alzheimer's has no respect for race, color, creed, religion, or whatever. I don't want to take any credit, but until ADRDA was founded, people did not know what Alzheimer's was. Even three years ago, if I told people my wife was ill and suffering from Alzheimer's, they'd respond, 'Old-timer's disease? Never heard of it.' Now, not a day goes by that there is not some article published or TV program done on Alzheimer's.

IMC: what you've discovered, then, is that Alzheimer's has always been in existence?

Stone: Yes! I believe that King Lear had it. And what Aristotle and Plato called "senility" was very probably Alzheimer's * * *

IMC: You must feel an extraordinary gratification in having brought a disease of this magnitude to the attention of the world?

Stone: Of course, but even more gratifying is having met so many dedicated and concerned people. The people at IMC are among them, and I am deeply appreciative to all of you for helping the Alzheimer's fight in Florida through your gala. To know that people can and do rise to the occasion is the greatest reward of all for me.

IMC: Is hope in sight?

Stone: Even if there is no hope for your loved ones, there's hope for the next generation. Remember: there are no hopeless situations * * * only hopeless men and women.

Where there is life, there is always hope * * *●

[1] It is very important for the family to have an autopsy done to help in Alzheimer research.

THE SUPPLY SIDE OF NARCOTICS

HON. LAWRENCE J. SMITH

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. SMITH of Florida. Mr. Speaker, many efforts are being undertaken to combat the demand side of the drug problem in this country. However, as with any commodity, we also must consider the supply side of this problem.

While efforts to reduce the demand for narcotics have been somewhat successful, the supply of drugs coming into the country continues to grow. The demand cannot decrease if drugs are readily available on our streets. To combat this problem, efforts must be made to cut off this supply from those countries overseas which continue to be the source of narcotics smuggled into the United States.

The March issue of the U.S. Journal of Drug and Alcohol Dependence published an editorial that discusses this problem and recommends several courses of action which we should consider. The editorial calls for more Drug Enforcement Administration agents to police the drug trade in over a dozen countries. These nations, the editorial argues, must be convinced of the urgency of undertaking action of their own to control the drug activity within their borders.

I believe that this body needs to give serious consideration to these recommendations. As the chairman for the 99th Congress of the Foreign Affairs Committee's International Narcotics Task Force, I will consider them. For the benefit of my colleagues, the editorial follows:

GETTING TOUGH ON THE SUPPLY SIDE

It's time to talk tough to those nations who profess to be our friends and trading partners, yet refuse to make good faith attempts to control the drug trade that flourishes within their borders and preys on the human wealth of others.

As a recent State Department report shows, the illicit cultivation, refining, and production of opium, coca leaf, and cannabis continues unabated in a growing number of countries. Supplies of these drugs already far outpace the ability of consumers to absorb them, yet more and more stockpiles continue to reach our shores.

Despite the millions of dollars of enforcement and interdiction efforts mobilized by our government, the drug inventories reach their customers. The international networks of gangsters who move this traffic—often with the barely-disguised aid of their own government officials—seem to run very little risk of apprehension, and even less of conviction and meaningful penalty.

That the gangsters should continue to get away with it, while their governments either turn the other cheek or help load the boats is our disgrace almost as much as it is theirs. As much effort as this Administration has put into interdiction activities, it isn't enough, so far.

There aren't enough Drug Enforcement Administration agents or dollars available for this nation to try to police the drug trade in Mexico and Bolivia and Peru and Ecuador, and almost a dozen other nations worldwide.

Those nations must be held accountable for their own efforts. If they expect to belong to a family of law-abiding nations—and reap the very clear and present benefits of such family status—then they must be convinced of the urgency of cleaning up their act.

It's possible this can be done. The advances made by Colombia—at U.S. urging—to curtail cocaine production has started to show some results. If it can be done in Colombia, it can certainly be done in Bolivia, Peru, Mexico, and several other countries.

What we are talking about here is not the suppression of small cottage industries, or occasional roving brigands. We are talking about cultivation, refining, storing, transportation, documentation and banking networks dealing in billions of dollars' worth of product. You don't produce and bring to market over 120,000 metric tons of coca leaf (Bolivia, Peru, Ecuador and Colombia in 1984), without somebody seeing it happen, without governments having some hint of who is driving the truck and fueling the plane.

What's so tragic about this booming production is that some very clear strides have been made in the United States to suppress the demand side of the drug use equation. We are starting to see some successes in terms of moderating drug consumption, changing attitudes of many young people toward dangerous drugs, and we are starting to see the positive effect of public health education.

But if we allow the traffickers and their accomplices in government posts to continue to flood our nation with cheaper and more plentiful drugs, then we will soon enough lose all the demand side gains we have achieved, and might continue to achieve. We can't afford that.

President Reagan has shown a willingness to talk tough on other issues to some pretty imposing adversaries on life and death issues: arms control, star wars, Central America.

Drug use in America is no less a social priority.

Let's see the President use his magic on the drug-producing nations. He is not without persuasive power. Neither is he without leverage—lots of it.●

IN MEMORY OF PATRICIA ROBERTS HARRIS: A PIONEER IN AMERICA

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. RANGEL. Mr. Speaker, I rise to join my many colleagues and friends who mourn the loss of a truly outstanding public servant—Patricia Roberts Harris.

Mrs. Harris was a woman of enormous energy, integrity and character; her moral compassion and conviction were inspirations to us all. Her incomparable career was precedent setting. Her standards of excellence, her keen intellect, and her unyielding courage guided her toward exemplary service. Pat Harris never forgot from whence she came; her triumphs will never let us forget how far we have come.

I submit this editorial from the Washington Post for inclusion in the CONGRESSIONAL RECORD.

[From the Washington Post, Mar. 25, 1985]

PATRICIA ROBERTS HARRIS

The Post's account of the life of Patricia Roberts Harris, who died Saturday at the age of 60, emphasized the "firsts"—first black to serve as a delegate to the U.N., first black woman to become law school dean, ambassador, Cabinet member. One thing about firsts is that people sometimes tend to forget them as they are succeeded by seconds, thirds and so on.

Sen. William Proxmire made this mistake during hearings on Mrs. Harris' nomination to be secretary of housing and urban development in the Carter administration. Sen. Proxmire saw before him a woman whose career was marked by success and whose reputation stood high in the governing establishment, and he wondered aloud about her ability to be "sympathetic to the problems of the poor."

"You do not understand who I am," Mrs. Harris replied. "I am a black woman, the daughter of a Pullman car waiter. I am a black woman who even eight years ago could not buy a house in parts of the District of Columbia. I didn't start out as a member of a prestigious law firm, but as a woman who needed a scholarship to go to school. If you think I have forgotten that, you are wrong."

Mrs. Harris' statement was characteristically, tough and forceful—attributes that often go with being first in areas where, for no good reason, you are not wanted—such as a segregated Washington lunch counter where Mrs. Harris led a sit-in by a group of fellow Howard University students in 1943. If some complained that she wasn't playing an activist role in the civil rights movement in the '60s, she could reply, "When I sat in there was nobody else to do it."

Her Cabinet tenure was in departments whose constituency is made up of people living on the edge. She ran the departments hard and fought for them fiercely. "She always impressed me as someone who cared very much about people who were not getting a decent shake, and she also impressed me as being tough as nails when it came to taking care of their interests," said Jody Powell, who was President Carter's press secretary.

Along with the firsts and the ups in her career there were the downs—a term as dean of the Howard University Law School cut short by a dispute over student protest, and her defeat in the 1982 race for mayor of this city. But no one should doubt that in all her work she showed—as she made clear to Sen. Proxmire that day eight years ago—that she had not forgotten either her own past or some of the darkest moments of this country's past.●

THE MX MISSILE: THE PEOPLE'S PERSPECTIVE

HON. JOHN F. SEIBERLING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. SEIBERLING. Mr. Speaker, the President has narrowly won the latest round on the MX missile, but both we and the country will pay an increasingly high price for this folly.

The price is not only the egregious waste of billions of dollars for a militarily vulnerable and strategically provocative weapons system. That is bad enough, since it will take scarce funds that could have been used to reduce the deficit or to finance the strengthening of NATO's conventional forces, as our colleague CHARLES BENNETT pointed out so cogently during the debate.

The price also includes, unfortunately, growing disillusionment on the part of the public over whether the President and Congress are capable of making the kinds of decisions necessary to deal with the serious strategic and economic issues facing this country, as the arms buildup and the deficits roll along with a momentum all their own.

Even while the MX debate raged in the House, the Washington Post released the results of a new national poll indicating that, despite the enormous public relations effort the administration has made, a plurality—47 percent—of the people oppose going ahead with the MX missile. The poll also indicated that a substantial majority of the American people want the defense budget to be cut.

Unfortunately, as the President said during the campaign, "You ain't seen nuthin' yet." If the public thinks the MX is expensive, with a price tag of $34 billion to complete the first 100 missiles and harden their silos, wait till the "star wars" program gets into high gear. The initial request of $26 billion over 5 years is just for research and testing, and only the first installment on that. If we should ever be so foolish as to deploy such a system, which at best would have enormous holes in it—since it will not defend against such things as manned bombers or cruise missiles or low trajectory submarine-launched missiles—we will find ourselves spending, not billions, but trillions of dollars.

Surely, there is a better vision of the future, if we set our minds to it. If he were providing constructive leadership, the President would be pursuing, not "star wars" but a nuclear freeze, followed by nuclear and conventional disarmament, and enforced by both national and international monitoring systems. Indeed, the development of such a system should be the goal of national leadership in both the United States and the Soviet Union, since it clearly is in the interest of both nations. Only through progress in that direction can they hope to free their people from the ever mounting spiral of defense expenditures, now on the way to bankrupting both countries.

The historic forces that brought on the nuclear arms race and the profound conflicts that continue to exist between the United States and the U.S.S.R. cannot be lightly dismissed. Nevertheless, the continued escalation of the arms race represents an immense failure of leadership on both sides of the Iron Curtain. If the President of the United States is incapable of providing dynamic leadership in the direction of disarmament, we can only

hope that the new leader of the Soviet Union, Mr. Gorbachev, will take the initiative. While it would be a miraculous departure from past patterns of conduct by Soviet leaders, it is time we started hoping and working for miracles.

Mr. Speaker, as evidence of the increasing disillusionment affecting people at the grass roots, especially young people concerned about the future, I offer for printing in the RECORD a recent article by a student, Jim Prater, from the Buchtelite, a student newspaper of the University of Akron, in Akron, OH.

[From the Buchtelite, Mar. 21, 1985]

GOVERNMENTS WAGE WARS, BUT PEOPLE PAY WITH LIVES

(By Jim Prater)

Personally, having been there, I hate war. I also hate taxpayers being milked for a lifetime over the threat of war. Unfortunately, both activities have been practiced throughout history.

For example, my Eastern Civilization class has been studying about the military/political turnovers in just one area of the world—the Middle East. To avoid the confusion of modern problems in that volatile area, let's go back a few years and list previous regimes in order—each turnover the result of war:

The Ottoman Empire (1600 A.D.)
The Mongols (1250 A.D.)
The Crusaders (1100 A.D.)
The Islamic Arabs (750 A.D.)
The Byzantine Empire (550 A.D.)
The Roman Empire
The Hellenist Empire (300 B.C.)
The Persians (500 B.C.)
The Assyrians (650 B.C.)
The Egyptians (1450 B.C.)
The Babylonians (2100 B.C.)

No one is sure what happened before the Babylonians, but based on the above history, millions upon hundreds of millions of people have been taxed and killed by war—or the threat of war. Taxed by their own rulers in the name of defense and killed by other people in the name of something glorified.

From this, it's easy to conclude that since the first caveman hit the second caveman in the head with a rock, all the warriors in mid east history have died in vain. The same is true for all the warriors in history in the rest of the world.

Still, it continues, war seems to be inevitable. It is the most stupid activity ever developed, but it is inevitable. Historically, mankind actually loves to kill. Plato said, "Only the dead have seen the end of the war."

Today, with fifty thousand nuclear warheads between us and the Russians, all it takes is one shot, false or not, and we're all incinerated.

Nuclear war, and the threat of nuclear war, is currently paramount in everyone's mind. When it comes to Star Wars and its computerized, laser beam technology, and the MX missiles, I will admit I don't know much about the technological aspects. Maybe I don't need to in presenting my argument against both.

Cutting through all the political rhetoric and technological jargon I've read, pro and con, what it all seems to boil down to is we've invested billions of dollars developing a weapon, the MX, which is vulnerable because it has no home. The environmentalists, rightfully, were able to persuade the government to not tear up a third of the country developing a crazy system of transporting the MX and dummy missiles from place to place—supposedly to fool the Russians.

Out of 33 other basing modes studied, the current alternative, basing the MX in existing Minute Man silos, leaves them vulnerable, (we're told), to a Soviet strike. Ergo Star Wars, and its multi-billion dollar technology.

Star Wars, if it even works, is only required to protect the MX. What this means to me is, no MX, no Star Wars.

Sometimes, I think we must have a minister of propaganda. He might have another title, but he's doing a job of flim-flamming and propagandizing the American people. It is so effective, maybe it's a joint effort. In Washington, anything is possible.

George Will recently wrote, "In geometry, a line can have length without breadth. In Washingtion, the argument about the MX missile is like that."

He goes on to say,"Actually the MX argument resembles not geometry, which is reasonable, but modern art—say, abstract expressionism, which is the work of the confused, sold to the earnest."

The administration says the MX is a "bargaining chip" and a "vote on Geneva." In truth it's a bargaining chip between the Administration and Congress. The "vote on Geneva," meaning arms control, should really be called "no arms control."

Let's cut through the propaganda: Arms control is a lot of garbage. Since SALT I the number of nuclear warheads has quadrupled and the Soviets have deployed 21 new nuclear weapons systems.

The United States does the same. The 1972 treaty banned defense of Intercontinental Ballistic Missiles (ICBMs). The United States arms control negotiators of that time agreed to this and the tready was ratified.

We, as a nation, are bound by its terms.

SALT I limited the number of launchers, hence, we built bigger launchers with multiple warheads—like the MX. At the rate we're going, by the time we reach SALT V or SALT VI, we should collectively have at least 200,000 nuclear warheads—all useless according to former Defense Secretary Robert McNamara.

Finance is done through deficit spending—more garbage. The only way the United States can be defeated is through bankruptcy.

As a taxpayer, when you begin realizing how you're being flim-flammed by the powers that be in Washington, you begin to question everything you hear coming out of the place. (Unless you decide to join in and help do the flim-flamming). The only way I could support the MX or Star Wars would be if a national referendum showed a majority of the people are in favor of the ghastly expenditures involved. I would hope most Americans, if given the opportunity would say, "Let's keep America strong, not bankrupt."

The majority of people in the work force aren't a part of the military-industrial complex. They make automobiles and refrigerators, build houses, construct highways or become educators, etc. I don't hear any of them saying they will be overjoyed and happy to contribute their $2,000-per-person share of the Star Wars cost—in addition to their per person cost of Trident submarines, B-1 bombers, M-1 tanks, etc., etc.

For those already in or those contemplating joining the military-industrial complex, why not pay $2,000 in if you're going to get $50,000 or $100,000 back every year, enjoy a never-ending cushiony job with travel and lush vacations, $600 toilet seats and $7,000 coffee pots—all through the courtesy of the American taxpayer. Maybe you'll even get free boarding for your dog, too!

If Star Wars technology is initiated to protect us from enemy missiles, what is going to protect us from the people in the military-industrial complex who are doing these things right now? Our only hope may well be an Annual Federal Referendum as suggested in this column a few weeks ago.

In the meantime, some principles are needed to at least regain the confidence of the taxpaying public: They're called integrity, scruples, honesty, honor and patriotism—principles that seem sadly lacking in our current military-industrial complex.

I read where those in favor sum up their Star Wars pitch by saying, "What kind of sense does it make to ban defensive weapons? It's illogical and ridiculous." We are urged to "go ahead with the program and worry about deployment when the time comes."

That's the same bill of goods somebody in Washington sold the Congress when they wanted approval of MX development monies. Remember the window of vulnerability? Come on! Now who is being illogical and ridiculous?

As for spinoff benefits, let's compare: As just one example, what did we really get, other than a few rocks, for the billions spent going to the moon?

Ending nuclear war forever sounds good. To bad Star Wars won't do it. Cruise missiles, conventional bombers and artillery—all have current nuclear capability—are unaffected by Star Wars. We'll still have mutual assured destruction.

Ronald Reagan says Moscow considers the MX vote coming up to Congress a test of U.S. "resolve." Let's face it, we were humiliated in Iran, driven from Lebanon by a truck bomb and drug dealers fly back and forth over our borders with impunity. When it comes to "resolve," is it any wonder the silent majority is cynical?

If I am a representative of the silent majority, I am also cynical of how some of our elected representatives do business. I no longer believe they vote in my best interest, or the country's best interest. And that's based on special interest lobbying! (In Washington, it's called lobbying. In private industry, it would be called bribery.)

Fortunately, in the Akron area, we have Congressman John Seiberling, who is honest, concerned and will respond to written requests or comments. Want to try helping save a few hundred billion tax dollars over the course of your lifetime?

Write your Congressman.

Remember, no MX, no Star Wars.●

PHOBIA CLINIC HONORED

HON. GARY L. ACKERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. ACKERMAN. Mr. Speaker, it is with great pleasure that I call the attention of my colleagues to the honor recently bestowed upon the Phobia Clinic of Long Island Jewish-Hillside Medical Center, in New Hyde Park,

NY, for its outstanding efforts on behalf of the mentally ill. The clinic was selected from 134 applicants to receive an award of significant achievement from the American Psychiatric Association at its 36th Annual Institute on Hospital and Community Psychiatry.

The Phobia Clinic, directed by Charlotte M. Zitrin, MD, serves as a model for the Nation through its direct approach to ameliorating the plight of the severe phobic, as weli as through its research and training in the field.

The Phobia Clinic began its innovative program 12 years ago, funded by a grant from the National Institute of Mental Health. The clinic's goals were to conduct research, and to provide free treatment for New York City-area patients with phobic disorders. Extensive coverage in the media triggered an onslaught of patient inquiries from around the Nation about the possibility of treatment.

Today, the clinic serves an average of 183 patients each year. Although treatment is no longer free, the clinic has instituted a sliding-scale fee schedule so that income level will not exclude a patient from treatment.

Mr. Speaker, I commend the Phobia Clinic not only for its selection by the American Psychiatric Association, but also for the example it has set by showing what can be done for our Nation's at-risk emotionally ill. I draw to the attention of my colleagues also to an article published in the Journal of Hospital and Community Psychiatry that describes the award-winning program, and ask that it be printed in the RECORD.

TREATING PHOBIAS IN A SPECIALIZED CLINIC—THE PHOBIA CLINIC, LONG ISLAND JEWISH-HILLSIDE MEDICAL CENTER, GLEN OAKS, NY

Each week at the Phobia Clinic of Long Island Jewish—Hillside Medical Center in Glen Oaks, New York, phobic individuals meet with a therapist and discuss their progress in conquering debilitating fears. After the group discussion, everyone embarks on an in vivo assignment, such as taking a train or shopping in a supermarket, that will force the patients to confront their fears.

With repeated exposure and the support of aides who accompany them on assignments, the phobic patients gradually become desensitized to the situations they dread. Because everyone in the group shares the same acute fear (claustrophobia or acrophobia, for example), patients find empathy and understanding within the group. Between clinic sessions group members often meet and carry out homework assignments together. Patients who feel too anxious to participate in group therapy, however, may opt for individual sessions.

Twelve years ago a press release announced the opening of this specialized clinic, funded by a grant from the National Institute of Mental Health. The clinic proclaimed that its goals were research and free treatment for patients with phobic disorders from the New York metropolitan area.

Extensive media coverage triggered an onslaught of patient inquiries about the possibility of treatment. Today the clinic serves an average of 183 patients each year. Although treatment is no longer free, the clinic has instituted a sliding-scale fee schedule so that finances will not exclude a patient from therapy.

One innovative technique practiced by the phobia clinic is the group family meeting. During these sessions relatives ask questions about the patient's symptoms and the degree of distress he or she experiences. Such meetings improve strained family relationships and help relatives to deal with denial of the problem or resistance to treatment.

Approximately 80 percent of the phobic individuals receiving treatment at the clinic have improved significantly, reports Charlotte M. Zitrin, M.D., the psychiatrist who directs the clinic. Of all the phobias, says Zitrin, agoraphobia—fear of open spaces—is the most difficult to treat because it affects every aspect of daily living. Agoraphobic patients who are terrified by the prospect of driving on freeways, crossing streets, or shopping in malls eventually become housebound. Some of Zitrin's patients have been agoraphobic for as long as 20 years.

Zitrin estimates that agoraphobia afflicts six out of every 1,000 individuals: the majority of agoraphobic patients are women who have recently married, moved into a new home, had a baby, or suffered the loss of a loved one. Zitrin theorizes that phobic patients are predominently women because society's "values and roles have affected women's dependency needs, self-esteem, and self-assertion."

Agoraphobic patients often suffer from panic attacks marked by such symptoms as dizziness, shortness of breath, chest pain, palpitations, headache, sweating, trembling, and fear of impending doom. Staff of the phobia clinic have found that antidepressants such as tricyclics and monoamine oxidase inhibitors can suppress the symptoms of panic attacks.

Other research studies conducted at the clinic have uncovered a high incidence of thyroid dysfunction among phobic patients and of mitral value prolaspe syndrome among agoraphboic women. The staff believe their research was partially responsible for the changes in diagnostic classification of phobias and other anxiety disorders that were published in the third edition of the Diagnostic and Statistical Manual of Mental Disorders.

In addition to its treatment and research functions, the clinic trains mental health professionals and advises those who are interested in starting their own phobia clinics. Zitrin and her staff maintain that the diagnosis and management of phobias demand specialized skills that a general psychiatrist might lack. They stress the need for more phobia clinics "where diagnosis and both psychosocial and medication therapy are undertaken by highly skilled and experienced professionals."

(More information is available from Charlotte M. Zitrin, M.D., Phobia Clinic, Long Island Jewish-Hillside Medical Center, P.O. Box 38, Glen Oaks, New York 11004.)●

STUDENT FINANCIAL AID: THE STAKES FOR THE FUTURE

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. BOLAND. Mr. Speaker, when the House begins its consideration of the fiscal year 1986 budget resolution, a number of issues will compete for our attention. We will have to make many choices, choices which will have an immediate impact on the lives of millions of people in this country.

The choices we make on one issue—student financial assistance—however, have the potential to shape our society not only in the near term, but for generations to come. Federal loan and grant programs have opened our system of higher education to young people who could not otherwise fully avail themselves of it. By introducing diversity into the student bodies of our most select colleges and universities, these programs have enriched the educational experience for aid recipients and nonaid recipients alike. The benefits of this process should be obvious, and we should therefore approach budget recommendations that would weaken it with a great deal of care. On March 31, the Washington Post carried a column by David Border on this subject. The column contained a portion of a discussion Mr. Broder had with the president of Georgetown University, Rev. Timothy S. Healy. Father Healy's comments forcefully articulate the real stakes in the student aid debate. I hope the Members of the House will consider the points Father Healy makes when we consider the various budget proposals for education in the coming weeks.

Mr. Speaker, I would like to insert Mr. Broder's column at this point in the RECORD:

[From the Washington Post, Mar. 31, 1985]

A DANGER TO GEORGETOWN—AND THE REPUBLIC

(By David S. Broder)

While the nation's basketball fans were watching Georgetown University try for a second straight NCAA title, the eyes of Georgetown's president, the Rev. Timothy S. Healy, were focused on a less glamorous sight.

When I saw him in his office recently, he was poring over a report from a university vice president on the impact of President Reagan's proposed reductions in student aid. It was a lot less pretty than a slam dunk by Patrick Ewing. I had gone to Georgetown because, under Father Healy, it has made a special effort to recruit not just basketball players, but academically gifted students from the ghettos, who can benefit from its first-class education.

I had already heard the views of Healy's friend, Joseph S. Murphy, the chancellor of the City University of New York. CUNY has the largest black and Hispanic student body in the world, and 85 percent of its students

come from families in which neither parent graduated from college.

Murphy, who minces no words, said the administration aid cutbacks—in his view—part of a strategy to "rigidity the class structure of America," by closing down the main channel to middle-class jobs for poor youths and forcing them to compete for available low-wage jobs with little future.

That is one view. But with Georgetown on the country's mind, I wanted to know if the administration's proposals would affect Healy's college. This is what I found out: half of Georgetown's degree candidates—5,599 of 11,187—this year received financial aid. That aid totaled $52 million. If the Reagan cuts had been in effect, the university thinks 4,337 of the aid students—77 percent—would have lost $14.2 million, an average of $3,274 each.

Some of the loss might have been made up by unsubsidized loans. But a first-year undergraduate or graduate student who borrowed from the bank to make up for the loss of the government-guaranteed loan would—if accepted as a good credit risk—pay back 68 percent more over 19 years than under the old program.

I asked Healy if it were not true, as the administration maintains, that Georgetown and other well-endowed institutions could do more to help their own. "In 1975," he said, "financial aid was 7 percent of our budget; in 1980, it was 12 percent; this year, it's 15 percent. It's doubled in a decade. This year, we raised tuition $800 and 27 percent of that increase is earmarked for student assistance. But there is no way we can fill a $22 million gap."

I asked Healy for his best judgment on the effect the Reagan proposals would have on Georgetown.

"Georgetown would not go out of business," he said, "but you would destroy a mix that's profoundly healthy for this republic. . . . We would still be able to handle some poor kids—if they applied—but there would be a huge gap between them and the rich kids whose family paid their way. If you cut $22 million out of the grants and loans that are available, you would just liquidate the middle-class kid who's bright enough to come to Georgetown but who needs massive help."

Could they make it by working? Healy said too many of his students were already carrying too much of an outside workload. A survey in 1983 found half the underclassmen and even more of the juniors and seniors were spending from 10 to 30 hours a week in jobs. It is not realistic to think they can earn enough to make up the average loss of $3,200 and still have time or energy for education.

Then Healy said: "This administration forgets that the element of choice for poor kids is a guarantor of the reality of education for all the rich ones. It's part of the education of the rich that they go to school with kids who aren't as rich as they are.

"That didn't happen when I was kid. [He is 62.] But American colleges learned that lesson. And now more black kids are getting into more selective colleges, and we're launching a black middle class. There's been real progress there.

"But look what they are proposing to do. They would limit the assistance to any kid—no matter how poor—to $4,000. They tell them to borrow the rest. The cabdriver in this city isn't going to do that. . . . That's half his take-home pay. That's crazy.

"I'll tell you what will happen; it's already happened. Seven years ago, 32 percent of the cohort of black kids went to college. It's down to 27 percent this year. And all of this publicity about student aid cuts will lower it further.

"Kids get the idea, particularly when they're not well guided, that the administration had already decided this, and it's done already—that where there was financial aid available, there isn't going to be any. So they don't apply."

And then he said: "If we lose this battle to educate black kids, then we are setting up for your grandchildren a permanent underclass of uneducated incompetents who cannot cope with the 20th century. We're building a real Orwellian horror."

That is why the president of Georgetown had his mind on something other than a basketball game. Maybe we should too.●

WITNESS FOR PEACE

HON. BOB EDGAR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. EDGAR. Mr. Speaker, as the House moves toward a decision on funding the rebel forces opposing the Sandinista government in Nicaragua, I want to bring my colleagues' attention to a briefing I recently held with Witness for Peace (WFP) on the situation in Nicaragua and along its borders.

Witness for Peace is a national interfaith organization which, for the last 15 months, has had members living in the war zones in Nicaragua. Hundreds of citizens have been part of short-term delegations and 40 citizens have been residents for 6 months or longer. WFP participants have lived in the areas of conflict along the northern and southern borders on Ocotal, San Juan de Limay, Jalapa, and elsewhere.

The purpose of the briefing was to hear WFP members discuss their experiences in Nicaragua, explain the effects of the rebel attacks, and share other first-hand impressions of the war. The testimony of two of the members was particularly striking, and I ask unanimous consent to insert their remarks into the RECORD following my statement. The two are Dr. Edwin Myer, a member of the Church of the Brethren from Seattle, WA, and Mr. Larry Leaman, a Mennonite from my home State of Pennsylvania. Dr. Myer has practiced medicine in the United States and Puerto Rico for a dozen years, and also has medical experience in Mexico, Peru, and pre-revolutionary Nicaragua. He has just returned from 7 months in Nicaragua as a long-term volunteer with WFP. Mr. Leaman has also just returned from Nicaragua, where he spent 9 months traveling extensively throughout the zones of conflict in both the north and south of Nicaragua.

I commend their words to my colleagues.

TESTIMONY OF DR. ED MYER, MARCH 5, 1985

In August 1984, I left my family practice in Seattle, Washington to join Witness for Peace. I was assigned to the northern war zone and in less than one week on the job, I found myself in the midst of what I now call the Nicaraguan reality.

On September 1st, three Cessna rocket-fitted airplanes and a Huey Diana 500 helicopter were involved in a contra attack which killed three little girls and a farmer. I was in Santa Clara two and half hours after the attack. Early the following morning, I went to a home where two 12-year-old victims, Juanita and Elena, had been laid out on tables. Later that day, I helped carry the casket of a 13-year-old in the procession for her funeral. This wasn't exactly the kind of medical work I had in mind when I went to Nicaragua. Within 24 hours of the time the helicopter had been shot down, I was at the crash site. Two U.S. mercenaries were in that helicopter. With so much continued terror during my time in Nicaragua that Santa Clara attack seems very long ago.

In another incident, I interviewed 28-year-old Maria Julia Ortiz Chavarilla from a settlement near Jalapa. Early on the morning of October 24, 1984, contras entered her home, and she hid under her bed. From there she watched as the contras threatened her husband verbally, then struck a heavy blow to the base of his skull. Three of the contras lifted him up and took him into the adjacent hallway, where she saw them strike him in the face, opening a deep gash. When he pled to speak to his wife before they killed him, they stuffed a green rag in his mouth, threw him to the ground and slit his throat. He was 40 years old. His two-year-old daughter was hiding under the bed with her mother and gasped, "my daddy!" giving away their location. The contras pulled Maria Julia from under the bed, stripped her naked, struck her on the head, and left her for dead. Her children ages 2, 9, and 10, were also left naked. Maria Julia was three months pregnant at the time.

Another incident: I have questioned and cross-questioned witnesses to the contra kidnapping of 25 people, including 4 children and 3 women from a coffee farm near Dipilto this past January 29. One man I interviewed was a 36-year-old father of 4 children. He was kidnapped, then later escaped. He refused to give his name to me because the contras took his full name at the time of the kidnapping, and he feared revenge from the contras if his story was made known. From this and numerous other testimonies which Witness for Peace has gathered, we have identified kidnappings as a pattern for the contras' military recruitment. I wish I had time here to share with you the grief of the mothers whose young boys are kidnapped. As a physician, I assure you that the mental anguish suffered by these mothers is perhaps more significant than any of the physical scars I have seen.

My 7 months in Nicaragua were filled with almost daily occurences of the type just described. As I left Nicaragua 3 days ago, I picked up reports from my co-workers which were of incidents less than a month old: Felicita and Matilde Rodriguez, 68- and 74-years-old, endured a "contra visit" on February 8th. The contras raped their 40-year-old daughter-in-law, whose husband they had killed a year ago. The contras also raped their 22-year-old daughter, Florencia, and their 13-year-old grand-daughter, Matilda. Florencia was raped in bed beside her 7-year-old nephew. Matilda, the 13-year-old, was forced to ride around on their shoulders naked, and was tossed through the air like a plaything. The younger woman and girl were then kidnapped.

The next day, in another village called Los Potreros, the contras kidnapped a grandfather, his son, and his 6-year-old grandson. These are civilians I'm talking about.

It is unconceivable to me, that with the knowledge we all now have, we would entertain the thought of further funding of the counter-revolutionaries who so terrorize and kill the civilian population of Nicaragua.

TESTIMONIES OF CONTRA VIOLENCE DIRECTED AT CIVILIANS

(By Larry Leaman, March 1985)

Having traveled widely in Nicaragua, it is apparent to me that contra attacks, and the threat of contra attacks, are a very real part of the day to day reality of the Nicaraguan people. Be it direct attacks, or the economic effects felt after attacks, the suffering is very real and continues.

I spent three months living and traveling along the southern border area, and witnessed first hand the results of contra attacks coming from Costa Rica. The customs border post of Penas Blancas, first attacked in September 1983, is subject to continued harassment by contras firing from within Costa Rican territory.

The southern town of Cardenas, located just 4 kms from the Costa Rican border suffers regular shelling from within Costa Rica. Many townspeople, 10 in December of 1984 alone, have been kidnapped by the contra while working on their outlying farms. The road connecting Cardenas to the Pan-American highway has long since been shut due to frequent ambushes. As a result, this isolated town now relies solely on infrequent boat service on Lake Nicaragua for supplies and transportation. Because of these frequent attacks, many rural people have had to move further in-land, leaving behind their homes, their farms, their belongings.

In the North the story is the same. Around the North Zelaya town of Waslala contras continuously attack and ambush civilian vehicles bringing in food and supplies for the town. One such attack occurred on October 11, 1984, when the contras ambushed 3 civilian trucks on the Matagalpa-Waslala road. The trucks were carrying important supplies of corn and beans. The contras burned all 3 trucks and their loads.

In mid-November 1984, I had the opportunity of speaking with survivors of the November 14, contra attack on the important coffee farm of La Sorpresa, Jinotega. One young man related to me how he escaped by fleeing into the mountains. Upon return to the farm he found the body of his 17 year old wife. The contras had shot her at point blank range in the mouth, and had sliced open her stomach with bayonets. She was 4 months pregnant with their first child.

Another survivor, a young woman who worked in the child day care center, told me how she had tried to rescue a 14 month old baby that had strayed outside. As she scooped up the baby in her arms and turned to enter a building, a contra caught sight of her, and opened fire. A bullet went through her elbow, entered the baby's back, and exited through the baby's chest. The baby fell from her arms dead.

On December 6, 1984, I attended the funeral in Esteli of 7 civilian (Telcor) workers, ambushed on their way to pick coffee in San Juan de Rio Coco. Thousands of townspeople attended the funeral to express their repudiation of this violent attack.

Survivors of the ambush recounted to me how the contras fired heavy machine guns, automatic rifles, rockets and hand grenades at the truck in which the coffee pickers were traveling. One survivor who managed to escape by hiding in the brush near-by witnessed the following. "The contras murdered the wounded survivors scattered on the ground near the truck with bayonets and point blank gunfire. Then the contras splashed diesel fuel on the truck and set it on fire, burning alive 7 of the wounded civilians who remained inside, including a 5 year old child.

We must realize these are not statistics, but rather human beings that are suffering. Contra attacks continue, and are exacting a heavy toll. The suffering of many innocent civilians continue.●

FEDERAL SUPPLEMENTAL COMPENSATION PROGRAM

HON. WILLIAM F. CLINGER, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. CLINGER. Mr. Speaker, I rise in support of this measure to ease the burden on those unemployed people across the Nation who are scheduled to receive unemployment compensation as this program expires.

It is reluctant support. Reluctant because a number of my colleagues on both sides of the aisle and I have been working to extend the Federal Supplemental Compensation Program to workers who—through no fault of their own—remain unemployed. All we have done here is to allow a phaseout of the current program.

Mr. Speaker, I come from a part of the country that has lagged far behind the rest of the country in recovering from the recession of the early eighties. We still have unemployment rates high above the national average.

I had hoped this Congress would not turn our backs on those people; that we could be more generous even in the face of deficits. In my capacity as cochairman of the Northeast-Midwest Congressional Coalition's Task Force on Unemployment Insurance, I have joined my Democratic colleague Representative DON PEASE in supporting extension. On my own side of the aisle, I have joined with Representative NANCY JOHNSON to urge our colleagues to support an extension of FSC. I would like to ask unanimous consent to include a letter sent by Mrs. JOHNSON and myself to our colleagues on the Ways and Means Committee which reported this legislation.

An extension is not going to happen today and many of us, I believe, have overlooked the nurturing of one of our Nation's primary assets—our people, the people that make our factories run and pay the taxes that keep our cities and towns viable.

Though we cannot extend the program now, I urge my colleagues to vote for this phaseout. But I want to send a message to those unemployed people in Pennsylvania and around the country—you are not forgotten and the fight for comprehensive reform of the unemployment insurance system will continue.

NORTHEAST-MIDWEST CONGRESSIONAL COALITION, U.S. HOUSE OF REPRESENTATIVES

April 1, 1985.

Hon. DAN ROSTENKOWSKI,
Chairman, Committee on Ways and Means, 2111 Rayburn House Office Building, Washington, DC.

DEAR MR. CHAIRMAN: As Republican members of the Coalition's Task Force on Unemployment Insurance, we are writing to urge you to support an extension of the Federal Supplemental Compensation (FSC) program tomorrow when the issue is considered by the full Ways and Means Committee.

It has been argued that we should not take any action to extend this unemployment insurance program—that continuation of these supplemental benefits cannot be justified at a time of economic expansion. We cannot agree. The extensions being considered by the Ways and Means Committee are modest compared to extensions of the program in the past. The human cost of inaction would simply be too great.

While national unemployment has declined significantly, many states and communities still have jobless rates much higher than the national average. Indeed, there are thousands of unemployed workers in our districts—and hundreds of thousands across the country—who, through no fault of their own, have lost their jobs and have been unable to find work despite the economic recovery.

We support the view that endless unemployment benefits are not the answer to our joblessness problem and that the lasting solution is sustained economic growth. However, as we work toward this goal, we cannot stand by and forget those who already have fallen victim to economic dislocation. We must continue to help these long-term unemployed in their struggle to get back on their feet.

For these reasons, we urge you to support an extension of the Federal Supplemental Compensation (FSC) program and to oppose any efforts to delay bringing the bill as soon as possible to the House floor.

Finally, we believe our current unemployment insurance program is in need of comprehensive reform. We would like to take this opportunity to bring to your attention legislation reported by the Subcommittee on Unemployment Compensation and Public Assistance that would make many long-overdue changes in the system. This bill would merge the current Extended Benefits program with the Federal Supplemental Compensation program to form a streamlined program of extended benefits for the long-term unemployed.

Thank you for the opportunity to present our views. We hope they will be helpful in your deliberations.

Sincerely,

WILLIAM F. CLINGER, Jr.,
Co-Chair, Task Force on Unemployment Insurance.

NANCY L. JOHNSON,
Member, Task Force on Unemployment Insurance.●

WHERE IS MEXICO'S PRIDE

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. RANGEL. Mr. Speaker, I wish to bring to the attention of my colleagues a timely editorial which appeared in the March 22, 1985, edition of the New York Times entitled, "Where Is Mexico's Pride?"

The article states:

A decade ago, Mexico was the main source of marijuana and heroin consumed in this country. Commendably, it responded to U.S. pressure and help with an effective crop eradication program. By 1981, Mexico's share of marijuana shipments to the U.S. had fallen to 4 percent. Its heroin share was down to 33 percent by 1983.

But now Mexico's marijuana shipments have rebounded to 24 percent, while heroin shipments have crept back up to 37 percent. The reversal coincides with disturbing signs of official indifference.

The recent kidnaping of Enrique Camarena Salazar, and his subsequent murder, have received wide publicity in the media. He was kidnaped on February 7, 1985, and his body was not discovered until March 6, 1985. Secretary of State Shultz met with Mexican officials to express American displeasure at the pace and results of the investigation. Subsequently, seven suspects were arrested in connection with his kidnaping and murder.

On March 22, 1985, U.S. Attorney General Edwin Meese III and Mexican Attorney General Sergio Garcia Ramirez met and agreed to share information "about corruption linked to drug trafficking * * * and to cooperate fully in strengthening the eradication programs in Mexico." They also agreed to meet in 6 months to assess progress.

Mexican authorities charged several members of the Jalisco State Judicial Police with crimes related to the Camarena case. Acting Drug Enforcement Administrator John Lawn said the DEA and Mexican authorities worked together until the bodies of Camarena and the Mexican pilot Alfredo Zavala Avelar, who flew occasional missions for the DEA, were discovered. However, cooperative efforts then ceased.

As chairman of the Select Committee on Narcotics, I have followed the events in Mexico with keen interest. I can tell you that the cooperation of foreign drug-producing nations is absolutely essential, if we are going to significantly curtail the flow of narcotics into America. I am concerned that a large marijuana farm, discovered last year in November, could go undetected for so long. However lax Mexico may have been in recent months in discovering and prosecuting drug traffickers, I am hopeful that Camarena's death, and subsequent meetings between American and Mexican officials, will galvanize Mexican authorities to vigorously pursue drug traffickers wherever they may be found.

Joint American-Mexican drug eradication efforts were one of the few successes realized in our antinarcotics efforts in the 1970's. I am hopeful that the events of the last 2 months will cause Mexican President de la Madrid to view Mexican narcotics production with new urgency. It is in the interest of both nations to work cooperatively to limit narcotics production, so that more punitive measures can be avoided. I have confidence that Mexico, our "good neighbor," will respond positively to this situation, and I will closely watch for tangible signs of progress in the months ahead.

I ask that the New York Times article entitled "Where Is Mexico's Pride?" be inserted in the CONGRESSIONAL RECORD at this point. The article follows:

[From the New York Times, Mar. 22, 1985]

WHERE IS MEXICO'S PRIDE?

The United States is rightly alarmed by evidence that drug traffickers are corrupting Mexico's law enforcement. Why are Mexican officials so reluctant to share that alarm?

A decade ago, Mexico was the main source of marijuana and heroin consumed in this country. Commendably, it responded to U.S. pressure and help with an effective crop-eradication program. By 1981, Mexico's share of marijuana shipments to the U.S. had fallen to 4 percent. Its heroin share was down to 33 percent by 1983.

But now Mexico's marijuana shipments have rebounded to 24 percent, while heroin shipments have crept back up to 37 percent. The reversal coincides with disturbing signs of official indifference.

Last November Mexican authorities seized 2,500 tons of marijuana produced on a farm employing 6,000 peasants. How could that immense business operate without official complicity? The question grew sharper this month when Mexican authorities were suspiciously slow to investigate the murder of a U.S. drug enforcement agent. Under heavy pressure from Washington, they finally arrested several Mexican police officers. "It's hard to tell the good guys from the bad guys here," reported one U.S. agent. "They all carry badges."

Though they might have been knocked off balance at first, Mexican drug dealers, whose wealth reaches into the hundreds of millions, have now found it easy enough to purchase protection. In addition, President de la Madrid may now be hesitating to move against political allies with possible ties to the illicit trade. And Mexican officialdom sees the whole effort as a big favor to the United States—less urgent now that relations with the Reagan administration have cooled.

What then can the United States do? Some in Washington are enraged to the point of demanding an end to help from the World Bank and Inter-American Development Bank, which last year lent Mexico more than $800 million. But that would further limit Washington's influence and also penalize United States businesses in Mexico. Besides, the Mexicans have a point when they insist that the problem really begins with the demand for drugs in the United States.

But in their terms, it's risky to dismiss the issue so casually. Colombia, Pakistan, Thailand and Malaysia once considered drug production for export a relatively harmless activity. All now find themselves having to cope with large and growing addict populations. The Mexican economy already is infected as Mexico's drug traffickers have invested their millions in real estate and other legitimate businesses. Unchecked, their bribing and bullying of officials is sure to continue.

Does a country so dependent on tourists from the United States really want a reputation for addiction, corruption and violence? Is its legitimate economy so weak that it must settle for one rooted in crime? Why does a Government properly proud of its standing in the hemisphere allow itself to be pushed around by thugs?

Pride should dictate Mexico's cooperation with drug enforcement. So should self-interest.●

IMPORTANCE OF REA ENGINEERING STANDARDS

HON. THOMAS A. DASCHLE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. DASCHLE. Mr. Speaker, when the Rural Electrification Administration [REA] was established 50 years ago, American electric utilities were primarily urban, and each system was generally individually designed to meet the needs of its higher density urban areas. Early REA leaders took a different approach to rural utility design, however, noting that economically feasible service to rural consumers would require engineering, material, and construction standards that could be used nationwide to offset, in part, the higher costs of providing service in lower density rural areas. From that early time, REA's engineers took an industry lead in developing designs to solve the unique problems facing rural utilities.

Now, REA has under consideration abandoning its engineering and standards responsibilities—functions performed in the Electric Program by the Electric Engineering and Standards Division and in the Telephone Program by the Telecommunications Engineering and Standards Division. Some of the work in establishing standards to provide rural system designs may be contracted out to private entities. The result would increase costs to the Government, the rural systems, and the consumers they serve because these private entities would not be able to monitor and enforce these standards effectively.

Mr. Speaker, before the administration proceeds with this plan, I think it is important for Congress and the public to know exactly what is at stake. I would like to take a few minutes to describe the work of the REA telecommunications engineers. I also

feel strongly about the fine work of the Electric Engineering and Standards Division, and have made public statements to that effect on prior occasions.

STANDARDIZATION

Standardization of specifications, designs, materials, and construction techniques is a vital element in the continuing success of the REA Telephone Program. In testimony before Congress last year, a representative of the Power and Communications Contractors Association, Mr. Lee Hogan, stated that contractors can build projects for rural utilities for between 5- and 9-percent less than they would normally cost, due to the system of standardization that REA has developed over the years. This translates into savings of about $133 million per year. Other benefits of standardization include: Lower equipment and material costs due to competition among manufacturers and a volume market for their products; improvements in equipment performance and construction due to standards based on technological advances and rural telephone company operating experiences; ease of maintenance due to familiarity of personnel with standardized equipment and materials; and reduced inventory and material stocking costs.

REA uses existing national standards and specifications when they are available and applicable. Otherwise, REA establishes them, after allowing for comments and consultations with manufacturers, engineers, rural telephone companies, contractors and other interested parties. Equipment meeting the standards is compiled in a list which is updated bimonthly and is widely used for rural design and construction.

A standardized construction contract keyed to the list is used for the provision of outside plant. Outside plant, such as the buried or aerial telephone cable, telephone poles, and so forth, accounts for about half of all the loan dollars in the rural telephone programs.

REA subdivides the entire construction project into standardized units, so that contractors can more easily bid competitively. Inside plant, including switching equipment, and electronic transmission equipment are purchased using standardized performance specifications for the equipment, installation and acceptance testing.

REA also provides the only comprehensive engineering and construction manuals for rural telephone systems designs.

It updates both the manuals and specifications periodically to cover technological changes as well as actual operating experiences of borrowers.

When there is no prior performance history for new equipment, REA initiates a field trial procedure. This involves a small number of installations carefully monitored for operating characteristics in rural environments. Satisfactory performances result in inclusion of the equipment on REA's list of equipment acceptable for general use. For example, successful field trials have been performed on digital switching systems, rural subscriber carrier transmission systems and rodent-resistant buried cable designs.

DEVELOPING DESIGNS FOR THE RURAL NETWORK

Perhaps the most important function of REA's engineering staff is to encourage the design of equipment needed for provision of rural service. Weather conditions can be extreme in many rural areas, and the low subscriber density is a challenge compared to designs planned with urban areas in mind. It it were not for REA, it is likely that few, if any, of the technological advances most useful to rural telephone systems would have been made.

Thus, REA takes these steps to foster design changes for rural telephone use:

First, monitoring technical problems reported by borrowers. REA monitors various operating experiences reported by borrower systems, and solicits information about any major problem areas.

Second, developing ideas and specifications for products or changes to address the problems. REA engineering staff develops ideas for new products or design changes in existing products to address the problems, and develops specifications for the products or changes.

Third, encouraging private sector participation. REA encourages manufacturers and engineering consultants to design, test, field trial and manufacture new equipment for rural service.

It encourages development of new products by offering the incentive of new business, since REA borrowers mainly purchase only REA listed equipment with their Federal loans. As an aid to interested manufacturers, REA also provides technical assistance in the form of performance guidelines or specifications for new equipment as well as guidance on compatibility with existing rural systems and rural environments.

This successful public-private partnership has resulted in a number of important technological developments in rural telecommunications. These advances are in use now, not only in rural telephone systems, but also in telephone companies and administrations around the world. Examples of developments of this type are:

Rural subscriber carrier systems; economical rural subscriber loop transmission design using fine-gauge telephone cable; electronic loop extenders; electronic subscriber loop voice frequency repeaters; and direct buried rural telephone cables.

Additional advances, which resulted in the past from partial development grants by REA include:

Dial mobile radio systems for unattended central offices; early pair-gain electronic equipment; new approaches to moisture-resistant buried cable splice closure design; and a rural fiber optic transmission system evaluation.

REA engineers actively participate in efforts of professional organizations to develop and revise private sector voluntary concensus standards. REA is represented on steering committees such as the American National Standards Institute, the Electrical and Electronics Standards Management Board and the Institute of Electrical and Electronics Engineers Standards Board. REA is also represented on numerous technical committees, including the T1 Technical Committee and its various subcommittees of the Exchange Carriers Standards Association.

REA standards and specifications have been adopted by a number of U.S. Government agencies, and are used by the telephone administrations of a number of foreign countries.

Mr. Speaker, REA's engineers have been working at the forefront of rural telecommunications to help direct some of our Nation's tremendous technological resources in solving the problems of rural telephone. By contracting out or eliminating the telephone standards and specifications activities, which requires only slightly more than 8 professional staff years, REA would lose a key ingredient to the continued success of its rural telephone program in controlling the high costs of construction in rural areas. The real losers in this battle will be the rural telephone customers and eventually, the entire country, as the cost for this effort increases, or the technical quality of the rural network deteriorates.●

USDA STUDY EXTENSION LEGISLATION INTRODUCED

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. FORD of Michigan. Mr. Speaker, I am pleased to join with Mr. GOODLING today in introducing a bill to provide for a limited extension of two important programs that assist the National School Lunch Program participants and related child nutrition components.

Section 1 of the bill extends, through June 30, 1987, the pilot study on alternative means of assisting States and local school districts in delivering the School Lunch Program. This pilot project permits school districts desiring to participate to continue to do so until such time as the Con-

gress, after reviewing the study results, either implements one of the alternative methods nationwide or sends all school districts back to conducting their programs in the usual manner. The two alternatives permit participating districts to receive either all cash in lieu of commodities, or to receive all letters of credit in lieu of commodities, and to purchase much of the food products used in school lunch programs locally.

In addition to continuing the study methodologies already in place for this pilot project, school districts will, during the extension period, begin to receive bonus commodities in the same manner as those commodities are made available to any other school district participating in the National School Lunch Program.

The desired result of this pilot study project is to provide the Congress, the Department of Agriculture, and other interested parties with the advantages and disadvantages of specified alternative approaches to the current Commodity Distribution Program for school lunches, based on actual operations in representative samplings of school districts.

Section 2 of the bill provides for a 2-year extension, from July 1, 1985, to October 15, 1987, for the National Commodity Processing Program. This program permits private companies to enter into agreements with the Secretary of Agriculture, so that whenever a surplus commodity is made available without charge or credit under any nutrition program administered by the Department, the Secretary shall encourage consumption of such commodities by permitting private food processing companies to reprocess them into end-food products for use by eligible recipient agencies, including schools. The expense of reprocessing shall be paid for by eligible recipient agenices.

The extension in the bill for the NCPP is a straightforward extension of previous law, except that for the first time, such private food processors having agreements with USDA's Secretary to process bulk surplus commodities must settle all accounts with the Secretary and any appropriate State agency on an annual basis. This addition to the law is intended to assure accountability for commodities received as well as to assure their use is only for eligible recipients and not for commercial resale.

The National Commodity Processing Act was begun under Public Law 98-8, the Temporary Emergency Food Distribution Act of 1983, and was intended to make lower priced processed foods available to schools and institutions not now able to obtain them. Private processors, such as the Pillsbury Co. of Minnesota and Better Baked Foods of Pennsylvania, for example, will convert USDA surplus dairy and other products into items that are easier to use and prepare and that are more attractive to consumers, particularly to schoolchildren.

Schools will receive a wider variety of products, and the Government will be able to reduce its inventory of surplus foods. Such processed foods made from bulk USDA commodities also reduce the costs to States for storage of commodities, eliminates the spoilage of certain foods stored over long periods of time, and eliminates plate waste in the School Lunch Program.

It is my hope that my colleagues will join in cosponsoring this extension legislation in order to improve and enhance the National School Lunch Program for schools, as well as for other institutions and the eligible populations they serve.●

FRANCIS W. STOVER

HON. G.V. (SONNY) MONTGOMERY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. MONTGOMERY. Mr. Speaker, on March 31, Francis W. Stover, deputy chief counsel of the Committee on Veterans' Affairs, retired, closing out an exemplary 29-year career as an innovator and guiding force in the field of veterans' benefits and services.

Frank served the committee for approximately 10 years. He was a great asset to the Committee, specializing in Education, training and employment matters. He was the committee expert on the Veterans Preference Act and was very experienced in the area of labor law.

Frank Stover is devoted to his country, having served honorably in France and Germany in World War II with the 94th Infantry Division of Gen. George S. Patton's Third Army. He was wounded in combat and received numerous awards for wounds he sustained during the Rhineland campaign.

Following his service, Frank obtained his law degree and, after practicing law for awhile, became an advocate for veterans. He spent many years in a major position of leadership with the Veterans of Foreign Wars and is held in high esteem by the members of this great veterans organization. Through his work on Capitol Hill, Frank became known as the dean of the veterans organizations national legislative directors. He had a keen insight into how the U.S. Congress functions and he knew his subject area. His expertise and ability benefited the veterans of our Nation through his work with the Veterans of Foreign Wars and the House Committee on Veterans' Affairs. He is known as a man of great character and integrity and his reputation as an advocate for veterans is second to none.

Frank Stover served the committee with distinction and our members and staff are going to miss him.

Mr. Speaker, on February 26, the committee staff invited a few of Frank's friends to a committee farewell party. Because of his personal popularity approximately 200 people attended the event, including about 15 members of the committee. During the evening Frank received numerous awards from veterans organizations and friends. It was a special privilege for the ranking minority member of the committee, JOHN PAUL HAMMERSCHMIDT, and me to present Frank with a resolution on behalf of the committee expressing our deep appreciation for the contributions he has made as a key member of our staff for the past 10 years. The text of the resolution follows:

RESOLUTION

Whereas Frank Stover served his country honorably in France and Germany in World War II as a member of the 94th Infantry Division of General George S. Patton's Third Army and, during this period, which included the Battle of the Bulge, he was awarded the Purple Heart medal for wounds he sustained during the Rhineland campaign, presented the Bronze Star in recognition of meritorious military service, and the Combat Infantry Badge, and

Whereas as a result of this experience, Frank Stover, a graduate of Georgetown University Law School and a lawyer by profession, was to become a spokesman and advocate of the veteran, especially those who have made the extra sacrifice by their participation in combat against the enemy, and

Whereas his concern and activity in veterans affairs led to his being appointed National Legislative Officer for the Veterans of Foreign Wars of the U.S. from 1959-1975, and

Whereas since 1975, he has served as counsel to the Committee on Veterans' Affairs, achieving immeasurable success in the formulation and development of veterans' education, employment and training programs, including the new GI Bill, and

Whereas as Deputy Chief Counsel to the Committee on Veterans' Affairs, he has firmly established himself as a trusted friend and advisor to its Members, its staff and the veterans they represent and serve: Now therefore be it

Resolved that the Committee on Veterans' Affairs of the U.S. House of Representatives on this 20th day of February, 1985, commends Francis W. Stover and gratefully acknowledges his dedication to excellence, the wisdom, expertise and guidance he has so unselfishly provided in the execution of the Committee's mission and, above all, his lifelong commitment to improving the lives of his fellow man.

G.V. (SONNY) MONTGOMERY,
Chairman.

JOHN PAUL HAMMERSCHMIDT,
Ranking Minority Member.

Mr. Speaker, I know the Members of this great body, many of whom have worked closely with Frank over the years, will want to join with me in extending our best wishes to Frank and

his wife, Rebbie, for a healthy and happy retirement and our thanks for a job well done.●

NO TROOPS TO EL SALVADOR OR NICARAGUA WITHOUT CONGRESSIONAL AUTHORIZATION

HON. MEL LEVINE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. LEVINE of California. Mr. Speaker, today I am joining Congressman FOLEY and 10 Members of Congress on a bipartisan basis in introducing a bill to prohibit the introduction of U.S. troops into or over El Salvador or Nicaragua for combat unless authorized by the Congress. I am doing so because the administration's Central America policy is basically flawed. It relies too heavily on military solutions, and has neglected the root causes of the problems in the region. Evidence of what makes that policy frightening and dangerous are abundant.

For example, last April within a period of only 10 days a series of chilling revelations were disclosed about U.S. activity in Central America. They were: that U.S. personnel were being used to mine the harbors and territorial waters off Nicaragua; and that the Secretary of State had placed this country above the law by withdrawing it from the jurisdiction of the world court with respect to disputes with Central American nations. Last November a storm of controversy was created by the administration over the alleged delivery of Migs to Nicaragua. There was no evidence that the Nicaraguans in fact received these planes or that they were or are planning to receive them. But because of scare tactics, the administration succeeded in creating unnecessary fear and tension in both Central America and the United States.

U.S. warships have been stationed off the coast of Nicaragua. U.S. reconnaissance planes have overflown Nicaraguan territory. In the past year three Americans were killed along the Honduran-Nicaraguan border. In El Salvador an American adviser was assassinated and four CIA-employed Americans died while engaged in an intelligence mission over guerrilla territory. U.S. advisers in El Salvador armed with automatic weapons faced hostile fire.

Last April two disturbing reports appeared in the newspapers about possible future administration action regarding Central America. On April 8 the New York Times ran a story, "U.S. Said to Draw Latin Troops Plan." The lead sentence said:

> Senior officials in the Reagan administration say that contingency plans are being drawn for the possible use of U.S. combat troops in Central America if the current strategy for defeating leftist forces in the region fails.

And on April 10 a Washington Post headline read, "CIA Views Minelaying Part of Covert 'Holding Action'." The first line read:

> The CIA views its involvement in the laying of mines in ports off Nicaragua as part of a holding action until its covert war against that country's leftist Sandinista government can be stepped up if President Reagan wins reelection, according to senior administration officials.

The contents of these stories were repudiated in an April 10 White House statement. But what are we to believe with respect to White House policy on Central America? What are its intentions with respect to military activity in that region of the world?

The bill we are introducing today is designed to ensure Congress its rightful role in Central America policy. It would prohibit the introduction of U.S. combat forces into or over El Salvador or Nicaragua unless Congress has declared war or specifically authorized such use of U.S. forces, or unless the introduction of such forces is necessary to meet a clear and present danger of hostile attack upon the United States, or to meet a clear and present danger to, and to provide essential and immediate evacuation of, citizens of the United States. The bill contains provisions for expedited Congressional consideration of any resolution or bill introduced at the request of the President to send troops to El Salvador or Nicaragua.

Mr. Speaker, we all know the tragic history of U.S. involvement in an undeclared war in Vietnam. We all know the tragic consequences of our experience in Lebanon. We all know the consequences if Congress is not vigilant in carrying out its responsibilities to this Nation. Congress has a constitutional role and the responsibility to carry out that role in deciding whether or not this country sends its troops into battle, and whether or not war is declared. This bill, which is similar to legislation I introduced in the last session of Congress, would strengthen that role and our ability to carry out our responsibility.

Last May the House overwhelmingly passed an amendment to a defense spending bill which incorporated the major provisions of our bill. In October these provisions were included in a House-passed continuing resolution. However, in both instances the language was weakened in conference with the Senate to that of a sense of Congress. The bill we are introducing today would strengthen that language and prohibit by law the introduction of U.S. combat troops unless specifically authorized by Congress.

Polls have shown that the American people are opposed to direct U.S. military involvement in Central America. Let us try to carry out the will of the American people and to ensure that Congress has a say in whether or not this country sends its troops into battle.

We are seeking cosponsors of this bill, and we invite each of our colleagues to join us. The text of the bill follows:

H.R. 1865

A bill to limit the introduction of United States Armed Forces into El Salvador and Nicaragua for combat

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That none of the funds appropriated for any department or agency of the United States Government for fiscal year 1985 or fiscal year 1986 may be obligated or expended for the purpose of introducing United States Armed Forces into or over El Salvador or Nicaragua for combat.

SEC. 2. As used in this Act, the term "combat" means the introduction of United States Armed Forces for the purpose of delivering weapons fire upon an enemy.

SEC. 3. This Act does not apply with respect to an introduction of United States Armed Forces into or over El Salvador or Nicaragua for combat if—

(1) the Congress has declared war or enacted specific authorization for such introduction; or

(2) such introduction is necessary—

(A) to meet a clear and present danger of hostile attack upon the United States, its territories or possessions; or

(B) to meet a clear and present danger to, and to provide necessary protection for, the United States Embassy; or

(C) to meet a clear and present danger to, and to provide necessary protection for and to evacuate, United States Government personnel or United States citizens.●

INTRODUCTION OF A SENSE OF THE CONGRESS RESOLUTION CALLING FOR AN END TO THE USE OF PLASTIC BULLETS BY BRITISH SECURITY FORCES IN NORTHERN IRELAND

HON. BRIAN J. DONNELLY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. DONNELLY. Mr. Speaker, today I am introducing a sense of the Congress resolution calling on the British Government to end the use of plastic bullets against civilians in Northern Ireland. A similar resolution has been introduced in the other body by Senator DODD.

Plastic bullets have been responsible for 15 deaths and numerous maiming injuries in Northern Ireland. Obviously, there can be no doubt that plastic bullets are lethal weapons, and the manner in which they have been used in Northern Ireland argues convincingly for their immediate withdrawal. They are used in no other civilized land, but they are used, and often with

tragic consequences, in the crowded streets of Northern Ireland.

Several years ago, British cities were besieged by violent riots. However, use of plastic bullets against the rioters was ruled out by British officials due to the lethal nature of those rounds. There should be no double standard in the case of Northern Ireland. The continued use of plastic bullets against civilians in Northern Ireland only serves to incite further violence, and to widen the gulf of alienation that exists between the nationalist minority community and the institutions of the state in which they live. Especially at a time there is renewed hope for peaceful, political progress that will improve the qualtity of life for both communities in Northern Ireland, it is essential that the use of plastic bullets be ended.

H. Con. Res. 118

Calling upon the Government of the United Kingdom to ban the use of plastic and rubber bullets against civilians

Whereas the people and the Congress of the United States are deeply troubled by the unending cycle of violence and misery in Northern Ireland which has been a reality there for far too long;

Whereas Members of Congress have, on many occasions, expressed their belief that the use of plastic bullets by security forces in Northern Ireland is morally indefensible, and is a practice that should be ended;

Whereas the European Parliament has voted overwhelmingly in favor of a ban on the use of plastic bullets against civilians in the member states of the European Parliament;

Whereas in recent years fifteen people, many of them children, have been killed in Northern Ireland by plastic bullets fired by British security forces and over one hundred and sixty people have sustained injuries, including brain damage, loss of eyes, and total blindness;

Whereas all of these injuries have been suffered by civilians, many of them in nonriot situations;

Whereas the British Home Secretary has described plastic bullets as "lethal";

Whereas in serious rioting in 1981 in fourteen British cities, during which gasoline bombs and other potentially lethal missiles were used against police, plastic bullets were not used in any instance; and

Whereas the use of plastic bullets in the United Kingdom has been limited to Northern Ireland alone: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That the Congress condemns the use of plastic or rubber bullets in Northern Ireland and calls upon the Government of the United Kingdom to ban the use of plastic or rubber bullets against civilians.

SEC. 2. The Clerk of the House of Representatives shall transmit a copy of the resolution to the President for the purpose of informing the Government of the United Kingdom.●

H.R. 1623

HON. THOMAS N. KINDNESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. KINDNESS. Recently, Mr. Speaker, several of my Judiciary Committee colleagues from both sides of the aisle joined with me in introducing H.R. 1623, a bill which deals with the problem of assuring adequate compensation to injured parties of large-scale accidents in which the Government is involved. The Government's often predominant role in establishing product specifications, in maintaining and repairing products, and in making post-delivery alterations to products can result in the Government being more at fault than any single contractor in the event of a large-scale accident. Additionally, many Government contracts for products or services involve substantial tort liability risks because of their military nature or the experimental or state-of-the-art technology involved. The interests of the victims of such accidents, as well as those of the Government and the contractors involved, likewise require that a system of fair allocation of responsibility be established.

Indeed, Mr. Speaker, large-scale accidents often lead to two problems: fair apportionment of fault and adequate compensation to victims. The first of these problems involves the so-called Stencel issue (*Stencel Aero Engineering Corp.* v. *United States,* 431 U.S. 666 (1977)), and refers to a 1977 Supreme Court ruling which held that a contractor sued by a military employee for a work-related product injury cannot bring a third-party suit against the Government for damages, regardless of whether the Government is partly or totally at fault in the accident. When coupled with the use of strict liability in many States, Mr. Speaker, the Stencel doctrine has left firms in the private sector to bear potential liability for millions of dollars in damages over which they had no control. The precedent set by Stencel and subsequent cases of its type is clearly unfair and should be changed.

By way of solution, section 3 of the bill establishes a system of equitable reduction which would reduce the liability of a contractor to an injured Government or military employee in proportion to the Government's fault in causing the harm. Under this system, the contractor is liable only for the damages he causes. The Federal employee, who will have already received compensation for his injuries under the military benefits programs or the Federal Employees Compensation Act, would have the Government's subrogation lien against his award from the contractor reduced by the percentage of the Government's degree of fault.

The second problem facing Government contractors is the potential of extraordinary liability caused by a product or service. As I mentioned at the outset, Mr. Speaker, Government contractors often develop products that can be hazardous and have the potential, however slight, to cause a large-scale accident. To the extent possible, all contractors purchase liability insurance to cover their potential liabilities in the event of a harm caused by their product, and the cost of this insurance is usually included in the cost of the contract.

But, obviously, Mr. Speaker, large amounts of insurance may be too costly to be practical in some cases. As a result, many contractors are now potentially liable for millions, if not billions, of dollars in damages in excess of the levels of insurance available in the commercial markets. Recent world events have demonstrated that this excess liability could easily exceed both a company's insurance coverage and its net worth.

A contractor bankrupted by such an accident would be unable to compensate many of the victims of the catastrophe. The victims' sole alternative would be an ad hoc Federal aid program approved by the Congress. As a matter of public policy, I believe Congress has an obligation to ensure our systems of Government contract and tort law do not become vehicles through which injured parties are reduced to the status of judgment creditors presiding over the liquidation of otherwise profitable companies—a process which would visit the greatest harm upon the injured parties and the innocent employees of such a firm.

Section 4 of the bill would indemnify all Government contractors for liabilities and exceed either a level of commercial insurance agreed upon in advance by the contractor and the contracting agency, or an amount that would be considered reasonable at the time the liability occurred. The indemnification procedure in section 4 will provide both contractors and injured persons with an established mechanism and procedure for compensating the victims of a large-scale accident. This would eliminate much of the delay, uncertainly and protracted litigation that would now beset both injured persons and contractors in a large-scale case involving substantial liabilities. This section of the bill is supported by the American Bar Association Section of Public Contract Law as the fairest and most effective means of providing indemnification in the event of an extraordinary occurrence. In order to protect the Government from unnecessary and unworthly ciaims for indemnification, liability caused by goods or services that are

51-059 O-86-17 (Pt. 6)

also sold to nongovernmental purchasers for nongovernmental use or applications would not be afforded indemnification. In addition, liability created by the gross negligence, willful misconduct or lack of good faith by a contractor would not be subject to indemnification.

In short, Mr. Speaker, H.R. 1623 is the product of many years of discussion and debate and strikes a fair balance between the needs of injured persons, the Government, and the thousands of firms which contract with the United States. Almost half of the members of the Judiciary Committee supported the bill in the last Congress, and I hope my colleagues will work with me in bringing this much-needed legislation to fruition.●

FISHERY CONSERVATION AND MANAGEMENT ACT

HON. DOUGLAS H. BOSCO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. BOSCO. Mr. Speaker, both Congress and the U.S. fishing industry hoped that enactment of the Fishery Conservation and Management Act [FCMA] in 1976 would offer an effective and responsive regulatory mechanism for managing our fishery resources. Two of the more important objectives of the act were promotion of the domestic commercial fishing industry under sound conservation and management principles, and to enable all affected groups an opportunity to participate in the management process.

In many important respects, the FCMA has failed to live up to its promise. Almost 10 years later, it has proven itself neither particularly effective in protecting the resource, nor responsive in addressing the concerns and needs of affected commercial fishermen and fishing-dependent coastal areas. Along the west coast, we now find ourselves with both a crisis of the salmon resource and an industry that has virtually no say in the regulatory process. Hundreds of fishermen face imminent bankruptcy and many coastal communities face uncertain economic futures.

Fortunately, reauthorization of the FCMA this year offers us an important opportunity to seek constructive changes. Today, I was joined by Congressman JAMES WEAVER, Congressman LES AUCOIN, and many other west coast Representatives in introducing legislation aimed at addressing the act's shortcomings—particularly as it affects the west coast fishing industry. Because reauthorization of the FCMA is undoubtedly among the most important issues facing our fishing industry this year, I urge my colleagues to give this proposal serious consideration.

This legislation was developed in close consultation with both conservation groups and a coalition of fishermen from California, Oregon, and Washington known as fishermen's solidarity. These fishermen should be commended for their willingness to spend hours of their own time developing a coastwide response and for advancing FCMA proposals that I believe will strengthen both fishery resource protection and the economic standing of the west coast fishing industry.

First, this legislation would provide for a significant restructuring of the Pacific Fishery Management Council [PFMC] aimed at fostering more balanced and responsive decisionmaking in the fishery management process. Under the current system, the fishing industry has only 2 out of the 13 available seats on the council. Perhaps most symptomatic of the industry's diminutive role in the management process is the fact that a commercial salmon troller has never been appointed to the council. This despite the fact that the council spends more than 80 percent of its time on salmon management issues, and the Governors of California, Oregon, and Washington have recommended several superbly qualified salmon fishermen to the Commerce Secretary for appointment.

This proposal would mandate that out of a 13-member council, 7 members shall be active participants in the recreational, or commercial fishing, or processing sectors of the fishing industry. The remaining members would consist of the principal State fishery officials from California, Washington, Oregon, and Idaho, and two at-large seats to be filled by an ocean scientist and a tribal representative. Moreover, unlike now, the Governors would have to consult with commercial and recreational fishing interests as well as conservation and tribal representatives before making council appointment recommendations.

The intent of this representational management scheme is to strengthen the role of affected fishermen while ensuring a more effective balance between commercial, recreational, scientific, and conservationist interests on the council. We have rejected the idea of mandating a set number of commercial troller or trawler seats to help establish this balance, but I believe it is clear that good fishery management will not be possible without more participation allowed for those who possess practical fishing experience. In sum, this type of council restructuring is flexible enough to allow the Commerce Secretary to ensure that each major fishery under the jurisdiction of the PFMC will have an experienced, knowledgeable voice in the regulatory decisionmaking process—allowing for a much needed diversity in council management philosophy.

The second major element of this legislation addresses the critical issue of fishery habitat protection. Habitat protection and enhancement are indispensable to maintaining adequate fishery production. Conflicts over fishery harvest allocation will only worsen unless this fact is clearly recognized and addressed. Inexplicably, however, the FCMA is virtually silent on this issue.

Since 1976, our Nation has continued to engage in Federal activities which have destroyed and degraded fishery habitat, thereby reducing the number of fish available for harvest and reproduction and exacerbating problems facing the industry. For instance, our Nation now loses to development each year over 450,000 acres of wetlands, which provide invaluable breeding areas for many different kinds of fishery resources. Along the west coast, thousands of miles of anadromous fish spawning habitat have been destroyed or degraded by water diversions, hydroelectric projects, mining, roadbuilding, and poor timber harvest practices.

This proposal would mandate two changes to address this serious problem. First, it would codify the current National Marine Fisheries Service [NMFS] habitat policy by requiring the inclusion of habitat information in fishery management plans developed by the councils. I believe this is necessary both to enhance our knowledge of how Federal activities affect fishery habitat and to allow for better coordination between fishery management decisions and habitat considerations. The need for more information between the two is much too important to be left up to the councils. The NMFS would be provided with the responsibility to provide the councils with the necessary habitat information and analysis for inclusion in the plans. This information would include current and future fishery habitat conditions, the life and habitat requirements important to the sustenance of the fishery and its food base, and the measures needed for the conservation, restoration, or enhancement of habitat that is essential for the fishery.

Next, it would establish a flexible national standard that confirms that fisheries under Federal management are of extraordinary significance to the Nation. It would also establish explicit consultation guidelines and timetables through which the Secretary of Commerce and other Federal agencies are to confer relative to Federal activities that could cause significant fisheries harm.

Presently, the most significant law relevant to maintaining fishery habitat is the Fish and Wildlife Coordination Act [FWCA]. The FWCA requires Federal agencies to consider the effects of proposed projects on fish and

wildlife on an equal basis with project benefits. While the National Marine Fisheries Service is allowed under the FWCA to provide comments on a proposed project's effects on fisheries, the law accords no special significance to their comments. In effect, most other Federal agencies ignore these comments, including requests for information from either NMFS or the regional fishery management councils. Therefore, fishery habitat protection remains virtually ignored in Federal decisionmaking.

One of the great failings of the FWCA is the absence of any explicitly defined guidelines and timetables for consultation between the Commerce Department and other agencies. By requiring that other agencies respond to the Secretary in a timely and responsive manner, I believe that we will be enhancing the role of the Secretary to see that responsible mitigation is seriously considered for actions that are likely to cause significant fisheries harm. This proposal will not provide the Secretary with authority to halt or delay other Federal agency activities. But any agency that refused to comply with Commerce's recommendations would have to clearly identify the public interest that outweighed the need for habitat protection.

Finally, this bill would establish a more timely appeals process and arbitration board for either a State or fishermen affected by Federal preemption of a State fishery management plan. Under FCMA, a State is allowed to apply to the Commerce Secretary for reinstatement of its authority within 3 miles offshore after a Federal preemption has occurred. If the Secretary finds that the reasons for which State management was preempted no longer prevail, he or she is required to promptly return State authority. However, no other specific guidelines for preemption are included.

There is a general consensus that the current preemption process is too long and drawn out to take into consideration the quickly changing nature of resource conditions. For their part, the fishing industry is concerned that one hearing before an administrative law judge, as presently occurs, does not constitute adequate opportunity to present scientific evidence. Establishment of a timely arbitration process should meet both of these concerns.

Mr. Speaker, these issues are of vital concern to west coast fishing interests, and I would once again urge my colleagues to give prompt consideration to this legislation.●

WESTWAY LANDFILL FUNDING PROHIBITION

HON. FRANK J. GUARINI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. GUARINI. Mr. Speaker, today I am joined by 22 of my colleagues from across the Nation in introducing legislation to prevent one of the most fiscally irresponsible, illegitimate Federal expenditures in history—the multibillion dollar Federal funding of the Westway Landfill in New York City. My bill will prohibit the illegitimate use of Highway Trust Funds and other Federal moneys to fill in more than 200 acres of the Hudson River as part of the Westway plan to create real estate for commercial, industrial, and residential development and to change the shape of a public waterway.

As proposed, Westway is a 4.2-mile interstate highway partially tunneled through a landfill which would run from the tip of Manhattan to 42d Street. Because of its complex construction, maintenance and ventilation requirements, Westway would be the world's most expensive highway. Westway's construction is scheduled to proceed until 1994. With cost overruns, inflation and interest, Westway could cost American taxpayers between $4 billion and $10 billion.

In no way should New York be denied the right to obtain Federal highway funds to construct a highway. The need for a new highway is as clear as the need for an efficient mass transportation system which can move millions of workers and shoppers through this great city.

However, the use of scarce and much needed Highway Trust Fund moneys for massive real estate development is reprehensible. This expenditure is totally inconsistent with the purpose of the Highway Trust Fund. The Federal Highway Act of 1981 states that "funds shall be limited to the construction necessary to provide a minimum level of acceptable service on the Interstate System." Since there exist less costly alternatives which would accommodate a comparable level of traffic, financing the landfill is clearly an illegitmate use of Highway Trust Funds.

Moreover, funding the landfill is fiscally irresponsible and financially devastating. New York's share of interstate highway funds will never cover the projected 90-percent Federal funding of Westway's final construction cost. Its constructors will have to return to the Federal Government for more funding to finish the project. With a diminishing cash balance already forecast for the Highway Trust Fund, Westway could be left without funding and unfinished.

Instead, New York could obtain $1.5 billion in highway trade-in funds if Westway was not constructed. According to Federal Highway Administration estimates, these trade-in moneys could easily be used to finance a suitable, but less costly nonlandfill highway and provide aid to New York's crippled mass transit system.

Funding the Westway Landfill would jeopardize the integrity of our environment. In dredging and filling more than 200 acres of the Hudson River we risk the destruction of the last vital striped bass habitat on the Atlantic Coast, and endanger a $200 million industry. Westway's construction process would also stir up unpredictable amounts of toxic waste from the river bottom and contaminate the shore area. It could cause potential flooding problems on the west side of the Hudson as well. It is obvious that funding Westway undermines the intentions of the Clean Water Act of 1972 which requires that landfills not be constructed if they would have an adverse aquatic effect and if there are practical nonlandfill alternatives which would cause less environmental harm.

Finally, using Federal highway funds for the Westway Landfill sets a dangerous precedent allowing others to pave in public waterways and change the flow of our rivers for private real estate development.

For over 7 years, the Environmental Protection Agency, the Department of Interior's Fish and Wildlife Service and the Department of Commerce's National Marine Fisheries Service have stood in steadfast opposition to the Westway Landfill on the basis of the serious environmental risks surrounding it. Key legislators in both the Senate and the House of Representatives, the New York State Assembly and the New York State Senate have all gone on record opposing Westway. Concerned New York City residents, environmentalists and taxpayers throughout the United States have joined together in this worthy fight against funding Westway.

At this time of severe budgetary pressures, we should not sanction this precedent setting, illegitimate use of Federal highway funds for costly real estate development. We cannot afford Westway's potential adverse environmental impact. We must act quickly to prohibit the use of Federal funds for the Westway Landfill. I urgently ask for your support of this vital legislation.●

EMBARRASSINGLY IGNORANT

HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mrs. SCHROEDER. Mr. Speaker, on March 25, the Denver Post commented on President Reagan's rather ignorant remarks about recent events in South Africa.

FORGETTING OUR HERITAGE

President Reagan's views of race relations in South Africa, as he expressed himself at his Thursday night press conference, display not only an almost tragic blindness toward that troubled nation, but also an ignorance of the trauma in his own nation only two decades ago.

The president's defense of South African police who killed at least 17 blacks as on "the law and order side" and his characterization of the victims as "rioting" and intent on "a violent settlement" through "trouble in the streets" were chilling reminders of the language of official statements once issued from Alabama and other southern states where black Americans sought civil and human rights.

It was Sheriff Jim Clark and his Selma, AL, possemen who were on "the law and order side" when they brutally beat blacks seeking the right to register and vote. It was Alabama Gov. George Wallace—then the "segregation forever" George Wallace—who was also on "the law and order side" when he sent troopers to bludgeon the line of marchers attempting to take their grievances to the state capital.

And throughout that era of bloody violence and repression, it was the Clarks and the Wallaces and their defenders—even high national officials—who maintained that criminal and subversive motives were driving the victims of "law and order," just as President Reagan asserted Thursday night.

The President even offered the shocking suggestion that blacks in the pay of the South African police forces, under the discipline of the brutal and inhumane system of apartheid, were on the right side of the stand against human rights and dignity that has made South Africa a hated pariah among nations.

He found it "significant," the President said, "that some of those enforcing the law and using the guns were also black policemen."

Other members of his own administration, including Secretary of State George P. Shultz and Chester A. Crocker, the secretary of state for Africa, issued strong denunciations after the South African killings—not just against the apartheid system, but against its awful results.

Shultz said the action "only underlines how evil and unacceptable that system is." Crocker, traveling in South Africa, said the slayings served as "a tragic reminder of what happens when there is no basis for consent and no effective dialogue between those who govern and those who are governed."

President Reagan, almost as an afterthought, said at his press conference that he sees the "system there repugnant" in South Africa. But when he cloaks the instruments of that system with "law and order" and suggests that an oppressed people can be dismissed as rioters intending "trouble in the streets," he offers evidence that he knows and remembers little of the legitimate aspirations of millions of his own people and millions more elsewhere in the world.

We are embarrassed for the President. We can only wonder at a frame of mind that even the one-time segregationist oppressor George Wallace now says is blindly mistaken.●

TRIO PROGRAMS

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. MOAKLEY. Mr. Speaker, I would like to take this opportunity to share with my colleagues my support for the special programs for students from disadvantaged background [TRIO]. These excellent and cost-effective programs have been extremely successful in helping many of our disadvantaged youth to realize their full potential through the learning and social opportunities offered by postsecondary education. Because I believe so strongly in the worth of TRIO programs, I was extremely distressed to learn that President Reagan in his fiscal year 1986 proposed budget plans to reduce TRIO budget funding by more than 50 percent. I believe that such cuts would severely diminish the effectiveness and success of the TRIO Program to an extent that would far outweigh the relatively small economic gains of such reductions.

The purposes of the TRIO programs are to identify qualified individuals from low-income families who are in the first generation in their families to attend college, to prepare these students for postsecondary education, to provide special supportive services for low-income, first-generation, and physically handicapped students while they pursue programs of postsecondary education, and to train persons serving or preparing for service in programs and projects so designed.

These TRIO programs have proved beneficial to disadvantaged students from various backgrounds throughout this country. In fiscal year 1984, 1,275 TRIO projects which operated in over 800 higher educational institutions and 80 community agencies served a total of 505,000 students. Two-thirds of these students are from families where first, the total taxable income is less than 50 percent of the poverty level, and second, neither parent had graduated from college. Among TRIO students, 41 percent are black, 35 percent are white, 17 percent are Hispanic, 4 percent are American Indian, and 3 percent are Asian. Eleven thousand TRIO students are physically handicapped.

TRIO refers to five programs which provide supportive services for disadvantaged students to enroll in and graduate from college. These programs are funded under the special programs subpart and include: educational opportunity centers, special services for disadvantaged students, talent search, upward bound, and a training program for TRIO staffs. These programs provide low-income students a realistic opportunity to escape cycles of poverty and to achieve the upward mobility afforded by higher education.

If in fiscal year 1986 the administration is successful in reducing TRIO funding by 53 percent, the result would be devastating. An estimated total of 380,000 students would be completely eliminated from these most valuable programs. The 167 talent search and 33 educational opportunity center projects would be eliminated. These projects provide 294,000 disadvantaged students with information about college and financial aid opportunities. Twenty percent of black and Hispanic students who enter college receive assistance from these two projects.

The administration's budget would also cause 20,000 students to be eliminated from special supportive services projects. These projects provide counseling, tutoring, and remedial coursework assistance. The low-income and first-generation students who benefit from these services are more than twice as likely to stay in school as similar students who do not participate in such services.

Proposed budget cuts would also eliminate 15,600 students from the Upward Bound Program and the total number of these projects would be reduced from 421 to approximately 200. Such cuts in Upward Bound are difficult to justify in light of its effectiveness. High school students who participate in Upward Bound are four times as likely to graduate from college as similar students who do not have the benefit of such participation.

Although I realize that due to the Federal deficit, budget cuts are necessary. I do not believe that TRIO should be made a target for reductions. The benefits of the program both to disadvantaged students and to education in this country as a whole far outweigh the comparatively low costs.●

FOR BULLETPROOF VESTS

HON. TIM VALENTINE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. VALENTINE. Mr. Speaker, I am today reintroducing legislation that I introduced during the 98th Congress designed to insure the safety and protection of local law enforcement officers. The purpose of this legislation

is to provide for a one-time purchase of needed protective soft body armor—bulletproof vests—to be worn by police officers in the line of duty.

Simply put, the life of a police officer is in constant danger. When an officer responds to a call for assistance and knows that an individual with a weapon is involved, there is time to take precautions to protect and defend against the threat, reducing the risk of injury or death to the officer. It is not surprising, however, that officers are most often killed or injured during incidents in which the attack is totally unexpected.

The Institute of Justice sponsored a major program to develop a lightweight body armor that an officer could wear on a full-time basis throughout an entire working shift. This development was in response to the rapid increase in police injuries and fatalities from assault with guns and knives during the period from 1960 to 1970.

The rationale for my legislation is just as obvious now as it was then. If an officer always wears body armor, the vulnerability to serious injury or death from unexpected assault is greatly reduced. While armor that could be concealed under normal clothing was available during the early 1970's, it was too heavy and uncomfortable and most officers would not wear it even if they had it. Consequently, soft or lightweight armor was developed and is still considered today preferable for full-time law enforcement officers.

Since about 1975, law enforcement officers have been using protective armor of the soft or lightweight variety to an increasing extent. This type of armor has been developed so that it quite effectively stops the penetration of many types of handgun bullets and some rifle bullets which pose threats to law enforcement officers.

Interestingly enough, however, prior to 1975, State and local governments began to purchase new body armor for their officers, and many officers purchased their own if their department did not provide it.

Today, over half of the Nation's 528,000 law enforcement officers wear soft body armor on a daily basis. Law enforcement officers recognize that soft body armor was designed to stop the handgun bullets like the ones that killed 791 police officers between 1971 and 1980. They also recognize that the bulletproof vests have proven to be a very effective protective device.

Recently, local news media reported on the death of a Washington, DC police officer who was killed in the line of duty. In ending the news story, the reporter indicated that the officer's life could have been saved if only he had been wearing this protective armor during the line of duty.

The U.S. Justice Department estimates that these vests have saved the lives of more than 400 police officers since the law enforcement community began wearing the body armor in the mid-1970's. It is interesting that the approximately 28-percent decrease in firearm-related deaths could be accounted for partially by the increased use of soft body armor by law enforcement officers.

Mr. Speaker, the legislation, I am introducing today on behalf of the Nation's law enforcement community would provide for the authorization of a one-time purchase of soft body armor for the protection and safety of law enforcement officers.

Specifically, the measure would authorize the Attorney General to make grants to States for the purpose of assisting local governments in the purchasing of bulletproof vests for use by police officers. The measure also requires local governments to contribute no less than 25 percent of the cost of the vests, and funds not expended by the local governments shall be returned to the general funds of the U.S. Treasury Department as miscellaneous receipts.

Mr. Speaker, the intent of my bill is simple: It would help save the lives of police officers whose public duties and responsibilities are to protect the citizens of this country. By routinely wearing body armor during all shifts, an officer is assured by full-time protection from most likely threats.

Mr. Speaker, I urge my colleagues to review the legislation, to seek me out on the House floor, or call my office for further information and/or cosponsorship.

Thank you.●

SUPERFUND LAW

HON. THOMAS J. DOWNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. DOWNEY of New York. Mr. Speaker, I am introducing legislation today that will reverse an inequity that exists in this Nation's Superfund law that has prevented the Environmental Protection Agency from responding to this Nation's fastest growing environmental hazard—leaking underground storage tanks. I am joined by my good friend JIM FLORIO, who shares my concern over the dire health threat posed by these leaking tanks.

My interest in the need for this legislation has grown over the past 2 years as I struggled to provide assistance to nearly 60 families in my district affected by a massive gasoline spill in their neighborhood. Over 2 years ago, 100,000 gallons of gasoline leaked from storage tanks belonging to a gasoline station into the ground below these homes. As a result, the homes in the area near the gas station have been inundated with fumes containing benzene, toluene, and xylene. These chemicals are dangerously toxic—in fact, benzene is a carcinogen. The supplying company and the county and State governments are still working to remove the bulk of the spilled gas. Legal action by the State and county governments against the responsible parties for the relocation of the residents took a long time to get off the ground. These delays and the drawn out negotiations prolonged my constituents' exposure to this severe health threat as well as the emotional hardship they were forced to bear.

I requested EPA assistance for these residents on two occasions and was denied both times. In the first instance, the Agency responded that its "regulatory jurisdiction over oil in ground water is extremely limited." I requested EPA assistance at the beginning of last month and was turned down again. I submit the heart of their response below:

Under section 104(a) of CERCLA, the President is authorized to undertake actions to respond to a release of a "hazardous substance" or a "pollutant or contaminant." The definition of "hazardous substance" in section 101(14) specifically excludes "petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as hazardous substance * * *" The definition of "pollutant and contaminant" in section 104(a)(2) contains an identical petroleum exclusion. EPA interprets the petroleum exclusion to apply to materials such as crude oil, petroleum feedstocks, and refined petroleum products, even if a specifically listed or designated hazardous substance is present in such products.

This response clearly depicts an Agency whose hands are tied. Outrageous as it may seem, the letter demonstrates that even if EPA acknowledges the presence of a hazardous substance such as benzene at a hazardous wastesite, the Agency will not respond if the presence of the substance is traced to a petroleum product.

The facts demonstrate, moreover, that these tanks present an imminent hazard to the health of millions of Americans. Nearly half the country relies on ground water for its supply of drinking water and leaking tanks are one of the leading suspects for ground water contamination. New York State has estimated that nearly a fifth of its underground gas tanks are leaking now. Experts estimate that there are 75,000 to 100,000 gasoline tanks nationally that may currently be leaking and that up to 350,000 tanks may be leaking within the next 5 years.

Last year, Congress took action during the reauthorization of the Resource Recovery and Conservation Act to create a comprehensive Federal regulatory program for underground

tanks. The RCRA amendment was designed to prevent future spills, but it did not lift the shackles that prevent EPA from cleaning up tank leaks and toxic wastesites where petroleum is involved.

My legislation will simply give EPA the mandate it currently lacks to clean up underground tank leaks and sets aside a designated percentage of Superfund to deal with these tanks. By lifting the so-called petroleum exclusion, this legislation will free EPA to take actions to prevent, minimize, or mitigate damage to the environment caused by leaking gas tanks. It would allow EPA to give the assistance that was needed to help my constituents including such provisions as alternate water supplies, temporary evacuation and housing of people threatened by gasoline tank leaks.

The massive spill that occurred in my district can happen anywhere. The time has come for Congress to complete the work it began last year to deal with leaking tanks. Let us allow EPA to get to work on these leaking gas tanks before it is too late.

H.R. 1881

A bill to provide that the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 will apply to certain petroleum and to establish a separate account in the Superfund for leaking underground storage tanks

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. PETROLEUM EXCLUSION.

(a) AMENDMENT OF CERCLA.—Section 101 of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 is amended—

(1) by inserting "(a) IN GENERAL.—" after "101.";

(2) by striking out "does not include petroleum" in paragraph (14) thereof and all that follows down to "does not include natural gas"; and

(3) by adding the following new subsection at the end thereof:

"(b) PETROLEUM.—The provisions of this Act shall apply to petroleum, including crude oil or any fraction or component or derivative thereof, in the same manner and to the same extent as such provisions apply to any hazardous substance referred to in paragraph (14), but only if such petroleum (or fraction, component, or derivative thereof) is otherwise specifically listed or designated as a hazardous substance under subparagraph (A), (B), (C), (D), (E), or (F) Of subsection (a)(14).".

(b) CONFORMING AMENDMENTS.—All references in any provision of law to section "101" of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 or to any provision of that section are hereby amended to refer to section "101(a)" of that Act.

SEC. 2. SET-ASIDE FOR UNDERGROUND STORAGE TANKS.

Section 221 of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 is amended by adding the following new subsection at the end thereof:

"(d) ESTABLISHMENT OF SEPARATE ACCOUNT FOR LEAKING UNDERGROUND STORAGE TANKS, ETC.—

"(1) CREATION OF ACCOUNT.—There is established in the Superfund a separate account to be known as the 'Leaking Underground Storage Tank Account' (hereinafter in this subsection referred to as the 'Account') consisting of such amounts as may be transferred to the Account as provided in paragraph (2).

"(2) TRANSFERS TO ACCOUNT.—The Secretary of the Treasury shall transfer to the Account from the Response Trust Fund amounts equivalent to 8.5 percent of the amounts appropriated to that Trust Fund under this section.

"(3) EXPENDITURES FROM ACCOUNT.—Amounts in the Account shall be available for expenditures which may be made from the Response Trust Fund under subsection (c) solely by reason of the amendments made to section 101 by the Superfund Leaking Undergound Storate Tank Amendments of 1985. Any expenditure which may be made from the Account may be made only from the Account.

"(4) REPAYABLE ADVANCES.—

"(A) AUTHORIZATION OF TRANSFERS.—The Secretary may transfer, as repayable advances, to the Account from other amounts in the Response Trust Fund such sums as may, from time to time, be necessary to make the expenditures described in paragraph (3).

"(B) REPAYMENT OF ADVANCES.—Advances made to the Account pursuant to this paragraph shall be repaid, and interest on such advances shall be paid, to the Response Trust Fund, when the Secretary of the Treasury determines that moneys are available for such purposes in the Account (or when required pursuant to subparagraph (D)).

"(C) RATE OF INTEREST.—The interest on advances made pursuant to this paragraph shall be at rates determined under the rules of section 223(b)(2) and shall be compounded annually.

"(D) LIMITATIONS ON ADVANCES.—Rules similar to the rules of section 223(c)(2) shall apply for purposes of this paragraph.".●

WE ARE THE WORLD

HON. RICHARD RAY

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. RAY. Mr. Speaker, I rise today to share with my colleagues something that I saw on television, because I hope that everyone in this Chamber and in the country will get a chance to see it.

All of us are aware of the absolutely tragic situation which is taking place in Africa. Children are starving by the tens of thousands; and when that happens it tells me that there is something wrong with the way the adults are running the world.

Like most of you, I voted for legislation to send more funds into that troubled area. Although there are few issues that we vote on up here that are clear cut, providing food and help for those that are starving is a clear choice for me.

What I saw on television has to do with the efforts that some people, who are not involved with government, have made to help, and I was moved by what I saw.

Apparently, after the night of the American Music Awards, some of the highest priced musical talent on this planet went to a recording studio and made a record and a video disk entitled "We Are the Children."

In addition to their talent, these musicians contributed $1 million of their own money to cover the production and distribution costs. All the proceeds of the album, video, record, and T-shirts will go for African famine relief and current estimates are that these efforts should bring in over $250 million for this cause.

I won't even pretend to say that I recognized all, or even a majority of the famous faces which I saw on the screen. I am not very much in touch with today's music.

But although I did not recognize the faces, I certainly felt the mood and emotion which flowed from that group. These entertainers had just been nominated for the most prestigious awards in their industry. Some had won and some had lost.

But all that seemed forgotten and insignificant in the faces that I saw. These talented musicians had combined their efforts and abilities to come forward with a message of hope and eternal optimism that people seem to be able to hang onto in spite of everything that confronts us.

I hope that everyone in this Chamber and, indeed, everyone in our country will buy a copy of this record, and take the chance to see the video. Because it reminds us that children come to us straight from God, and are the hope that we have for the future.

But it also tells us that the only chance we truly have to work our way into the brighter future that we all want is to care about one another as human beings. Government can help. But unless we, as a people care enough about each other to put aside our individual problems and concerns and devote some attention to the world that we are leaving for our children and grandchildren, there is no constitution that has ever been written or no government that has ever been formed which will be able to save us.●

A NICARAGUAN REFUGEE FAMILY'S PLEA FOR HELP

HON. BOB LIVINGSTON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. LIVINGSTON. Mr. Speaker, since the Sandinista government took power in Nicaragua in 1979, thousands of Nicaraguan citizens have fled their country to seek refuge from the harsh policies of that totalitarian rule. It is right and proper for the United States

to come to the aid of these refugees and to oppose the Sandinista government which has forced them from their homes.

It is hard for the American people to conceive of a situation bad enough to make home-flight happen. We do not see much about it on television, and we do not have any personal experiences to draw on in trying to understand it. Consequently, I would like to read a short but poignant letter from Salvador Pierrot Armijo, who is president of the Civic Committee of Nicaraguan Emigrants. He wrote the letter on February 10, 1985, to the Jenkins family of Baton Rouge, Louisiana, thanking them for their refugee relief efforts through Friends of the Americas, a privately funded, nonprofit group they have formed. I understand this letter is typical of those received by Friends of the Americas in the course of their work with refugees.

This is an English translation, of course, Mr. Speaker, but I would be pleased to provide anyone interested with a copy of the Spanish original. The letter reads as follows:

FEBRUARY 10, 1985.

THE JENKINS FAMILY,
Baton Rouge, LA.

I would like to thank you for your Christmas card and letter. Our best wishes that you and your family are well.

We had a difficult time understanding the letter because we don't speak English, but we could see the beautiful home you have formed with your wife and beautiful children and see that God exists in your home as you profess your Christian faith as every human being should.

In regard to how we Nicaraguan refugees are living, I want to tell you that the violence grows in Nicaragua every day because the Nicaraguan people cannot stand the injustice of the communist regime that rules my country.

Recently we have received several preachers who have come with their arms and legs inhumanly mutilated, tortured by the Sandinistas.

This week an Evangelical pastor arrived with his body almost completely burned. He is only alive by the grace of God. He told me that he was locked in a house by the Sandinistas, then tied up with two other companions. The Sandinistas then spread gasoline around the house, the walls of which were made of wood. Then they set fire to the house. The two other Evangelical pastors died in the fire and he alone was saved by God's divine salvation.

This type of incident is frequently repeated and the Human Rights Commission is notorious by its absence and never makes statements regarding such circumstances. It appears that the communists enjoy the privilege of murdering our Nicaraguan brothers in such a humiliating way and the Human Rights Commission overlooks these acts.

We would like for our friends in the United States to organize and help us raise our voices of protest to the world so all will know of the inhuman acts being committed against the Nicaraguan people.

We have sufficient evidence and are prepared to document similar cases such as I have narrated.

I also wish to express once again in the name of the Nicaraguan people, and for myself personally, the valuable help you have been, along with the other group of friends who presented us with Shoeboxes for Liberty. I also plead to your spirit of good heartedness and the philanthropic spirit of the organization directed by your dear wife, that you help the Nicaraguan refugees who are living in Honduras without work and under inhuman conditions because we have no economic resources.

The number of Nicaraguan refugees is growing by the day, they are sick, wearing rags, and hungry. The majority of those refugees are children, women and the elderly.

The young people remain in the mountains of Nicaragua fighting along side the freedom fighters, the true heroes of the Nicaraguan people. We would appreciate a visit from you and your wife so that together you could witness the need of our people and you could give us the help we need from charitable persons such as you.

I will say no more.

I send best wishes to you and to your family.

SALVADOR PIERROT ARMIJO,
Presidente del Comite Civico de Emigrantes Nicaraguenses, Contiguo a la Logia Mazonica, Danli, Department del Paraiso, Honduras, Central America.

So Mr. Speaker, this is the result of the lofty promises the Sandinistas made to the world—and to their own people—upon the success of their revolution. Let's face it, Mr. Speaker, they broke their promises of yesterday. We should not be foolish enough to believe their promises today.●

USER TAX EQUITY

HON. NORMAN Y. MINETA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. MINETA. Mr. Speaker, nothing would be of greater assistance to the budget crisis we face than to increase reliance on dedicated user fees. Both the administration and the Budget Committee have advocated this approach. Yet the budget process itself provides powerful disincentives to raising those dedicated revenues. It does so because in the aggregate it looks at total revenues and at total expenditures and compares the two, but it tends to ignore the dedicated relationship between some of those revenues and some of those expenditures. Once the dedicated revenues are enacted, the budget process tends to take their existence as a given, but treats the expenditures side as a completely open question, subject to severe limitation even where dedicated revenues continue to flow in unabated.

We have had this problem in the Aviation Trust Fund for more than a decade. Dedicated revenues are enacted based on certain levels of need and authorized spending. But then in subsequent years the budget process considers those spending levels completely disembodied from the dedicated revenues on which they are based. The result is that budget resolutions and enforcement devices are easily used to cut the expenditure side while leaving the revenue side untouched. The close relationship originally intended by Congress when it enacted the dedicated revenues is lost.

This is not only detrimental to the programs and the taxpayers involved, it is also detrimental to the budget process itself, because this kind of experience is used to oppose new dedicated revenues which would ease the budget squeeze and would provide assured financing mechanisms particularly for our capital investment-type programs. The argument against proposals to support additional program areas with dedicated revenues is that the promises accompanying dedicated tax proposals are just a ruse: "Once you get the revenue, we'll never see the spending you've promised." Until we deal with that concern, we will continue to face stiff opposition to user fees and other forms of dedicated revenue.

Programs supported by dedicated revenues and afflicted by the problems I have just mentioned include not only aviation, but also such programs as highways and transit. Legislation I am introducing today, the User Tax Equity Act of 1985, would deal with that concern by providing that programs supported by dedicated revenues would not be subject to the various enforcement devices of the budget process, if and only if the dedicated revenues provided by the Congress were fully adequate to cover the costs of the program. In other words, if you can raise the revenue, you can spend it. This would apply not only to existing dedicated revenue programs, but to such new dedicated revenue programs as the Congress might choose to enact, either of the contract authority type or the prior appropriation type. This bill would not in any way affect the entitlement programs, such as Social Security.

This is basically, therefore, a pay-as-you-go proposal. The Congress would be assured that the programs covered by this bill would not contribute one dime to the deficit, since they would be required to be at least fully self-supporting.

It also does not take these programs off budget: their anticipated revenues and expenditures would still be included in the unified budget.

Mr. Speaker, the bill I am introducing today is similar in concept to language I worked to have included in last year's budget resolution and which this House did approve last year as part of the House budget resolution. So I think the Members of this House have come to recognize that it is no longer enough that in imposing dedicated user taxes we make reasonable efforts at the outset to size those

taxes so that they will produce revenues roughly equal to what we plan to spend on the relevant programs in future years. In fairness to those who pay these user taxes, and in defense of our own credibility in imposing them, we also have to provide some reasonable likelihood that we will in fact spend in future years those amounts we assumed at the outset when we determined the level of the user taxes.

In short, if we are serious about pay-as-you-go, then we are going to have to let pay-as-you-go work. These user tax-supported programs are fully self-supporting; they don't contribute one dime to the deficit; they represent exactly the approach we should be encouraging. This legislation would simply allow us to live up to the promise we make when we impose these dedicated user taxes that they will be spent for certain dedicated purposes. It would do that by allowing spending for such programs to be as great as, but never greater than, the dedicated revenues being collected for that purpose. The programs covered by this bill are now fully self-supporting and would remain so if this bill were enacted. What would be different, however, is that we would be less likely to set dedicated tax levels based on one set of spending assumptions, only to find ourselves railroaded into lower spending levels, ballooning trust fund surpluses, and an angry citizenry which feels it was hoodwinked when we set user tax levels.●

FREE TRADE VICTIMS ACT OF 1985

HON. DONALD J. PEASE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. PEASE. Mr. Speaker, today I am introducing what might aptly be termed the Free Trade Victims Act of 1985. This bill extends the Trade Adjustment Assistant [TAA], Program for import-impacted U.S. firms and workers for 4 years. While preaching about the magic of the marketplace and the virtues of the strong dollar for American consumers, the Reagan administration continues to ignore the mounting toll of American markets and jobs that are being sacrificed to its disastrous trade and fiscal policies. The TAA Program is needed more desperately now than at any time since it was created in 1974, if we are to do anything to help those victimized by a trade deficit that exceeded $120 billion in 1984.

My bill is in tune with our times. It simply extends the current TAA Program for 4 years. The other salient feature is that it provides for a different means of funding the TAA Program in the future than continued reliance upon general revenues. Specifically, it directs the President, upon enactment, to commence negotiations in the GATT context to secure approval for member countries to levy an adjustment fee on imports to finance trade adjustment.

Senator ROTH has offered a similar proposal in the Senate programs. Such fees would be akin to user fees to be levied on importers and nations exporting to America.

Under my bill, if the President is successful in negotiations, the adjustment fee would be applied as soon as GATT approval is won, if the President is unsuccessful in negotiating GATT approval of the establishment of adjustment fees during the next 4 years, then the fees will be imposed on October 1, 1989.

I hope for expeditious action on this bill. We must keep faith with those American companies and workers who have supported trade liberalization in the national interest in exchange for a commitment honored by every President from Kennedy through Carter to provide trade adjustment assistance.●

EXPLANATION FOR MISSED VOTE

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. GILMAN. Mr. Speaker, I was in a meeting earlier today with Attorney General Meese and the chairman of our Select Committee on Narcotics, Congressman RANGEL, and so was unable to cast my vote on rollcall No. 42, on agreeing to the conference report to H.R. 1239, supplemental appropriations for African famine relief. Had I been present at that time, I would have voted "aye."●

PLEDGE TO AMERICA

HON. DOUG WALGREN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. WALGREN. Mr. Speaker, I am honored to place in the RECORD an award-winning entry in the annual Voice of Democracy scriptwriting contest held by the Veterans of Foreign Wars and their ladies auxiliary. Marjorie Scholtz is a senior at Fox Chapel High School in the 18th Congressional District of Pennsylvania and the daughter of Kenneth and Marjorie Scholtz of O'Hara Township. She is also an active participant in a number of sholastic, local, and community organizations and would like to pursue a career in law.

I am proud to insert in the RECORD, "My Pledge to America," by Marjorie R. Scholtz:

Listen to me America. I speak to you. I speak not with one voice but with the richness and power of millions of voices. I bring you a promise to keep our country strong by not forgetting the past. I pledge to remember that the excitement and vitality of America is an echo—it is a refrain not a new song. Its melody was sung by Pilgrims and immigrants—by doughboys and sailors. It has a chorus with an accent on acceptance, freedom, and hope. This song tells us that today was shaped by yesterday—tomorrow will be framed by today!

I am a child of today. A progeny of astronauts, of the 23rd Olympiad, of personal computers and of Neilson ratings.

America's young people look to generations of long ago for guidance. They explore each horizon with the confidence of two hundred some years of ingenuity and grit behind them.

Young America pledges to remember: That Sally Ride would not have been an astronaut had there never been a Charles Lindberg—that Jesse Jackson would not have made a bid for the presidency had there never been an Abraham Lincoln—that Jeane Kirkpatrick could not address the United Nations had there never been an Eleanor Roosevelt—that Lee Iacocca could not have rescued Chrysler had there never had been an Andrew Carnegie—that General Eisenhower could not have taken Normandy had General Washington never crossed the Delaware—that Andrew Wyeth's beautiful paintings are rich with the colors of Gilbert Stuart—and that Neil Diamond sings with the voice of an Al Jolson. America leads the world because it looks forward but she also leads because she doesn't forget to look back. Democracy is strong because of its history not in spite of it.

I am proud to be an American—proud of a nation whose power and wonder come from its diversity. Our flag tells the world that strength comes from tolerance not from insensitivity—that wealth is built on incentive and free choice not on government mandate. I pledge to be loyal to that flag. I pledge to America to work for you . . . to work at being well informed, to know politicians and what their goals are, to know about the world beyond the United States, to know about America's problems. Why are our school's mediocre? Is nuclear disarmament possible? Can we create jobs for the unemployed? Is there a way to stop hunger? These challenges face us as we move toward the next century and like our forefathers, we will meet these problems head-on . . . for we are a nation of action.

America is a democracy built on dreams but based on reality! With determination and hard work we will solve our problems. We are a country whose fabric is woven of strands of blue collar muscle and soldiers' sweat.

As a child of this country I promise to remember America's history and I promise to work for America's future.

This is my pledge to America.●

INTERNATIONAL DOLLAR TRADING

HON. THOMAS J. TAUKE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. TAUKE. Mr. Speaker, one of my constituents and a good friend of mine, John N. Knapp, president of the SCI Financial Group, Inc., of Cedar Rapids, IA, recently sent me the following letter to the editor of the Wall Street Journal. His points are well taken, and I commend his comments on the international trading of our dollar to my colleagues.

SCI FINANCIAL GROUP, INC.,
Cedar Rapids, IA, March 18, 1985.

To the EDITOR,
The Wall Street Journal, 22 Cortlandt Street, New York, NY.

DEAR SIR: Perhaps our preoccupation with the domestic economy is obscuring the answer to the recent daily puzzle of why new highs are being set in international dollar trading. In our introductory economic courses we learned about the powerful impact of the multiplier on the banking system and how the multiplier has the power of creating money. The multiplier also works internationally. An example of the international multiplier in action occurred in the 1970s with the unprecedented increase in Euro dollars and Euro dollar credit. For this reason it is probably no accident that current international dollar strength is happening simultaneously with reports of an extraordinary drop in foreign lending by U.S. banks. Increases in U.S. bank lending overseas have slowed from $111 billion in 1982 to an estimated $300 million during 1984. Possibly in 1985 there will be an actual decrease! Is the multiplier now working in reverse?

Because of a change in the international liquidity preference of banks, recent growth in the money supply (which normally would be more than adequate to satisfy our domestic economic needs) is not sufficient to overcome the international contraction of liquidity which the new reluctance to lend (or borrow) internationally has caused. The monetary policy appropriate for current circumstances can only be discerned from an international perspective. What may once have been considered to be an excessive rate of domestic monetary growth may, in a global environment, actually represent a contractionary policy. The continued strength of the dollar coupled with weakness in commodity prices is providing an important message to the Federal Reserve Board. We are in the midst of an international dollar crisis caused by a credit contraction which, on a world scale, cancels out more dollars in international credit than are being created by domestic money supply growth.

Against the backdrop of a contracting supply of dollars, international demand for dollars remains largely inelastic. Dollar denominated debt looms large in the global economy and the service of this debt insures a constant international demand for dollars regardless of price. Moreover, in a worldwide environment of declining inflation, investment portfolios are increasingly being restructured to include a larger proportion of financial assets of which 75 percent of the world's supply are denominated in dollars. The debt service and investment requirements for dollars do not represent speculative demands which are subject to rapid change, but rather are demands which are fundamental in nature. The bottom line which measures whether sufficient dollar liquidity exists throughout the global economy to satisfy these demands will be found in the action of the international currency market. As long as dollar strength prevails, we will know we are short of international dollar liquidity. With a declining international dollar multiplier and strong dollar demand, an inflation-minded U.S. Federal Reserve Board will succeed in keeping inflation low, probably too low.

Our present course of tight monetary policy will increasingly destabilize our domestic economy by, (a) contributing to dollar strength, (b) promoting larger trade deficits, (c) weakening the domestic economy and leaving large amounts of capacity unutilized, and, thereby, (d) increasing the size of the Federal budget deficit. We should not fear a policy of promoting economic growth in this environment because of the possibility of reigniting inflation. There is a large amount of unused capacity in the world economic system, and the deflationary risks of our present course appear to substantially outweigh the dangers of inflation.

The proper policy should be to back off interest rates allowing the dollar to stabilize and retrace part of its advance. This will help our economy to grow with the added result that we will shrink our budget deficit when economic growth adds incremental tax dollars to the coffers of the government. On the other hand, if we do not supply adequate international dollar liquidity, we risk the destruction of American agriculture, the abandonment of American manufacturing and, because of an ongoing collapse of world commodity prices, the bankruptcy of world money center banks.

Sincerely yours,

JOHN N. KNAPP,
Chairman and President.●

AUTO SAFETY AND CAR PHONES

HON. ROBERT G. TORRICELLI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. TORRICELLI. Mr. Speaker, I rise today to share an article on the matter of car phone safety with my colleagues. Written by Mr. Gerald LeBoff, of Teaneck, it outlines the potential safety hazards associated with telephones in cars. It is an article which provides valuable insights into a problem which has yet to be fully examined by auto manufacturers and highway safety officials. I urge my colleagues to consider its points carefully.

[From the New York Times, Feb. 1, 1985]

ARE CAR PHONES SAFE?

(By Gerald A. LeBoff)

TEANECK, N.J.—Has anyone stopped to consider the safety problems of car telephones? Advertisers of the new service, obviously trying to downplay the issue, show pictures of cool executives cruising down uncrowded highways, one hand on the wheel and one on the set. But what about the hard-driving, get-it-done-yesterday type fighting his way to work on a crowded urban highway? Will he see those distant brake lights while he's absorbed with closing a multimillion dollar European deal?

A few years back, we had a President who was partisanly described as having trouble chewing gum and walking at the same time. Can we expect as much from the average driver?

Can drivers safely pick up a telephone, dial it and talk at length—presumably about subjects that are too important to wait? I don't think so. The car telephone is an invitation to visual, tactile and auditory conflict. Even if the driver has the expensive "hands-free" option, talking and listening on the phone adds a dangerous sensory complication to driving.

Too often, we accept the consequences of technology without questions about its uses and limits. What is this cellular telephone? Is it a tool or a toy? If a toy, it should give the user pleasure and not subject him to unwarranted hazards. If a tool, where concentration is a necessary element, then it should be used in the repose of the back seat or a parkway rest area.

Last year, 50,000 people died in car accidents. To help combat this slaughter, many states are raising drinking ages and almost all have banned the use of stereo headphones by drivers. By allowing driving and telephoning, we are introducing an element of serious distraction, both physical and mental, that can lead to collisions.

As cellular-telephone service is quite new, there are no statistics about its effects on road safety. In New Jersey, for example, accident-report forms do not require information about whether a cellular phone was being used at the time of the incident.

But why should we wait for the inevitable confirmation, when common sense dictates some sort of safety guidelines for car telephones? The Federal Communications Commission and our state legislatures should quickly devise such guidelines. Cellular-telephone manufacturers and installers should make safety the centerpiece of their marketing strategies. And we all should recognize the potential dangers of this medium and demand prudent regulation.●

PATRICIA ROBERTS HARRIS

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. RODINO. Mr. Speaker, it is with a deep sense of sorrow that I take this opportunity to pay tribute to Patricia Roberts Harris, who passed away last week.

Pat Harris truly left her mark on this city and this Nation, and there is a great deal for which we will always remember her. Her achievements were many—the first black woman to serve in a President's Cabinet, as a U.S. Ambassador, and as dean of one of our Nation's outstanding law schools.

Although we will remember her for her contributions, we cannot forget that Pat Harris embodied a spirit that swept this Nation during her lifetime—the spirit of the civil rights movement, of which she was an inte-

gral part. She fought all her life to make this country live up to the ideals of equality and justice for all. The civil rights movement opened up the gates of opportunity in this Nation for so many, for whom they had long been closed. These were the same gates through which Pat Harris proudly passed. With all of the success she achieved—as a lawyer, an Ambassador, a law school dean, and as a member of President Carter's Cabinet—Pat Harris never forgot how hard the struggle had been or how many had been left behind.

That is why, as Secretary of Housing and Urban Development, Pat expanded the UDAG Program. She knew that equal opportunity meant little to those without a roof over their heads.

That is why, as Secretary of Health, Education, and Welfare, Pat was an ardent advocate of child nutrition programs. She knew that empty stomachs meant empty minds.

That is why, as a leader in the corporate world, Pat insisted that companies serve the best interests of their communities. She knew that a business which only served itself serves no one.

Dignity, strength and resolve, grace and humor—Pat Harris had all of these qualities in abundance. Those of us who were privileged to know her can only hope to emulate her in our own public service. She left a lasting legacy, one that will serve to enrich and strengthen life in our society, especially the lives of the underprivileged.●

McINTYRE-McCLOSKEY ALBATROSS

HON. THOMAS J. BLILEY, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. BLILEY. Mr. Speaker, our finest hours have come when we have been able to pull together in a bipartisan fashion and pass legislation benefiting the whole of the American people. I think we need to have one of our finest hours to solve the budget deficit crisis. But I am not sure that is possible with the McIntyre-McCloskey albatross hanging around our necks.

I agree that an investigation should continue, but I know Mr. McIntyre should be seated during that investigation as all precedent dictates.

The lost, liberal leadership has finally found an issue around which it can rally its party. What they need to understand is their stance on this issue—like so many of their other stances—ignores the Constitution and has no input from the common man. Well, the people have spoken on that type of government and the count was 49 to 1—against.

I ask those of you on the other side of the aisle who are pure at heart to join the American people and ask your leadership to give back to the people of Indiana's Eighth District their constitutional rights.

Thank you.●

THE MOST REVEREND BISHOP VILMOS APOR

HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. HORTON. Mr. Speaker, today marks, the 40th anniversary of the death of Hungarian Bishop Vilmos Apor. Bishop Apor died from wounds received from Soviet soldiers while he tried to protect several young women from being raped. Bishop Apor's demonstration of courage in the face of death has served as a rallying point for Hungarian nationals around the world.

To remind people everywhere of the sacrifice Bishop Apor made, the Coordinating Committee of Hungarian Organizations has prepared a commemorative resolution. I ask unanimous consent that this resolution be included in the RECORD.

THE MOST REVEREND BISHOP VILMOS APOR, DEFENDER OF HUMAN RIGHTS, MARTYR OF HUNGARY

The martyrdom of the Hungarian bishop Baron Vilmos Apor takes us back to the last few weeks of World War II. On Good Friday, forty years ago, in the process of protecting young girls and women from being raped he was fired upon by drunken Soviet troops, and succumbed to his wounds a few days later, on April 2, 1945.

Vilmos Apor was bishop of the city of Gyor in Western Hungary during the most difficult years of the war, 1941 to 1945. His name was well known throughout the country. His social commitment, his helpfulness, and his willingness to stand up on behalf of anyone in need of his aid, were public knowledge. Thus it is no wonder that so many people sought his protection in times of persecution and war.

Among other things he was the ecclesiastic head of the Hungarian Holy Cross Association, an organization of Roman Catholics of Jewish origin. He applied all his energy to alleviating the fate of those Jews whose situation had become desperate as a result of the German occupation. His care was not limited to those who were baptized, however. It extended to anyone suffering persecution. In his sermons, in his pastoral letters, in his letters and telegrams to the head of the government, to ministers of state, etc., he demanded that inhuman decrees and practices be stopped. He called personally on the local head of the Gestapo to lodge his protests. Totally without fear, and with untiring energy, he waged a desperate battle on behalf of every victim of persecution, whether personally known to him or not. He turned no one away, for it was his creed to assume responsibility for all who appealed to him, and to protect them at whatever price. And he himself paid that price: he gave his life for those under his protection.

Toward the end of March 1945 the advancing Soviet troops reached Gyor. A fierce battle was fought for this city on the banks of the Danube. The withdrawing German troops blew up the bridges and laid heavy artillery fire on the Soviet battalions pushed toward the inner city. Somehow, in the midst of the devastation, the bishop's palace remained almost entirely unharmed. But, following the battle, further trials were in store for those who had sought refuge there. Reports of the atrocities committed by Soviet troops filled everyone with dread, particularly the young girls and women. Their defense and protection now became one of Bishop Apor's main tasks.

He hid the women, resisting to the end of the violent assaults and demands of the Soviet troops. On Good Friday, however, a group of soldiers, blinded by drink and violence, ended the drama brutally and abruptly: maddened by the bishop's resistance, they began firing at random. Bishop Apor was hit by three bullets; one that eventually caused his death struck him in the abdomen. Blood from a wound on his forehead streamed down his face, staining his habit and crimsoning the pavement. The soldiers, who only a moment before had been shouting and firing wildly, suddenly took fright at what they had done, released their intended victims and fled to the street. The only words uttered by the dangerously wounded bishop, when he was told that the women and girls had been spared the Soviet atrocities, were: "It was worth it. I thank God for accepting my sacrifice."

An operation on Bishop Apor was performed in an emergency operating room set up in the basement of a ruined hospital. The surgeons worked by the light of a petroleum lamp—there was no electricity. The operation was successful. Hopes were raised high. But two days later, on Easter Sunday, the bishop developed a high temperature. The doctors diagnosed peritonitis. He suffered terrible pain, which he endured without a word of complaint. Hampered by their extremely limited resources, the doctors did everything they could, but were unable to save him. On Easter Monday, April 2, 1945, the bishop of Gyor died. The nun who closed his eyes at the last wrote later: "• • • he suffered a great deal, endured it all with great patience, and died like a saint."

The ruined city could offer only a temporary resting place for Bishop Apor: a crypt in the church of the Carmelites. An appropriately solemn transfer of his remains to the cathedral of Gyor was arranged for November 23–24, 1948. The entire Bishops' Conference of Hungary, headed by Cardinal Mindszenty, announced that they would attend the funeral. However, on November 20, three days before it was to take place, Janos Kadar, the then Minister of Internal Affairs, now the First Secretary of the Hungarian Socialist Workers' Party, prohibited the transfer and the funeral rites, raising transparently false arguments.

The body of Bishop Apor remains in the church of the Carmelites to this day, 40 years after his martydom. But the Communists have not succeeded in erasing his memory. Reverence for him and his deeds is alive, within Hungary and without, wherever there are decent men and women. The man who gave his life for his people is not forgotten by them. The men who sacrificed his life to prevent the most despicable violation of human rights, rape, is admired and respected forever not only by his contemporaries, but future generations as well.

Coordinating Committee of Hungarian Organizations in North America, Istvan B.

Gereban, Executive Secretary, Washington, D.C., March 29, 1985.●

THE YOUTH SUICIDE PREVENTION ACT OF 1985

HON. TOM LANTOS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. LANTOS. Mr. Speaker, today, with 27 of my colleagues, I introduced the Youth Suicide Prevention Act of 1985. Our legislation is a much needed initial step by the Federal Government to deal with this devastating public health and social problem in our country.

At a meeting with the press before our legislation was introduced, I was joined by several of these members as well as officers of the American Association of Suicidology, the American Psychiatric Association, and the American Psychological Association. There is clear agreement that this issue must be confronted and that Federal action is appropriate.

THE SCOPE OF THE PROBLEM OF YOUTH SUICIDE

Some 30,000 Americans took their own life last year, and a disturbingly high proportion of those suicides—6,000—were young people. Even this shocking figure, based on the most recent data, may underestimate the problem. The actual number probably is much higher, but is intentionally or erroneously under-reported.

Suicide is currently the eighth leading cause of death in the United States, but among young people it is even more significant. Suicide is the third leading cause of death among adolescents, and the second leading cause of death among college and university students. Furthermore, the rate of suicide during the last 25 years among individuals 15 to 24 years of age has increased threefold.

For every suicide reported it is estimated that at a minimum 10 others are attempted. Thus, while there were 6,000 youth suicides last year, there could have been as many as 60,000 or more attempted.

THE PHENOMENON OF "CLUSTER" SUICIDES

A deeply disturbing phenomenon has emerged recently as waves of suicides have occurred in communities as a result of one adolescent's death. In Plano and Clear Lake, TX, and in Westchester County, NY, such clusters of sequential suicides have been reported.

The first death may or may not have been preventable, but surely additional suicides could have been prevented if we knew how and had the local resources to help the peer group with its own adolescent reaction to the suicide of a friend.

CAUSES OF YOUTH SUICIDE

Most of those who attempt suicide are not mentally ill, but are healthy people experiencing severe personal crises. Crises and intolerable stress can occur in anyone's life. Thoughts of suicide are more common than we like to believe. There is an unwillingness to talk about it, to confront the problem, and to dispel the myths surrounding this ongoing tragedy. This contributes to our inability as a society to reduce a rising suicide rate.

This problem touches every corner of our country—respecting no age, ethnic, regional, or socioeconomic group. Teen suicide eludes classification as a tragedy affecting only low-income youths. As a matter of fact, young people in economically and academically successful families are among those at high risk. Youth suicide victims often are academically and socially successful.

The dramatic increase in teenage suicide is frequently attributed to the breakdown of the family. Divorce rates are higher today than ever before in history. Only 38 percent of all teenagers live with both natural parents. Pressures and stress on the family may be greater in these times when both parents must be employed full time.

Also thought to contribute to youth suicide is the increase in geographic mobility with its potential for disruption, uprooting, and loneliness. Models of violence and the romanticism of death displayed on television and in films may also play a role in teen suicide. Religion, which for some provides spiritual strength in times of stress, is often alien to many young people. Altogether, current social conditions leave youth especially vulnerable and at risk.

The taboos surrounding suicide are many and varied. The stigma of suicide clings to those who unsuccessfully attempt it, and to the family and friends of those who complete the act. Our Judeo-Christian tradition has led us to view suicide as murder. Indeed, many laws regarding suicide and attempts at suicide reflect this punitive point of view.

SAN MATEO COUNTY CRISIS CENTER

As a legislator and an economist, I claim little expertise in the study and treatment of suicide. I do, however, know the importance to my own district in San Mateo County of the outstanding crisis intervention center with its model program for education about and the prevention of suicide.

Mr. Speaker, I want to make particular mention of the director of this center, Charlotte Ross, who has given untiring effort in this field. She has made great contributions to public awareness of the problems of youth suicide both locally and nationally.

The San Mateo Center, along with a similar institution in Los Angeles, spurred California to be the first State in the Nation to pass legislation mandating a statewide youth suicide prevention school program. I believe we need to look to California for a national model for reducing the tragic problems associated with suicide.

Programs that have achieved success in suicide prevention, such as the San Mateo County Crisis Center, can serve as models for other areas of our country. This cross fertilization and dissemination of programs will be an important step toward youth suicide prevention.

THE NEED FOR FEDERAL ACTION

Mr. Speaker, a tragedy of this dimension required Federal action, yet for more than a decade the Federal Government has made little effort to address this problem.

A tiny, underfunded unit for suicide research exists in a remote branch of the National Institute of Mental Health within Public Health Service. No Federal funds are targeted for prevention programs or research on prevention models through this unit. Those projects which are funded generally support biochemical research, clinical searches for physiological causes of suicide, and do not support research on prevention models.

PROVISIONS OF THE YOUTH SUICIDE PREVENTION ACT

The Suicide Prevention Act establishes two short-term programs at the Federal level. Both programs will be set up under the U.S. Department of Health and Human Services in cooperation with the U.S. Department of Education.

COMMISSION ON YOUTH SUICIDE

The bill creates a short-term Commission for the Study of Youth Suicide, whose principal task will be to examine the causes of youth suicide and identify the most promising crisis intervention strategies. The most important task for the Commission will be establishing short- and long-term national plans to assist States and communities in implementing effective youth suicide prevention programs. The Commission will be in existence for only 18 months.

The Commission will be composed of 13 members designated by the Secretary of Health and Human Services: a designee of the Secretary of HHS; a designee of the Secretary of Education; three individuals representing the public at large; and two individuals from each one of the following professional organizations, selected from five names submitted by each organization: the American Association of Suicidology, the American Medical Association, the American Psychological Association, and the American Psychiatric Association.

GRANTS FOR YOUTH SUICIDE PREVENTION PROGRAMS

The bill establishes a temporary 3-year grant program to aid States, local governments, and private nonprofit agencies to implement programs for the prevention of suicide among children and youth. The act authorizes $10 million per year for the next 3 fiscal years for this purpose.

Programs eligible for funding under the bill include: Youth education programs; training personnel who work with youth to recognize signs of self-destructive behavior; establishing community suicide-prevention resources such as 24-hour teen hot-lines; providing educational materials, including public service announcements for radio and television; and holding appropriate national conferences on youth suicide.

REASONS FOR SHORT-TERM PROGRAMS

Both programs established by the legislation are short term. One of the principal objects of the bill is to establish the longer term national agenda for action on youth suicide. These interim measures will encourage the expansion and dissemination of information on existing programs which have been shown effective in preventing youth suicide, but it will also encourage the creation of the agenda for further Federal measures.

Mr. Speaker, the time clearly has come for the Federal Government to act more aggressively and vigorously to deal with this national crisis affecting our young people. I invite my colleagues in Congress to join me in this effort by cosponsoring this important legislation.●

THE MYTH OF FREE TRADE

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. FORD of Michigan. Mr. Speaker, today I am cosponsoring a "sense of the Congress" resolution introduced by my friend and colleague, the Honorable JOHN DINGELL, that calls on the President to retaliate against the unfair trade practices of Japan if that country fails to alter its discriminatory trade actions.

During 1984 our merchandise trade deficit with Japan totaled $37 billion, with nearly $27 billion in automobiles alone. At the same time, the administration ignores the realities of world trade and continues to profess its support for "free trade." What will it take to convince the President that there is no such thing as free trade? While our Nation operates under the guise of free trade, the Japanese are operating under their own restrictive and protective system. It's long past time for the administration to be both tough and realistic in negotiations with Japan. If negotiations fail to open Japanese markets, our alternative is clear—retaliation. We simply cannot stand idly by while American workers and firms are displaced.

For me, the last straw was the announcement that Japan would increase auto imports to the United States by 25 percent next year in response to the Reagan administration's announcement that it would not seek to renew the voluntary restraint agreement [VRA] which limited the number of cars that Japan could import into our Nation. Just as predicted, the Japanese did not reciprocate or otherwise operate in good faith to open up their markets to American products. Rather, the Japanese will import an additional 450,000 cars into our market, resulting in 90,000 fewer jobs for American workers. Lifting the quotas may ultimately result in the loss of 3 million American jobs.

Not only will expiration of the VRA result in a substantial increase in imports of Japanese cars into the United States, it has already had an adverse affect on domestic production in our Nation. On March 7, 1985, Chrysler decided to cut $2 billion from its plans to invest $12.5 billion in new plants and products in North America. This will cost our Nation up to 20,000 desperately needed jobs in the auto and supplier industries. In addition, on March 13, Chrysler Chairman Lee Iacocca stated that he may build high-technology Liberty small cars in Japan or Korea. The Liberty project is similar to GM's Saturn car project. Lifting the quotas will also go a long way toward enabling General Motors to fulfill its Japanese strategy of importing 200,000 to 300,000 subcompacts from Japan's Isuzu and nearly 100,000 minicars from Suzuki after the expiration of quotas.

Clearly, decisive action must be taken to protect our Nation's automobile industry, particularly while Japanese cars enjoy a $1,500 price advantage resulting from the dollar-yen imbalance and rebate of Japanese taxes on exported autos. I would prefer that the Congress enact H.R. 1050, the Made in American Act, which would limit foreign car imports to 15 percent of the U.S. market and apply to manufacturers who sell more than 100,000 vehicles in the United States in a given year.

Of course my interest, and that of my constituents, centers on the problems that imports of Japanese cars have had on the auto industry, its workers and communities. However, by no means are trade problems limited to the auto industry. Our trade deficit with Japan in telecommunications equipment has grown from $516 million in 1979 to $1.9 billion in 1984. When AT&T was divested, Japanese telecommunications manufacturers were allowed to compete with American firms in our domestic market. However, Japan has failed to reciprocate by allowing American companies access to the Japanese market. Other industries affected by Japan's trade practices include steel, agriculture, timber, textiles, and footwear. This list could go on and on. I urge my colleagues to join me in cosponsoring this measure.●

INTRODUCTION OF LEGISLATION TO MAINTAIN STATUS QUO FOR PILOT PROJECT SCHOOL DISTRICTS AND TO EXTEND THE NATIONAL COMMODITY PROCESSING PROGRAM

HON. WILLIAM F. GOODLING

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. GOODLING. Mr. Speaker, together with my Education and Labor Committee colleagues, the distinguished gentleman from Michigan [Mr. FORD] and the distinguished gentleman from Vermont [Mr. JEFFORDS] I am introducing child nutrition legislation which we must act upon within the very near future.

The first provision in this legislation will allow local school districts now participating in the congressionally mandated pilot project study of alternatives to commodities in the National School Lunch Program to continue to use the alternative program they are now testing through the school year ending June 30, 1987.

Unless further legislative action is taken quickly, 70 pilot school districts in 30 States will have to terminate their current test programs and return to the traditional commodity donation program at the end of the current school year. For the past 3 years, these pilot school districts have been testing the use of cash in lieu of commodities or a commodity letter of credit which entitles them not only to purchase locally those products which they can use most efficiently but also products containing those commodities which the U.S. Department of Agriculture wants supported through School Lunch Program purchases.

At the present time, the Department of Agriculture is in the process of reviewing the pilot study data and expects to send two reports on the study findings to Congress this year.

This legislation would, therefore, enable those school districts, at their option, to continue in their alternative cash or letter of credit program while Congress reviews the pilot study findings, assesses the alternative methods, and decides whether further legislative action is appropriate. Cooperating pilot project school districts will be

spared costly and disruptive changes in School Lunch Program operations.

A list of the pilot project school districts and their locations follows:

LOCATION OF SCHOOL DISTRICT AND SCHOOL DISTRICT NAME

Amarillo, TX, Amarillo Independent S.D.
Atco, NJ, Waterford Township School District.
Bar Mills, ME, School Administration District No. 6.
Batesburg, SC, Lexington School District No. 3.
Boise, ID, Boise Independent School District.
Bremerton, WA, Bremerton Public Schools.
Brodhead, WI, Brodhead School District.
Brooksville, FL, Hernando County School District.
Chipley, FL, Washington Public School District.
Covington, VA, Alleghany County School District.
Dayton, OH, Dayton Public Schools.
Dublin, GA, Laurens County School District.
Edgefield, SC, Edgefield County School District.
Elaine, AR, Elaine School District.
Elba, NY, Elba Central School.
Elk Point, SD, Elk Point School District No. 61-3.
Ely, NV, White Pine County Schools.
Franklin, WV, Pendleton County School District.
Fredericksburg, VA, Fredericksburg City Schools.
Fruitland, ID, Fruitland Idaho Public Schools.
Gilroy, CA, Gilroy Unified School District.
Glenrock, WY, Converse County S.D. No. 2.
Goldfield, NV, Esmeraldo County School District.
Gonvick, MN, Gonvick-Trail Community School.
Grace, ID, Grace Joint No. 148.
Greeley, CO, Weld County School District.
Green Forest, AR, Green Forest School District.
Greenwich, CT, Greenwich Public Schools.
Huntington Beach, CA, Huntington Beach City, S.D.
Indiana, PA, Indiana Area School District.
Jonesboro, AR, Jonesboro Public School.
Key West, FL, Monroe County School District.
Knoxville, TN, Knox County School District.
Lancaster, PA, School District of Lancaster.
Longview, WA, Longview School District No. 122.
Loudon, TN, Loudon County School District.
Lyndonville, VT, Lyndon Town School District.
Medina, OH, Highland Local School District.
Menahga, MN, Menahga School District No. 821.
Merrill, WI, Merrill School District.
Morrisville, VT, Morristown School District.
Mt. Vernon, IA, Mt. Vernon Community School.
Norton, OH, Norton City Schools.
Oakland, CA, Oakland Unified School District.
Oldham, SD, Oldham School District No. 38-4.
Page, AZ, Victoria Independent S.D.
Paris, IL, Crestwood School District No. 4.
Parkersburg, IA, Parkersburg Community School.
Petersburg, WV, Grant County Schools.
Philadelphia, PA, Archdiocese of Philadelphia.
Plaquemine, LA, Iberville Parish School District.
Portland, ME, Portland Public Schools.
Reading, PA, Reading School District.
River Falls, WI, River Falls School District.
Romulus, MI, Woodhaven School District.
Seattle, WA, Shoreline Public Schools.
Shreveport, LA, Caddo Parish School District.
Springfield, OH, Northwestern Local School District.
Springfield, VA, Fairfax County Public Schools.
St. Louis, MO, St. Louis Public Schools.
Sylvester, GA, Worth County Public Schools.
Tamms, IL, Egyptian Community Unit.
Ten Sleep, WY, Washakie Community Con. S.D. #2
Troy, MI, Troy School District.
Tucson, AZ, Flowing Wells Schools.
Tyler, TX, Tyler Independent School District.
Vincetown, NJ, Shamong Township School District.
Waverly, TN, Humphreys County School District.
Westminster, CO, Adams County S.D. #50
Windsor, CT, Windsor Public Schools.

I would urge my colleagues who represent pilot project schools to contact their school food service directors directly and to learn first hand of their interest in continuing in either a cash or commodity letter of credit program for the next 2 years.

Mr. Speaker, the second provision of this legislation would extend the USDA-administered National Donated Commodity Processing Program through October 15, 1987. Thanks to this program, elementary and secondary schools, correctional facilities, nonprofit hospitals and nursing homes as well as senior citizen food service programs, nonprofit summer camps, food banks, and day care centers can buy products utilizing USDA-donated commodities at a discount.

Under the National Donated Commodity Processing Program, the U.S. Department of Agriculture enters into contracts with food processors to make finished end products from nonfat dry milk, butter, cheese, and honey—commodities which the Department has in storage. The food processing companies take the USDA commodities, make finished products, and discount the price of the finished food products to eligible recipient agencies by the value of the donated commodity contained in the end product.

National Commodity Processing has been operating for about 18 months during which in excess of 35 million pounds of USDA commodities have been moved out of storage and to eligible agencies in the form of finished end products ready to be served to the individuals served by these agencies.

By extending the National Commodity Processing Program for an additional 2 years and requiring that all eligible recipient agencies be notified of its existence and the benefits it affords, we can insure the wise utilization of foods that would otherwise remain in storage at the taxpayers' expense.

I would urge all of my colleagues to take a careful look at this legislation and join us as cosponsors.●

CONVENTIONAL FORCE REDUCTIONS

HON. CECIL (CEC) HEFTEL

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. HEFTEL of Hawaii. Mr. Speaker, reports have surfaced that the Senate Armed Services Subcommittee on Manpower has voted to cut the Pentagon payroll by 175,000 people over the next 2 years in an effort to hold down defense spending. The cut, if enacted, would reduce the active duty force of the Army, Navy, Air Force, and Marine Corps by 75,000 service personnel, and the Defense Department's civilian work force by 100,000 employees over fiscal years 1986 and 1987.

These proposed cuts are deeply troubling in the manpower priorities they signal for our military, namely, that more jobs will be targeted to programs such as the MX and the B-1 bomber and fewer jobs will earmarked for our conventional forces such as the 600-ship Navy. We run a substantial risk that we will have new ships being delivered without enough capable people to run them.

Mr. Speaker, our distinguished colleague from the other body, Senator JOHN GLENN, has remarked that these cuts if enacted would also undermine such critical defense operations as intelligence, communications, and training. I second Senator GLENN's remarks and would add that the current round of proposed cuts in defense spending demonstrates the dangerous inconsistency in our current defense planning.

We seem willing to spend billions on the development of potentially destabilizing weapons systems such as the MX, and yet, we are seemingly unwilling to make the same sort of commitment toward our conventional forces.

The total cost of the administration's MX program is likely to end up costing the taxpayer at least $50 billion. This expenditure will not buy America more security. Rather, it will only heighten the tension between the United States and the Soviet Union because the MX is a first strike weapon and it will add to our already

exorbitant budget deficit. Yet, while we spend billions on doomsday weapons, we jeopardize our best means of defense, our conventional force strength. I hope that the upcoming congressional debates on defense spending will reverse this troubling trend. The time is short, but the stakes are high, and the American people deserve a defense policy that provides genuine security, not an invitation to confrontation and global instability.●

THE 140TH ANNIVERSARY OF MONITEAU COUNTY

HON. IKE SKELTON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. SKELTON. Mr. Speaker, it is with great pleasure I announce the celebration of the 140th anniversary of Moniteau County, in the great State of Missouri, which was formally organized on April 2, 1845.

Moniteau County is situated in central Missouri along the Missouri River. The history and tradition of this county run deep, Mr. Speaker. In the early part of 1800's many settlers from Kentucky and Tennessee were attracted to its rich soil and fine location, as were many Europeans seeking the land of golden opportunity.

The county seat is located in California, MO, which today is the largest city in the county and was named in 1846 and incorporated in 1848. The railroad, which first arrived in California in May of 1858, was all that was needed to spark growth in the community.

Tipton, to the west of California, also received many benefits from the expansion of the Pacific Railroad. Settled in the 1850's and named by William Tipton Seely, it became an important community for the railroad and Butterfield Overland Stage Line, which carried passengers and mail to San Francisco.

Because of its strategic location and the railroad and stage depot, Moniteau County was deeply coveted by both the North and South during the Civil War. Much of the county, like many parts of Missouri, found itself pitting brother against brother in the conflict.

Union Gen. John C. Fremont, early in the war, established headquarters, according to local history, in the Maclay mansion at Tipton. To this day, the mansion stands as a beautiful example of Missouri antebellum architecture. The army of Confederate Gen. Sterling Price, of Missouri, went through California, Tipton, and many of the surrounding communities in his effort to secure the area for the South.

Following the conflict, the county continued its steady growth, as did the railroads. Many towns dotted the countryside of Moniteau County, including McGirk, Clarksburg, Fortuna, and Jamestown. Along the Missouri River are the once busy riverports of Lupus and Sandy Hook.

Those in the countryside and smaller communities have for generations relied on the soil and God's blessing to provide themselves with a living. They prefer the neighborly atmosphere of Enon, Latham, High Point, Kliever, and the surrounding countryside.

Mr. Speaker, I am proud to represent the people of Moniteau County in Congress. The county stands as a fine example of the strengths, hard work, and dedication attributed to rural America. While driving along highway 50, through Moniteau County, you can feel the warmth that is so characteristic of Missouri. I ask you join me in the celebration of its 140th anniversary.●

EUROPEANS RALLY TO NICARAGUAN RESISTANCE

HON. JIM COURTER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. COURTER. Mr. Speaker, as the original sponsor of House Concurrent Resolution 81, which calls upon both President Reagan and the Organization of American States to extend explicit political recognition to the Nicaraguan resistance, I was gratified to see that distinguished Western Europeans are equally interested in doing more to hold the Sandinistas to the promises about democracy they so freely made in 1979.

A partial list of these European statesmen, soldiers, and scholars has been assembled by Mr. Bill Outlaw for the Washington Times, and was printed by that newspaper on March 28, 1985. I commend it to those of my colleagues who share my interest in obtaining a just resolution of the Nicaraguan war.

EUROPEANS RALLY TO NICARAGUAN RESISTANCE

(By Bill Outlaw)

A group of European intellectuals and politicians, including several leaders of the resistance to the Nazis during World War II, have signed a petition calling on Congress to provide aid for the anti-Sandinista resistance.

The "problem of Central America is also a European problem," they say.

The petition was published as an open letter to Congress in many European newspapers earlier, including the Paris daily Le Monde, Le Soir of Belgium, La Stampa of Italy and De Telegraph of the Netherlands.

A group of the signers, including Vladimir Boukovsky, the Soviet dissident who lives now in France, will come to the United States Tuesday to present personal pleas for aid to the Nicaraguan resistance.

"The freedom of the Nicaraguans is also your freedom, as it is ours," the petition asserts. "If you fail in Nicaragua, we must ask, where will you fail next? If freedom and domocracy are not worth defending in your own hemisphere, where are they worth defending? The free world awaits your answer. Its enemies are waiting too."

Among the signers are Winston Churchill, a member of the British Parliament and grandson of the World War II prime minister; Lord Chalfont, a former British foreign minister; playwright Eugene Ionesco; French author Jean-Francois Revel; former Australian Prime Minister Malcolm Fraser, and Robert Conquest, the British historian.

The visiting delegation of about 12 has requested a meeting with the president during next week's visit, said a Reagan adminstration official.

He said the White House was pleased with the support and the prestige of those signing the petition was impressive.

The petition and the pending U.S. visit are the latest in what has become an intense lobbying effort in a battle between the Reagan administration and those opposed to a proposed $14 million appropriation for Nicaraguan resistance.

Last month, a delegation of lawmakers from several European countries visited the U.S. to lobby against funding Nicaraguan resistance. That delegation met with members of Congress and registered objections to the Reagan administration policy in Central America at meetings in the State Department.

The petition argues that the aid is necessary because the Sandinista junta is a totalitarian regime which since its inception has "declared its aim to be the incorporation of Central America into a single Marxist-Leninist entity."

The petition also contends the resumption of the aid is "necessary morally" because Western countries must be "forthright in support for those who are struggling to gain the rights which your own Declaration of Independence declares are inalienable and, therefore, possessed by all men."

The petitioners describe Central America as Europe's "Fifth Frontier."

To deny aid to those who seek freedom in Central America, they argue, "is to deny the meaning of your own country." It says the United States would be placed in a difficult strategic position in dealing with the Soviet Union should the aid be suspended.

The trip to the United States and the published statements in connection with the petition are sponsored by Resistance International, a Paris-based human rights, anti-communist organization.

Others who signed the petition include former North Atlantic Treaty Organization Gen. Robert Close; Cuban poet Armando Valladares; Marie Madeleine Fourcade, chairman of the Action Committee of the French Resistance during World War II, and former French Prime Minister Jacques Chabin Delmas.

Also, Italian publisher Massimo Pini; Marcelle Lentz Cornette, of Luxembourg, a member of the European Parliament; Simon Wiesenthal, of Austria, president of the Documentation Center on Jews persecuted by the Nazi regime; writer Leif Hovelsen, a Norwegian Resistance Fighter during World War II, and Joseph Luns, former secretary general of NATO.●

CHARLES ELLIOT, BAY SHORE HUMANITARIAN OF THE YEAR

HON. THOMAS J. DOWNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. DOWNEY of New York. Mr. Speaker, today I am privileged to pay tribute to Mr. Charles Elliot, who was unanimously selected by the Bay Shore Chamber of Commerce to receive their 1985 Humanitarian of the Year Award.

Mr. Elliot has served the local community as a member of the Bay Shore Fire Department for 57 years. He began his service to the Bay Shore community in 1927 when there were only 23 fire alarms. Today, this department has over 300 alarms.

Mr. Elliot rose through the ranks, becoming captain of the fire department in 1946. He also held the position of treasurer of the Bay Shore Fireman's Benevolent Association for 12 years. Mr. Elliot was the first president of the Suffolk County Fireman's Parade Officials Association and co-chairman of both the Southern New York State Fireman's Association and the South Shore Fire Department Association.

Mr. Elliot still continues to devote his time on a senior active basis with the fire department by making daily visits to the sick firemen in our community hospitals and is readily available to assist in other matters.

Mr. Elliot has earned the respect and admiration of his colleagues and the members of the Bay Shore community for his sincere dedication to community service.

I am honored to offer my gratitude and congratulations to Mr. "Bay Shore Fireman" Elliot.●

ADDRESSING FLAW IN IMPLEMENTATION OF STAGGERS ACT

HON. BYRON L. DORGAN

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. DORGAN of North Dakota. Mr. Speaker, I am introducing today a bill to address a small but vital flaw in the implementation of the Staggers Act. That legislation permits railroads to enter into contracts with shippers, so long as the contracts are not discriminatory. It is my concern that small shippers be protected so that they do not get the short end of the deregulatory stick, which would be the result if railroads entered into preferential contracts with the larger shippers.

The seeds of this problem have been germinating since the Staggers Act was passed. Since October 1980, when contracts were permitted for the first time in a century, about 21,000 contracts have been signed by railroads and shippers. I have no quarrel with these contracts, if they do not give favored treatment to the contracting shippers.

Are these contracts discriminatory? We do not know, and we will never know if the Interstate Commerce Commission has its way. The Staggers Act provided that the essential terms of contracts be made public, to ensure that discriminatory pricing would be exposed to the antiseptic of sunlight. The ICC has thwarted the intent of Staggers, taking a bizarre approach in defining how rail contracts should be disclosed. Until prodded by the courts, the ICC claimed that the essential terms of rail contracts included neither the identity of the contracting parties nor the pricing structure. The ICC has modified their regulations, under duress, to provide ground rules for limited discovery for affected third-party shippers.

The new regulations of the ICC give us not even half a loaf, just a few crumbs. Requests for discovery of contract terms must be made simultaneously with complaints of discriminatory pricing, even though the information necessary to argue discriminatory pricing is not available until after discovery. The costs of entering into ICC discovery proceedings deter smaller shippers from seeking contract information, even though these are the very shippers most likely to be discriminated against. Further, in States like North Dakota public and private clearinghouses often act on the behalf of smaller shippers, providing expert analysis and counsel. These bodies cannot enter into discovery proceedings: They are not shippers, and are not themselves affected directly, and so have no ability to petition the ICC for contract information.

The ICC has set up a neat paradox: Small shippers, the parties most likely to be hurt by discriminatory pricing, are the ones least likely to get the information they need to make a case for discrimination. It is no surprise that the ICC has received only 4 petitions for discovery, and granted only 1 of these, for the 21,000 contracts in their files. It should be obvious that small shippers need to know who is getting a contract, and what the rates are, if they want to judge its fairness. The ICC has managed to overlook the obvious in rail contract disclosure. The direction taken by the ICC is consistent with much we have seen from this administration: long on free-market rhetoric and textbook approaches to regulation, and short on common sense and protection for the smaller producers.

I note with some irony that there were similar concerns a century ago, when the original Interstate Commerce Act was considered. The railroads at that time reduced rates where they had competiton, and increased rates where they had none. Shippers in rural areas, with access to only one railroad, were forced into paying outrageously high rates to get their goods to market. The public outcry over rate discrimination and other abuses of the market system led to the passage of the Interstate Commerce Act in 1887 and the establishment of the first Federal independent regulatory agency, the Interstate Commerce Commission. Contracts, and resulting discrimination in setting rates, were outlawed.

This legislation says that all terms of rail contracts must be disclosed within 2 business days after filing with the ICC. It provides a measure of protection for small shippers, and no additional burden on large shippers or railroads. It is entirely consistent with the intent of the Staggers Act: Rail contracts are still permitted, but discrimination as a result of those contracts is not.

ICC regulations on rail contracts have satisfied big shippers and railroads, and left small shippers a few stale crumbs. Small shippers deserve more. This legislation will let the small shippers sit at the same table, on an equal footing, with their larger brethren.●

FDIC, H.R. 107 AND BROKERED DEPOSITS

HON. ROBERT GARCIA

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. GARCIA. Mr. Speaker, I wish to commend recent FDIC action identifying financial institutions that have used deposit brokers to place funds in other banks, seemingly without regard to the condition of these banks. Banks paying above market rates of interest often are experiencing serious problems. If other institutions place funds through brokers into these banks, with regard only for the rate of return and without any means to individually check each institution where these funds are placed, then the very insurance system that all banks enjoy can be undermined.

I have introduced legislation with other members of the Banking Committee to end this practice. H.R. 107, the Broker Deposit Limitation Act prevents financial institutions, whether they be banks, thrifts or credit unions from using a broker to place funds in other institutions. The FDIC is also circulating a draft proposal to deal with broker funds. Though I do not agree with every aspect of the FDIC proposal, primarily with respect to the differences between short and long-term deposits, it is important to

note that the FDIC effort adopts the language in my bill to limit the use of deposit brokers by financial institutions.

H.R. 107 strikes a reasonable balance. It recognizes the benefits that broker funds can provide and the abuses currently existing in the system. The legislation institutes a 15 percent cap on the amount of short term brokered funds any one institution may hold. Any troubled institution is restricted from accepting short term brokered funds. In order to monitor the activity of brokers and institutions, each are required to report their activity.

Last year, 17 members of the House Banking Committee wrote to the regulators asking that they keep in mind that broker funds provide a mechanism to channel funds into regions of the country where they are needed to satisfy the credit needs of individual businesses and homebuyers. They have also afforded individual savers an additional option for purchasing certificates of deposit and other types of long-term saving certificates.

Since the courts have stricken the regulator's rules on broker funds, it is important that Congress adopt legislation to deal with any abuses while establishing a set of guidelines for the safe, sound, and beneficial use of broker funds. I look forward to continuing the dialog with the regulators and members of the industry in order to pass H.R. 107.●

NEEDED: STRONG RIGHT TO KNOW PROTECTION

HON. BRUCE F. VENTO

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. VENTO. Mr. Speaker, the terrible disaster which occured late last year in which more than 2,000 people died as a result of a chemical spill near Bhopal, India was perhaps the most striking example of the need for strong safety standards when dealing with chemicals and hazardous substances. The accident at the Union Carbide plant was a large-scale tragedy for many victims and their families. However, here in our own country, we must act to insure that such a tragedy does not occur. Unfortunately, accidents on a similar scale do happen here every day.

Millions of Americans are being exposed daily to an ever-increasing number and variety of toxic and hazardous substances which pose a threat to their health and well-being. Exposure to hazardous substances can and does lead to occupational disease and injury. Workers are often unaware that they are handling or have been exposed to hazardous substances on the job.

In November, 1983, the Occupational Safety and Health Administration [OSHA] issued its hazard communications standard. Unfortunately, however, the OSHA standard extends limited protection to only the 25 percent of our work force in manufacturing and offers no protection at all for the remaining 75 percent of workers in other industries and services, such as construction, and transportation. Today, I am introducing the hazardous substances right to know resolution which affirms the right of all workers to know when they are handling or are exposed to hazardous substances which threaten their health or well-being. Additionally, this resolution calls for OSHA to revise its standards to provide for the dissemination of meaningful hazard information to all workers under OSHA jurisdiction. Finally, this resolution commends those 20 States and numerous local governments which have enacted strong right to know laws for the benefit of their workers on the job and the community at large. This resolution is similar to one which I sponsored in the 98th Congress which received the support of 92 of my colleagues. I hope that you will join me in supporting the strongest possible protection against exposure to hazardous substances by American workers on the job.●

PETER GIULIANI: A MODEL OF LEGISLATIVE LEADERSHIP

HON. JAMES M. JEFFORDS

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. JEFFORDS. Mr. Speaker, as we continue to struggle with unmanageable deficits in Washington, I'd like to pay tribute to a man who deserves much of the credit for keeping my home State of Vermont on sound financial footing for two decades.

Peter Giuliani, long known as the powerful chairman of the Ways and Means Committee of the Vermont House, remains one of the most respected leaders in our State. A long succession of Governors and legislative leaders have found him to be either a needed ally or a formidable opponent. There is not a high State official who has not had occasional strong differences of opinion with Peter Giuliani. But the wisdom of the positions he has taken has repeatedly been validated by the test of time. He speaks with authority, and today's policymakers listen to his insights and advice.

Peter was my representative in the Vermont House in the years when I served as Vermont's attorney general. I watched him in action rather closely in those years, and still consider him to be a nearly perfect model of the best kind of legislative leadership.

He's a man who always listened to constituents, but never hesitated to say or do what he believed to be right, regardless of political popularity.

He's a man who knows how to use influence, without letting it get to his head. He is gracious in both victory and defeat, and maintains a sense of humor in the most stressful of times.

He has a unique ability to understand the impact of legislative action on the future of the State and the lives of people. Peter has often been at odds with other experts in predicting the State's revenue needs, and he has almost always been proven correct. He has fought to raise taxes when necessary, and fought to bring taxes back down when possible. And, knowing that local taxation is as burdensome as the State's, he crusaded for years for a more equitable method of distributing State aid to education.

Importantly, he has the perspective of a man who knows that life does not begin and end with legislation and politics. His beautiful gardens and his famous 1949 Buick, maintained in mint condition, are outward symbols of his diverse interests and quality lifestyle.

Tragedy fell upon the Giuliani household during last year's election campaign when Peter's wife, Pauline, became terminally ill. To his enduring credit, the needs of his family took priority over campaigning for reelection.

But all Vermonters can be deeply grateful for the profound impact he has had on the quality of life in our State in a lifetime of public service.

He has earned the respect of political leaders of both parties and all viewpoints, and his insights will continue to influence public policy, in a positive way, for many years to come.●

CONSIDER THE CASE OF ISAAK SHKOLNICK

HON. SHERWOOD L. BOEHLERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. BOEHLERT. Mr. Speaker, despite the recent thaw in Soviet-American relations and the rise of a new leader, we must not forget the horrible conditions of cultural repression, and physical and psychological torture that continue for those Soviet citizens of the Jewish faith. Arbitrary arrests and imprisonment, brutal intimidation and physical abuse, and the inhumane, pointless breakup of families—these are standard operating procedures in the nation which claims to be the beacon of hope for oppressed people around the world.

Consider the case of Isaak Shkolnick, a semiskilled mechanic from Vinnitsa, in the Ukraine. Isaak applied in

July 1972 for a visa to emigrate to Israel, and was immediately arrested on fabricated charges of being an industrial spy first for Great Britain, and then for Israel. His trial began 12 years ago this week behind closed doors at a local factory. Not a single family member was allowed to attend. Isaak maintained his innocence until November, when his state-appointed lawyer informed him that if he did not change his plea to guilty, he would be sentenced to death. Isaak changed his plea, and was sentenced to 7 years of hard labor.

At this point, the Soviets threw in another vicious twist: They allowed Isaak's wife and daughter to emigrate to Israel. The family has not been united since 1973.

Isaak has applied again and again for permission to leave, most recently this past December. He has been denied that permission, and now lives alone as an Orwellian nonperson, ignored by friends and neighbors, separated from his small family. Isaak has only one reason to continue to live—the tortured hope that someday still he will be able to escape this totalitarian hell and rejoin his family in Israel.

Mr. Speaker, try for a moment to imagine yourself in Isaak's shoes, persecuted cruelly by your own government for nothing more criminal than an expressed desire to live and worship freely. Try to see the faces of 400,000 other Soviet Jews who have been denied exit visas, and who have faced hardships similar to Isaak's. Even as we reach for improved relations with the Soviets, we must not let the world overlook such gross violations of internationally recognized supposedly recognized even by the Soviets I might add, human rights.

On Isaak's behalf, I will continue to write to Soviet and American officials urging that he be allowed to go free. I would also encourage my colleagues to join the Congressional Call to Conscience Vigil for Soviet Jews. I encourage the President to include this issue high on the agenda of any meeting between representatives of our nations, or indeed, between himself and Mr. Gorbachev.

The human spirit has proven itself throughout the centuries stronger than any government. Isaak Shkolnick and his fellow refuseniks are inspiring examples of that fact. Let us work and pray for justice to be done.●

SOCIAL SECURITY NOTCH PROBLEM

HON. JIM ROSS LIGHTFOOT

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. LIGHTFOOT. Mr. Speaker, today I am joining several of my colleagues in cosponsoring legislation to eliminate the Social Security notch problem. The bill, H.R. 1917, sponsored by the chairman of the Select Committee on Aging, Mr. ROYBAL, enjoys bipartisan congressional support. As you may recall, this is the bill that Congressman ROYBAL sponsored in the 98th Congress. That bill, H.R. 4093, died last year in the Ways and Means Committee with 62 cosponsors.

Since taking office earlier this year, I have heard from countless numbers of constituents who have asked me to support legislation to correct this serious inequity in the Social Security system. In addition, I have met with an ad hoc notch group, based out of Council Bluffs, to discuss the unfairness of the Social Security notch.

After meeting with this group, I came to the conclusion that they would not give up on this issue until it had been corrected. I also noted that they were not fighting for themselves, all of whom are affected by the notch, but were fighting for thousands of senior citizens who desperately need the extra Social Security benefits that have been unfairly denied to them.

This dedicated group of individuals, headed by Daryl Cooper, Arlene Sheeley, and Vera Daniels, has organized one of the most active grassroots organizations in the country devoted to eliminating the notch. This group of individuals has devoted countless numbers of hours, time, and effort to make Members of Congress, the media, and millions of Americans aware of the notch issue.

They have held hearings all across Iowa, Nebraska, and now into Illinois to educate people about the notch. These meetings have been well attended. In fact, attendance usually ranges anywhere from 50 to over 300 people. As you can see, these are not small numbers. It is amazing what this group has accomplished, and what they plan to accomplish in the future, which is to eliminate the notch.

For this reason, I urge my colleagues to address this issue. I believe that Congressman ROYBAL's bill would provide Congress with a forum to examine the notch and to eliminate it. At this time, I think it is important to discuss how the notch was created, how it affects senior citizens, and how Congressman ROYBAL's bill provides them with a fairer level of benefits.

First, of all, how was the notch created. It started in 1972 when Congress amended the Social Security Act to provide for annual cost-of-living adjustments. Unfortunately, Congress made a mistake which resulted in increasing the future benefits of current workers twice: once through cost-of-living adjustments [COLA's] in the Social Security benefit table and once again due to inflation-based growth in the wages upon which benefits are calculated. As a result of that mistake, some individuals retiring by the year 2000 would have received monthly Social Security benefits greater than their working salaries. If left unchecked, this error would have bankrupted the Social Security system.

Therefore, in 1977, Congress approved a plan which eliminated the overadjustment for inflation by providing for a new benefit formula for workers born after 1916. To protect people from an abrupt change in benefits, a transition formula was included in the new plan. This transition formula was to provide for a smooth change over by dividing Social Security beneficiaries into three categories: those born before 1917, those born between 1917 and 1921—the notch years—and those born after 1921.

Under the transition formula, which was to last for 5 years, benefits were expected to be 5 to 7 percent less than those projected to be paid under the 1972 law. However, as we all know, this transition formula failed. Instead, workers with the same earnings record, retiring at the age of 65, and born only a few days apart, one in 1916 and one in 1917, experienced up to $1,300 a year difference in benefits.

While one of the main reasons for the transition formula's failure was unexpectedly high inflation in the late 1970's, which in essence, created a 2-year phasein period rather than the 5-year period, this is not the only reason. The primary reason, and one that is often ignored, is that the post-age-82 earnings of people born after 1916 are excluded when calculating the benefits for workers born in the notch years.

As Congress worked on this new plan, many fears were expressed about the possibility of creating a notch situation. However, those fears went unheeded and people were told that there only would be small differences in the benefits received by persons born after 1916 who retired at age 62. What was not divulged or properly discussed, however, was the full effect of this change on people who worked until age 65; that is, those people whose earnings after the age of 62 were ignored.

Now, many may ask, what has been the effect of the notch on those people born between 1917 and 1921. Well, thanks to Congressman ROYBAL, I can give you specific examples of how the notch affects constituents in my district. Last year, in an Aging Committee hearing that Congressman ROYBAL held in Council Bluffs, he heard from many notch year babies.

Let me just list a few of those for you. Mr. "C" of Blockton receives benefits of $210 a month less than those paid to someone of equivalent earnings who was born 3 years earlier. Elizabeth Redman of Van Wert, born in 1918, currently receives $484 a month.

She would have gotten $637 a month if she had been born in 1916. Jerald Walter of Mt. Ayr was born in 1919 and receives benefits which are 19-percent less than if he had been born in 1916.

Donavan Nelson of Atlantic, born in 1918, would receive $106 a month increase under the Roybal bill. Vera Carson of Redding was born in 1918 and would get an 11-percent increase under this bill. And finally, Mrs. "A" of Leon paid Social Security taxes on earnings of almost a quarter of a million dollars. She receives $154 a month less than someone of equivalent earnings who was born in 1916.

As anyone can see, these are concrete examples of the notch effect on senior citizens. It is unfortunate that Congress did not follow the advice of many people in 1977 by adopting a longer phase-in period. It is unfortunate that this group of senior citizens has had to bear the entire burden of correcting Congress' mistake. And, furthermore, it is unfortunate that a vast majority of these senior citizens have already sacrificed for our country by serving in World War II.

These notch year babies are not asking for a handout or an unjustified increase in their benefits. They are only asking to be treated fairly. A slight difference in benefits might have been acceptable to them, but not a $1,300 a year difference.

Let there be no mistake that I think Congress should have changed the 1972 law in order to preserve the future solvency of the Social Security system. However, I believe that a wiser, more thought-out plan should have been adopted by Congress. Nonetheless, the mistake has been made, and it is now time for Congress to act to correct this serious injustice.

Congressman ROYBAL's bill does this. It is the best plan put forward so far which would reduce the large differences in Social Security benefits while also maintaining the intent of the 1977 law. This bill does this by providing for a smoother, yet fairer transition from the 1972 law to current law by phasing in the Social Security benefit formula over a 20- to 30-year period rather than the 2- or 3-year period that has occurred. This bill essentially holds harmless those persons who, through no fault of their own, have been adversely affected by the notch.

In conclusion, Mr. Speaker, I encourage my colleagues to reexamine the notch issue and to support the Roybal bill. Senior citizens deserve to have the notch problem corrected, and if the notch group in my district is like any of the other concerned citizens across the country, they will not relent on this issue until justice is done.●

TRIBUTE TO JUDGE ERNEST ROSASCO

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. CONTE. Mr. Speaker, I ask my colleagues to indulge me today as I pay tribute to one of my Italian-American comrades, Judge Ernest H. Rosasco, in recognition of his numerous contributions over the years to the community of North Adams, MA.

Ernie and I have been close friends all of our lives, and in fact, he has served as counsel to two generations of Contes in North Adams. I bring my remarks to the floor of the House today as Ernie is soon to be recognized for his works and contributions to the city of North Adams as part of "Italian American Culture Week." You should know, too, that North Adams is the gateway from the north to the First Congressional District of Massachusetts.

In my opinion, no better selection could have been made. Ernie has been singled out because he has given so freely of his time and talents and has dedicated himself to fairness and compassion in his work on the bench and in his dealings with friends and neighbors of North Adams. His Italian heritage is rich as is his Italian lineage. History recounts the contribution Ernie's father made on behalf of the advancement and acceptance of the newly arrived Italian-American emigres when he received his unprecedented appointment in 1922 as chief of police in North Adams by Mayor Houghton.

Ernie has continued in the proud tradition of his parents and grandparents. A 1929 graduate of Williams College, and a 1937 graduate of the Harvard School of Law, he went on to make a name for himself in the legal profession. A distinguished veteran and city councilor, Ernie returned from World War II to be elected mayor of North Adams where he served with the utmost competence and professionalism. In 1962, I was proud to recommend Ernie for a judgeship. Since then he has provided unbounded energy and a strong commitment to the administration of justice.

Men of this caliber are indeed rare and I take this time today on the floor of Congress to relay to you his many accomplishments and achievements, and may we all aspire to such greatness during our lifetime. Please join me in congratulating Judge Ernest H. Rosasco on a job well done and in extending to him our best wishes for continued success in the future.●

FLEXTIME WORK SCHEDULES

HON. THOMAS N. KINDNESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. KINDNESS. Mr. Speaker, today I introduce legislation which changes two outdated Federal laws dealing with employee flextime work schedules. I am speaking of the Walsh-Healey Public Contracts Act and the Contract Work Hours and Safety Standards Act which, among other things, regulate the overtime pay schedules for the employees of Federal contractors.

To recall for our colleagues, Mr. Speaker, the Walsh-Healey Act applies to Federal contractors supplying goods to the Government in excess of $10,000. This includes manufacturers supplying army blankets, repair shops servicing Government vehicles, or industrial companies supplying equipment to the armed services.

The Contract Work Hours Act applies to federally financed construction contracts over $2,000 and Federal service contracts between $2,500 and $10,000. Service contracts include computer repairs, security guards, janitorial services, and other service-type contracts.

Both laws have overtime provisions mandating pay at time and one-half for work in excess of 8 hours a day or 40 hours a week and have denied Federal contractors the ability to meet the changing needs of their employees through the use of flexible and compressed work schedules.

Passed in the 1930's, Mr. Speaker, these laws served for years to protect employees from abusive overtime practices and paved the way for the 8-hour day to become the workplace standard.

Similarly, the Fair Labor Standards Act, which governs non-Federal employees in the private sector, requires employers to pay overtime only after an employee works more than 40 hours per week, with no daily limit. Thus the Walsh-Healey and Contract Work Hours Acts have held Federal contractors to a higher standard than private-sector employers generally and have strengthened the Government's role as our Nation's model employer.

In recent years, however, the Federal Government has experimented with flextime work schedules and we have made provision for them in law affecting civil service workers. But we have yet to extend that same freedom to Government contractors to utilize the innovative management techniques which have allowed employees greater worktime flexibility. The present law unduly restricts thousands of private-sector contractors who provide goods and services to the Government and clearly should be changed.

As our colleagues know, Mr. Speaker, the idea of flextime first became popular in the late 1960's, when employers started to utilize the idea of completing the standard 40-hour workweek in less than 5, 8-hour days; 4-day, 10-hour schedules, 3-day, 12-hour schedules, and a variety of other flexible schedules which take into account the special demands of certain employees such as working mothers and permanent part-time employees, have been used with increasing frequency.

Managers have found that alternative work schedules can increase productivity and reduce absenteeism while employees enjoy more leisure time and reduced commuting time and expense. Furthermore, the Congressional Budget Office concluded that over $500 million in cost savings would accrue to the Government if Federal contractors were able to use these schedules effectively.

To date, the only segment of the American economy that has been left out of the flexible workweek schedules are private contractors who do work for the Federal Government. The outdated impact of the Walsh-Healey Act and the Contract Work Hours Act has served to discourage these contractors from utilizing alternative work schedules and has penalized those employers who seek progressive ways to meet the changing needs of their work force.

With millions more Americans predicted to be utilizing some form of alternative work schedule by the end of the decade, the need to conform the present law to the workplace realities of the 1980's will grow stronger every day. I trust my colleagues will join with me in passing this much needed legislation.●

JONELLE MATTHEWS

HON. DAN SCHAEFER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. SCHAEFER. Mr. Speaker, on December 20, 1984, 12-year-old Jonelle Matthews disappeared from her home in Greeley, CO. It is feared that she was kidnaped. I want to call attention to Jonelle's case in the hope that she will soon be found.

Jonelle is 5 feet, 3 inches tall and weighs 115 pounds. She has brown hair and brown eyes, a full set of braces on her teeth, and a scar under her chin. Jonelle would have celebrated her 13th birthday last month. Information about Jonelle, or any other missing child, should be reported to a local law enforcement agency or to the National Center for Missing and Exploited Children's hotline at 1-800-843-5678.

In Colorado, over 11,000 children are listed as having been abducted. Just as I did in the Colorado State Legislature, I will support measures to help curb this epidemic of abuse against our most valuable resource—our children.●

DISMANTLING OF THE SMALL BUSINESS ADMINISTRATION

HON. DAVID DREIER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. DREIER of California. Mr. Speaker, if there ever was a Federal program that lacks unified support among the constituency it is designed to serve, it is the Small Business Adminstration. Of course, there are many people here in Washington who continue to believe that maintaining the SBA, along with its superfluous lending programs, is essential to the small business economy. But the small business person back home is not so easily fooled. They see the Federal deficit as a major obstacle to economic growth. And we know that as the economy goes, so do the fortunes of small business.

The recent economic recession should have been enough of a lesson for the Congress to realize that small business is always the first to feel the pinch. Inversely, the current economic expansion has been instrumental in fostering small business growth.

Small business will continue to thrive without the SBA, but they will not continue to thrive with massive Federal deficits. The economic benefits that will be realized by including the SBA in any deficit cutting package will far outweigh any advantages that may exist by perpetuating the agency. This is something the small business person recognizes, and is willing to accept.

Since introducing H.R. 1461, the Small Business Advancement Act of 1985, support for the measure has far exceeded my expectations. This measure incorporates the administration's proposal to dismantle the SBA, liquidate its credit programs, and transfer its noncredit programs over to the Department of Commerce. The response to this proposal from small business in my home State has been overwhelmingly positive. This includes active support from several chambers of commerce in my district. The following letter from one local chamber of commerce is just one example of the community support I have received for discontinuing the SBA and its inefficient loan programs:

MARCH 15, 1985.

Congressman DAVID DREIER,
Covina, CA.

DEAR CONGRESSMAN DREIER: On behalf of the membership of the Glendora Chamber of Commerce, I would like to express our support for your bill H.R. 1461, the Small Business Advancement Act of 1985.

Our Chamber is primarily made up of small business owners, and we know first hand how important a strong small business sector is to the continuing strength of the American economy. We believe that the Small Business Administration loan programs do not significantly contribute to a strong small business sector, and applaud your effort to eliminate spending on these loan programs. To us, a much more important priority is the reduction of federal expenditures to cut the federal deficit and reduce interest rates. Cutting back on the S.B.A. is an important first step toward this important goal, and we support your effort to eliminate this wasteful spending.

We will also contact other Chambers of Commerce to share our views on this issue, and encourage them to join us in supporting your stand.

Please keep us informed on the progress of your legislation.

Sincerely,

BILL GERSHON,
President.

Mr. Speaker, It is clear that maintaining anything more than small business noncredit programs in the Department of Commerce lacks any broad-based support in the small business community, making it one of the less difficult cuts this Congress can make. Rather than any unified protest, I anticipate praise that Congress is taking such a positive step to reducing the Federal deficit.

Dismantling the Small Business Administration as part of an overall Federal spending reduction will send only one signal to small business—that we are committed to reducing the deficit so that the small business economy can continue to expand and flourish.●

THE TIME FOR CHANGING OUR TRADING POLICY IS NOW

HON. DOUGLAS APPLEGATE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. APPLEGATE. Mr. Speaker, it appears as though the United States has finally relegated itself to the status of a pawn in the international chess game of free trade. We now find ourselves either so unwilling or so powerless to correct our current trade problems that we readily accept the edicts that come from Tokyo and other foreign capitals as to what the future rules of international trade will be.

The epitome of this inaction on our part is to be found in our inability to react with force to the pronouncement last week from Japan that an additional 500,000 automobiles will be imported into the United States in the coming year. The Japanese say that this figure represents a real concession on their part—that they could easily send over to American shores nearly twice that number. Of course they

could easily do that—because no one has told them they can't.

Yes; they'll start sending over to the United States an additional one-half million automobiles—because we'll let them!

Has anyone in this Chamber heard anything about a reciprocal trade-off to benefit the United States? Has anyone heard anything about the Japanese agreeing to an increase of 25 percent of any American products to enter their country?

Finally, have we in the Congress forgotten the American auto workers who continue to face long-term unemployment? Have we forgotten about the American factories that are shut down and rusting away? And have we forgotten about American businesses that can't compete overseas because we continue to believe that international trade should be free while we as an economic force in this world are losing our freedom?

No Member of this House should ever suggest that the freedoms we so strongly believe in as Americans should ever he held captive to ideals of free trade that were created generations ago. The freedom that we so willingly accept will not be ours for long—and the facts and figures of our trade imbalance point this out every day.

Besides the additional 500,000 cars coming from Japan, there is also the ever-increasing share of foreign steel products that continue to make inroads into the American steel producing industry—although the Reagan administration says that it is trying to reduce the foreign share of steel. Let me point out, though, that ever since the voluntary restraint agreement negotiations were started by the administration last year, the percentage of foreign steel coming into the United States has actually increased—not decreased.

What kind of progress is this?

Are we as a nation really serious about the consequences that we face if we continue to stick to an outdated trade policy? And is this administration ready and willing to stand up to the challenges that face not the White House but, instead, the millions of American workers and thousands of American businesses that continue to suffer from foreign actions that undermine our freedom and our economy?

I would like to believe that the President seeks a just and fair resolution to this situation that impacts on all Americans, but I have my doubts. Mr. Reagan stated over a week ago—supposedly off the record—that we should keep our grain at home and export the farmers instead.

Well, in view of the trade constraints that the United States faces in dealing with Japan, I would like to challenge the President to even attempt to export to the Japanese the pitchforks and milking stools of American farmers—let alone the grain that we produce.

The time for change in our trading policy is now.●

DENISE K. SIMONEAUX WINS VFW AWARD

HON. BOB LIVINGSTON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. LIVINGSTON. Mr. Speaker, I am very proud that the Louisiana winner of the VFW Voice of Democracy scriptwriting contest is Denise K. Simoneaux of New Orleans, a student at the Academy of the Holy Angels High School. This is an outstanding activity, and both Denise and the VFW are to be commended.

The program was started 37 years ago with the endorsement of the U.S. Office of Education and the National Association of Secondary School Principals. Sponsorship was provided by the National Association of Broadcasters, Electronic Industries Association and State Associations of Broadcasters.

Starting in 1958–59, the program was conducted in cooperation with the Veterans of Foreign Wars with the broadcasters still serving as sponsors.

In 1961–62, the Veterans of Foreign Wars assumed sole sponsorship responsibility. At that time, the national scholarship award consisted of a single $1,500 scholarship for the first place national winner.

During the past 23 years under VFW sponsorship, the annual national scholarships have been increased to six, totaling $32,500 with the first place winners currently receiving a $14,000 scholarship to the school of his/her choice. Student participation has tripled and school participation has doubled.

This past year more than one-quarter of a million participated. Over 8,000 schools participated, over 4,000 VFW posts and 3,500 auxiliaries sponsored the program and over 2,300 radio and TV stations cooperated.

The total monetary value of scholarships and awards provided by VFW posts, auxiliaries, county councils, districts and departments amounted to over $675,000 last year. This is in addition to the $32,500 in national scholarships and an annual budget at the national level in excess of $150,000 to conduct the Voice of Democracy Program.

During the 23 years of sponsorship by the VFW, over 5 million students have participated and awards totaling more than $3 million have been given to winners at all levels in scholarships, savings bonds, and so forth.

Mr. Speaker, I urge my colleagues to read Denise's winning script, "My Pledge to America," and to join me in congratulating all of the students throughout Louisiana and across the Nation who participated in this fine program. The text of her script follows.

MY PLEDGE TO AMERICA

Remembering the many history lessons I have been taught over the years, I recall the names of men and women who have contributed great things to this country. I think of those men who wrote our Constitution and established our government under the ridicule of some of their fellow Americans. I think of Abraham Lincoln and John F. Kennedy and other presidents who changed the direction of American government. I think of the anonymous soldiers, both young and old, who gave their lives because they believed in a better world. I recall the names of Susan B. Anthony and Martin Luther King who fought for the equality of all Americans. Today, the commitments of these people seem so clear and defined. They lived their lives in service to their country and in doing so shaped America into what it is today.

Reflecting on the strong commitments of these people, I am called to question my own pledge to America. To me, America is more than a piece of land stretching from the Atlantic to the Pacific. It is more than a set of laws and a network of states. America is a body of people working together and individually, supporting each other on a foundation of freedom and democracy. America is the person sitting beside me and in front of me. America is the people who live around me and the people who live thousands of miles away from me. America is its people. Therefore, when I say that I pledge to America, I mean that I pledge to the people. I commit myself to the person right next to me and the person a thousand miles away.

I am not a freedom fighter, or a human rights activist, or a feminist, and my bravery does not extend to the battlefield or the podium. My ammunition is my vote. My battlefield is the voting booth. I believe that the best way I can commit myself to my fellow Americans is through the wise use of my voting rights. I consider voting to be a responsibility as well as a privilege.

When I vote for the person I believe is the best candidate, I am voting for the American people or against them. We voters take an active role in our government by choosing who will make our laws and who will represent us to foreign nations and who will make the crucial decisions when it comes to war. In short, through the voting booth, we decide the future of our country.

In this election year, as in previous ones, millions of Americans will stay home on election day. In doing so, these people choose to waive their rights as American citizens and leave the important decisions in the hands of a few.

Speaking to a group of young Americans, Eleanor Roosevelt once said: "It is not enough to want freedom, one must believe in it. It is not enough to believe in freedom, one must work for it".

The work of us as Americans citizens is in the voting booth. I may never be a Susan B. Anthony or a John F. Kennedy, but I do have a clear and defined commitment to America as they did. My commitment is to the person sitting next to me and the person a thousand miles away from me. Most importantly, my commitment is to

myself as an informed, responsible, active citizen of this country.●

AMERICAN PEOPLE LOSING PATIENCE WITH THE JAPANESE GOVERNMENT

HON. WM. S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. BROOMFIELD. Mr. Speaker, Congressman JOHN DINGELL and I are introducing a resolution urging the President to take retaliatory action against Japanese imports unless the Japanese significantly open up their own markets.

This resolution is similar to one passed by the Senate last week by a vote of 92 to 0. Its passage in the House will clearly indicate just how thin our patience has worn over our trade problems with Japan.

The Japanese must understand that we are long past the period when we will be mollified by smiles and promises. Now is the time for action—and if the Japanese will not act in opening up their markets, then we will act to close our markets to them.

We have a degree of protectionism in our country, but we are only beginners compared to the Japanese. They have had a policy of protecting their infant and declining industries for decades. It is a policy of targeting which protects their industries during a growth stage and supports them in competition for foreign markets. It is a policy where the members of the Diet, the powerful bureaucracy, and the captains of Japanese industry put their combined strength into economic growth.

As a result, we have seen our trade deficit with Japan go from $10 billion in 1980 to over $37 billion in 1984.

Japan's announcement that auto shipments to the United States will be raised by 25 percent could mean an increase in sales from $4 billion to $10 billion, further magnifying our trade problems. This could translate into the loss of new job opportunities for 90,000 Americans which is intolerable.

Mr. Speaker, I have always been a firm believer in the advantages of competition in the marketplace. However, that competition must be fair.

For far too long, we have been willing to accept a degree of unfairness to set an example for free trade to the world. However, the result of this attitude has been the weakening of our domestic industries. Certainly we have seen no expansion in the number of open markets in other countries. We have learned it takes two trading partners committed to open markets to make this system work. Japan and others must realize that the free ride is over. We will not let our domestic industries fall because of unfair trade practices and closed overseas markets.

We are engaged in important trade negotiations with the Japanese seeking markets for many of our products from telecommunications equipment and technology to wood products.

I had hoped that with Prime Minister Nakasone's last visit with President Reagan, our trade relations would take a different direction. However, it seems that politically, leaders in Japan have as much trouble with their bureaucracies as we do here. The announcement of increased Japanese auto imports and the lack of progress in our ongoing trade talks leads me to believe that things have not changed all that much.

Business as usual is no business at all as far as I'm concerned. Things will change either through mutual agreement or unilateral action on our part.

Mr. Speaker, it is significant that JOHN DINGELL, as a Democrat and chairman of the House Committee on Energy and Commerce, and I, as the ranking Republican on the House Committee on Foreign Affairs, have joined in sponsoring this resolution. We have come to address this trade problem from a bipartisan perspective, and we believe our trade problems with Japan seriously affect our domestic economy and our foreign relations with that country.

I hope the Japanese do not misread our action in Congress. This is not a charade. We have come to the end of our patience, and we will not play any further games. We want our trade with Japan to be open, considerate, and above all fair.

Mr. Speaker, I urge my colleagues in the House to join Mr. DINGELL and myself in sponsoring this resolution and later in voting for its passage.●

REINTRODUCTION OF THE MEDICARE AND MEDICAID PATIENT AND PROGRAM PROTECTION ACT OF 1985

HON. W. HENSON MOORE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. MOORE. Mr. Speaker, I am pleased to be joined by my House colleagues in reintroducing today a clean version of the Medicare and Medicaid Patient and Program Protection Act of 1985 which was introduced as H.R. 1370 on February 28, 1985.

This reintroduced version takes into account various suggestions for improvement gleaned from our recent joint hearings in the Subcommittee on Health of the Committee on Ways and Means and the Subcommittee on Health and Environment of the Committee on Energy and Commerce, and will allow for more expeditious consideration of the measure in our respective committees.

As many of my colleagues already know, Mr. Speaker, the bill is designed to protect Social Security Act beneficiaries from incompetent or unscrupulous practitioners and improve our protection against fraud and abuse.

We need to act swiftly on this legislation in order to help assure quality services to our Nation's elderly, disabled and poor and I commend the interest and support of the distinguished chairman of the Subcommittee on Health and Environment for scheduling a markup on the measure on April 4. I am hopeful that the Subcommittee on Health of the Committee on Ways and Means will be able to follow suit shortly after the Easter recess.●

THE ENVIRONMENTAL AND ENERGY STUDY INSTITUTE'S GROUND WATER SYMPOSIUM

HON. HOWARD WOLPE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. WOLPE. Mr. Speaker, I had the opportunity March 11 and 12 to observe and participate in a symposium on one of the most vexing environmental issues facing the Nation: The protection of our ground water, on which half the Nation depends for its drinking water.

The symposium was sponsored by the Environmental and Energy Study Institute and hosted by the Environmental and Energy Study Conference, of which I am cochairman. It was the first step by the institute in its ambitious effort to explore and define the options facing us if we are to protect this most vital natural resource.

The institute's ground water protection project could not be more timely. We are just beginning to recognize ground water contamination as a national problem. Federal protection efforts—and most State efforts—are scattered throughout programs designed primarily to protect other resources or to regulate only some sources of contamination.

For example, the institute's initial ground water report, released at the symposium, and the Office of Technology Assessment both note that at least 15 Federal agencies and 16 Federal statutes offer some ground water protection, and each of the 50 States has some protection program in place. Yet ground water is still being polluted. And our experience through the Superfund Program has taught us that once ground water is contaminated it is extremely costly and difficult to clean.

The symposium was a remarkable success. Hundreds attended the various sessions to hear and question an

array of experts on the many facets of ground water contamination and protection policies. This information exchange among specialists and policymakers will prove invaluable to Congress when we are forced to grapple with ground water questions in the coming months.

At the heart of the ground water symposium was the institute's ground water report itself, written by Judy Campbell Bird of the institute staff. The paper is a superb outline of the nature of the problem confronting us and the policy options available to us. I am arranging to make the report available to the office of every Member and every Senator so that it receives the widest possible consideration.

From here the institute will organize a series of regional hearings across the country to examine in detail the nature and scope of the threat facing the Nation's ground water. Other members of the Environmental and Energy Study Conference and I will take part in those hearings.

In the fall, the institute's ground water task force will organize policy development workshops to evaluate the most promising ideas garnered in those hearings.

By early next year, the institute will develop its proposals for congressional action on ground water protection. That proposed agenda will be presented to Congress at a major conference.

I wish to congratulate and thank the Environmental and Energy Study Institute for its ground water protection project and last week's promising beginning. In particular I want to thank Judy Campbell Bird, Ken Murphy, executive director of the institute, and Dr. Ruth Patrick, the distinguished head of the ground water task force.

We are a long way from a comprehensive answer to the ground water problems facing us. This recent symposium and the institute's report are important first steps.●

EGYPTIAN-ISRAELI RELATIONS: A SPOTTY RECORD

HON. RON WYDEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. WYDEN. Mr. Speaker, with each passing day and with each disturbing newspaper headline, the need for peace in the Middle East becomes more evident. That's why when Egyptian President Hosni Mubarak visited the United States last month, Congressman JOHN MCCAIN and I joined 115 of our colleagues in introducing a resolution calling on Egypt to renew its commitment to the Camp David accords.

The need for this renewed commitment is made clear by a recent analysis by Phil Baum and Raphael Danziger of the American Jewish Congress, entitled "Egypt Update: A Periodic Survey of Egyptian-Israeli Relations," March 1985. This analysis shows that progress toward peace, although somewhat improved in recent months, is still spotty.

Because I know many of my colleagues share my concern about this matter, I would like to ask that the analysis be printed in the RECORD. The full American Jewish Congress report also contains a documented chronology of specific acts and statements between November 1, 1984, and February 28, 1985, which bear upon Egyptian-Israeli relations. Members interested in reading through that chronology can obtain a copy of the full report by calling the American Jewish Congress.

Following is the analysis of that report:

ANALYSIS

In our two previous reports (May and November, 1984) we presented a rather gloomy picture of virtually frozen bilateral Egyptian-Israeli ties and persistent Egyptian erosion of the Camp David stipulations for the peace process. We are pleased to report that during the last few weeks, Cairo has moved forward on both issues: It has partially thawed bilateral relations and it has adopted a public position on procedural (although not the substantive) aspects of the peace process that seems entirely consistent with Camp David accords. At this stage it is unclear, however, whether Cairo's recent moves merely amount to empty rhetoric designed to secure further U.S. aid during President Mubarak's upcoming trip to Washington as well as American recognition of the PLO as asserted by Israel's Likud Party, or whether the Labor Party is right in crediting the Egyptians with a genuine decision to promote peace following the emergence in Israel of what they perceive as a more moderate government, the beginning of complete Israeli withdrawal from Lebanon, and the Jordanian-PLO agreement to form a joint delegation.

On the bilateral level, it must be emphasized that the Egyptians have thus far failed to address some of Israel's main grievances. Despite frequent explicit promises, President Mubarak has refused to return the Egyptian Ambassador to Israel. Equally unambigous high-level promises to end the publication of anti-Semitic articles and cartoons in the Egyptian press have been ignored as well (see Dec. 18, Jan. 3, and Jan. 6). Cultural ties between the two nations remain frozen, and Egyptian tourists are still virtually barred from visiting Israel.

At the same time, Egypt has undertaken a significant number of substantive steps to improve its bilateral relations with Israel. Politically, for the first time in three years high-level meetings and intensive negotiations were held—both on Taba and on the peace process. There were no hostile Egyptian acts comparable to the severing last year of diplomatic relations with Costa Rica and El Salvador because they returned their ambassadors from Tel Aviv to Jerusalem. And on several occasions, President Murbarak publicly praised Israeli statesmen and actions. Economically, Israel was invited to participate in the Cairo book fair (Jan. 22); Egypt responded positively to Israeli requests for compensation for water pipes installed in Sinai during its occupation and for greater help for transferring Palestinian refugees from Rafa to the Gaza Strip (Feb. 5); President Mubarak promised to approve import licenses for several Egyptian businessmen seeking to purchase goods in Israel and to facilitate the border crossings of Israeli tourists en route to Sinai (Feb. 17); Mr. Mubarak approved the sailings of Israeli yachts to Egypt's Coral Island south of Eilat (Feb. 21); and Egypt and Israel decided to expand trade in the energy sector (Feb. 28). And in the humanitarian field, Egypt agreed to consider a plan by Israel to conduct a fourth search for an Israeli submarine that sank with its entire crew in the 1960's off Egypt (Feb. 5).

Egypt has made equally significant progress in its position toward the Middle East peace process. Whereas just three months ago it signed a joint communique with Jordan agreeing on the importance of convening an international peace conference under UN supervision attended by "all parties concerned, including the PLO" (Dec. 3), by late February President Mubarak had forthrightly called for direct negotiations between Israel and a joint Jordanian-Palestinian delegation that would not have to include known PLO members, while an international conference "could be the last stage as a blessing of the solution" (Feb. 24). If genuine and firm, this position represents a substantial Egyptian return to the Camp David procedural stipulations after many months of advocating procedures that clearly contravened the Egyptian obligations at Camp David. Arguably, President Mubarak's assertion that the first step should be an American dialogue with the Jordanian-Palestinian delegation (Feb. 27) and Mr. Osama el-Baz' statement that the Israeli-Arab talks should be conducted indirectly with the United States serving as an "honest broker" between the two sides (ABC-News 'This Week with David Brinkley," March 3), are no more than an initial bargaining position to be traded away for direct Arab-Israeli negotiations. This, however, remains to be seen.

Unfortunately, no parallel progress was recorded with regard to Egypt's position on the substance of the peace process. In total contradiction to the Camp David formula requiring the establishment of a five-year Palestinian autonomy in the territories prior to the implementation of a negotiated final settlement, last December Egypt's Foreign Minister demanded Israel's "unconditional and immediate withdrawal from Arab territories occupied after (sic) 1967, including the West Bank, the Gaza Strip, and the Syrian Golan Heights" (Dec. 19). Nor was Egypt's support for the Palestinians' "inalienable right to self-determination in the form they see fit" (Dec. 3)—a thin disguise for an independent Palestinian state—any more constructive. These positions, which have not been repudiated or amended since, might have just as well be stated by Syria, the PLO, or other Arab radicals.

The stark contrast between the apparent improvement in Egypt's bilateral relations with Israel and its position on the peace procedure on the one hand and its totally negative positions on the substance of peace on the other raises troubling questions about Egypt's intentions. While not presuming to resolve the internal debate in Israel between the Likud and the Labor parties on this issue, we believe that the following observations are warranted:

1. Egypt is determined to restore its former legitimacy and leadership position in

the Arab world. This explains not only its hard line on the substance of peace and its refusal to return the Ambassador to Israel, but also its prodigious efforts to "sell" the Hussein-Arafat "agreement" to Washington and to involve Jordan and the PLO (at least indirectly) in the peace process under Egyptian auspices. Furthermore, inter-Arab politics underlie Egypt's refusal to grant bases to the United States (Jan. 15) as well.

2. Egypt is equally determined to preserve the essence (if not necessarily the spirit) of its 1979 peace treaty with Israel which has benefited it in many ways (see out two previous reports for details). Because of the danger of erosion of support in Israel for the peace treaty due to Egypt's obstructionism (Feb. 4), Cairo may have concluded that an improvement in relations is necessary for the survival of the peace.

3. The acceleration of Egypt's positive steps on the eve of President Mubarak's visit to Washington hardly seems coincidental. No doubt the Egyptians were well aware of the reluctance on the part of many Congressmen to support increased aid to Egypt as long as it continued its impediments. And Cairo made it perfectly clear that it regarded the requested aid increases a vitally important.

As far as they go, all of these Egyptian objectives (although not all of the steps taken to advance them) merit full sympathy in Washington and Jerusalem alike. An Arab world under the leadership of an Egypt that lives in peace with Israel is obviously preferable to one led by a Syria or even a Saudi Arabia. Certainly, Egypt's interest in maintaining peace with Israel is highly desirable. And the growing dependence on U.S. aid has provided Egypt with added incentive to adhere to its peace treaty with Israel. If Egypt had acted to advance all three objectives simultaneously, its policies would have deserved nothing but praise. But as we have seen, the Egyptians have frequently sought to promote their inter-Arab position at the expense of their peace treaty with Israel and even their strategic cooperation with the United States. President Mubarak's forthcoming visit to Washington provides an excellent opportunity to attempt to rectify this deplorable Egyptian propensity and to persuade Mr. Mubarak that his country's interests would best be served by strengthening the Egyptian-Israeli peace and the strategic relationship with Washington even as Egypt continues to improve its position in the Arab World.

Considering Israel's complete adherence to the peace treaty with Egypt and Mr. Peres's favorable response to President Mubarak's call for direct Israeli negotitions with a Jordanian-Palestinian delegation as well as Egyptian and American participation (Feb. 27), it behooves the Administration to urge the Egyptian President to respond in kind. Mr. Mubarak should be apprised that the United States expects him to continue improving Egypt's relations with Israel—specifically to return its ambassador to Tel Aviv, to end anti-Semitic expressions in the government-controlled press, to remove the restrictions on the free movement of people and goods across the borders, and to implement the agreements on cultural exchange. Furthermore, the Administration should stand firm in its insistence on direct Arab-Israeli negotiations as opposed to indirect, U.S.-brokered talks, let alone a UN-supervised international conference. To quote ABC-News correspondent C. Robert Zelnick (Christian Science Monitor, 2/14/85), "The U.S. message to Mubarak should be clearly articulated. Assistance to Egypt cannot be divorced from movement in the regional peace process. Even in a difficult market, wise investors require a return."●

INTRODUCTION OF NEW INDUSTRIAL DESIGN PROTECTION LEGISLATION

HON. CARLOS J. MOORHEAD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. MOORHEAD. Mr. Speaker, today I am introducing legislation very similar to that which I introduced last Congress, H.R. 2985. I hope that industrial design protection legislation will become a top national priority and a goal of the 99th Congress. While proposed legislation has been before Congress for a number of years, its importance has not been recognized for several reasons. One is the perception that the design patent system in this country provides adequate protection and additional protection is unnecessary. Another is the impression that designs of articles are somehow not as basic to our country as other more fundamental things such as patentable innovations, protection of new and emerging technologies. In point of fact, current existing design patent protection is unreliable.

Decade after decade the litigation track record has been abysmal with three out of every four design patents struck down as invalid. This chills those who contemplate enforcing their rights and dissuades potential applicants from seeking protection. In 1983, only 3,279 design patents were granted in the United States to U.S. residents and reported by the World Intellectual Property Organization. By way of comparison, in Japan, which has a viable form of industrial design protection, the comparable number is 31,508 registrations or nearly 10 times ours. We cannot dismiss this disparity with the thought that it is unique to Japan. The comparable statistic for West Germany is 61,032 and for France 11,843. Nor do we find the answer to these differences by assuming U.S. designers are intellectually bankrupt.

The answer is that the United States is the only country in the world to provide a patent-type protection for industrial designs which is a particularly unsuitable form of protection for the shape of most articles as distinguished from its workings or function. It is noteworthy that while other countries have borrowed heavily from the United States in adopting features of our patent laws, none have even considered applying patent laws to the field of industrial design protection and we have stood alone with this ill-conceived system for nearly a century and a half.

We have been very aggressive in enacting laws to protect our good names when applied to products, but we have been remiss in protecting the distinctive appearance of those same products. Appropriating the appearance of a product can lead to the same abuses as appropriating its name by those motivated to palm off inferior goods on the unsuspecting or intentionally misled. The competitive posture of this country no longer permits us to ignore the plight of our creative designers and perpetuate this inequity between the effectiveness of this country's design protection compared to that provided elsewhere.

This legislation proposes that a copyright type of protection be provided for industrial designs through a low cost, relatively simple registration process. Such protection would both be more reliable than patent protection by avoiding high standards of invention that are impossible to apply to most shapes, but also would be a sharply focused protection aimed at the parasitic copyist while leaving original designers free to pursue new designs without fear of inadvertent violations. Design protection should be for a reasonable term of, for example, 10 years as has been proposed in this legislation although 15 years is the internationally recommended standard for design protection.

I am urging the Judiciary Committee Subcommittee on Courts, Civil Liberties and the Administration of Justice to begin hearings on this legislation later this year.●

INTRODUCTION OF HOUSE CONCURRENT RESOLUTION TO ESTABLISH THE CEREMONY ON MAY 1 TO INSTALL THE STATUE OF JEANNETTE RANKIN IN THE U.S. CAPITOL TO REPRESENT THE STATE OF MONTANA

HON. PAT WILLIAMS

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. WILLIAMS. Mr. Speaker, I am pleased today to join my colleagues from Montana in introducing a resolution to establish the ceremony on May 1 to install the statue of Jeannette Rankin here in the U.S. Capitol representing the State of Montana. Today, April 2, is a particularly appropriate day for this introduction because 68 years ago today, Jeannette Rankin first took her seat in Congress.

In 1916, before suffrage was granted to women nationally, Jeannette Rankin was elected as the first woman to Congress. She had been active in the suffrage movement in Montana which gained women the right to vote in 1914. Using the same skills and net-

work she had developed in that effort, she ran a successful grassroots and postcard campaign unheard of in her day. She stated in her campaign:

It is not for myself that I am making this appeal, but for the 6 million women who are suffering for better conditions, under better moral conditions, at equal wages with men for equal work performed. For those women and their children I ask for your support.

On her fourth day in the House of Representatives she voted against the U.S. entry into World War I. She answered the rollcall, saying "I want to stand by my country, but I cannot vote for war." She decided to run for a Senate seat in 1918, but lost in part because of the contentiousness surrounding her vote. Over the next 20 years she worked as a lobbyist and organizer for the National Consumers' League, the National Council for the Prevention of War, and other peace organizations.

In 1940, she again ran for Congress, this time as Representative of the western district of Montana. During her second term in Congress from 1941 to 1943 she also voted against the U.S. entry into World War II, expressing her belief that we must protect our shores, but fight as hard for peace as we do for war. She alone cast a no vote against entry into the war. She later said of her historic two votes, "No one said it would be easy, only that it was right." During the 1950's she opposed the cold war and the U.S. involvement in Korea. In 1968, at the age of 87, she led 5,000 women of the Jeannette Rankin Brigade against the war in Vietnam.

Between and after her terms in Congress she worked as a lobbyist, organizer, and speaker for peace, better working and health conditions for women, and equal rights for women and children. She worked in Congress and afterwards in State legislatures for women and children, particularly for 8-hour workday laws, minimum wage laws, and child labor legislation. She had always believed that women should play a prominent role in politics. She wrote:

It is altogether fitting and proper that a mother be at the bedside of her child, sick with typhoid fever; it is also altogether fitting and proper for the mother to go into the public forum to eradicate the causes of typhoid fever.

Montana is a State with a proud pioneer tradition of men and women who work side by side against adversity because they have a strong sense of a better future. It is most appropriate that Jeannette Rankin with her courage, commitment, and compassion should represent our State to the Nation.●

A TRIBUTE TO LAWRENCE W. STRATTNER

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. CONTE. Mr. Speaker, I rise today before my colleagues to both recognize and honor a good friend, a dedicated volunteer, a great humanitarian and a truly remarkable man, Mr. Lawrence W. Strattner from the very heart of my district, Pittsfield, MA.

I am very pleased to bring Larry Strattner to the attention of my colleagues today since Mr. Strattner will be honored on Friday, April 19, as the first recipient of the Distinguished Citizen Award which will be presented by the Great Trails Council of the Boy Scouts of America located in Dalton, MA.

The significance of this award cannot be overstated just as the contributions made by Larry Strattner, both to scouting and to the quality of life, in the community of Pittsfield cannot be exaggerated. From his first affiliation with the Berkshire Medical Center, during the years of its genesis, through his three terms as president of the Great Trails Council, Larry Strattner has exemplified the highest ideals of voluntarism, professionalism and giving for the good of others. As the recipient of numerous awards for his work with the United Way, the Rotary Club, the State University of New York at Albany, the Boy Scouts and many cultural organizations, one can only envy the good that this man has done and be awed by the amount of time that he has selflessly given to fundraising, to promoting, to developing, and to providing many services and activities for the residents of Berkshire County and beyond. His tireless work has touched many of my constituents.

As president and chief executive officer of the Berkshire Life Insurance Co. of Pittsfield, Larry's leadership fast-tracked his company to the top of the industry. Now as chairman of the board, his professionalism continues, yet he still finds the energy and enthusiasm for his community and its people.

The highest words of praise seem so inadequate in light of what Larry Strattner has accomplished, and I feel that we, in the House of Representatives, could only benefit from learning about such fine men in our society. I hope you will all join me in extending a well-deserved and heart-felt congratulations to Larry Strattner as the outstanding and distinguished citizen of Pittsfield, MA.●

TRAVEL EXPENSE DEDUCTIONS

HON. FORTNEY H. (PETE) STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. STARK. Mr. Speaker, today I am reintroducing legislation to amend the Internal Revenue Code of 1954 to clarify the rules for deducting travel expenses to and from temporary job sites. The purpose of this clarification is to insure that the travel expenses construction workers incur in order to practice their trades may be deducted in the same way that lawyers, accountants, and professionals are allowed to deduct their business travel expenses.

The background is as follows: Section 162 of the Internal Revenue Code authorizes taxpayers to deduct their ordinary and necessary business expenses including travel expenses incurred for business reasons. On the other hand, travel expenses incurred for personal reasons are not deductible. For example, a person with a regular job in a city who chooses for personal reasons to live in a distant suburb cannot deduct the costs of driving to and from the regular job each day.

The courts have attempted to distinguish business from personal travel expenses through the use of the so-called temporary job doctrine: If the job is temporary, then the travel costs are deductible. The Internal Revenue Service, however, has been applying this doctrine without regard to its purpose of distinguishing travel undertaken for business purposes from travel undertaken for personal purposes. As a result, thousands of construction workers around the country are being denied the ability to deduct expenses that, by any rational standard, constitute ordinary and necessary business expenses.

Here is a typical example. A construction worker has lived and worked in a particular community for many years. His primary business contacts are in that community. He has a home in that community; his children attend school there; he and his wife vote and pay taxes there. His wife may have a job there. If construction work becomes temporarily unavailable in the home community—and in the current economy this is happening more and more often—the worker has only two choices. He can look for work in more distant areas and work away from home until a job in his community becomes available, or he can remain unemployed. If he takes a distant job, he must either move his home and family to that job or incur substantial additional expense, either by traveling many miles each day or by renting temporary lodging near the job.

For most workers, moving home and family is either impossible or contrary to good business judgment. Housing near the job may be unavailable or prohibitively expensive. More importantly, however, construction work is inherently uncertain; workers are well aware that they are likely to be laid off without warning at any time. Furthermore, the worker in this situation fully intends to take work closer to his traditional work area as soon as a job opens up. The worker therefore has only two choices; remain unemployed or incur travel expenses in order to practice his trade.

The travel expenses are therefore clearly necessary to the worker's trade. Nevertheless, the IRS automatically disallows such expenses. In fact, the IRS has conducted mass audits at large construction projects for the purpose of disallowing travel expenses. On the other hand, the IRS allows professionals and businessmen to deduct, without question, the expenses they incur when they have to travel to practice their trade.

The IRS uses the so-called 1-year rule as the basis for its arbitrary action. Under this rule, a job that has lasted for more than 1 year is automatically regarded as not temporary, and travel expenses are disallowed. This hindsight test ignores the crucial fact that the worker could have been laid off at any time throughout the year. The 1-year rule has been expressly rejected by the U.S. Court of Appeals for the Eighth Circuit, but the IRS has announced that it will refuse to follow the eighth circuit's holding.

The IRS also uses as a ground for disallowance the fact that the worker's job is indefinite, but it is the very indefiniteness of the job that makes deductibility appropriate. A worker's decision to aviod travel expenses by moving his family makes economic sense only if he has some assurance the job will last for a substantial period of time; it makes no sense if he is uncertain whether the job will last much longer. And, if it is not reasonable for the worker to move closer to the job, then his travel expenses are the result of business necessity, not personal choice, and they should be deductible.

Mr. Speaker, equity and efficiency require that something be done. The current IRS interpretation unfairly penalizes the working men and women of this country, and has led to expensive and needless litigation. Construction workers deserve to have the special problems of their industry recognized. Their travel expenses to distant jobsites are certainly more necessary to their jobs than an executive's three-martini lunch is to his.

My proposed bill institutes an easily administered rule that will eliminate the need for litigation in the vast majority of cases. Construction workers will be recognized as being temporarily away from home for the first 2 years of employment at any jobsite more than 30 miles from their home. This will eliminate the disputes in the vast majority of cases. In those few cases that are not resolved by the 2-year rule, the deductibility of the travel expenses will be determined case by case. In making this determination, the IRS and the courts will be prohibited from using either the 1-year rule or the indefinit employment rationale, but will make their decision according to whether the expenses are incurred by because of business necessity rather than personal convenience.●

EXPAND U.S. AGRICULTURAL EXPORTS

HON. TONY P. HALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. HALL of Ohio. Mr. Speaker, along with my colleagues from the Select Committee on Hunger, Foreign Affairs and Agriculture Committees, I am introducing legislation that will expand U.S. agricultural exports to developing countries to combat hunger and provide the mechanisms to increase the developmental impact of food assistance.

I urge Foreign Affairs Committee members to consider the provisions I am introducing today as amendments to this year's foreign aid bill These amendments will: Strengthen food aid programs by providing multiyear programming agreements with private voluntary organizations; extend the food security wheat reserve to 1989; mandate the Commodity Credit Corporation [CCC] to pay for the processing and shipping of surplus agricultural commodities for overseas donation in kind; and, set a target of immunizing approximately 3 million children of the 25 million children participating in overseas food aid programs by 1987.

These four components of the Food, Trade and Development Act, which will be introduced in the coming weeks, are essential to the effectiveness of overseas food assistance programs. For example, if the target of immunizing 3 million children is achieved, approximately 150,000 lives will be saved according to UNICEF estimates. In addition, the multiyear provision of this bill will encourage the Commodity Credit Corporation [CCC] to use surplus commodities for humanitarian assistance at a cost savings to the CCC.

These are four components of a larger bill the Food, Trade and Development Act. This larger bill which is currently supported by Representatives LELAND, FOLEY, PANETTA, EVANS, MORRISON, FAZIO, DORGAN, and KOSTMAYER will be introduced in the coming weeks.●

NUCLEAR WINTER—A JOINT UNITED STATES-SOVIET STUDY IS NEEDED

HON. JERRY HUCKABY

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. HUCKABY. Mr. Speaker, today my distinguished colleague from Arizona, the Honorable MO UDALL, and I are introducing a resolution expressing the sense of the Congress that the United States should enter into a joint high-level scientific study with the Soviet Union to determine the long-term climatic and environmental effects of a nuclear exchange. Everyone is familiar with the immediate consequences of nuclear war, including radiation, blast, and thermal effects, short-term radioactive fallout, inadequate medical attention for surviving casualties, and long-term biological effects of global fallout. During the past year, however, the public's interest has been aroused by the scientific debate on the controversial theory that there would be a significant contamination of a large portion of the Earth's atmosphere. Preliminary calculations have suggested that this contamination could lead to cooling of many parts of the Earth's surface—the so-called nuclear winter. This occurs when massive fires generate large quantities of smoke and fine dust which are carried into the atmosphere and result in the attenuation of sunlight in areas far removed from nuclear target zones.

The most detailed studies recently released here in Washington at a nuclear winter symposium confirm that these significantly lower temperatures would occur. But their extent and duration—and hence their potential impact on people and on the biosphere that supports the surviving population—have yet to be determined.

We believe that more indepth scientific evaluation is needed to determine the long-term climatic and environmental effects of a nuclear war. The impact of these severe surface air temperature reductions and the resulting effects on our fish and wildlife, water quality and resources, food supply, and forests must be thoroughly assessed.

It is appropriate that the United States and the Soviet Union, as the two nations with the most highly developed nuclear weapons arsenals and strategies, should jointly undertake the high-level scientific study that will be necessary to gain the requisite understanding of the problem. We rec-

ommend that the conclusions reached in this study would be included in any analysis of the consequences of nuclear war, and that they should also be considered in the nuclear weapons, arms control, and civil defense policies of the United States and the Soviet Union.

Mr. Speaker, we think this would be a worthwhile matter to pursue and we urge timely consideration and support for the passage of this measure.●

PEACE AND ECONOMIC DEVELOPMENT IN THE SOUTHWEST PACIFIC

HON. MERVYN M. DYMALLY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. DYMALLY. Mr. Speaker, I would like to familiarize my colleagues in the House of Representatives with an area that has been too long ignored by American foreign policymakers. Given my longtime interest in peace and economic cooperation in the Caribbean, I am amazed that America's political leadership has not taken a similar interest over similar problems in the Pacific. My recent initiatives—H.R. 1462 and House Resolution 99—have placed overdue focus on the poor health care situation in the Micronesian islands and on the civil rights/civil liberties concerns of their residents. In both cases, the dramatic issues associated with health and civil rights/civil liberties are ones that were virtually resolved many years ago in the Caribbean. The problems in the Pacific islands further to the south and west of American-administered Micronesia are even more glaring.

A growing political/economic conflict between the eastern section of New Guinea, the independent nation of Papua New Guinea, and the western section of New Guinea, Irian Jaya, a province of Indonesia, has recently threatened to result in a military confrontation. Indonesian jet fighters have flown over Papua New Guinea territory. A refugee problem, stimulated by the tense situation, has complicated border relations between Papua New Guinea and Indonesia. These difficulties have especially harmed the peaceful economic development of Papua New Guinea, one of the Pacific's most impressive developing nations.

Considering the need to promote peace and economic development in the Pacific, as we have done in the Caribbean, it is imperative that the President encourage Papua New Guinea and Indonesia to resolve all their differences and to request the Association of South East Asian Nations [ASEAN] to make similar encouragements. Once this is accomplished, we can credit ourselves, as a Pacific nation, for promoting the peaceful economic development of a significant area of the Pacific Third World and the Southwest Pacific. It is, indeed, an overdue task.●

INTRODUCTION OF THE INDIAN GAMING CONTROL ACT

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. UDALL. Mr. Speaker, today I am introducing on behalf of myself, Mr. MCCAIN, Mr. RICHARDSON, and Mr. BATES a bill to establish Federal standards and regulations for the conduct of gaming activities on Indian reservations and lands subject to the jurisdiction of Indian tribes.

Although I sponsored a similar bill in the 98th Congress, there were at that time a number of unresolved issues which came to light during the hearings on the bill. I felt these issues deserved more study before such legislation could be enacted into law. Since then, the committee has had more time to study these issues and reintroduction of the legislation is now timely.

This bill has some technical and other differences from last year's version but, in essence, it has the same purpose and intent and is substantially the same as last year's bill. The purpose of the bill is to impose Federal standards on gaming within Indian reservations and Indian lands so that the tribes will continue to be able to conduct, operate and generate needed revenues from these gaming operations free of the harmful influence of criminal or other undesirable elements.

I want to emphasize that this bill does not grant the tribes rights that they do not already have. Neither is it a bill to get the Federal Government in the business of running gaming operations on Indian reservations. Rather, it is a bill which recognizes that, in these budget-cutting years, Indian tribal governments have a right, if not a duty, to generate revenues on their reservations and that raising such revenues from gaming operations is legitimate when such activities are not illegal under Federal law or prohibited by a State as a matter of criminal law.

On the other hand, there have been reports and allegations of potential involvements of criminal or undesirable elements in connection with some of the gaming operations. It is in order to protect the tribes from such harmful influence that the bill imposes some Federal standards and regulations on these gaming operations.

I am aware that some of my colleagues are contemplating introducing legislation similar to the bill I am introducing today. Because I believe that other legislative proposals would contribute to a better debate of the issues relating to gaming on Indian lands, I would welcome and encourage others to introduce their proposed solutions.●

MARJORIE P. HART SERVES 40 YEARS ON DISTRICT 64 SCHOOL BOARD

HON. JOHN EDWARD PORTER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. PORTER. Mr. Speaker, I would like to draw my colleagues attention to a very special and talented person and long-time educator, Marjorie P. Hart of North Chicago, IL. Marjorie P. Hart was first elected to the North Chicago Elementary School District 64 Board of Education on April 24, 1945. She has served 40 continuous years on the board. Her current term expires in November 1985.

She has won reelection to the board every 3 years since then, giving her the distinction of having the longest continuous service on the same board of education in the State of Illinois.

She was elected secretary of the district 64 board of education on two occasions, serving from April 16, 1949 to April 19, 1968 and from April 14, 1980 to November 4, 1981. She was elected president of the board from April 19, 1971 to April 14, 1980.

During her 40 years on the board she has served the students and citizens of the school district with distinction and dedication. She has been active in local, State and national school board associations. In recognition of her service, Marjorie P. Hart received a "Special Appreciation Award" in 1982 from the Illinois Association of School Boards for her many years of outstanding service as a school board member. In addition, in 1982, she received special recognition from the Illinois General Assembly for meritorious service on the District 64 Board of Education.

On the 17th day of October, 1983, the district 64 board of education, in grateful appreciation and with a deep sense of pride, changed the name of Central School to the Marjorie P. Hart School.

On April 25, 1985, she will be honored at a reception at the school named in her honor. Mr. Speaker, I am extremely proud to represent Marjorie P. Hart in the Congress. She is an inspiration and example to us all.●

ENDING THE UNFAIRNESS OF THE SOCIAL SECURITY NOTCH

HON. EDWARD F. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. FEIGHAN. Mr. Speaker, today the new bill to end the unfairness of the Social Security notch, H.R. 1917, was introduced. I am proud to be 1 of the 56 original cosponsors of this important measure.

Over the last several years, a number of different bills designed to remedy the problem of the notch have been introduced in Congress. Unfortunately, the sheer fact that so many bills aimed at solving the same problem existed hindered the chance that any one of them would be passed. Now, virtually all the supporters of past notch bills have joined forces behind H.R. 1917. The breadth and unity of the support for H.R. 1917 among my colleagues makes me more hopeful than ever that Congress will finally take action to alleviate the injustice of the Social Security notch.

Like its predecessors, H.R. 1917 would take care of the notch by extending the transition period and making benefit calculations more generous for citizens born after 1916. The bill should return a sense of fairness to the Social Security system by providing an equitable solution to the overindexing problem that marred the 1972 benefit formula.

I urge the members of the Social Security Subcommittee to act speedily to bring this bill before the full House for consideration and a vote. We owe it to all the notch year seniors—and to our own sense of fairness—to pass this legislation which will assure that all Social Security beneficiaries receive the benefits they have earned and deserve.●

RECOGNITION OF JAMES DON KEPHART

HON. JOE KOLTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. KOLTER. Mr. Speaker, I rise today in recognition of James Don Kephart. On August 16, 1984, Mr. Kephart made the ultimate sacrifice when he saved his little niece, Tina, from drowning. Eight-year-old Tina was wading in French Creek in Meadville, PA, when she lost her footing and drifted into deep water. Thinking only of Tina, Mr. Kephart jumped into the water and pushed her toward the bank of the creek.

Unfortunately, this episode did not have a totally happy ending. Mr. Kephart, just 22 years old, submerged and drowned after pushing Tina toward safety.

Mr. Kephart's heroism was recognized on December 6, 1984, when he was posthumously awarded a medal by the Carnegie Hero Fund Commission. In 1904, Andrew Carnegie established the fund with $5 million "to recognize outstanding acts of selfless heroism performed in the United States and Canada."

Mr. Kephart fully deserved the honor bestowed upon him. His selflessly courageous act, performed at such a tragically young age, should inspire us all to realize that concern for the well-being of others is the most valuable thing that any of us can give.

Mr. Speaker, I am offering the condolences of this body to James Don Kephart's wife, Jo Ann Kephart. May she find comfort in the knowledge that her husband's act of heroism was an act of love, and because of his selflessness, Tina is with us today.●

TRIBUTE TO GARY STYMILOSKI—POLICE HERO

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. BIAGGI. Mr. Speaker, as a 23-year police veteran, I feel a very deep and personal sense of loss each and every time a brave police officer is forced to make the supreme sacrifice while protecting his fellow man. That feeling of loss is with me today, and it was with me on February 28 when I joined more than 5,000 others in attending the funeral of Westchester County (NY) Police Officer Gary Stymiloski, a Yonkers (NY) resident and my constituent, who was shot and killed in cold blooded fashion during a routine traffic stop.

Like so many who have worn the uniform before him, Officer Stymiloski's death cannot be explained. There was no provocation. In fact, it now appears that his accused murderer, Alex J. Mengel, would have been given nothing more than a summons for his traffic violation and had his car impounded—since he did not own the car and he had no license. Yet, instead of accepting this fate, Mengel allegedly pumped a bullet into Officer Stymiloski's head and then tried to escape justice.

As usually happens in police slayings, Mengel was captured within a week of his crime. The evidence against Mengel appears overwhelming. Consider, for example, that he was arrested in the possession of Officer Stymiloski's service revolver. In all likelihood, he will serve time in prison for this terrible crime he has committed. But, it is also likely that someday he will be back out on the street again—a free man. You see, Mr. Speaker, New York has no death penalty, not even for the coldblooded murder of a police officer.

But what about Officer Stymiloski. He will get no second chance. His life is over, and for what? For some two-bit thug, who thought nothing of firing a bullet into a police officer's head.

So many people will be unaffected by Officer Stymiloski's death, viewing it as simply another senseless tragedy. His death should, but probably will not, be enough to revive the death penalty in New York. In fact, there are some who might even support parole at some later date for Officer Stymiloski's killer, provided, of course, he is a good prisoner. But, is that fair? Is that really justice?

I, like so many others, have long contended that murderers of police officers deserve the death penalty and I have introduced legislation to that effect. It is just punishment and it would also serve as a deterrent to others. The State of New York has stalled long enough in reimposing the death penalty. We must not allow coldblooded killers like Alex Mengel to act with impunity. It is a travesty of the highest order when a police killer can someday walk the streets again, a free man.

What about those who are affected by Officer Stymiloski's death—his fiance who was planning a November wedding; his parents and sister with whom he lived; or what about his two brothers, who are also police officers and are expected to continue enforcing the same laws that may someday allow their brother's killer to go free? These are the people, along with many other friends, relatives, and comrades who will remember that Gary Stymiloski was a good cop and a good man. These are the people who will be haunted by his death for the rest of their lives.

We are a society that has come to expect police deaths, and all too often, expectance breeds acceptance. But, what we must remember is that police deaths are more than mere numbers. Certainly, the numbers should not be overlooked. Consider, for instance, that some 1,600 law enforcement officers were killed in the line of duty during the last 10 years, with 142 of those deaths occurring in 1984. Yet, these numbers, while significant, also tend to depersonalize a police officer's death and that must not be allowed to happen. In fact, due to the tragic consequences that almost always surround a police officer's death, the personal impact of those deaths is devastating.

The death of 27-year-old Gary Stymiloski, a 1984 "Police Officer of the Year" in Westchester County, proves that no matter the level of courage or ability of the law enforcement officer,

his or her life is on the line every time they put on their uniform. It is also a grim and jolting reminder—a reminder that we ask so much of our Nation's law enforcement officers, while giving them so little in return.

Mr. Speaker, we must give more to our law enforcement officers. We can begin by slamming shut our Nation's revolving door criminal justice system; by supplying our police officers with the best weaponry and protective equipment possible; and by keeping that same equipment away from the criminals.

At this time, Mr. Speaker, I wish to insert a copy of the very moving sermon preached at Officer Stymiloski's funeral by the Reverend L. Lester McGonagle, pastor of the North Yonkers Community Church:

SERMON PREACHED BY PASTOR L. LESTER MCGONAGLE OF NORTH YONKERS COMMUNITY CHURCH, HASTINGS-ON-HUDSON, NY, AT THE FUNERAL FOR OFFICER GARY STYMILOSKI ON FEBRUARY 28, 1985

We are here today to affirm our faith in a God who cares and connects with us in this time of sorrow and hurt in the tragic death of Officer Gary Stymiloski. We affirm our faith in life, in death, in life beyond death, God is with us. It is sometimes difficult and demanding to affirm this faith—especially when a young police officer is killed in the line of duty. Dag Hammarsjold once noted: "To be free, to be able to stand up and leave everything behind—without looking back, to say 'yes'."

But we do look back, especially at a time like this. There are so many memories and shared experiences that linked Gary Stymiloski on his journey; his life has been shortened by a violent act committed by some one who, in one moment, changed a destiny. His family—his mother and father, his two brothers, a sister and fiance look back with memories—a mixture of shock, sorrow and hurt. We are here to celebrate Gary's shortened journey in this life—a life that touched so many, his family, his friends and his colleagues in the Westchester County Police. We begin by remembering the words from Psalm 90:

"I lift up my eyes to the hills from whence does my help come. My help comes from the Lord who made heavens and earth."

We are strengthened to by the words of St. Paul in the letter to Romans 8:

"If God is for us, who is against us. Who shall separate us from the love of Christ?

"For I am sure that neither death nor life . . . nor things present, nor things to come, nor height, nor depth nor anything in all creation will be able to separate us from the love of God in Christ Jesus our Lord."

We come here first to affirm that in tragedy, suffering and even death we find comfort in a God who is with us—a God who cares. We know too well the reality of violent death in our contemporary world yet we forget so quickly that God is with us in all events. When human words fail, we find comfort in knowing God's presence that brings peace and power in times of a tragic loss such as Gary's death. In our grief, we confess our loss of Gary; in our bitterness and anger, we anguish over the never ending violence in our society. We are moved by the presence of so many police officers. Any one of the police officers in and outside this church could have been Gary Stymiloski. That's why they're here, to show their oneness at the precariousness of their vocation. We come with tears and a sense of loss; we come here to give our support as men and women to a family and friends who have lost some one dear to them. We come knowing that our presence and comfort express our love and God's love that we are not alone in death.

We come to remember the life of Gary Stymiloski. He was born in Yonkers on May 22, 1957 and grew up in this city—graduating from Gorton High School. He studied at Dale Carnegie Institute and attended Westchester Community College. He joined his brothers, Edward and Paul as police officers beginning at Sloatsburg and then the Westchester Department of Public Safety—the Parkway Police. He was ambitious and was a serious police officer—studying for the sargeant's examination. Working as a narcotics undercover agent and then as a parkway police officer, Gary received the Cop of the Year Award from the Westchester Pulaski Association. What we learn from looking at his life is that Gary was an able and good police officer. He had goals and planned to be married in November to Karen Parks. He was part of a loving, supporting family, parents who loved him, brothers and a sister who grew up and supported one another in times of joy, pain and in times of celebration and struggle and now in death. We pray that the killer is found and that justice is done. For the tragic death of Gary Stymiloski reminds us all of the reality of our fragile life. For even as we mourn Gary in his tragic death, we affirm God's presence more than ever.

For in our sorrow, we are met by a God who has promised us new life. We believe that our God is for us. And we affirm the presence of one named Jesus who has gone before us and now meets us in this time of testing, sorrow and loss. We can become bitter and angry—hitting our fists against a wall. But we know that our fists will become injured and bloody—a sign of our frustration and bitterness. We must move on. As Christians we are placed in the hands of one whose love and power enable us to move on; we believe that death has been conquered by the death and resurrection of our Lord, Jesus Christ. I know the feeling of emptiness and loss at the time of death; my wife and I lost our only son—several years ago in a motorcycle accident. What do you say to a family and friends who have lost some one so senselessly and tragically? Very little. You simply embrace them as God in Christ embraces us with the hope that we know that in life, in death and in life beyond death, God is with us. "God will bring them with Him." Can we affirm here in our abyss, our loss and sorrow that God will bring Gary with Him?

To believe this is to have hope when all else fails . . . when human systems fall down and the realities of pain, violence, sudden death dominate. Life is fragile. In St. Paul's letter to the Corinthians, we read the words: "Let us be on the edge of expectancy, working, serving, loving, keeping the faith, and demonstrating that faith to the world of men women about us."

As for now to the Stymiloski family and to the close friends of Gary: We need to hold on to one another in our love and dedicate ourselves in loving service to God and humanity.

May God search our hearts and give us not only comfort and strength but also this new life—that in pain, we may find comfort; that in sorrow, we experience hope; that in death, resurrection.

God speak to the family and friends of Gary Stymiloski—to his fellow police officers and give them strength and courage to move on; hope that reminds them that they are not alone but in your hands and love; faith that reminds that nothing even death can shake them from life that is rooted in our Jesus's resurrection and power. For as we sing Gary's favorite hymn "Amazing Grace" we know anew this power:

Through many dangers, toils and snares
I have already come
'Tis grace hath brought me safe thus far
And grace will lead me home.

May this grace lead us as it has led Gary to a new hope and power. May we find this peace as we commit the spirit of this young brave man—Officer Gary Stymiloski to the Lord of life and death.●

TRIBUTE TO ANDREW BEAVERS

HON. TOMMY ROBINSON

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. ROBINSON. Mr. Speaker, in June of this year, my constituent Mr. Andrew Beavers will retire after a lifetime of service to his community. Mr. Beavers has been involved in the education of Pulaski County students for 34 years, and during that time has touched literally thousands of children's lives.

He began his career as a teacher in Arkadelphia, AR, in 1949 and came to Pulaski County in 1951 when he accepted a position at Jones High School. Mr. Beavers was the athletic coach and athletic director at Jones High School and later became assistant principal there. In 1970, Mr. Beavers moved to Rose City Junior High School, my alma mater. From 1971 to 1985, Mr. Beavers served as assistant principal at Northeast High School.

Gov. Bill Clinton has named April 20, 1985, "Andrew Beavers Day." Never was a man more worthy to have bestowed upon him this honor. I can only wonder if all the honors in the world will ever repay Andrew Beavers for what he has done for our children. Andrew Beavers is a man who has had a tremendous influence on the young people of my district. He has helped make them better students, and better citizens, and better people. His students know that they were lucky to have had such a fine person as their coach and principal.

I am recognizing his efforts today because he is retiring soon, and his friends in Pulaski County will honor him for his many years of service to their community. A scholarship fund is being set up in his name. It is an appropriate gesture due to his never-ending commitment to excellence in education. It is our hope that this scholarship fund will perpetuate Andrew Beavers' good name, his integrity, and his thirst for knowledge.●

LEGISLATION INTRODUCED TO AID RURAL LETTER CARRIERS

HON. RONNIE G. FLIPPO

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. FLIPPO. Mr. Speaker, I am pleased to introduce today on behalf of myself, Mr. JENKINS of Georgia, and several other members of the Ways and Means Committee, a bill to provide the rural letter carriers relief from the unfair application of the Federal tax law by the Internal Revenue Service.

There are 38,925 U.S. Postal Service rural mail routes. Rural letter carriers serve these routes as employees of the U.S. Postal Service. These rural carriers differ from their urban counterparts in that they use their own vehicles to deliver the U.S. mail daily to 15 million rural American families. The average rural route is 62 miles in length and has 440 mailbox stops. The routes range in length from the 2.25-mile route in Wapplingers Falls, NY, to the longest route of 167.15 miles in Georgewest, TX.

The frequency of stops and rural road conditions greatly affects the high cost of operating and maintaining a rural mail vehicle, which is the sole responsibility of the rural letter carrier.

No two rural mail routes are identical, however salaries range from $5,000 to $30,000. The beginning salary for a 40-hour-week is $16,710. The average rural carrier after 12 years service reaches the top of the grade, and the national average route evaluates at a 40-hour-week for which he receives $24,889.

The U.S.P.S. reimburses rural letter carriers for using and maintaining their own vehicles 31.5 cents per mile. Last year, U.S.P.S. paid $247 million equipment maintenance reimbursement on 38,925 rural mail routes. This averages $6,356 per route. Note this is not per carrier, since all carriers have a relief or substitute, who work the sixth day and/or vacation/sick days.

From 1956 until 1984, the IRS allowed rural letter carriers to use a weighted factor when computing business vehicle usage on their tax return. The factor was an allowance for rural mail delivery. It was 1.2 to 2.0 depending upon roads and conditions. In 1984, IRS informed the National Rural Letter Carriers' Association their previous understanding with the Service was inoperative and revoked. Nevertheless, the Service is auditing every rural letter carrier in the United States for years 1983 and before and assessing them for back taxes with interest. They now maintain the 1956 agreement was not applicable between 1962 and 1983.

The bill we are introducing here today would alleviate the problems the rural carriers are experiencing with the unfair audits now being imposed by the IRS. This bill would allow the carriers to use the 1956 formula in calculating depreciation and actual expenses for the 1982, 1983, and 1984 tax years.

The remaining carriers would be provided deductions for expenses equivalent to the equipment maintenance allowance. This provision would resolve the problem the carriers are experiencing in the audits now being conducted by the IRS.

The bill would also settle the differences between the IRS and the rural letter carriers over tax treatment of the equipment and maintenance allowance. Under this bill the carriers who elect to deduct depreciation and actual expenses would be allowed to do so without reference to section 280F(b) of the Internal Revenue Code. The remaining carriers would be provided an allowable mileage allowance calculated by the IRS for all business miles traveled.●

HYGIENISTS DESERVE RECOGNITION

HON. JOHN EDWARD PORTER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. PORTER. Mr. Speaker, on March 28 I introduced legislation which would establish September 15-21, 1985, as "National Dental Hygiene Week." I was joined in this by Congresswoman BARBARA MIKULSKI of Maryland.

This would be the first occasion for national recognition for a profession that was founded some 70 years ago. Dental hygienists, who now number 44,000 in the United States, are dedicated to the prevention of dental disease and have had a tremendous impact on the improvement of the public's dental health. They are professionals in every sense of the word—by education and board certification and by their total dedication to the betterment of dental care. In the last decade and a half, the dental community has witnessed a decline in the number of children who have had caries in their permanent teeth from 71 percent in 1971-73 to 49 percent in 1979-80. By 1990, this statistic is projected to drop to 40 percent.

There is much credit to pass around and this resolution recognizes one segment of the dental community that has played an outstanding role in that success. Dental hygienists share great pride in this accomplishment, yet are looking ahead to other targets that require our attention. Recently, for example, through their national organization—the American Dental Hygienists' Association—hygienists have initiated an outreach program on geriatric dental care in conjunction with the National Council on Aging. And, this week will be more than just recognition for a profession. It will help focus national attention on the importance of dental disease prevention and the role that individual personal care can play in its elimination.

I am pleased to have this opportunity to support dental hygiene professionals throughout our country and encourage my colleague's attention to this legislative symbol of our admiration and gratitude.●

A TRIBUTE TO COACH JOE B. HALL

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. MAZZOLI. Mr. Speaker, I take this opportunity today to honor Coach Joe B. Hall of the University of Kentucky, who has retired as coach of the Wildcat basketball team following a long and highly successful career.

His contributions to the youth of Kentucky and of America make him—as it made his predecessor at University of Kentucky, Adolph Rupp—a legend in his own time.

Coach Hall served as coach at University of Kentucky for 13 years. Joe B. leaves behind him a remarkable legacy of victory with a record of 297 wins and only 100 losses. The Wildcats were NCAA Champs in 1978, made two other appearances in the final four, and also won a National Invitational Tournament title in 1976.

But even though willing to work and sacrifice for success on the court, Coach Hall never forgot the importance of developing the individual along with the player. To Coach Hall basketball was a means for a young man to gain personal as well as emotional maturity, through sportsmanship, team play, and discipline. And, always basketball was a complement to academic achievement in the classroom.

I extend thanks to Coach Hall for giving us such great basketball over the years, and I wish him the best of health and good fortune in the future.●

TRIBUTE TO HANS "PETE" HANSEN

HON. SOLOMON P. ORTIZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. ORTIZ. Mr. Speaker, on Friday evening, April 26, a very dedicated and respected constituent of mine will be honored at a social, hosted by the regional director for Naval Investigative Service, Special Agent Usrey, to be held at the Naval Amphibious Base, Little Creek, VA.

Mr. Speaker, Special Agent Hans "Pete" Hansen, Naval Investigative Service, is retiring from nearly 29 years of consecutive Federal service on April 30, 1985.

Born in Manly, IA, on July 30, 1934, Pete matriculated at Notre Dame University and after graduation, served honorably as a U.S. naval officer until 1958. He then joined the Office of Naval Intelligence as a contract agent in Chicago. Pete's later assignments included tours in St. Louis, MO, and as special agent-in-charge at San Diego, CA, Kanehoe Bay, Hawaii, and Corpus Christi, TX.

His final assignment, as Assistant Regional Director for Operations, Naval Investigative Service Regional Office, Norfolk, VA, rounded out a most distinguished career.

Pete Hansen has established a norm of excellence and perfection that is beyond comprehension. Professional, demanding, deeply loyal, and meticulous in every task, Special Agent Hansen is simply a tower of strength and the epitome of a Naval Investigative Service special agent.

Mr. Speaker, Pete and his wife, Janice, will be returning to their home at 6409 Suwanee Circle, Corpus Christi, TX. On behalf of my colleagues in the House, I say, "Bon voyage Pete, welcome home to Corpus Christi, and may you have fair winds and following seas."●

SENIOR CITIZENS UNDER SEIGE DUE TO CUTS IN SOCIAL SERVICES

HON. THOMAS A. DASCHLE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. DASCHLE. Mr. Speaker, I rise today to call to the attention of my colleagues the distressing impact that the administration's budget will have upon yet another segment of our rural society, senior citizens and the handicapped.

In an area of my home State, the Beadle County Transportation System has been providing a wide range of services which are essential to the health and survival of many elderly and disabled county residents. These services include grocery shopping assistance, daily home check-ins, nutritional programs, and a bus service to provide transportation and access to vital medical checkups and health care appointments. In 1984 nearly 60,000 rides were provided to over 1,200 residents.

Without Federal dollars through section 18 under UMTA and title III funding from the Older Americans Act, these much-needed services will no longer be available. Elderly and disabled citizens will be forced to search for other means to carry on, which will be more costly and less accessible; or, as in most cases, they will simply have to do without the assistance they require.

The senior citizens of Beadle County realize the difficult financial situation our Nation is in today. They remember, they lived through the difficult financial situation of days past, the days of the Depression. They understand, and like their fellow Americans, they are willing to make some adjustments, to do their part to get America back on a strong economic track. They want to do their part. What they don't want is to be offered as the sacrificial lamb at the budgetary alter.

Why, after all, should one group of truly needy Americans be forced to suffer the burden of our outrageous budget deficit in order to support major corporations who don't pay adequate taxes or to fund the Pentagon, which fritters away millions each year in $700 wrenches and $600 toilet seats?

I am here today to implore my fellow Members of the House to consider long and hard the devastating effect that the administration's budget proposal would have on communities in their own districts, to consider the hundreds of thousands of senior citizens and handicapped people across this country who would be forced into an unacceptable existence, and to act positively to rectify this avoidable and undesirable situation.●

WASTE AND ABUSE IN DEFENSE

HON. BARBARA BOXER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mrs. BOXER. Mr. Speaker, in February of last year, the International Association of Machinists and Aerospace Workers published a story in their trade magazine, the Machinist (p. 2, vol. XXXIX), about the billions of dollars of taxpayer's money wasted each year in defense procurement. They raised a number of excellent examples of how this ripoff occurs. I would like to share these examples with my distinguished colleagues in order to emphasize the need to monitor defense waste continually.

If critics of procurement abuse are reluctant to single out one single cause of the abuses, most agree that the revolving door concept of doing Pentagon business is high on the list of those causes.

Revolving door is the Government practice whereby federal officials, both civilian and military—particularly those in charge of procurement decisions—leave their government jobs and rush through the revolving door into high paid jobs with the very companies whose contracts they awarded, inspected or monitored.

Dr. Thomas Amlie, a retired Navy engineer who helped develop the Sidewinder missile says, "military officers in charge of procurement are vulnerable when a nice man from a defense contractor comes around and offers him a good job at $50,000–75,000 per year. If he stands up and makes a fuss about high cost and poor quality, no nice "man" will come to see him when he retires.

Recently, Ford Aerospace had funding for the Division Air Defense Gun (Sgt. York) after already having received over $4 billion, because of their performance deficiencies. It was revealed that Ford had hired 8 former Army officers some of whom had direct connections to the development and testing of DIVAD and the choice of contractor.

General Electric last fall hired James Nelson to become manager of quality control at his Evansdale, Ohio plant. Nelson had retired in June, 1984 as systems program officer at Wright-Patterson AFB in Dayton, Ohio. Nelson is credited with playing a key role in getting a large share for G.E. when G.E. was battling Pratt and Whitney for over who would produce engines for the Air Force.●

TRIBUTE TO GIL HODGES

HON. CHARLES E. SCHUMER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. SCHUMER. Mr. Speaker, I would like to take this opportunity to recognize the historic tribute planned by the Parents Association of Public School 193 to Gil Hodges, an outstanding baseball player for both the Brooklyn Dodgers and the New York Mets, and a great humanitarian. To honor Hodges, a long-time resident of district 22, the Parents Association will rename Public School 193 the "Gil Hodges School" on April 3, 1985.

I believe that those who attend Public School 193 will be proud to have their school named after such a distinguished individual. Gil Hodges accomplished much in his lifetime, despite the fact that part of it was spent battling heart disease. In this fight, he was an inspiration to others faced with the same disease. He also contributed much time and effort to promoting wholesome recreation and social opportunities for the youth of the city of New York. Gil Hodges had a long baseball career, but his really outstanding accomplishment was the leadership he

provided and the unselfish examples he set. Gil Hodges was a hero not only for our children but for the entire Brooklyn community. He was, in the words of the famed sportswriter, Dick Young, "Somebody our kids can look up to."

I am proud that the Parents Association of Public School 193 has chosen to honor Gil Hodges in such a distinctive fashion. Gil Hodges was indeed the modern-day hero—an outstanding athlete with a concern for good sportsmanship—who exemplified community spirit. Gil Hodges loved his community, and district 22 takes great pride in paying such a lasting honor to a fine individual.●

PRIME MINISTER TURGUT OZAL

HON. MARJORIE S. HOLT

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mrs. HOLT. Mr. Speaker, I hope the House will join me in welcoming Prime Minister Turgut Ozal, of the Republic of Turkey, to our country.

The Prime Minister leads a government which has made great strides in revitalizing the economy of Turkey, and it is fitting that we congratulate him and encourage his efforts to improve the quality of life for his people.

I should also say that Turkey is a vital NATO ally on the southern flank of Europe. Having a long border with the Soviet Union and Bulgaria, she has been a steadfast and courageous ally of the Free World.

Turkey has been successful in cracking down on internal terrorism, but 42 Turkish diplomats in various parts of the world have been assassinated since 1973.

In a recent interview in U.S. News & World Report, Prime Minister Ozal said that—

"Sooner or later the terrorist snake will bite every country if we do not work together to stop it.

Mr. Speaker, I hope the House will join me in greeting our brave and loyal ally with respect.●

INTRODUCTION OF LEGISLATION TO ESTABLISH A NATIONAL LOTTERY

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. CONTE. Mr. Speaker, I am introducing legislation today to establish a national lottery. The lottery will have two principal purposes: to assist in the financing of the Medicare Program, and to assist in reducing the deficit.

Mr. Speaker, the Washington Post reported last Thursday—and yesterday's Social Security trustees' report confirmed the Post article—that Medicare was not in as precarious financial position as originally projected. Just last year, the Ways and Means Committee's Medicare Conference projected that Medicare would have a $93.4 billion deficit by 1992. Now we hear that Medicare will have a surplus in that year. It is difficult to know which is correct.

The trustees' report indicated that the primary reason for the Medicare surplus into the next century was primarily due to lower health care costs, shorter hospital stays, the freeze on physician reimbursement under part B, and the prospective payment system enacted by Congress in 1983. It is quite probable, however, that Congress will consider some Medicare changes this year as part of the deficit reduction effort and to assist in additional Medicare financing.

With respect to the budget deficit, Mr. Speaker, we all know the problem we face. The budget deficit for fiscal year 1986 is expected to exceed $200 billion. Just the interest on the national debt is greater than the entire budget of most nations on Earth. Clearly, Congress must develop a method to reduce that deficit.

It is a time for hard choices. With respect to Medicare, we have three options: We can further reform the administration of the system, which we did in 1983 for hospitals and 1984 for physicians. The other two options are to increase taxes on currently working Americans or to reduce benefits—and increase costs—for our senior citizens. With respect to reducing the deficit, our choices are again clear: Enact difficult spending cuts, or increase taxes. None of these proposals, for obvious reasons, appeal to many Members of Congress.

Today, I am proposing an innovative new solution to these immediate problems, one which will insure that Medicare will remain available to face increasing costs in the coming years as well as directly aid in the reduction of the deficit. Although this proposal will not eliminate the need for difficult choices, it will make our job somewhat easier.

My bill establishes a national lottery, with 50 percent of the revenues generated going to assist in financing the Medicare Program. The remaining 50 percent will go to reducing the deficit. Estimates I have seen indicate that a national lottery could raise at least $25 billion per year, with a possibility of raising as much as $50 billion. Under my bill, one-half—after prizes and administration—of any revenues generated would go directly to the Medicare fund. The other half would go to reduce the deficit and could be used for other purposes.

Although there have been many arguments against a lottery, many of these arguments are not backed up by facts. First, many argue that the poor play lottery games disproportionately to their representation in the population. This simply is not true. Studies have shown that the average lottery player is in the middle class, and earns an average of $25,000 per year.

Second, many argue that a lottery will use money as time goes by, once the initial novelty wears off. However, with respect to State lotteries, revenues were up 77 percent last year. In fact, in my own State of Massachusetts, revenues nearly doubled to over $800 million in 1984.

Third, many States believe that their State lottery revenues would decline if a national lottery were enacted. It is possible, however, that a national lottery would tap a new market due to the vast resources and potential big money a Federal lottery would generate. Along these lines, the Federal Government will, under my bill, consider all possible efforts to work closely with States that already have lotteries in order to facilitate the operation of a national lottery. In addition, possibilities will be explored to give States incentives in assisting with the implementation of this lottery.

Specifically, my bill calls for the creation of a commission to establish, operate, and administer a national lottery. The Commission will be composed of five members: The Secretary of the Treasury, the Secretary of Health and Human Services, and three private individuals appointed by the President after consultation with the Speaker of the House and the President pro tempore of the Senate.

No more than three members of the Commission may be members of the same political party. The presidentially appointed members must not be elected or appointed officers or employees of the Federal Government. Along with the characteristics of integrity, impartiality, and good judgment, they must be, or have been, directors of a State lottery, or have expertise in the operation of a lottery. The Commission will elect a chairman at their first meeting, and all decisions of the Commission will be made by a majority vote.

The Commission will report to the President, and the Congress not later than June 30 of each year, beginning in 1986. Each report will have to contain a detailed statement about revenues generated, costs of administering the lottery, amounts transferred under the statute to the Medicare fund and the funds to be used to reduce the deficit, together with recommendations for any legislation or other action which the Commission may consider appropriate.

Lottery tickets will be sold by post offices and by other places which apply and are accepted by the Commission. In addition, prizes and administrative costs cannot exceed 45 percent of the revenues received from the lottery in that fiscal year. All prizes paid under the program are taxable income, and the revenues from the tax will be directly transferred to the Medicare fund and directly toward the reduction of the deficit. Finally, there are provisions in the bill providing criminal penalties for such acts as forging or stealing tickets.

Mr. Speaker, there is nothing new about lotteries. The first American colonies ran them, and Thomas Jefferson noted that the main benefit of a lottery is "that it is a tax laid only on the willing." A lottery will help the people who deserve it the most. Mr. Speaker, we need megabucks, not megadebts.●

ASSESSMENT OF THE DESIGNER DRUG PROBLEM

HON. CHARLES B. RANGEL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. RANGEL. Mr. Speaker, today I am introducing legislation which would require the National Drug Enforcement Policy Board to provide a comprehensive assessment of the designer drug problem and make recommendations to Congress for necessary legislation. This bill is identical to S. 746 introduced on March 26, 1985, by Senator LAWTON CHILES, Democrat from Florida. The National Narcotics Act of 1984, was part of the Comprehensive Crime Control Act of 1984, chapter XIII, title II, Public Law 98-473, enacted last year. The National Narcotics Act of 1984 established the National Drug Enforcement Policy Board, chaired by the Attorney General, to coordinate and develop U.S. Government policy with respect to illegal drug law enforcement.

A designer drug refers to the phenomenon of chemists modifying controlled substances to produce analogs, or chemical cousins of controlled substances, which are not covered by the Controlled Substances Act. By adding a flouride or an extra carbon molecule, a new drug is created which will produce the high or euphoria, the user seeks, but is not illegal. The primary concern regarding designer drugs is that they can be developed and produced faster than they can be identified and controlled. Even with the emergency scheduling provisions of the Controlled Substances Act, clandestine labs can always stay beyond the reach of the law with a slightly different compound that is not yet on the schedule of controlled substances. Thus, the Drug Enforcement Administration could end up adding thousands of new entries to the list of controlled substances with little impact on the availability of designer drugs. Of course, I am also concerned with the possibility of a user suffering an overdose when he uses a designer drug. Designer drugs can also cause severe neurological impairment.

Mr. Speaker, I ask that the more detailed statement of Senator CHILES when he introduced S. 746 be included in the RECORD at this point for the benefit of my colleagues and the public.

Senator CHILES statement on S. 746 follows:

ASSESSMENT OF THE DESIGNER DRUG PROBLEM

Mr. CHILES. Mr. President, as one surveys the reality of drug abuse in this country and the constant flood of illegal narcotics that threatens the very fabric of our society, there doesn't seem to be room for any more bad news. Unfortunately, there is some new bad news; a developing problem that is left unaddressed and unresolved poses immense public health and law enforcement difficulties for the future. In the parlance of California, where this problem is emerging, they are called "designer drugs." One observer warns if they move to the rest of the country, designer drugs, "may well topple America's 70-year policy of drug control and spark a public health disaster of overdose deaths, poisonings, and addiction." And in all likelihood they will spread to the rest of the country.

What is a designer drug? Originally it was a drug synthetically created by chemists and designed to fit the tastes of individual clients. Now it refers to a broader phenomenon of chemists modifying controlled substances to produce analogs or chemical cousins of these substances which are not covered by the Controlled Substances Act. By adding a fluoride or an extra carbon molecule, a new drug is created which will produce the high or euphoria the user seeks but is not illegal. Eventually DEA may move to control this new substance but the enterprising chemist will probably already be marketing some new variations. The surveyor of designer drugs can stay ahead of the law indefinitely.

The United States is devoting considerable resources and manpower to the effort to contain the flow of heroin, cocaine and marijuana. In light of the damage these narcotics inflict on our society and the crime they spawn, I think we should be doing more. However, whatever success we achieve in destroying drug crops and interdicting drug shipments will be of little consequences of the opium fields of Asia and the coca fields of Colombia are replaced by clandestine laboratories in the United States.

At this point, designer drugs represent a small but growing factor in overall drug use. The chief of the California Division of Drug Programs projects that up to 20 percent of the State's heroin users are now taking some fentanyl analog to feed their habit. The more alarming facts are not the present statistics but the dangerous potential of these substances. These drugs can be made in small labs, with minimal materials and with readily available chemical formulas. A $500 investment in chemicals can produce a $2 million batch of synthetic heroin. In testimony before the President's Commission on Organized Crime it was estimated that a single chemist working an 8 hour day could, using the more potent fentanyl derivatives, supply the entire Nation's heroin demand on an on-going basis. Soon, if not already, organized crime will recognize that designer drugs represent an easy and immensely profitable means of supplying narcotics.

The disturbing nature of designer drugs is not simply that they are another source of illicit narcotics. Designer drugs pose additional and very troubling problems in terms of the public health consequences and our law enforcement response.

The more commonly used drugs—cocaine, marijuana and heroin—take a terrible toll on their users in health problems and even death. Designer drugs multiply these risks and open the door to long term neurodegenerative diseases, adding to an entirely new dimension to the drug abuse problems. At least with the more traditional drugs there is some understanding of what physically happens to the user. Each batch of synthetic heroin or some other analog represents a chemical game of Russian roulette for the user. The fentanyl analogs, sold as heroin, are hundreds and even thousands of times more potent than morphine. Infinitesimal amounts of the drug can cause profound reactions. Already they have resulted in the deaths of 90 persons.

Beyond the great risk of overdose is the risk of incurring severe neurological impairment. No one knows what is in each batch of designer drugs. They are not tested; there is no process to remove contaminants or unwanted compounds; and the potential is very real that a highly toxic compound will hit the streets. In California a substance known as MPTP was circulated as "new heroin." It has caused severe brain damage similar to end-stage Parkinson's disease. California health authorities estimate that as many as 500 users of this substance may develop the symptoms of Parkinson's disease. The human and medical economic costs of such an epidemic are almost incalculable. More recently, a designer drug user has been identified with the neurological symptoms of Huntington's chorea, a debilitating and eventually fatal disease.

All the signs indicate that designer drugs will be a major part of the drug abuse problem of the future. If that proves to be the case, the public health consequences of drug use may be entering an entirely new and frightening dimension.

Are we prepared to take action to stop this looming crisis? The answer is not encouraging. Synthetic narcotic analogs can be developed and produced faster than they can be identified and controlled. Even with the emergency scheduling provisions of the Controlled Substances Act, the clandestine labs can always stay beyond the reach of the law with a slightly different compound that is not yet on the schedule of controlled drugs. DEA could end up adding thousands and thousands of new entries to the list of illegal drugs with little impact on the availability of designer drugs.

DEA and other law enforcement agencies have experienced considerable problems in identifying synthetic narcotic analogs. They are very difficult to detect in drug samples or body fluids, as detection requires the most sensitive analytical techniques. Because of their extreme potency they are cut with large amounts of lactose or sucrose so the active drug present is very small, contributing nothing to the color, odor or taste of a sample. The fentanyl analogs are now

available throughout much of California and since they are potent, difficult to detect and often quite legal, they could well become the drug of choice for heroin addicts. An anonymous addict interviewed on NBC news maintained, "I think heroin will gradually phase out as more and more illegal labs start to make the designer narcotics. It's better. It's definitely better as far as the rush and the high is concerned."

The current procedure for controlling illicit drugs, even with the emergency scheduling provisions authorized by Congress in 1984, represents an essentially unworkable response in the face of any significant increase in the manufacture of designer drugs. The Federal Register will simply be required reading for the criminal chemists to keep up to date on what analog formulas are now illegal and need to be modified.

Mr. President, our experience with illegal drug law enforcement is usually a matter of too little, too late. The problem reaches new levels of crisis while we search for the resources and tools to combat it. The potential disaster posed by the designer drug phenomenon is too grave for us to delay in finding means to prevent the manufacture and distribution of these drugs. It is apparent that present statute and policy will not do the job.

The National Narcotics Act of 1984 established the National Drug Enforcement Policy Board, chaired by the Attorney General, to coordinate and develop U.S. Government policy with respect to illegal drug law enforcement. I believe the Board must give priority attention to determining an effective strategy to control the spread of designer drugs. The Chairman is required to report to Congress on policy and planning for U.S. drug law enforcement. The initial report is due nine months after enactment. I am today introducing legislation requiring the Board to provide in that report to the Congress:

A comprehensive assessment of the current and potential contribution of synthetic narcotic analogs to the illegal narcotic problem in the United States;

Identification of illegal drug law enforcement strategies to prevent the manufacture and distribution of synthetic narcotic analogs;

Recommendations for necessary legislation.

I am also requesting the Office of Technology Assessment to initiate a workshop to examine the chemical, pharmacological, and regulatory questions involved in addressing the control of designer drugs so as to provide guidance to the Congress in the formulation of future legislation.

Mr. President, I believe the Congress must move expeditiously to address this problem but we must move with deliberation and an understanding of the difficult technical and pharmacological questions that need to be resolved in order to achieve an effective law enforcement policy. By requiring the National Drug Enforcement Policy Board to promptly address this issue and report to the Congress and by initiating an examination by the Office of Technology Assessment we will be laying the foundation for development of a responsible and workable policy.

I ask unanimous consent that the text of the legislation I am introducing be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the Record, as follows:

S. 746

Be it enacted by the Senate and the House of Representatives of the United States of America in Congress assembled, That (a) the Congress finds that—

(1) the use of illegal narcotics is a major health, law enforcement, and economic problem for the United States;

(2) the Congress has determined that the control of illegal narcotics and the prevention of drug abuse are national priorities;

(3) the Congress has identified "designer drugs" as new chemical analogs or variations of existing controlled substances, or other new substances, which have a psychedelic, stimulant, or depressent effect and have a high potential for abuse;

(4) these synthetic narcotic analogs are linked to numerous fatalities and incidence of severe neurodegenerative disease;

(5) significant increases in the consumption of synthetic narcotic analogs would pose an imminent hazard to the public safety;

(6) the virtually unlimited modification potential of synthetic narcotic analogs undermines effective implementation of the Controlled Substances Act;

(7) the National Narcotics Act of 1984 established the National Drug Enforcement Policy Board, designating the Attorney General as Chairman;

(8) the Board has among its responsibilities the development of United States policy with respect to illegal drug law enforcement; and

(9) the Chairman is required to report to the Congress on such policy by July of 1985.

(b) The purpose of this Act is to require the National Drug Enforcement Policy Board to provide a comprehensive assessment of the designer drug problem and make recommendations to Congress for necessary legislation.

SEC. 3. The initial report of the National Drug Enforcement Policy Board as required by section 1305 of the National Narcotics Act of 1984 (Chapter XIII, title II, Public Law 98-473) shall include—

(1) a comprehensive assessment of the current and potential contribution of synthetic narcotic analogs to the illegal narcotics problem in the United States;

(2) proposals for illegal drug law enforcement strategies to prevent the manufacture and distribution of synthetic narcotic analogs; and

(3) recommendations to the Congress for necessary legislation to eliminate the manufacture and distribution of illegal synthetic narcotic analogs.

H.R.—

A bill to require the National Drug Enforcement Policy Board to provide a comprehensive assessment of the designer drug problem and make recommendations to Congress for necessary legislation

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the Congress finds that—

(1) the use of illegal narcotics is a major health, law enforcement, and economic problem for the United States;

(2) the Congress has determined that the control of illegal narcotics and drug abuse are national priorities;

(3) the Congress has identified "designer drugs" as new chemical analogs or variations of existing controlled substances, or other new substances, which have a psychedelic, stimulant, or depressant effect and have a high potential for abuse;

(4) that synthetic narcotic analogs are linked to numerous fatalities and incidence of severe neurodegenerative disease;

(5) significant increases in the consumption of synthetic narcotic analogs would pose an imminent hazard to the public safety;

(6) the virtually unlimited modification potential of synthetic narcotic analogs undermines effective implementation of the Controlled Substances Act;

(7) the National Narcotics Act of 1984 established the National Drug Enforcement Policy Board, designating the Attorney General as Chairman;

(8) the Board has among its responsibilities the development of United States policy with respect to illegal drug law enforcement; and

(9) the Chairman is required to report to the Congress on such policy by July of 1985

(b) The purpose of this act is to require the National Drug Enforcement Policy Board to provide a comprehensive assessment of the designer drug problem and make recommendations to Congress for necessary legislation.

SEC. 2. The initial report of the National Drug Enforcement Policy Board as required by section 1305 of the National Narcotics Act of 1984 (Chapter XIII, title II, Public Law 98-473) shall include—

(1) a comprehensive assessment of the current and potential contribution of synthetic narcotic analogs to the illegal narcotics problem in the United States;

(2) proposals for illegal drug law enforcement strategies to prevent the manufacture and distribution of synthetic narcotic analogs; and

(3) recommendations to the Congress for necessary legislation to eliminate the manufacture and distribution of illegal synthetic narcotic analogs.●

DISABLED AMERICAN VETERANS' NATIONAL COMMANDER PRESENTS $1 MILLION TOWARD STATUE OF LIBERTY—ELLIS ISLAND RENOVATIONS

HON. FRANK J. GUARINI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. GUARINI. Mr. Speaker, I rise to inform you, my colleagues here in the Congress, and indeed all persons throughout our Nation, of a dramatic event which will be held next week.

On April 11, 1985, at 11:30 a.m., a most important ceremony will be held on the mall at the Statue of Liberty.

On this occasion the National Commander of the Disabled American Veterans, Mr. Chad Colley, will present a check for $1 million toward the estimated $2.7 million required for accessibility features at Liberty and Ellis Islands.

The DAV gift is to be used exclusively to provide full accessibility in both architectural construction and in program and service delivery for disabled persons, including the visual and hearing impaired, at the Statue of Liberty.

The Disabled American Veterans is an outstanding veterans' organization tending to the needs of those who have fought and bled and have become disabled during America's military and naval involvements.

Commander Colley is scheduled to make the presentation on April 11, and invited Lee A. Iacocca, chairman of the Statue of Liberty-Ellis Island Centennial Commission, to attend.

On March 25, 1985, Mr. Iacocca wrote me the following letter:

DEAR FRANK: I am delighted that the Disabled American Veterans will make a contribution of $1,000,000 to the Statue of Liberty-Ellis Island Foundation on April 11th. I regret that I will be unable to attend, but William May, Foundation President, will accept in my behalf.

Please extend my sincere appreciation to Commander Colley and all the Disabled Veterans for this generous contribution to our national symbol. We are all very proud of them and honored that they've chosen to help our national symbol.

Sincerely,

LEE A. IACOCCA.

In addition to this magnanimous gift by the Disabled American Veterans, the facts surrounding this large donation should be made public.

The following is a report of Richard Bernard, who served as chairman of the State of New Jersey "International Year of Disabled Persons" committee:

In 1981 while serving as the executive director of the Governor's Committee to employ the handicapped and coordinator of the International Year of Disabled Persons in New Jersey, we had the privilege of working on the Continental Quest.

The Continental Quest was a project of the national council of the International Year of Disabled Persons. Two disabled athletes, paraplegics, set out to cross the country in wheel chairs from Los Angeles to New York. When they reached New York City we spent five days with them crossing the State. They were Philip Carpenter and George Murray, of Florida.

This was done at night with a State Police escort because of the heavy traffic, especially in Northern New Jersey. Many of the mayors opened their town halls at 2:00 a.m. or 3:00 a.m. to greet them as they passed through the towns.

On August 24, 1981 as they were approaching the Lincoln Tunnel at 4:00 a.m. in Jersey City, Congressman Frank J. Guarini (D 14th New Jersey) greeted them in a parking lot at a hamburger stand. As we were sitting on a curb discussing their trip, the congressman asked them what they would like to do while they were in the New Jersey-New York area.

They replied that they would like to visit the Statue of Liberty. We told them it was not accessible. It seemed odd that two young men in wheel chairs, in 105 days, came across the continental United States over many obstacles but could not visit the Statue of Liberty or Ellis Island because of barriers.

Phil and George went on to complete their journey the next day through the Lincoln Tunnel, across 42nd Street to the United Nations, where they were received as ambassadors of the International Year of Disabled Persons.

About a month later we brought the subject up at IYD of New Jersey committee meeting.

They unanimously agreed that a committee should be formed to work toward eliminating the barriers pertaining to the disabled at the Statue of Liberty and Ellis Island.

In 1982 at a Region 1 meeting held in New Brunswick, N.J. of the President's Committee to Employ the Handicapped, along with Harold Russell, chairman, a commitment was made to do everything possible to assist in making the Statue of Liberty and Ellis Island accessible to all persons.

After discussion with officials of the United States Department of the Interior, National Park Service, of the Statue of Liberty Monument, and those involved with disabled persons in New York, New Jersey, and Connecticut, a committee was formed to work on the problems.

Members of the committee are:

Richard J. Bernard, chairman, life member of the DAV, State of New Jersey;

Joseph E. Kane, Assistant County Counsel, Atlantic County Law Department, representing the N.J. Advisory Board to the Commission for the blind and Visually Impaired;

William Scott, former executive director of the Essex County Office of the Disabled;

Thelma Schomes, special assistant for constituent relations, U.S. Department of Education, Region 2, representing Lorraine Coville, Secretary, regional representative, U.S. Dept. of Education, Region 2;

William Bernstein, currently of Laguna Beach, California;

Paul V. Smith, deputy advocate from the Advocacy for the Disabled Office in New York, representing G. Berko, advocate for the disabled in New York; Francis

Joseph W. Llewellyn, National Service Office, DAV, New Jersey, representing N.J. Department Commander John Chaplick;

Terrence Moakley, barrier free design director, Eastern Paralyzed Veterans, New York;

Conrad J. Vuocolo, special assistant to Congressman Frank J. Guarini (D-14th N.J.)

Beverly Warmbrand, who was the interpreter for the deaf at all meetings.

The following individuals from the National Park Service spent many hours assisting the committee:

David Moffit, superintendent of the Statue of Liberty Monument, who attended many of the meetings which were held at facilities provided by the Port Authority of New York and New Jersey;

Debra Burge, special population coordinator, Statue of Liberty;

Ray Bloomer, disability specialist, North Atlantic Region Office, National Park Service;

Herbert Cables, regional director, National Park Service, North Atlantic Region;

David C. Park, chief, special programs in population branch, National Park Service, Washington, D.C.

Russell E. Dickinson, former director, National Park Service.

Recommendations made will provide accessibility for the millions of disabled people in the United States.

The Disabled American Veterans, who have given so generously toward the renovation of our two most-cherished national shrines, indeed prove F. Scott Fitzgerald's quotation that "America is a willingness of the heart" despite the personal hardships and tribulations suffered by its members. They always have taken the challenge of the famous words of John F. Kennedy, who said:

"Ask not what your country can do for you, but what you can do for your country."

The Statue of Liberty has stood for 100 years as a beacon in the quest for political, educational, economic and intellectual freedom. Indeed this contribution by the DAV will help aid those who also seek freedom—this time from restrictive barriers which have prevented the disabled and/or handicapped from visiting Liberty Island and feeling the protective warmth of the Statue of Liberty—305 feet high.

Indeed, after the ceremony on April 11th, Emma Lazarus's famous sonnet "New Colossus" has added dimensions:

THE NEW COLOSSUS

Not like the brazen giant of Greek fame,
With conquering limbs astride from land to land;
Here at our sea-washed, sunset gates shall stand
A mighty woman with a torch, whose flame
Is the imprisoned lightning, and her name
Mother of Exiles. From her beacon hand
Glows world-wide welcome; her mild eyes command
The air-bridged harbor that twin cities frame.
"Keep, ancient lands, your storied pomp!" cries she
With silent lips, "Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore,
Send these, the homeless, tempest-tossed; to me:
I lift my lamp beside the golden door!"

History tells us that Ms. Lazarus was asked by friends to write a poem to assist the struggling campaign to raise funds to build the statue. The DAV has shown the way, proving that "America is a tune—it must be sung together."

I feel certain that all my colleagues in the Congress of the United States wish to join me in a salute to Comdr. Chad Colley and all members of the Disabled American Veterans for this everlasting gift.●

H.R. 1082 IMPROVES FBI COUNTERINTELLIGENCE CAPABILITIES BY IMPROVING ACCESS TO CERTAIN BANK AND TAX RECORDS

HON. BOB STUMP

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. STUMP. Mr. Speaker, the Federal Bureau of Investigation bears responsibility within the United States for protecting the country from espionage and international terrorism. The FBI devotes a substantial amount of its time and resources to detecting and countering espionage or terrorist activities of hostile foreign powers in the United States. These FBI counterintelligence activities are critical to the Nation's security.

For hostile foreign powers to create, support, and operate an espionage network or terrorist network takes money. Financial records relating to espionage or terrorist operations can often provide the FBI with the information it needs to prevent such operations or render them ineffective. The inability of the FBI to gain the access it needs to financial information contained in bank and tax records has hampered its ability to meet its counterintelligence responsibilities. Accordingly, the Congress should amend the Right to Financial Privacy Act and the Internal Revenue Code to allow the FBI access to bank and tax records it needs for its counterintelligence investigations.

On February 7, 1985, I introduced H.R. 1082, the Omnibus Intelligence and Security Improvements Act, which would remove certain obstacles hampering the FBI and its counterintelligence efforts. Sections 302 and 303 of H.R. 1082 would amend the Right to Financial Privacy Act and the Internal Revenue Code to improve FBI access to bank and tax records for foreign counterintelligence investigations.

ACCESS TO BANK RECORDS: RIGHT TO FINANCIAL PRIVACY ACT

The Supreme Court held in 1976 that the fourth amendment does not confer upon a bank's customers a constitutional right to the privacy of their financial records possessed by banks. (*U.S.* v. *Miller*, 425 U.S. 435 (1976)). In response to the Miller case, the Congress enacted the Right to Financial Privacy Act [RFPA] of 1978 (12 U.S.C. 3401 et seq.). That act generally provides that, when the Government seeks the records of a customer of a financial institution which are relevant to a legitimate law enforcement inquiry, the customer must receive notice of the Government's request for the records and an opportunity to contest the Government's request in court.

Federal agencies responsible for intelligence and counterintelligence activities could not have effectively discharged their responsibilities if Congress made applicable to their activities the generally applicable RFPA requirements for notice to the customer and an opportunity to litigate. The FBI could not effectively monitor and counter the clandestine activities of hostile foreign agents and terrorists if it had to notify them that the FBI sought their financial records for a counterintelligence investigation. Accordingly, Congress enacted section 1114 of the RFPA with special provisions for intelligence and counterintelligence access to bank records (12 U.S.C. 3414).

Under section 1114 of the RFPA, to gain access to bank records for counterintelligence investigations, the FBI issues a letter, signed by an appropriate supervisory official and certifying compliance with the applicable provisions of the RFPA, seeking bank records needed for the FBI's counterintelligence activities. The RFPA requires the bank to keep secret that the FBI sought or obtained access to the records. Section 1114 of the RFPA does not, however, mandate that banks comply with the FBI letter requesting access to the bank records; it merely permits the banks to do so without regard to the other provisions of the RFPA.

The FBI has encountered resistance from financial institutions in obtaining access to financial records for foreign counterintelligence investigations. Banks which refuse to comply with FBI requests for access to bank records under section 1114 of the RFPA generally cite either or both of two reasons. First, in States which have State banking privacy laws, the banks say that the State laws prevent them from complying with FBI requests for counterintelligence access to records. Second, the banks express concern that, by complying with FBI requests when they are not specifically required to do so by Federal statute, they may subject themselves to lawsuits by their customers. To remove these obstacles to FBI counterintelligence access to bank records, the RFPA must be amended to make mandatory the FBI counterintelligence requests for access, thus clearly preempting State banking privacy laws, and to make clear that banks complying with FBI counterintelligence requests for access are fully protected from adverse legal action for complying with the FBI requests.

Section 302 of H.R. 1082 ensures effective FBI access to bank records for counterintelligence investigations by requiring banks to comply with such requests and by providing banks with legal immunity for their compliance with such requests. Section 302 provides:

SEC. 302. Section 1114(a) of the Right to Financial Privacy Act of 1978 (12 U.S.C. 3414) is amended by adding at the end thereof the following new paragraph:

(5)(A) Financial institutions, and officers, employees, and agents thereof, shall comply with a request pursuant to this subsection by the Federal Bureau of Investigation for financial records when such requests has been approved by the Attorney General or his designee for foreign counterintelligence purposes.

(B) Financial institutions, and officers, employees, and agents thereof, shall be immune from any civil or criminal liability for efforts to comply with a request described in subparagraph (A) of this paragraph.

Section 302 ensures that the FBI will have the access it needs to bank records in protecting the Nation from espionage and international terrorism. Section 302 also ensures that financial institutions which assist the FBI in carrying out its counterintelligence responsibilities have full legal protection.

ACCESS TO TAX RECORDS: INTERNAL REVENUE CODE

Tax returns filed with the Internal Revenue Service contain substantial information about taxpayers and their financial activities. In recognition of the privacy interests of taxpayers, of the potential for misuse of information about taxpayers, and of the importance of ensuring taxpayer candor in filing tax returns, the Congress historically has maintained a statutory policy of confidentiality of tax returns. Thus, tax returns are generally available only to Government personnel for enforcement of Federal revenue laws, and are generally not available for other purposes.

Section 6103 of the Internal Revenue Code (26 U.S.C. 6103), which provides for the confidentiality of tax returns and return information, recognizes a number of special situations in which the governmental need for access to tax returns outweighs the taxpayer's interest in confidentiality. The currently enumerated special situations do not include FBI counterintelligence investigations of spies or terrorists. Section 6103 should be amended to give the FBI access in counterintelligence investigations to the tax returns and return information of agents of foreign powers, who engage in espionage or terrorism in the United States. Access to such information for counterintelligence investigations would improve the FBI's ability to prevent or counter espionage or terrorism activities threatening the Nation's security.

Section 303 of H.R. 1082 would amend the Internal Revenue Code to provide the needed FBI counterintelligence access to tax records. Section 303 provides:

SEC. 303. Section 6103(i) of title 26, United States Code is amended by adding at the end thereof the following new paragraph:

(8) FEDERAL BUREAU OF INVESTIGATION COUNTERINTELLIGENCE ACTIVITIES.—Upon a determination by the Attorney General that there is probable cause to believe that a taxpayer is a foreign power or an agent of a foreign power (as defined in section 101 of the Foreign Intelligence Surveillance Act of 1978 (50 U.S.C. 1801)), the return of the taxpayer and return information which relates to such taxpayer shall, upon request for foreign counterintelligence purposes by the Federal Bureau of Investigation approved by the Attorney General, be open (to the extent of the approved request) to inspection by, or disclosure to, the Federal Bureau of Investigation.

Section 303 of H.R. 1082 provides a rapid and secure procedure by which the FBI can obtain the access it needs to tax returns and return information of foreign powers and agents of foreign powers for counterintelligence purposes. Because of the strong, historical congressional policy of general confidentiality of tax return informa-

tion, section 303 appropriately imposes the relatively high standard of probable cause to believe that the taxpayer about whom information is sought is a foreign power or an agent of a foreign power as the prerequisite to FBI counterintelligence access to tax returns and return information.

CONCLUSION

The FBI's inability to obtain needed access to bank and tax records has impeded its ability to counter the activities of hostile foreign powers in the United States. Section 302 and 303 of H.R. 1082 will improve the ability of the FBI to detect and counter espionage and international terrorism in the United States by granting the FBI access to bank and tax records for counterintelligence investigations. The United States would no longer handicap itself by giving foreign agents engaged in espionage or terrorism the benefit of privacy protections in U.S. laws for the financing of their nefarious activities.●

UNREGULATED HIGH-STAKES GAMBLING GROWS ON AMERICAN INDIAN RESERVATIONS

HON. NORMAN D. SHUMWAY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. SHUMWAY. Mr. Speaker, as Representative of several Indian reservations and rancherias in northern California, the issue of gambling on Indian lands has become a matter of great concern to me and many of my constituents. Specifically, as I have seen the problem associated with establishment of gaming halls in Indian country, I have grown increasingly concerned over the absence of Federal regulation over such activity due to the Indians' unique trust relationship with the Federal Government. It is this fiduciary relationship which precludes State and local jurisdiction over Indian tribes, and serious problems, such as the possible influence of organized crime, unfair competition with charity groups, and domination by dishonest non-Indian investors, are left unresolved.

I recently read with interest the following article from the March 25, 1985, Christian Science Monitor in which these very concerns are discussed. I commend it to my colleagues' attention.

The article follows:

UNREGULATED HIGH-STAKES GAMBLING GROWS ON AMERICAN INDIAN RESERVATIONS

(By Warren Richey)

New forms of unregulated gambling are proliferating on Indian reservations across the United States, according to a California state prosecutor involved in a three-year battle to restrict the growth of professional high-stakes bingo games run by Indian tribes.

He warns that unless states are given authority to police and in some cases shut down the operations, the US may soon be faced with the development of dozens of miniature gambling towns on Indian reservations in as many as 20 states.

"They are trying to create little Los Vegases on reservations across the nation," says Rudulf Corona, a deputy attorney general in San Diego.

"These kinds of endeavors that are unregulated and shielded from view are highly attractive to organized crime," he adds.

Mr. Corona is one of a handful of state law-enforcement officials, largely in the West, who are concerned about the proliferation of large-scale bingo operations on federal Indian reservations.

According to the Bureau of Indian Affairs, 75 to 80 of the country's 300 Indian tribes have established high-stakes bingo halls in the past four years.

Federal courts have consistently ruled that state governments do not have the authority to restrict or even monitor the Indian bingo parlors, provided that they do not violate criminal laws. Bingo is regulated by states under civil statutes.

In some cases the Indian bingo games offer in excess of $100,000 in prizes, while some states restrict bingo prizes to as little as $250. Church and charity bingo groups, which are state-regulated, are worried they may lose their clientele to the higher stakes games on the reservations. But the Indians reply that ultimately their games will lure more novice players into the bingo halls and thus create a larger pool of bingo players for all to share.

On May 4, tribes in Florida, California, and Washington State are planning to conduct a $1 million bingo game—the largest ever—by using satellite transmission to broadcast the action live to three of the tribes' bingo parlors. Some 4,300 bingo enthusiasts are expected to pay from $250 to $300 to participate in the six-hour session.

"We view it as a severe threat to the state," Corona says. The $1 million bingo game is "a dramatic escalation in the gambling that is taking place on these reservations," he says.

"If these kinds of activities are allowed to go unchecked, then we may face some day nationally broadcast games that involve each and every state."

He adds that the Indians often sign lucrative contracts with management and investment firms specializing in opening and running big-money bingo halls. Last year the Sycuan Indians with the help of a Florida management firm expanded their bingo operation near San Diego to include Black Jack, Keano, and an illegal lottery. They attempted to circumvent state authorities by simply renaming the games "Bingo Jack," "Do-it-yourself Bingo," and "Horserace Bingo."

The operation was busted up in an August raid. In addition to $300,000 in illicit gaming equipment, police confiscated information announcing the expected arrival soon of "Bingo roulette," and "Bingo slot machines."

The raid was a minor setback for the Sycuans, who are still going strong in the bingo business. The tribe—along with the Muckleshoot tribe of Washington State and the Seminoles of Florida—is participating in the May 4 million-dollar satellite bingo session.

High-stakes professional Indian bingo got its first major boost in 1981, when a federal judge in Florida ruled that the Seminole tribe was entitled to run its big-money bingo game in Hollywood, Fla., without interference from the state.

The ruling said in effect that because the game is conducted by the Indians on their reservation, it is up to the Indians themselves to regulate and monitor the conduct of the gambling operation. Indian tribal reservation land is recognized by the U.S. government as being a sovereign nation within a nation.

Tribes across the country have viewed the Seminole experience as a model. The 725-member Muckleshoot tribe went so far as to sign a contract with the Seminoles to have them build and manage the 1,450-seat Muckleshoot Bingo Palace near Auburn, Wash.

The contract terms are lucrative for the Seminoles. In addition to paying back a $2.3 million construction loan—including interest at the prime interest rate—the management contract requires the Muckleshoots to pay the Seminoles 44 percent of their profits until 1995.

Tony Herrara, business manager for the Muckleshoots, is quick to point out that he didn't do the negotiating for the tribe. But he adds: "Sure we'd like [the Seminoles] to get less of a percentage, but they are providing a lot, too. We didn't have the expertise or money to build the bingo hall."

He adds that before the arrival of bingo the unemployment rate on the reservation was 65 percent, and that today 160 Indians have jobs in the Bingo Palace.

Bingo has been seen by Indians nationwide as a means to raise much-needed revenue and create jobs on some Indian reservations that have been notable in the past only for their poverty and high unemployment. In most cases tribes are looking to bingo to provide seed money to fund social programs, pave roads, and create a viable Indian economy on reservations where none existed before.

There have been several significant successes, according to some observers.

"Bingo is the growth industry of the Indian country," says a spokesman at the Bureau of Indian Affairs in Washington. "The federal government is cutting back on its domestic programs, and the tribes out there have been feeling the pinch in federal dollars. For some, the bingo has made the pinch less pinchy."

Because of the apparent benefits of bingo revenues, some officials have been reluctant to impose any restrictions on the bingo operations. Others, concerned that the tribes might become victims of unscrupulous bingo management firms and organized crime, have pushed to set up federal safeguards, such as requirement that background criminal checks be conducted by the Federal Bureau of Investigation into people running or financing the bingo parlors.

Still others, such as Corona in California, have felt that the best response would be to require the reservations to comply with state bingo regulations. This last response would cut deeply into Indian bingo profits and probably drive many of the operations out of business.

In the meantime, preparations are under way at the Muckleshoot Bingo Palace, Seminole Bingo in Tampa, Fla., and the Sycuan Reservation near San Diego for the May 4 million-dollar bingo session.

California and Washington law-enforcement officials say they will not try to stop the event, even though officials in both states consider the Indian bingo operations to be in violation of the law.

Asked about the $1 million satellite bingo session, Corona responded: "Is it legal? No, it is not."

He added, "The question is whether the federal government wants to do anything about it."

Federal regulations outlaw interstate transmission of lottery or gambling information, Corona says. He adds that the Organized Crime Control Act of 1970 forbids gambling on federal lands. Indian reservations, he says, are federal lands.●

SENATOR RUDY BOSCHWITZ—CERTIFIABLE WORKAHOLIC

HON. BILL FRENZEL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. FRENZEL. Mr. Speaker, on April 1, the Journal of Commerce noted the tireless work of Minnesota's Senator RUDY BOSCHWITZ for his State's agricultural interests against trade-restricting cargo preference laws.

The Journal's article, over the byline of Robert F. Morrison, identified RUDY BOSCHWITZ as a "certifiable workaholic." That's no surprise to Minnesotans. They know RUDY came to Washington to work.

I'm proud that I am represented by a Senator who has achieved this national recognition, and am pleased he is still working to provide more opportunity for our State's farmers.

The article follows:

[From the Journal of Commerce, Apr. 1, 1985]

SENATOR FROM MINNESOTA A CERTIFIABLE WORKAHOLIC

(By Robert F. Morrison)

WASHINGTON.—Senator Rudy Boschwitz, R-Minn., isn't an obvious adversary for the shipping industry.

His chief interest is to further the agricultural pursuits of his state. He chairs a subcommittee of the Senate Agriculture Committee, and serves on the Budget, Foreign Relations, Veterans, and Small Business committees as well.

He just doesn't seem to have time for much else.

He took on ocean shipping on cargo preference back in 1981 and was beaten in efforts to roll back the extent of the required use of U.S. flags.

Now, with farmers in more difficulty than ever, he's ready to do battle again.

He was a highly successful businessman in the Twin Cities before his election to the Senate in 1978.

That was his first try at an elective office and may prove a corrolary to the old saw about it "pays to advertise."

Indeed, what Frank Perdue is to chickens, Rudy Boschwitz may be to plywood.

Much credit is given for his statewide "name recognition" in 1978 to the fact that he did his own television commercials, complete with plaid shirt, for his plywood do-it-yourself business which by then had blossomed to 68 outlets in eight states.

Not something of a workaholic, Senator Boschwitz is a certifiable workaholic. He says he has little time to enjoy jogging and music—his chief diversions—as well as his family—his wife, Ellen, and two of four sons still at home here, Dan and Tom.

His two older sons, Gerry and Ken, are back running the business and, with fatherly pride, he reports they are doing well.

His reading runs to political history and as much in the way of newspapers, newsletters, and the like as he can squeeze in.

Senator Boschwitz—and his name is Rudolph E. but no one ever seems to refer to him as anything but Rudy—is probably the only congressman or senator who was a refugee from Nazi Germany, having been brought here by his parents at the age of 5 in 1935.

That unique experience is in large part responsible for his deep feelings regarding the United States and the opportunities it presents.

Senator Boschwitz, 55, has a law degree, but, after serving in the Army Signal Corps, practiced only a short while before joining a brother in what became Plywood Minnesota. He was re-elected to a second term last fall.●

FEDERAL DRUG LAW ENFORCEMENT AGENT PROTECTION ACT OF 1985

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. RANGEL. Mr. Speaker, one of the most dedicated and knowledgeable individuals in the Congress on the issue of narcotics is the junior Senator from Florida, Senator PAULA HAWKINS, the chairman of the Senate drug enforcement caucus.

On March 7, 1985, Senator HAWKINS introduced S. 630, the "Federal Drug Law Enforcement Agent Protection Act of 1985." This bill, which passed the U.S. Senate on March 20, 1985, would provide a reward of $100,000 in seized drug assets for information leading to the arrest and conviction of anyone who kills or kidnaps a Federal drug enforcement agent.

Senator HAWKINS named the award the Camarena Reward in honor of Enrique Camarena, the drug enforcement agent who lost his life in the war against illegal narcotics in Mexico.

This legislation is fiscally responsible, because the money to pay the reward comes from seized drug profits contained in the assets forfeiture fund, established last year under the Comprehensive Crime Control Act—title II of Public Law 98-473.

Today, I am introducing this legislation in the House of Representatives. Passing this bill is the least we can do to show agents of the Drug Enforcement Administration, especially those stationed overseas, that we care about their safety.

I insert the Senate floor debate on S. 630 in the CONGRESSIONAL RECORD at this point:

FEDERAL DRUG LAW ENFORCEMENT AGENT PROTECTION ACT OF 1985

Mrs. HAWKINS. Mr. President, I ask unanimous consent the Judiciary Committee be discharged from further consideration of S. 630, a Federal Drug Law Enforcement Agent Protection Act of 1985, and I ask unanimous consent for its immediate consideration.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered. The clerk will report.

The assistant legislative clerk read as follows:

A bill (S. 630) to provide for the payment of rewards to individuals providing information leading to the arrest and conviction of persons guilty of killing or kidnaping a Federal drug law enforcement agent.

The Senate proceeded to consider the bill.

The PRESIDING OFFICER. The Senator from Florida is recognized.

Mrs. HAWKINS. Mr. President, this bill provides a reward of $100,000 in seized drug assets for information leading to the conviction of anyone who kills or kidnaps a Federal drug enforcement agent.

I am calling this the Camarena Reward. It is named in honor of Enrique Camarena, the brave drug enforcement agent who gave his life in the war against illegal narcotics in Mexico last month.

It is too late for Enrique Camarena. But that does not mean we should not protect our men in the field.

Very often, those involved in these heinous crimes are merely acting on orders from the drug kingpins. Those who may be in on the arrangements are often poor and, frankly, not necessarily loyal. We should let the word go out around the world to those who have designs on the lives of U.S. drug enforcement agents:

"If you touch one of our people, your underlings will be given 100,000 United States dollars to lead the authorities to you."

The money for the Camarena Reward will come from the assets forfeiture fund, set up last year under the Comprehensive Crime Control Act.

Jack Lawn, the incoming director of the Drug Enforcement Administration, told me last week that this legislation "would certainly verbalize the message that drug enforcement personnel are important, and that people of the United States will not tolerate attacks against our people."

This legislation provides poetic justice—as the drug traffickers' money is plowed back into law enforcement. It is also common sense. It will not cost the taxpayers one cent.

This is a good idea and an incentive all around. It is also a fitting tribute to the memory of the courageous Enrique Camarena.

Mr. President, I thank the majority leader and the minority leader for working out consideration of this bill at this late hour of the day.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

S. 630

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Drug Law Enforcement Agent Protection Act of 1985."

SEC. 2. Section (e) of section 511 of the Controlled Substances Act (21 U.S.C. 881(e)) is amended by—

(1) inserting after "(e)" the following: "(1)";

(2) redesignating paragraphs (1), (2), (3), and (4) as subparagraphs (A), (B), (C), and (D), respectively; and

(3) striking out the matter following subparagraph (D), as redesignated, and inserting in lieu thereof the following:

"(2)(A) The proceeds from any sale under subparagraph (B) of paragraph (1) and any moneys forfeited under this title shall be used to pay—

"(i) all property expenses of the proceedings for forfeiture and sale including expenses of seizure, maintenance of custody, advertising, and court costs; and

"(ii) awards of up to $100,000 to any individual who provides original information which leads to the arrest and conviction of a person who kills or kidnaps a Federal drug law enforcement agent.

Any award paid for information concerning the killing or kidnaping of a Federal drug law enforcement agent, as provided in clause (ii), shall be paid at the discretion of the Attorney General.

"(B) The Attorney General shall forward to the Treasurer of the United States for deposit in accordance with section 524(c) of title 28, United States Code, any amounts of such moneys and proceeds remaining after payment of the expenses provided in subparagraph (A).".

Mr. DOLE. Mr. President, I move to reconsider the vote by which the bill was passed.

Mrs. HAWKINS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. DOLE. Mr. President, I thank my distinguished colleague from Florida for calling this matter to our attention. I thank the distinguished minority leader for clearing it for immediate action. It is important. I am pleased that we have been able to accommodate the Senator from Florida.

H.R. —

A bill to provide for the payment of rewards to individuals providing information leading to the arrest and conviction of persons guilty of killing or kidnaping a Federal drug law enforcement agent

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Drug Law Enforcement Agent Protection Act of 1985."

SEC. 2. Subsection (e) of section 511 of the Controlled Substances Act (21 U.S.C. 881(e)) is amended by—

(1) inserting after "(e)" the following: "(1)";

(2) redesignating paragraphs (1), (2), (3), and (4) as subparagraphs (A), (B), (C), and (D) respectively; and

(3) striking out the matter following subparagraph (D), as redesignated, and inserting in lieu thereof the following:

"(2)(A) The proceeds from any sale under subparagraph (B) of paragraph (1) and any moneys forfeited under this title shall be used to pay—

"(i) all property expenses of the proceedings for forfeiture and sale including expenses of seizure, maintenance of custody, advertising, and court costs; and

"(ii) awards of up to $100,000 to any individual who provides original information which leads to the arrest and conviction of a person who kills or kidnaps a Federal drug law enforcement agent.

Any award paid for information concerning the killing or kidnapping of a Federal drug law enforcement agent, as provided in clause (ii), shall be paid at the discretion of the Attorney General.

"(B) The Attorney General shall forward to the Treasurer of the United States for deposit in accordance with section 524(c) of title 28, United States Code, any amounts of such moneys and proceeds remaining after payment of the expenses provided in subparagraph (A).".●

CRISIS IN THE COPPER INDUSTRY

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. UDALL. Mr. Speaker, a staff writer for the Washington Post recently spent a week in my State of Arizona to review the condition of the domestic copper industry. Mr. Paul Taylor, in his article of March 30, describes the severe crisis which now exists. As he points out, the 3-year depression of the industry has "halved mining employment, idled 16 of the Nation's 28 largest mines," and "generated net industry operating losses of nearly $3 billion since 1981." Those mines which have closed are not likely to reopen. Entire communities have been destroyed by these layoffs and shutdowns.

Excess production by foreign producers has been a major factor in the demise of the U.S. copper industry. While 5 years ago the United States produced nearly one-fourth of the world's copper, we now produce less than one-sixth.

In an attempt to save this vital industry, Senator DOMENICI and I have introduced the National Copper Policy Act of 1985. We feel this bill would give U.S. copper a fair chance to compete with the best industries worldwide. We also feel that without such legislation, domestic copper will gradually fade away and die in the face of unfair competition. As Mr. Taylor's article makes clear, something must be done soon.

Mr. Speaker, at this point, I would like to insert Mr. Taylor's article into the RECORD.

[From the Washington Post, Mar. 30, 1985]

COPPER INDUSTRY LANGUISHES IN THE ECONOMIC PITS

(By Paul Taylor)

MORENCI, ARIZ.—This is where copper is coming a cropper.

The great open it copper mines of Arizona, New Mexico and Utah, world-dominant for most of this century, are mired in a three-year depression.

It has halved mining employment, idled 16 of the nation's 28 largest mines, triggered the longest strike in industry history (21 months and counting here at Phelps Dodge's mile-wide Morenci mine), generated net industry operating losses of nearly $3 billion since 1981 despite a 29 percent reduction in per-ton production costs and set off a round of almost panic-stricken divestitures by the same oil companies that went on a cash-happy shopping spree for copper mines in the 1970s.

This week, Phelps Dodge announced that its smelter in Ajo will close April 4, laying off 200 workers. Prognoses for the survival of the industry as a whole—from whose vivid, sometimes violent, history could be chronicled the taming of the American Southwest—range from dire to dour.

Copper is not the only afflicted metal in this country.

Lead producers have been stung by the unleading of gasoline; the great iron ore mines of Minnesota's Mesabi Range have been losing a generation-long battle with low-cost imports; gold and silver prices have gone soft, and aluminum producers have been hurt by the high cost of power, which they use abundantly in smelting.

Nationwide, metals mining employment dropped from 109,000 in 1981 to 44,800 last year.

But the $2.4 billion copper industry is the largest metal miner and, at the moment, the most crippled. And it is mined in a sparsely populated, politically vulnerable part of the country, reducing prospects for a congressional bailout.

Copper's humiliation has come at the hands of a rogue's gallery of economic and social forces that mugged a swath of Smokestack America throughout the 1980s.

This lineup includes: low-wage Third World competitors that have been overproducing (and driving the world copper price to Depression-era depths) to raise the money their countries need to pay off international loans financed, in part, by U.S. taxpayers; federal clean air standards that have forced the industry to spend—and often misspend—hundreds of millions of dollars on antipollution processes that have added to cost but not productivity, and a strong dollar that has devoured export markets as voraciously as it has sucked in copper imports.

Besides these generic causes of U.S. deindustrialization, there is a another problem specific to copper.

Most of the known high-grade copper ore in this country has been mined. The grade or copper content of the ore in the gargantuan Chuquicamata mine in Chile, which has become the Saudi Arabia of copper, is twice that of a typical U.S. mine, and the ore grades in Zaire's nationalized mines are more than five times the U.S. average.

Given these multiple ills, the copper debate will bump into some hard questions. Are old-line "dirty" industries like copper worth saving? If so, are they capable of salvation? Or, sooner or later are they bound to be done in by broad forces of economic change?

In the darkest hours of auto and steel, such questions were not entertained seriously. At stake were too many jobs, too much national security, too expensive an economic ripple.

"The next 12 to 18 months will decide whether there's going to be a domestic copper industry," said Bruce Wright, administrative aide to Rep. Morris K. Udall (D-Ariz.), who earlier this month introduced a rescue bill in Congress.

"The only difference between us and the industries that get bailed out," said Carl J. Forstram, plant manager of the Phelps Dodge mine here, "is that we don't have the votes in Congress."

Udall's bill, introduced on behalf of the new congressional Copper Caucus, would provide a five-year "recovery window" by negotiating production limits for foreign competitors. (Under the legislation, competitors that refused to live within the limits would have tariffs slapped on their exports to the United States).

IMPORT QUOTAS URGED

Prospects for passage are not good. There are 23,000 jobs left in copper mining and smelting, a fraction of the auto and steel payroll. Moreover, the copper fabricating industry—which buys refined copper from U.S. and overseas producers—employs five times as many workers as the mines.

Last year, after the International Trade Commission found that unfair foreign competition had hurt the American copper producers, the fabricators opposed ITC recommendations for tariffs or quotas, fearing that either approach would create a two-tier pricing structure—one U.S. price and a lower world price—that would place them at a competitive disadvantage.

The Reagan administration sided with the fabricators. "It was a political year, and in a political year, you count heads," said Robert Wardell, president of the Copper and Brass Fabricators Council. "We had 125,000 jobs, the producers 25,000."

"It's not just the politics of it," said Don Phillips of the Office of the U.S. Trade Representative, which turned down the ITC request. "If, by imposing tariffs, you are going to lose more jobs in fabrication than you save in mining, that's a legitimate economic consideration."

If the jobs argument alone cannot carry the day for the mines, Udall and others say defense considerations should.

Copper is used in everything from ammunition casing to battlefield communications lines to engine parts. The nation experienced copper shortages during each of its last three wars; the shortages were deemed so serious that in the late 1960s the federal government, through the Defense Production Act, helped finance the development of several large private mines.

Copper is one of 61 commodities designated by Congress as part of the National Defense Stockpile, but as of 1984, the government had filled only 3 percent of its target stockpile of 1 million short tons of copper. The industry as been clamoring for additional reserve purchases in this, its hour of need, but government experts say that, given the current world oversupply of copper, there are more pressing purchasing priorities.

"The national security danger is that this is an industry that can't be turned on and off like a faucet," said C.J. Hansen, president of the Arizona mining Association. "Once you close mines, you tend to lose them."

Industry leader believe that is what Chile is banking on. They say that Chilean overproduction—which they describe as a deliberate strategy of selling two pounds of copper at 50 cent a pound rather than one pound at $1—amounts to a predatory "squeeze play" designed to drive high-cost U.S. producers under.

Chile can make a profit on lowprice copper; the U.S. producers, whose costs are 50 percent higher, cannot. Already the U.S. share of the world market has dropped from 50 to 13 percent over the past two generations.

Domestic copper producers are enraged that the Chilean copper industry has been aided by loans from the International Monetary Fund and World Bank granted in what J. Hugh Leidke, chairman of the Pennzoil Co. (which recently put its copper subsidiary, Duval Corp., up for sale), calls a "global Ponzi game" to ensure that developing countries will have the revenue to pay off earlier loans.

Most parties to the copper debate agree that the domestic industry has legitimate gripes. But one school holds that, even so, any rescue effort would only postpone the inevitable.

"Let's face it, what's happening with copper is what we are supposed to want to happen," said Robert Horton, director of the Interior Department's Bureau of Mines. "The developing countries are in fact developing. No government can stand in the way of long-term trends for very long."

Even Arizona Gov. Bruce E. Babbitt has been muted in his calls for federal help. "The governor realizes that copper's heyday has come and gone," said Jim West, Babbitt's press secretary. " . . . He doesn't want to raise hopes that will only be dashed later. He's more interested in economic diversification."

UNION MOVE BLUNTED

Behind the cold-eyed assessment of economic history, there is a human and intensely poignant side to the decline of a "company-town" industry.

Copper is the source of the genteel wealth of the Hearsts and the Guggenheims, but its history is that of a rugged, Wild West industry, pioneered by prospectors who spilled as much blood fending off each other as they did fighting the Apache.

Because copper deposits were so remote, mining companies built company towns to attract and hold a stable work force. Labor relations in such towns have ranged from violent to imperial to benign; one historian has likened them to imperial Britain's mercantilistic outposts, with their rigid social and economic strats.

Seventy years ago, the Industrial Workers of the World ("wobblies") tried to establish a foothold in the copper towns. But in 1917, in one of the infamous episodes of U.S. labor history, 1,250 workers and IWW sympathizers at Phelps Dodge's Bisbee, Ariz., mine were rounded up by a sherif's posse on orders from Phelps Dodge officials and sent by train to a town in New Mexico with a warning never to return.

The labor movement in the copper mines never has been the same, nor has management ever been quite so heavy-handed. Company towns like the one here grew into little mountaintop oases of the good life: palm trees, manicured lawns, good schools, plenty of hunting and fishing, all set in the stark beauty of the southern Rockies.

By 1983, when the current Phelps Dodge strike began, workers here were getting wage and benefit package worth an average of $36,000 a year. "As an industry, we had gotten fat, dumb and happy," Hansen said.

Most of the Phelps Dodge workers grew up as second- or third-generation miners; the whole town had the quality of a extended—and fairly happy—family. Race relations among Hispanics, Anglos and Indians were good, on the whole.

"It was a pretty good life, no question," said Angel Rodriguez, head of United Steel Workers Local 616, the largest of 13 unions that used to represent 2,000 workers here.

A BRUTAL, BITTER STRIKE

It came unglued July 1, 1983. Other copper companies had agreed that spring to a pattern contract that invovled a wage freeze; Phelps Dodge also wanted to eliminate cost-of-living adjustments and extract some other concessions. When the unions went on strike, the company decided to keep the mine open, which it was able to in the critical first days only with the help of National Guard units mobilized by Babbitt.

It has been a brutal, bitter strike. There have been no deaths, but vandalism in Morenci is in the $250,000 range, company officials say; comparable damage has been done in Ajo, Douglas and other Phelps Dodge towns.

Brother has been set against brother, friend against friend, father against son as miners have made the agonizing choice between working and striking. About half the jobs at the mine are filled by ex-union members who crossed their own picket lines.

The strike has been a disaster for the unions. Phelps Dodge has been able to operate; it says that it even set production records last fall. New workers' wage scales have been cut by one-third, and all 13 unions were kicked out last fall in a decertification vote that is still being appealed. Workers at other mines in Arizona, fearful for their jobs, are decertifying their unions as well.

Nearly 21 months after the strike began, strikers and "scabs" still wave ritual obscene gestures at one another each afternoon at the shift change, but the strike long since has been lost.

"I'm just sort of hanging around to see how the [appeal of the] decertification vote comes out," said Janner Nessler, a striking filter helper. Most of his fellow strikers long ago drifted away to Tucson or Phoenix or Stafford, leaving behind not just their jobs, but also their roots, their homes, their relations.

Even with the cost-cutting and union-busting, the Phelps Dodge mine here may not be able to make it. In January the company had to close its Morenci smelter into which it had poured $90 million in an effort, ultimately futile, to comply with an Environmental Protection Agency consent decree.

"In hindsight, they would have been better tearing the smelter down and starting from scratch," Hansen said. "They tried for an innovative approach to pollution control, and they could never get it to work."

Phelps Dodge is not the only company to miscalculate antipollution strategy. The Duval Corp. spent millions developing a state-of-the-art hydrometallurgical smelting system that does not foul the air but has proven too costly to operate.

When the Phelps Dodge smelter here closed, it meant laying off permanently 600 workers, some of whom were the very ex-union members who had estranged themselves from their families by choosing to work. Officials said the Ajo smelter, the town's only industry, could reopen if copper prices rise.

JAPANESE FIRMS BUY IN

Phelps Dodge, Arizona's largest copper producer and the nation's second largest (behind Kennecott), lost $267.8 million in 1984. The most optimistic reading of its future is uncertain. And if a miracle rescue comes, it may come from a strange corner of the globe.

Earlier this year the Sunitomo Corp., a Japanese trading company, signed a letter of intent to purchase 25 to 40 percent of the Morenci mine. Sunitomo is following the footsteps of the Mitsubishi Corp., which in

1980 became a one-third owner of Kennecott's Chino Mines in New Mexico.

Japan is a copper importer, and its modern, post-World War II smelters, which are low in pollution, are always hungry for more ore concentrate. The company apparently plans to ship the concentrate—which is 25 percent copper—across the ocean from Morenci and smelt it in Japan.

If that happens, the mine here would serve a function commonly associated with those in the Third World as a supplier of a raw metal to an industrial power that would smelt it, fabricate it and sell it on the world market.

A circle, of sorts, would be closed in Morenci. The world's first and foremost industrial giant, unable to compete with the developing nations, would become one.

"The Japanese are our best hope," said J.D. Ferrin, an instrument repairer who moved here with his wife and three children a few months after the strike began because the pay was 50 percent better than he could make anywhere else.

"I can't imagine them sinking a lot of money in here and not giving it a good try," he said.

MAJOR COPPER-PRODUCING COUNTRIES IN 1983

Country	Metric tons	Percent of free world total	Percent of domestic production capacity
Chile	1,245,000	20.4	100
United States	1,046,000	17.1	59
Canada	625,000	10.2	73
Zambia	514,000	8.4	100
Zaire	503,000	8.2	100
Peru	315,000	5.2	100
Philippines	271,000	4.4	92
Australia	265,000	4.3	100
South Africa	205,000	3.4	100
Mexico	191,000	3.1	100
Papua New Guinea	183,000	3.0	100

BOSTON BAR ASSOCIATION ADOPTS RESOLUTION ON NICARAGUA

HON. BARNEY FRANK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. FRANK. Mr. Speaker, the Boston Bar Association, through its council, has adopted a resolution regarding the decision of the United States not to accept the jurisdiction of the World Court in the case brought by Nicaragua against the United States. I want to take a moment to express my high regard for the bar association. At both the local level and the national level, bar associations have done excellent work, not only in offering constructive criticism of our own judicial system, but also monitoring judicial abuses abroad. In the last Congress—April 5, 1985—I brought to the attention of this body the plight of Baha'i lawyers in Iran, and commended the American Bar Association for bringing this violation of human rights to our attention. Likewise, I am grateful to the Boston Bar Association for its thoughtful criticism of the American position regarding the jurisdiction of the World Court. It is a call for the United States to renew its support for the concept and institutions of international law. I hope the administration will take this admonition to heart.

Mr. Speaker, I include the resolution in the RECORD.

RESOLUTION OF THE BOSTON BAR ASSOCIATION

Resolved: The Boston Bar Association regrets the decision of President Reagan that the United States will not participate in the further proceedings before the International Court of Justice in Nicaragua's case against the United States.

The Court in November rejected arguments by the United States and held by a vote of 15 to 1 that the Court has jurisdiction in the case. By a vote of 16 to 0, in a decision in which the United States member of the Court joined, the Court also rejected argument by the United States that the Court is precluded from hearing the case as one involving armed conflict, for which the proper forum is the United Nations Security Council.

The actions taken by the United States against Nicaragua have been claimed by the United States and by El Salvador to be legally justified as measures taken in the exercise of the right of collective self-defense in a case of armed attack by Nicaragua against El Salvador. The inherent right of individual and collective self-defense if an "armed attack" occurs is affirmed by Article 51 of the United Nations Charter. However, in boycotting further proceedings in the case in the International Court, the United States declines to make its case in or out of court as to the facts claimed to constitute an "armed attack" by Nicaragua against El Salvador. Presumably the State Department in saying only that "much of the evidence that would establish Nicaragua's aggression against its neighbors is of a highly sensitive intelligence character" does not mean to contend that it is a case of "armed attack" so invisible that it can be proved only by evidence too sensitive to reveal.

The fundamental law of the United Nations Charter is that "All Members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the Purposes of the United Nations." We reject the notion that the Charter prescribed limitations on the use of force should be the exclusive preserve of the veto-hobbled Security Council. We reject also the notion that legitimate political or diplomatic objectives or approaches require a suspension of Charter limitations or of the exercise of Court jurisdiction. We affirm the right of the United States and of other nations to take legitimate and effective countermeasures to oppose violations by others—countermeasures in accordance with law and in support of law.

A great nation does not need to hide from law. When it does so it weakens law and diminishes itself. The United States by action of the President and the Senate accepted the compulsory jurisdiction of the International Court of Justice under Article 36 of the Statute of the Court, which provides that "In the event of a dispute as to whether the Court has jurisidiction, the matter shall be settled by the decision of the Court." The Court has decided. The protestations of our government that we boycott the Court out of concern for the "enormous harm to it as an institution and to the cause of international law" which would follow from the Court's decisions will not avoid the damage done—not in a case where the United States boycotts the Court in repudiation of decisions by the Court in which distinguished judges from all segments of the international community, including our closest allies, have joined. We call upon the President to honor in deed as well as in word this nation's historic commitment to the rule of law among nations.●

CALLING A SPADE A SPADE: BOB MICHEL TELLS THE TRUTH ABOUT THE SANDINISTAS

HON. WM. S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. BROOMFIELD. Mr. Speaker, hats off to Representative BOB MICHEL. He has cut through to the heart of the matter and tells it like it is about the Sandinistas. His letter to the Washington Post captures the essence of what the Sandinistas are all about.

It is interesting to note how our own open and democratic system is being manipulated by the Sandinistas. I am intrigued by the recent Sandinista publicity campaign focused on this country. Lobbyists for that failed revolution are conducting a full-court press here in the Congress. Commandante Ortega has appeared on television in a suit, and even trimmed his droopy mustache.

The Sandinistas are now offering seductive concessions to the administration. They are trying to put on the cloak of reasonableness, and civility. For a short period of time, they like chameleons, will change their colors. They are masters in the business of imagemaking and sensing the timing of any important political undertaking.

I hope that my colleagues see through the well-crafted Sandinista smokescreen. In their hearts, Ortega and company are clearly ideologues committed to either selling or forcing their system on the countries in this hemisphere.

With these concerns in mind, I strongly recommend Representative BOB MICHEL's excellent letter to all of my colleagues in the Congress who are interested in preserving democracy in this hemisphere.

PIERCING THE SANDINISTA SMOKESCREEN

In "Nicaragua: We Can't Remake It in Our Own Image" [Topic A, March 24] my colleague Lee Hamilton made an informed, if not persuasive, case for cessation of aid to the contras. He touched all the usual bases: the need for negotiations with the Sandinistas, the desirability of a "strong regional policy" and the urgency of addressing economic problems of the region.

But it isn't what Lee Hamilton said that captured my attention. It was what he did not say. Nowhere is there even a hint that the Sandinista leaders are and always have been dedicated Marxist-Leninists. Not mentioning the most important fact about the Sandinistas—their ideology—makes every other argument meaningless.

From the very beginning, ideology has been the Sandinistas' guiding force. From 1961 to 1978, the avowedly Marxist-Leninist movement never attracted more than a relative handful. One Sandinista faction tried to enlist the "proletariat." That failed. The Sandinistas tried a policy of "prolonged popular war" in the countryside. That failed, miserably.

According to David Nolan's "The Ideology of the Sandinistas and the Nicaraguan Revolution," in 1969 they published a 15-point declaration of their goals and principles.

These included, "replacement of the constitutional theory of elected representation," "an end to cruel Yankee exploitation," "nationalization of property" and "struggle for a true union of the Central American peoples within one country beginning with support for national liberation movements" in neighboring states.

That statement had at least the virtue of honesty. But in May 1978, the Sandinista "National Directorate" issued a 25-point program. Notably absent were any references to "Yankee imperialism" or plans to nationalize the economy. There were references, however, to freedom of speech, organization and religion, "without the veiled qualifiers used in 1969," according to Nolan. In short, the 1978 program was vintage Marxist-Leninist duplicity. Sandinista Nicaragua is being built on the 1969, not the 1978, program.

Mr. Hamilton says our decision in Nicaragua ". . . should be based not on ideology, but on a clearly defined assessment of how best to protect our national interest." I agree. But the first step in such an assessment is to remember we are confronting ideologues.

The Sandinistas believe they alone represent the "vanguard" of the revolutionary process and the driving force of Nicaraguan history. They are certain that, in leader Humberto Ortega's words, "without Sandinismo we cannot be Marxist-Leninist, and Sandinismo without Marxism-Leninism cannot be revolutionary."

They aren't simply "undemocratic"—to use Mr. Hamilton's word. They are ideologically driven to make a reality of their totalitarian vision.

The Sandinistas are convinced—as was the new Jewel Movement in Grenada—that their revolution is irreversible. It is in our own national interest and in the interest of freedom worldwide that we aid those in Nicaragua not convinced by this myth.●

SOUTH AFRICA'S OFFICIAL PARTY LINE

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. RANGEL. Mr. Speaker, the Republic of South Africa has embarked upon a new campaign to repress any free expression of dissent by that country's black majority.

Protesters and participants in funeral processions have been gassed, beaten, and shot. The South African Government's excuse for its brutal actions is unacceptable in the eyes of most Americans. The only person who seems to have bought their story is our President, Ronald Reagan.

The facts speak for themselves; 19 people were murdered on the anniversary of the Sharpeville massacre; arrests and detentions are everyday occurrences; blacks inside South Africa are demanding concessions; and the international community has denounced the violence being perpetrated against unarmed civilians. Only Ronald Reagan seems to be oblivious to these facts. Only his administration accepts the official lies emanating from Pretoria.

Mr. Speaker, I would like to offer the following article for inclusion in the CONGRESSIONAL RECORD. It presents an excellent analysis of how the official line of Pretoria is no longer valid.

[From the New York Daily News, Mar. 25, 1985]

SOUTH AFRICA'S OFFICIAL STORY MAY HAVE DIED, TOO

The way officials of the South African government told the story, the police had no choice. The official story was that there was a huge mob of blacks armed with sticks, stones and gasoline bombs, marching on a white township, and the official story was that the police had no choice. That was the way the government of South Africa explained the shootings that left 19 dead and many injured and that was the story President Reagan carried to the American people in his news conference.

Until now, Reagan has been a lucky President and with his luck, he's always had a perfect sense of timing. Until now, it has always been that way for him but on Thursday night, at his news conference, he didn't have his luck or his sense of timing.

It is different with South Africa now. For the first time, the attention of the world is focused on the policies and the government in Pretoria. It is not just what the government in South Africa says. Not any more. The days of one-sided stories are over and the bad luck the President of the United States had was not realizing all this at his news conference on Thursday. But that wasn't all that went against Reagan. His timing, the incredible timing he's had all through his presidency, deserted him on Thursday. Never before in history has a major American television news program broadcast live from South Africa. But on the very week of these latest killings the ABC-TV program "Nightline" was in South Africa. "Nightline" had millions of Americans examining South African policies up close and once the killings in a town called Langa took place, ABC was there and correspondent Kenneth Walker, who was in Johannesburg for the broadcasts, rushed to the scene.

Being there when something really important happens is an obsession that reporters have. In the day-to-day reporting of news, reporters always get to the scene when whatever it is has already happened and they are told, "You should have been here an hour ago" or "You should have been here last night." It seldom happens that a reporter is there when important news happens and can see and then say for sure what has taken place. But reporters, in a way, are like cops. They try and reconstruct events and to do that, they look for every bit of evidence that is left at the scene and they talk to everyone they can find and that way they are able to rebuild in their minds at least some of what happened. In the town of Langa, outside Port Elizabeth in South Africa, they was what Kenneth Walker did. He went looking for evidence of gasoline bombs but there was nothing And that was just a start. He interviewed all the witnesses he could find and the story he came up with was very different from the story the South African government gave out.

In the middle of the afternoon yesterday, Kenneth Walker arrived back in the United States and he said the way the story was told to him, it was a massacre without provocation that took place on the black-top road in the town of Langa.

The irony was that it took place on the 25th anniversary of another horrible episode in South African history, the massacre of 69 blacks at the police headquarters in Sharpeville. It was protest against the government's passbook laws that started the shooting at Sharpeville. On Thursday, it was a funeral the government said blacks couldn't have that led to the killing. Funerals are big, emotional and political events in South Africa and that was the reason the government tried to stop one that had been set for Thursday. The funeral was originally set for last Sunday. The government said no, a general strike was going on and it was felt that the funeral might prompt trouble. The funeral was reset for Thursday. But again, the government said no, this time because it was the anniversary of the killings at Sharpeville and trouble was feared. But word that the funeral had been banned had gone out too late and on Thursday morning, thousands began to gather. They had buses to take them to Kwanobuhle, the site of the funeral. They had already begun to board the buses but the police ordered them out of the vehicles. The blacks decided then to walk to Kwanobuhle. They were on Maduna Road in the town of Langa when the police opened fire.

Yesterday, reporter Walker said that witnesses told him that there was one armored vehicle in front of the line of march and another at the rear and the blacks were caught in the crossfire. After the shooting was done, Walker said he was told, the government sent fire engines to wash the blood off the road, and witnesses reported that rocks and sticks were placed in the hands of dead people. "To make it look like they were throwing stones."

But it's different now. It is not just the story that comes from the government of South Africa and nothing more. Not any more, and it will be that way from now on.●

LEGISLATION ON INSPECTING AMUSEMENT RIDES

HON. HENRY J. HYDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. HYDE. Mr. Speaker, I am today introducing the Amusement Ride Safety Commission Joint Resolution.

Last year, in the wake of amusement ride accidents occurring in Illinois and elsewhere, I joined in cosponsoring H.R. 5790, a bill to extend the jurisdiction of the Consumer Product Safety Commission to fixed location amusement park rides. I did so because I felt that if the State governments could not, or rather would not, inspect parks to insure safety to our citizens, then it fell to the Federal Government to do so.

However, I was deeply concerned over the many legitimate arguments of those opposed to this legislation. For that reason, I now believe we need a slightly different approach which will still accomplish the same goal—safety for our citizens. In recognition of the arguments that the Consumer Product Safety Commission has neither the manpower, money, nor technical expertise to conduct Federal inspections, my bill will create a commission to investigate the scope and adequacy of public and private measures now employed to protect the public and report to Congress on the effectiveness and current enforcement of these laws. The commission will consist of five members: a Chairman from the Bureau of Standards, a Co-Chair from the CPSC, a representative from industry, a consumer spokesman, and a representative from a State agency with oversight on ride regulations.

Much good has already come from Federal interest in this matter. The industry is aware of the concern expressed by many legislators. They have endorsed a comprehensive set of ride safety standards produced by the American Society of Testing and Material, an independent standards-writing organization located in Philadelphia. These standards may provide the added measure of safety assurance that is needed, but the standards ought to be evaluated. I am particularly concerned to know how these standards, now voluntary in nature, can best be enforced against all operators.

I believe we, as legislators, have a responsibility to insure that the laws we enact will be effective. Opponents of the legislation which gives jurisdiction of this matter strictly to CPSC have argued that it may be counterproductive. H.R. 5790, which passed last year with my support, and which has been reintroduced in various bills this year, intends that if a State does not have a ride inspection law, then CPSC has the right, and indeed obligation, to go in and inspect for that State. Opponents of that approach have pointed out that a negative spinoff of this approach may be a "let the Feds spend the money attitude" by many States. My ultimate concern is protection of our citizens. I am no longer sure that sole CPSC jurisdiction will provide that protection.

The CPSC is not, nor for that matter is any agency of the Federal Government, presently equipped to routinely inspect amusement rides. To do so on a regular basis would require an enormous infusion of personnel and money. To make that kind of commitment without attempting to determine whether it is necessary or whether it will be effective seems most unwise.

Current law is a case in point. CPSC currently does not routinely inspect the carnival rides over which it now has jurisdiction and has never asked for the personnel and money needed for such inspections. The bills currently pending which extend CPSC jurisdiction over fixed amusement park rides do not give them the resources to do so, either, I agree with former Commissioner Armstrong of the CPSC that to hold out the promise of such inspection when none will be forthcoming is dangerous for the false perceptions it may create in the public mind.

A congressional interest in ride safety is legitimate. Nearly 200 million people a year frequent our Nation's amusement parks. They should be assured that the highest standards of care and safety are adhered to by the entire industry.

The legislation I am introducing will create a temporary commission charged with assessing the present status of ride safety efforts, public and private. It is patterned after the 1967 legislation which created the Advisory Commission on Consumer Product Safety.

The commission will be empowered to accept or require testimony relating to ride safety, obtain records, and request the cooperation of all other agencies of the Federal Government. It will analyze the present state of industry safety programs, of State and local ride safety regulations, and will assess the need for and potential effectiveness of any Federal involvement in ride safety.

The commission may conclude that there is indeed a Federal role to be performed with respect to ride safety. It may conclude that such a role ought to be performed by CPSC or that it would be better performed by some other agency of Government. On the other hand, the commission may conclude that Federal participation will not significantly improve the safety picture.

No one, including the industry itself, is suggesting that the industry be allowed to police itself with no oversight or accountability to anyone. However, I believe it would be unwise from the standpoint of public policy to impose a costly and burdensome regulation or, worse, an illusory promise of remedy before determining that a Federal program is justified, that it will produce good results, and if so, what agency could do so most effectively.

Therefore, I urge my colleagues to consider this approach which is, in my opinion, a rational approach which will ultimately provide more effective safety regulations for our amusement parks and our citizens.●

MADISON, WI, A CITY OF REFUGE

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. KASTENMEIER. Mr. Speaker, I wish to call to the attention of my colleagues a resolution adopted by the Madison, WI, Common Council reaffirming support for efforts to provide sanctuary to political refugees fleeing El Salvador and Guatemala and declaring Madison to be a city of refuge.

Support for the sanctuary movement in the United States is increasing as more and more Americans become concerned about the fate of those political refugees from El Salvador and Guatemala who are denied asylum here and are deported back to their native lands to face an uncertain future.

Congress, of course, can act to relieve this concern by passing legislation which would provide extended voluntary departure status to Salvadoran and Guatemalan political refugees.

Mr. Speaker, the Madison Common Council resolution follows:

Whereas, the United Nations Convention relating to the Status of Refugees has defined the conditions of political refugee as "any person who owing to a well-grounded fear of being persecuted for reasons of race, religion, nationality, membership in a particular social group or of a political opinion, is outside the country of his(her) nationality and is unable, or, owing to such fear, is unwilling to avail himself of the protection of that country"; and

Whereas, the United States Congress has adopted this convention in the Refugee Act of 1980; and

Whereas, the United Nations High Commission on Refugees has recognized that persons fleeing El Salvador and Guatemala are bona fide political refugees, yet fewer than two percent are being granted that status by the U.S. Immigration Service; and

Whereas, deportation of those seeking asylum has often meant disappearance or death upon their return home; and

Whereas, members of those religious communities offering sanctuary to the refugees believe themselves to be acting not in civil disobedience but under the law of the land; and

Whereas, both refugees and sanctuary workers in Texas, Arizona, Washington, New York, California and Pennsylvania have been detained or indicted in recent days; and

Whereas, within the City of Madison, we have both refugees and sanctuary providers for whom the fear of deportation and the threat of arrest have an increasing immediacy; and

Whereas, the Common Council passed a resolution on June 3, 1983 in support of

those sanctuaries when first refugees came to our City;

Now therefore, be it resolved, That the Common Council of the City of Madison reaffirms that resolution, declares Madison a City of refuge and supports the religious communities of the City of Madison in their efforts to provide sanctuary; and

Be it further resolved, That the people of Madison will not condone for its own citizens who are providing sanctuary the harrassment, indictments or arrests which have been experienced by sanctuary workers in other cities at the instigation of the U.S. Immigration Service; and

Be it further resolved, That no employee of the City of Madison will violate the established sanctuaries by assisting in investigations, public or clandestine, by engaging in or assisting with arrests for alleged violation of immigration laws by the refugees in the sanctuaries or by those offering sanctuary, or by refusing established public services to the established sanctuaries; and

Be it further resolved, That the Madison Common Council urges the Immigration Service to provide the refugees with the status of "extended voluntary departure", so that they may live among us free of the threat of deportation until conditions allow their return home.●

OHIOAN IS CHAIRMAN OF AMERICAN TRUCKING ASSOCIATIONS

HON. BOB McEWEN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. McEWEN. Mr. Speaker, as a member of the Public Works and Transportation Committee, I would like to recognize a citizen of Ohio who has risen to the highest elective office in America's trucking industry. Dale K. Craig is the chairman of the Board of American Trucking Associations.

We are all aware of our complete dependence on an efficient, cost-effective transportation system. We all know the tremendous role the trucking industry has played in the progress of America over these past 50 years.

Dale Craig is typical of the hard-working trucking entrepreneur who has made our freight transportation system the envy of the world. Mr. Craig is the son of one of the early trucking pioneers and grew up on the industry, striking out on his own when he purchased a small trucking firm based in Toledo. OH, in 1962. He immediately relocated the business to a nearby suburb and over the years has built Craig Transportation Co. into a highly respected regional motor carrier of grocery products. Craig's tractor-trailers, with their distinctive red arrows, are a familiar sight on the highways of an area stretching from Pennsylvania to Iowa and from Minnesota to Georgia.

Mr. Craig also has found time to be active in civic affairs in the Toledo area and as a licensed pilot, has been particularly prominent in the promotion of aviation there.

Mr. Craig is an outspoken proponent of highway safety. As the ATA chairman, and even prior to his election to that position, he has made numerous speeches throughout the country calling for the weeding out of the irresponsible truckdriver and more recognition for the safe, courteous, and responsible professional driver.

I am happy to have this opportunity to say a few words about a businessman from Ohio who has risen to the very top of one of the Nation's most vital industries.●

VOICE OF DEMOCRACY WINNER

HON. LES AuCOIN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. AuCOIN. Mr. Speaker, I would like to bring my colleagues' attention to an essay written by a young woman in my district which imparts a valuable lesson to all Americans on the importance of casting an educated vote.

Lisa Gesik, a high school student in Newport, OR, submitted the essay for the annual Voice of Democracy scriptwriting contest sponsored by the Veterans of Foreign Wars of the United States and its ladies auxiliary. This year, more than 300,000 secondary school students entered scripts for the contest theme, "My Pledge To America."

I commend the Veterans of Foreign Wars for inspiring students to think about what America means to them and to put those thoughts in writing to be shared with others.

I hope that my colleagues will enjoy this essay. I think that they might share my feelings of pride and optimism that students today, even those who have not yet reached the legal voting age, realize that casting an informed vote is one of the most important responsibilities of citizenship.

MY PLEDGE TO AMERICA

(By Lisa D. Gesik, Oregon Winner, 1984/85 VFW Voice of Democracy Scholarship Program)

It is 5:30 p.m., November 6, 1984, Karen, age 35, is waiting in line to receive her ballot and enter into the voting booth. The line is long and Karen is tired. She now wishes she had come before work when it was less crowded. Thirty minutes later, it is finally Karen's turn. She accepts her ballot and inserts it into the voting machine. Her first vote was for the President of the United States. Because Karen had watched the Presidential Debates, she chose the candidate she was most impressed by. Karen then turned the page, and none of the candidates or measures were familiar. Feeling pressured because of the long line behind her, and thinking that she must answer all the questions for her ballot to be valid, she then voted on measures she knew nothing about.

Situations like Karen's happen quite often. Citizens need to take time to understand their country and know the issues. Therefore, my first pledge to America is to exercise my right to vote. I feel that voting is just one small but important part I can contribute to my country. Every registered voter can vote, but unlike Karen you must have knowledge of whom and what you're voting for.

One of the measures Karen unwittingly helped to vote down was the local school tax base. Had Karen known about the measure she would have never voted as she did, for she herself had children approaching school age and was concerned about school closures and budget cutbacks. The local school tax base measure, incidentially, failed by only three votes.

Karen also voted "no" on other measures that she would have voted yes on had she only taken a few minutes to study her voters' pamphlet. But Karen, like so many other uninformed voters, believed in the old adage: when in doubt, vote it out. So, Karen voted no.

This is where my second pledge comes in. Education. I pledge to further my education so I will have the knowledge to make important decisions that can help my country. Education is the key to knowledge and without it our country wouldn't be what it is today. I pledge to try and understand our government the best I can while keeping up with issues in my community.

Right now, I am in the process of finishing up a major part of my education—a part that I will hopefully remember for the rest of my life. For as the saying goes, "Those who do not remember the past are condemned to repeat it". By taking my education seriously, perhaps I can be instrumental in keeping our country from repeating mistakes of the past.

Part of my responsibility also is to try and help other people, like Karen, to understand voting, the issues, and their consequences.

Therefore my pledge, while simple, has far reaching effects. I pledge to vote and to vote knowledgeably. I pledge to help others understand and to take their responsibilities as citizens seriously. I pledge to uphold this country and to support it, not blindly, not ignorantly, not fanatically, but intelligently, wisely, and proudly. This, America, is my pledge.●

OUR KIDS AND COCAINE

HON. EDWARD F. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. FEIGHAN. Mr. Speaker, in its most recent survey of high school seniors, the National Institute on Drug Abuse found every drug of abuse to be declining in popularity—except cocaine.

The percentage of seniors who reported having used cocaine during the 30 days prior to the survey rose from 4.9 to 5.8, the highest level of current use recorded by the survey so far. While we seem to be slowly winning the war against the abuse of other substances, we are also witnessing the emergence of a deadly new enemy.

Cocaine is not simply a drug of pleasure, a stimulant abused for the

high it produces. It has become a drug of status, a symbol of a glamorous lifestyle. A recent article by Sydney Schanberg of the New York Times eloquently describes the new role cocaine has begun to play in our society and the fascination it increasingly exercises over many of our young people. I commend it to the attention of my colleagues.

The article follows:

OUR KIDS AND COCAINE

(By Sydney H. Schanberg)

For those who think that serious drug problems only happen to other people's children, look around you again. Cocaine is in the schoolyards.

Cocaine, in fact, is all over the country. In both quantity and dollar amounts of sales, it long ago surpassed heroin, as the illegal hard drug of choice. Not only that, but because of the increased tonnage of the powder being smuggled into the country, the price has dropped from $125 a gram in 1981 to as low as $70 now. Which means, obviously, that young people can get their hands on it more easily.

There are probably very few high schools in the city—or, for that matter, in the country—where cocaine is not available in the vicinity and used by the students. That's a conservative estimate and you can include junior high schools in it, too.

In one recent survey, 15 percent of junior high and high school students in the city admitted trying cocaine. Since many users will not make such an admission, even anonymously, the real figure has to be much higher. Nationally, the figures are similar.

The newspaper at one private school in the city took a poll of the high school student body this semester on alcohol and drug abuse. It found that the number who admitted having tried marijuanna had risen in two years (a similar poll was taken in November 1982) from 39 percent to 58 percent. The cocaine figure has gone from 11 percent to 20 percent. The highest figures, not surprisingly, came from the senior class, where 82 percent said they had tried marijuana and 43 percent tried cocaine.

However, for an affirmation of how wide is the parents' information gap, consider the Parent Teachers Association poll taken at the same private school in the same time period. Of the 243 parents who responded, only 8 thought their child used marijuana and no one said their child used cocaine. Drug use is scary—so parents would rather not know, or acknowledge, the truth.

In case any of you are taking comfort in the notion that this disease afflicts only affluent kids at private schools, you can forget it. Yes, it's easier for the offspring of the well-to-do to buy cocaine, but a lot of kids in public schools are buying it too, and some of the poorer kids are resorting to dealing in the drug in order to get the cash for their own usage.

For a long time, the "beautiful people" tried to sell an image of cocaine as a drug that could do you no harm while it made you feel happy, lucid, creative, powerful and optimistic.

Well, the down side of that high is severe depression, paranoia, irritability, achiness, weakness and a drainage of energy. And cocaine is addictive. Some medical researchers think it's physically addictive, but all of them say it's emotionally addictive. One million or more Americans are now dependent on the drug.

Beyond the psychic damage, there is physical damage as well—and not only to the blood vessels of the nose from sniffing the powder.

More and more evidence is showing up that links regular cocaine usage to heart disease. A recent report in The American Journal of Cardiology on three patients who had suffered heart attacks left little doubt about the causal connection.

The report—by Dr. Peter Pasternack and Dr. Stephen Colvin of the New York University Medical Center—said of cocaine: "Larger doses result in an increased heart rate from stimulation of the . . . nervous system. An extremely high dose can produce a direct toxic action on the heart muscle, resulting in cardiac failure and immediate death."

Not one of the patients described in that report—all men in their 30's—had any of the other risk factors for coronary artery disease, such as hypertension, diabetes mellitus, high cholesterol levels or a family history of heart disease. Their only risk factor was cocaine.

It's bad enough that cocaine can produce heart disease in men under 40, but the damage to the nervous system and other parts of the body begins long before that—with the first use of the drug. Some researchers believe, for example, that it has contributed to the epidemic of teen-age suicides.

There is no easy way to turn around the teen-age drug scene—not after we've spent the last couple of decades creating a culture where "consciousness-raising" has included the use of "social" drugs. We told our children that designer jeans were a sign of status; next came designer drugs.

If we want them to know how dangerous these drugs are, we'll first have to stop pretending that the problem doesn't exist—and then we'll have to set a better designer role model for them.●

CONTEMPORANEOUS RECORDKEEPING REQUIREMENTS REPEALED

HON. NICK JOE RAHALL II

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. RAHALL. Mr. Speaker, yesterday, April 2, 1985, the House of Representatives voted overwhelmingly to repeal 3-month-old Federal regulations which caused quite an uproar in the State of West Virginia and throughout the country.

The Deficit Reduction Act of 1984 modified the requirements for records needed to substantiate deductions for business use of certain types of property including automobiles, airplanes, yachts, computers, and property generally used for entertainment, recreation, and amusement purposes.

Prior law permitted taxpayers to substantiate these deductions through records reconstructed after the fact, however, the 1984 act specified that the records needed to substantiate such deductions must be contemporaneous—that is, made at the time of each business use.

In October 1984 the Internal Revenue Service [IRS] issued regulations implementing the provisions which required that detailed logs be kept of business use of these types of property. Due to widespread discontent, the IRS modified its regulations in February 1985 providing less stringent rules for some farmers, as well as sales and service personnel, for vehicles used only for business and kept on business premises, and for certain other cases.

Although a clear improvement in the recordkeeping requirements, the new regulations continued to present employers with a formidable administrative task. The paperwork which was necessary to comply with these regulations was an unreasonable burden which could have led to additional cases of tax fraud.

Because legislation in this area has such wide reach, I would like to enter here the information provided by the House Ways and Means Committee on the repeal of the contemporaneous recordkeeping requirements. I am sure that my colleagues and all interested parties will find this information of tremendous import.

H.R. 1869: REPEAL OF RECORDKEEPING REQUIREMENTS

The Committee on Ways and Means today adopted legislation, by voice vote, repealing the "contemporaneous" recordkeeping requirements of the Deficit Reduction Act of 1984. These provisions required individuals to keep contemporaneous records showing the date, mileage and purpose of each trip. The contemporaneous recordkeeping requirement is repealed for all listed property, such as automobiles, airplanes, yachts and computers. In addition, the regulations issued by the Department of the Treasury to carry out the contemporaneous recordkeeping requirements are legislatively repealed.

The legislation also repeals the special negligence penalty for failure to have contemporaneous records and the provision requiring accountants to obtain written confirmation from the taxpayer that records exist.

The substantiation of automobile business deductions requirement is generally returned to prior law, except for the addition of a requirement that there be some written evidence corroborating taxpayer's own statement and the modification of the types of items subject to those requirements.

Delivery trucks, buses, marked police and fire vehicles, ambulances, hearses, and any vehicle designed to carry cargo with a loaded gross vehicle weight of over 14,000 pounds are excluded from the recordkeeping requirements. In addition, the Secretary of the Treasury shall issue regulations to carry out the provisions of this Act no later than October 1, 1985.

Income tax withholding for vehicle fringe benefits would become optional, allowing the employer either to include the imputed income on an employee's W-2, or withhold on whatever basis the employer finds to be most convenient.

The legislation is made revenue neutral by reducing the amount of investment tax credit and depreciation for luxury automobiles. These reductions are generally effec-

tive on April 2, 1985. In addition, the present law automobile inflation adjustment is deferred until January 1, 1986.

The repeal of the contemporaneous recordkeeping requirement, the no-fault negligence penalty and the preparer's penalty is effective as if those provisions had never been enacted. Thus, prior law recordkeeping requirements apply for 1985. The revised substantiation requirements apply to taxable years beginning after December 31, 1985. The withholding provision is effective January 1, 1985.●

PRESIDENT BELISARIO BETANCUR ADDRESSES COMMITTEE

HON. MICHAEL D. BARNES

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. BARNES. Mr. Speaker, this morning the Committee on Foreign Affairs, in behalf of the entire House, had the honor and privilege of meeting with one of Latin America's leading statesman, His Excellency Belisario Betancur, President of Colombia.

President Betancur is a powerful voice for democracy and peace in the hemisphere. He is one of the leaders of the Contadora group of countries working for a peaceful solution to the problems of Central America. In his own country he has stretched out his hand to guerrilla groups in an effort to bring peace.

In another area of importance to the Congress and the American people, illicit drugs, President Betancur has moved swiftly and effectively to cooperate fully with the United States. As he told us this morning, "we are disposed to pay the price, even of our own lives, which would be a small sacrifice to free humanity from this scourge." Those are the words of a man of commitment and of considerable courage.

Mr. Speaker, President Betancur's remarks to us this morning were eloquent but more importantly they carry an important message to the Congress from a valued friend of the United States. I include his address to the committee in its entirety at this point in the RECORD.

ADDRESS BY BELISARIO BETANCUR, PRESIDENT OF COLOMBIA

THE SUBVERSION OF UNDERDEVELOPMENT IN LATIN AMERICA

I am Belisario Betancur, freely elected, on my fourth attempt, President of a South American country called Colombia, with a territory equal to that of France, the Federal Republic of Germany and Japan combined, and with a population of almost 30 million people, distributed on the Caribbean Coast, the Pacific Coast, the Andean region, and along the Orinoco and Amazon regions. Without exaggeration, I could be taken as an example of a typical Latin American, for I am the second child of a semi-illiterate campesino family of 22 children, born of the same father and mother, 17 of whom died of a grave illness: subdevelopment. Struggling against such conditions, I was the only one in my hamlet who was able to study, sleeping in parks, and doing all kinds of work, from picking coffee beans as a child and working in bars, to writing for newspapers and being a university professor.

1. Our Mutual Sin

North Americans as well as Latin Americans have to confess and be ashamed of the ugly sin of mutual ignorance, which, most of the time, denotes a lack of interest. The guilt is not unilateral, since if you at times are mistaken in identifying us, I must confess that few people in my country would be able to name the fifty states of the Union or point to them on a map; correspondingly, not even our nearest neighbors know that an hour away from Miami, in our beautiful Caribbean archipelago of San Andres and Providencia, surrounded by Panama, Costa Rica, Nicaragua, Honduras, Jamaica and the Cayman Islands, English is spoken and the predominant religion is Protestant.

2. Returning to Forgotten Lessons

In Latin America the desire to satisfy our needs, has arrived tumultuously, upsetting the traditional structure, which gives this desire the inappropriate name of subversion: inappropriate because among ourselves very often the subversive agents are not the masses, nor the leaders, but the situations and needs.

As a result, we must repeat lessons that have been forgotten, or were never really learned, one way or another. It is our aspiration that we be given the benefit of a doubt, in regard to our desire for democracy. We prefer liberty; yes, we prefer democracy. We are not fighting with anyone in North America. It is just that people oppressed by misery, grasp at any straw, seek any port in a storm, above all when they cannot find development in liberty. But I have faith that in Latin America, Central America, and the Caribbean we prefer liberty. We prefer peace to war, because our only war is against underdevelopment. We are privileged survivors among the agony of people who, nevertheless, cherish the values of the American Constitution.

3. The Contadora Group

But, in spite of our problems, we like to look around and try to help, in a democratic and Christian way, neighbors who need us. Hence the philosophy and action of Contadora is founded in the need to give contemporary and worthy metaphysical answers to the subjective and objective agents that work in every subversive process. For this reason, the Act of Contadora has as its aims:

To ensure the defense and promotion of democracy in the Central American Isthmus through means of free and pluralistic elections of governments and representative institutions, eliminating all interferences in internal matters and all forces destabilizing the governments of the region;

To create opportunities for participation to those not in agreement, so that in a state of reconciliation they become part of the solution to their country's national and international problems;

To give dignified answers to subjective or personal subversive factors, so that there are only free people in our homelands making exile and clandestine operations unnecessary; for it is our conviction that in a democracy all ideologies may exist without fear;

To make subversion impossible because the objective factors that motivate it will be eliminated by creating financial support for a social infrastructure such as hospitals, schools, water supplies, food production, sewerage systems, employment, cheap credit, and fair prices for products;

To seek peaceful solutions to conflicts, giving more importance to dialogue and the rejection of all military intervention, since we are convinced that such intervention would unchain a subversive wave throughout Latin America and the Caribbean;

To achieve, as its consequence, the demilitarization of Central America and the departure of foreign military experts.

In this we coincide with what Indiana Representative Lee H. Hamilton has said: "Military action alone will not resolve the underlying problems of the region and will not neutralize the advances of communism in the long run." [1] And with the Congressman from Arkansas, William Alexander, who says that "What is important is not who has the most powerful weapons, but who has the most valid political ideals, and who has the politics that offer the best response to the elemental prayers of Central Americans, more often motivated by Christianism than by Communism." [2]

All of which has as its basis that we recognize realistically, that peace in Central America requires that the countries interested in the region adhere to these principles. Because true peace is one and indissoluble, and war in any region affects it in the whole world. For that reason, Colombia likewise seeks agreement with internal armed groups, and also has encouraged agreement among opposing factions in other countries: we are proud that we are seen as a moral force rather than a military power. Thus we better serve democracy and humanity. Because definitely, we are citizens of the world, citizens of the cosmos as Carl Sagan would say.

I must not ignore the Report of the Bipartite Commission on Central America: we are attentive to its recommendations, even though we are not in complete agreement with the Manichean philosophy of supporting only the social infrastructure of those who behave themselves. This treatment of the crisis reminds us of the obsolete Renaissance debate over which came first, the chicken or the egg. We hope that the recommendations of the Commission will lead to peace.

4. Drugs as a Destructive Force

Permit me to touch on a painful theme. Drugs are a two-way tragedy: they weaken our two countries and destroy values that are the foundation of our moral and physical patrimony.

We are all daily victims of this plague.

Our two governments give no quarter in the struggle against drugs. Colombia has done it, and will continue to do it relentessly, even if with material and logistic limitations. We have reached a point of no return, because we wish to be on the side of human dignity. We wish to look more at history than at our human condition. And we are disposed to pay the price, even of our own lives, which would be a small sacrifice to free humanity from this scourge.

But we do not wish to feel alone in this struggle, in which you, too, take part: For here is the greatest center of drug consumption. The tremendous wealth proceeding from drugs, is deposited here. North American banks launder fantastic sums of money and are barely punished. Many of the great North American drug traffickers live here. According to the Washington Post, "The Colombians are making a mighty effort, one extending far beyond the American preoc-

cupation with law-enforcement (necessary as that is) and one costing them far more in basic social stability than the American drug problem (terrible as it is) costs the United States." And it is true: we continue to fumigate crops, destroy laboratories, seize shipments, jail criminals, and extradite nationals, for whom, notwithstanding, we request dignified treatment, at the same time that we insist on the extradition of North Americans who commit the same transnational crimes.

5. Six Proposals

In sum, I have the honor of submitting to you, Honorable Congressmen, the following proposals:

I. To establish an Alliance for Peace, Development and Democracy between the United States and Latin America;

II. In the case of Central America, support the Act of Contadora and the commitments inherent in it for all the countries that have an interest in the area; support plans to generate employment and construction for the physical and social infrastructure that the region requires, using the Interamerican Development Bank as the technical secretaryship and coordinating entity of the Advisory Group for the region, according to the general plan of the Kissinger Report;

III. Perfect the International Coffee Agreement, as a program of cooperation;

IV. Seek a better adjustment between fiscal politics and monetary politics of the United States and other industrialized countries, which is reflected in lower interest rates for the developing countries; and to facilitate the exports of these countries, eliminating protectionist barriers;

V. Strengthen multilateral credit organizations: without long-term credit directed to well-structured projects, it will not be possible to stimulate the growth of developing countries.

VI. Intensify the battle against drugs declared, by the United Nations, a crime against mankind; eradicate drug-producing crops in Latin America and in the United States, destroy drug processing laboratories, dismantle the international organization that controls drugs, strengthen the educational campaigns against their use, institute more severe punishments for drug users, and provide stimuli for the substitution of other crops;

7. A Driving Force

The opportunity to converse with the representatives of this great democracy, could not pass without a new appeal to the spirit that has endured throughout the history of this nation: the same spirit that once permitted Jefferson to say that "every man, and every group of men on earth, possesses the right to self-government."

These groups of men and all humanity, will be more secure if we give them peace; if we give them dignity, if we give them courage. We wish to give them that courage, that dignity and that peace. We would feel very well accompanied if you—free citizens of this free and great nation—persist in that courage which has illuminated its great men since the time of Washington and that has been the glory of your people.

I wished to come to you to speak frankly, as a friend: no euphemism can you expect, for that reason, from the President of Columbia. Our Liberator, Simon Bolivar, used to say that the good friend of he who governs is he who speaks the truth.

Permit me, in the manner of Niels Bohr, one of the fathers of contemporary physics, to close this unforgettable encounter with his words: "Every phrase that I utter should be considered not as an affirmation, but as a question." [3]

That is what we are: leaders who seek the ways of liberty to bring our people happiness through progress and justice. It says in the Bible: "And the Lord appeared to Solomon in a dream by night saying: Ask what thou wilt that I should give thee. And Solomon said: Give to thy servant an understanding heart, to judge thy people and discern between good and evil. And it was pleasing to the Lord that Solomon has asked such a thing. And the Lord said to Solomon: Because thou hast asked this thing, and hast not asked for thyself long life or riches, nor the lives of thy enemies, but hast asked for thyself wisdom to discern judgment, behold I have done for thee according to thy words, and have given thee a wise and understanding heart, insomuch that there hath been no one like thee before thee, nor shall arise after thee." (3 Kings, 5–13).

With a wise and just heart, we should feel the moral duty to offer responses through democracy and liberty, to the anguished questions of America and the world.

LESSONS FROM VIETNAM

HON. DON RITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. RITTER. Mr. Speaker, a recent article in Stars and Stripes describes the experiences and ideas of Vietnam war veteran Al Santoli. I would like to share these insights with my colleagues as we continue to judge our foreign policy in the shadow of the Vietnam war.

AL SANTOLI'S BURDENS

(By Joan M. Maiman)

In 1983 Al Santoli was helping to evacuate Cambodian refugees who were being shelled in a camp near the border of Thailand. "There were women and children and old people dying around me as the Vietnamese mortars and artillery fell on the defenseless people," recalls Santoli.

He goes on to note that the unit doing the shelling was the 9th Div. of the Vietnamese army, a unit he had fought as a young infantry man serving near the Vietnam Cambodian border with the U.S. 25th Inf. Div. 15 years earlier.

Santoli believes that the incident of the refugee camp shelling brings home a point the American public, especially those who served in Vietnam, must be aware of—the Vietnam War is not over in Southeast Asia.

As did many young Americans during the Vietnam years, Santoli went into the service right out of high school and served in Vietnam from 1968–1969 as an infantry man. He also spent time serving with a joint U.S. Vietnamese force and this enabled him to spend time away from the Americans seeing how the war was affecting the people of Vietnam.

When Santoli returned to the States in 1969, he noted that there was: "A kind of guilt by association." That is says Santoli, "you were stigmatized by having been in Vietnam." Santoli credits the media with much of this stigma because of "their constant negative press accounts of Vietnam."

Also, he believes that the American people were confused about what was really happening in Southeast Asia.

When he got out of the service Santoli returned to school originally intending to get a degree in physical therapy, a skill in which the military had trained him.

However, opting for "the reality of nonfiction writing," Santoli began working on his bestselling book "Everything We Had," an account of the Vietnam War from the viewpoint of ordinary soldiers who had fought there.

"We were kind of sleepwalking in the 1970's, says Santoli of the Vietnam vets. "It was only at the end of that decade that those who were the ordinary people in that war began to be heard."

Noting that the men who had been in the field were not the policy makers of the war and not "those who made careers off of Vietnam," Santoli believes it is important that their voices be heard. Following the success of his book, Santoli became increasingly involved with refugees from Southeast Asia who told him of what had happened in that part of the world since the Americans left in 1975.

From their accounts of life under the Communists, Santoli says he began to realize that: "we were right in being involved in Southeast Asia." He is quick to point out however, that this "does not mean that we always made the right policy decisions in that war."

Also, based on what he saw of the activities of the Viet Cong during the time he spent with the Vietnamese units, Santoli realized that the accounts of life under the repressive Hanoi regime, were in line with what he had observed.

Santoli has made four trips to Southeast Asia in recent years including one he made with members of the non-Communist resistance forces of Cambodia.

"The numbers tell the story of what has happened in Southeast Asia," notes Santoli. In 1984, 25,000 Cambodians and 20,000 Laotians fled the communist occupation of their nations according to Santoli.

Under the "orderly departure" program of the United Nations operating in Vietnam, 2,000 persons per month may obtain exit visas to leave the country. To date, over one million have applied, knowing that they face severe action from the government when they do so.

An estimated 500,000 people have fled Vietnam as boat people and relief workers estimate than an equal number may have perished on the high seas in their quest for freedom.

In 1984 some 2,000 people per month continued to flee as boat people.

"Clearly," notes Santoli, "the government of Vietnam does not have the support of its own people."

Santoli goes on to say that the economy of that nation is a "disaster" as 50% of their GNP goes for defense.

While working on his new book "To Bear Any Burden" due for release this spring, Santoli spoke with individuals who had been former members of the Viet Cong as well as members of the post 1975 Communist government of Vietnam. One of these men stated: "I wish we had understood you

Americans better and had not fallen for the communist leaders lies. You were right." These former communist officials have joined those who have fled Southeast Asia.

Looking back, Santoli believes that the lesson we must learn from Vietnam is that of realizing that we were right in trying to preserve freedom for the people of that region. "There is no reason for Americans, especially veterans, to feel guilty about our involvement. We must realize that we lost the war in Paris and Washington not on the battlefield," he says.

For Al Santoli getting the word out about what has happened in Southeast Asia is a duty and a way of making sure that "history understands that we were right in being there, that those who died did not do so in vain."

The recent focus on the Vietnam veterans, the monuments and recognition for those who served "has a place" Santoli says. But to focus on this constantly, to be fixated in the past denies the present," he concludes.

"The struggle for freedom which we were a part of in Vietnam goes on there and in other parts of the world," he says.

(Al Santoli served in Vietnam with the 25th Infantry Division and received three Purple Hearts and a Bronze Star for valor. His first book, "Everything We Had", was nominated for the American Book Award in 1983, and was selected for the American Library Association All Time Best Books List. He now lives in New York with his wife, Phuong, and regularly contributes to Parade Magazine. His articles have also appeared in Atlantic Monthly, New Republic, and Reader's Digest.)

(His new books "To Bear Any Burden the Vietnam War" and its aftermath in the words of Americans and Southeast Asians will be released by E. P. Dutton in April 1985.)●

IMPOSE A 10-PERCENT SURCHARGE ON JAPANESE GOODS

HON. ELWOOD HILLIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. HILLIS. Mr. Speaker, today I am introducing a bill which I hope will bring about a fundamental change in the current American-Japanese trading relationship.

On two occasions within the last 10 days the Japanese have demonstrated their reluctance to treat the American worker and farmer with equality. Last week the Japanese announced that they were increasing shipments of their cars by 25 percent to the United States. This week the Japanese Government asked for still more time to complete their technical standards for telecommunications equipment which would allow American manufacturers access to the Japanese market.

The objective of this bill is straightforward and unambiguous. A 10-percent surcharge would be imposed on all Japanese goods imported into the United States until the President certified to the Congress that "substantial progress" has been made in the removal of Japanese nontariff trade barriers to the importation of American goods. This would be imposed on an across-the-board basis.

For too long the Japanese have refused to afford the American worker and farmer the same fair treatment which we have given his counterpart. This has manifested itself in a $37 million trade deficit for 1984 alone.

This measure sends a resounding signal to the Japanese that the rules of the game are changing. It is a responsive and responsible measure. I urge my colleagues to cosponsor this bill.

The text of the bill follows:

H.R. 1944

A bill to impose a surcharge on the importation of Japanese products until such time as the President determines that Japan has made significant progress in eliminating its non-tariff barriers to American products

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Fair Trade Act of 1985".

SEC. 2. FINDINGS AND PURPOSE.

(a) FINDINGS.—The Congress finds that—

(1) the current United States trade deficit with Japan of $37,000,000,000 is unacceptable to the American people;

(2) the continued refusal of Japan to make significant reductions in non-tariff trade barriers to United States products will further increase this trade deficit; and

(3) Japanese non-tariff trade barriers pose a significant threat to the stability of the economic, political, and strategic relationship between the United States and Japan.

(b) PURPOSE.—The purpose of this Act is to reduce Japanese non-tariff trade barriers to United States products and services.

SEC. 3. IMPOSITION OF SURCHARGES ON IMPORTS FROM JAPAN.

(a) IMPOSITION OF IMPORT SURCHARGES.—There is imposed on the entry, or withdrawal from warehouse for consumption, in the customs territory of the United States of each article that is the growth, product, or manufacture of Japan an import surcharge in the form of a duty of 10 percent ad valorem.

(b) TREATMENT OF IMPORT SURCHARGES.—Each import surcharge imposed under subsection (a)—

(1) shall be treated as a regular customs duty for purposes of the administration of the customs laws; and

(2) is in addition to any other duty imposed by statute as proclamation on the article.

(c) APPLICATION.—The surcharge imposed under subsection (a) applies with respect to articles entered, or withdrawn from warehouse for consumption, on or after the date of the enactment of this Act.

SEC. 4. MONITORING OF JAPANESE ACTION.

The Secretary of Commerce shall monitor the actions taken by the Japanese Government to eliminate its non-tariff barriers to the products and services of the United States and estimate the probable monetary impact that those actions will have with respect to United States trade with Japan. The Secretary of Commerce shall report the results of the monitoring and estimates made under this section to Congress on a biannual basis.

SEC. 5. TERMINATION OF IMPORT SURCHARGE.

At such time as the President decides, based on the monitoring undertaken under section 4, that the Japanese Government has made significant progress in eliminating its non-tariff barriers to the products and services of the United States, the President shall certify that decision to the Congress and proclaim the termination of the import surcharges provided for in section 3 of this Act.●

HISPANIC CHAMBER DRAFTS BLUEPRINT EXPANDING BUSINESS

HON. BILL RICHARDSON

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. RICHARDSON. Mr. Speaker, last week, the Hispanic Chamber of Commerce held their annual meeting in the Nation's Capital. During this conference the Hispanic chamber presented a Hispanic business agenda. The purpose of the agenda was to underscore the issues facing the Hispanic business sector and to initiate plan for action in the future. The agenda was developed and drafted by the U.S. Hispanic Chamber of Commerce as a blueprint for collection action, and comprises issues and resolutions gathered from a national survey of Hispanic business leaders at agenda sessions across the country.

The No. 1 issue coming out of this business agenda was the need for capital. The lack of financing is the most critical problem facing new Hispanic businesses and established firms wanting to expand.

Last week, Robert Rodriguez received approval from the Securities and Exchange Commission, and the National Association of Securities Dealers, to establish the Nation's first Hispanic-owned investment banking house. Southwestern Capital Markets, Inc., of San Antonio, TX, is a firm with over 20 years of experience. Robert Rodriguez is a leader with the Hispanic business community and we are encouraged by his leadership. Certainly other Hispanics throughout the United States have achieved great heights, and in a business considered by many to be the world's most exclusive club. Robert Rodriguez will make his mark.

I would like to insert the following article from Hispanic Business magazine for the RECORD.

FIRM BIDS TO ENTER BUSINESS WORLD'S MOST EXCLUSIVE CLUB

(By Juan Guedella)

At age 41, Robert G. Rodriguez, of San Antonio, Texas, is finally making history. That is to say, the dream Rodriguez has nurtured since age 14—and perhaps a few years before that—is finally taking shape.

Within the next 60 days, Rodriguez expects to have the approval of the Securities

and Exchange Commission and the National Association of Securities Dealers which will make his small San Antonio firm, Southwestern Capital Markets, Inc., (SCMI), the first Hispanic-owned investment banking house in the United States.

Rodriguez is aware that he is breaking into a club, entry to which is not only jealously guarded but to which few, if any, minority firms have ever been admitted—certainly none that were Hispanic-owned.

Participation in underwritings, the bread and butter of the business, is by invitation only; and the lead underwriters—those large investment banking houses whose names appear in the largest type in the top line of participants, or above it, in the "tombstone" ads which appear on the financial pages of the country's largest newspapers—can literally starve a small, young firm to death.

NO NEOPHYTE

Still, Rodriguez is no neophyte impudently banging on the door and loudly demanding admission to that exclusive club which is the investment banking business in the U.S. Like most things he has done in his life, Rodriguez put a lot of thought—and a great deal of personal and professional preparation—into his move to establish his own investment banking house.

Texas-born Rodriguez points out that his native state is today probably the largest generator of tax-exempt issues in the entire country. He puts the current figure at around $7 billion a year; and Rodriguez, who formed Southwestern Capital Markets, Inc., in 1983, has been acting a financial advisor to a handful of municipal and public entities whose issues have been part of that huge and profitable financial pie.

Then there is the rapidly expanding world of Hispanic-owned businesses to which Rodriguez will surely be drawn by bilingual and bicultural affinities. He says that he has seen considerable evidence of the reticence of many Hispanic entrepreneurs to go into the capital market in the U.S. for urgently needed funds for expansion.

"Most of them do not understand the market's complexities. They see it as a sort of jungle; a place where they are alone, and without friends; and they fear it," he says.

He hopes that his own educational and low-key persuasive approach will encourage more Hispanic businessmen to seek an understanding of the market and how it can help meet their capital needs.

But it is a mark of the sophistication which Rodriguez has acquired in his 20 or so years in financial education and practice that his view of Southwestern Capital Markets, Inc., is not an exclusively Hispanic one.

"We want to serve clients across the business spectrum," he says. "I want the image of SCMI in the marketplace to be that of an investment banker whose principal just happens to be a Hispanic."

Rodriguez's corporation currently has three partners: Rodriguez, Raul Villasenor and Timothy Arms. As the firm grows, and its capital requirements increase, other investors may be invited in. Rodriguez expects the firm's initial capitalization to be around the $1 million mark.

Villasenor, who holds a degree in computer science, was for some years a senior computer analyst with a leading San Antonio utility company. He will head the firm's "back office" operations—keeping track of clients' accounts, reporting, settlements, etc.

Arms is a CPA, a former executive of Ernst & Whinney, one of the accounting world's "Big Eight." His immediate area of responsibility will be financial planning, and, eventually, portfolio management.

ADVISORY ASSIGNMENTS

While awaiting SEC and NASD approval to make its formal debut as the first Hispanic-owned investment banking house in the U.S., SCMI has been acting as financial adviser to a number of municipalities and public bodies floating bond issues. It advised on the Alamo Community College District's $20 million issue to finance a new campus; and on Bexar County's (and its Housing Finance Corporation's) four issues totalling $150 million. More recently, SCMI was retained by the San Antonio School District to advise on a capital improvement issue of some $25 million; and Maverick County, Texas, asked SCMI to advise on an $8 million issue to finance construction of a new jail.

Born in the military hospital of Fort Bliss, Texas, the son of a Signal Corps soldier who was to die in World War II, Rodriguez set his sights on a career in finance early in his boyhood. His mother, who supported him through high school by working as a sales clerk at J.C. Penney and Co., encouraged his early financial aspirations. His first job out of high school was that of a Collections Clerk for Montgomery Ward, "telephoning people at home in the evenings to try to persuade them to pay their overdue accounts. It was not a pleasant job, and it was not one that I liked," he says.

From high school, in Eagle Pass, Texas, Rodriguez entered the University of Houston where he majored in finance and graduated with a Master's Degree in Business Administration. From Houston, he went on to Northwestern University, in Chicago, for further studies in mortgage banking and real estate financing. His credentials from Northwestern show him to be a Certified Mortgage Banker.

On his return to Texas, Rodriguez entered the public sector, serving as executive director of the Houston Economic Center where he worked with the Small Business Administration, and the capital markets at large to gain business loans for small entrepreneurs. He was later appointed to the board of the Houston Housing Authority, and he also served on the city's planning commission.

In 1979, Rodriguez joined the Houston office of Boettcher and Company, a highly respected regional investment banking house with a head office in Denver, Colorado. At Boettcher, Rodriguez was soon invited to become a partner, and in 1981 he was chosen to expand the firm's Texas operations to the city of San Antonio. He moved his family to San Antonio, and opened Boettcher and Company's first office in that city. He left Boettcher and Company in 1983 to establish SCMI.

With his wife, Rose Mary, a teacher in bilingual education in the San Antonio School District; his twin daughters, aged 14; and his son, aged seven years; Rodriguez now counts San Antonio home—a home upon which he would like to confer the honor of being the first city in the United States to accommodate the first Hispanic-owned investment banking house to be established in the United States.●

LETTER FROM OPTOMETRISTS FOR SOCIAL RESPONSIBILITY

HON. JOSEPH P. ADDABBO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. ADDABBO. Mr. Speaker, I would like to bring to the attention of my colleagues, a letter written by the Optometrists for Social Responsibility.

Their recognition of the senselessness and danger of the arms race is something we all need to take note of. Their message is one that I hope we will all heed so that we may begin using our resources for the betterment of mankind rather than its annihilation.

I submit the letter of the Optometrists for Social Responsibility for the RECORD:

OPTOMETRISTS FOR
SOCIAL RESPONSIBILITY,
Burlington, NJ, March 27, 1985.

DEAR MEMBER OF CONGRESS: In 1959, former President/General Eisenhower said, "I like to believe that people in the long run are going to do more to promote peace than are governments. Indeed, I think that people want peace so much that one of these days governments had better get out of their way and let them have it."

In 1953 he had stated, "Every gun that is made, every warship launched, every rocket fired, signifies in a final sense a theft from those who hunger and are not fed—those who are cold and not clothed. This world in arms is not spending money alone—it is spending the sweat of its laborers, the genius of its scientists, the hopes of its children."

Eisenhower's views in one way or another have been repeated not only by the majority of the American people and millions outside of our own country, but by experts in the field of weaponry, health, education, the arts, science, labor, religion—in every field of endeavor.

All recognize the delusion that, "more and bigger is safer." The Administration is out of step. Your role is historic. We hope that you will be your own man and vote against the MX missile and the "Star War" adventure. Both are a step backward from the forward move toward security from nuclear war.

The MX missile has been shown to be inefficient and unworkable as a defensive weapon. And if the idea of Star Wars is to keep us safe from a nuclear weapons attack, it is cheaper and safer to negotiate nuclear weapons out of existence.

We are at a technological point where we can use the billions either for food, education, health, a clean environment, a virtual Heavenly earth, or prepare for blowing up the world even as we finance it, by demeaning our people and their quality of life.

The decision of the issue is in your hands—history looks to you! We urge, hope, and expect to hear that you will vote for a peaceful, healthy future—against the MX missile and the "Star Wars" adventure.

Most sincerely,

DR. GEORGE L. BROWN, *Director.*●

CONTRACTING CONDUCTED OVER GOLDEN SAFETY NET

HON. GERRY SIKORSKI
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. SIKORSKI. Mr. Speaker, on Sunday, the Washington Post published the first in a series of indepth articles on defense contracting. This series underscores the cost overruns, improprieties, and abuses we've been uncovering in the Oversight and Investigations Subcommittee on Energy and Commerce.

CONTRACTING CONDUCTED OVER GOLDEN SAFETY NET

(By Rick Atkinson and Fred Hiatt)

When a small defense contractor in Florida was going broke two years ago, the Defense Department did what has been done in the name of national security more than 6,000 times since 1958: It bailed out the company.

The $1.8 million grant to the Wayne H. Coloney Co. of Tallahassee, a maker of ammunition cases for the A10 warplane, was pocket change by Pentagon standards.

But it provided a perfect symbol of the golden safety net the United States has woven beneath the nation's most controversial industry—the defense business.

The bailout was bestowed under an act of Congress that has been used to pump out hundreds of millions of dollars over the last 27 years, while remaining nearly hidden from public view: the Extraordinary Contractual Relief Act.

The relief to Coloney, moreover, was not from an act of God or natural disaster or fickle shift of governmental policy.

The Air Force rescued Coloney despite concluding that the company had deliberately underbid on arms contracts.

What Coloney illuminates is how throughly Congress and the Pentagon insulate the defense industry from the normal rough-and-tumble risks of doing business.

From cradle to grave in the life of a weapon the nation's defense giants are coddled in ways only dreamed about by most commercial companies, ensuring that few defense contractors fail and adding a hidden surcharge to every military budget.

The Pentagon soothes its contractors through the birth pangs of a new weapon by picking up the tab for even unsolicited and unsuccessful proposals.

It consoles the bereaved arms maker at the death of a weapon with hefty "termination" fees.

And along the way, the government again and again trusts the defense industry to tell it what to buy and how much to pay.

Again and again, the government pays for contractor mistakes.

Again and again government underwrites industry's costs with what amount to interest free loans.

Somebody said that the Pentagon runs the world's second-largest planned economy after the Kremlin," said defense analyst Wolfgang Demisch. "I think that's a little harsh, but there's something to it."

This article is the first in an occasional series that will look at this and other aspects of the peculiar institution that President Dwight D. Eisenhower darkly dubbed the military-industrial complex" and that President Reagan prefers to call "the arsenal of democracy."

Among the features of that American arsenal:

At the midpoint of Reagan's eight-year, $2.3 trillion defense buildup, the Pentagon is spending an average $28 million every hour—24 hours a day, seven days a week.

In the time it takes to read this paragraph aloud, the United States will spend $160,000 for defense.

The defense industry is racking up record profits, with many multinational corporations finding their military business two or three times more rewarding than commercial sales.

The top 13 contractors last year had combined sales, military and commercial, of more than $122 billion.

Few of the country's defense giants have paid any federal income taxes in the past three years.

General Dynamics Corp., the nation's largest defense contractor, has paid no federal taxes since 1972. The Grumman Corp. is paying federal taxes this year for the first time since 1976.

Because profits paradoxically increase as costs rise, in many cases there is no incentive for contractors to save taxpayers' money.

As Sen. William Proxmire (D-Wis.) put it. "The higher the cost, the higher the profit. It's all perfectly legal in the topsy-turvy world of defense contracting."

The industry has more than its share of patriots who have performed technological wonders in advancing the state of weaponry for American soldiers and sailors.

But persistent revelations of exorbitantly priced coffee pots, shoddy missiles and taxpayer subsidies for executives' high-rolling life styles also provoke questions about whether the industry has exploited—and thus undermined—the national consensus to rearm America.

The arsenal of democracy includes 20,000 prime contractors and 150,000 subcontractors and vendors. They labor under 154 accounting systems used by the Pentagon, as well as purchasing rules that fill more than 7,500 pages—five times the length of Leo Tolstoy's "War and Peace."

Some inkling of the torrent of paper involved can be gleaned from Lockheed Corp.'s recently submitted proposal to build a new military transport jet: One copy of the plan weighed *three tons* and had to be delivered to the Air Force by cargo plane.

This year, the Defense Department will issue 15 million contracts for purchases of everything from socks to submarines, all supervised by 54,000 officials who do the Pentagon's shopping.

"Without question, it's the biggest thing that afflicts us . . . the vastness of this bureaucracy," said Navy Secretary John F. Lehman Jr., one of the most aggressive Pentagon advocates for competition and curbs on costs.

"Nobody really realizes how big this building is and how complex it has become," Lehman said. "It's really like an ant on an elephant's knee trying to describe it.

"The problem just gets worse and worse and worse every year. Unfortunately, what it creates is the ideal environment for monopoly relationships."

Or, as former Deputy Defense Secretary David Packard put it in 1970, "Frankly, gentleman, in defense procurement we have a real mess on our hands."

THE ARMS BAZAAR

Before World War II, there was no defense industry as we know it today.

Weapons were simple enough that, with few exceptions, government arsenals could mass-produce the requisite rifles, cannons and other tools of battle.

When warfare took to the skies, however, government arms makers were incapable of building the increasingly sophisticated warplanes, and the industry was born.

By 1958, only 10 percent of the nation's munitions were made in U.S. arsenals.

Since then, captains of the defense industry have proclaimed themselves paragons of free enterprise.

But the arms bazaar remains a business like no other, part regulated utility, part national asset, part reaper of subsidized profit.

Under a broad and bipartisan policy, the United States has chosen to nurture an elaborate defense industrial base, ready to respond should the nation again be plunged into global war.

It is that fundamental manifesto that causes the Pentagon to go to extraordinary lengths to nurture the defense industry in peacetime.

"Either overtly or subconsciously, we don't let them go out of business because of concern about the defense industrial base," Maj. Gen. Bernard L. Weiss, chief of Air Force contracting policy, said in an interview. "We can drive the industry to survival of the fittest, but then we'll have even more sole-source contracts and no industrial base.

"Who should say whether that industrial base is worth the cost?" Weiss added. "I think it is."

The Reagan administration took office determined to stop what it viewed as the erosion of the military's industrial underpinnings.

Administration policy, best articulated by former deputy defense Secretary Frank C. Carlucci, called for higher industry profits, lower risk and closer working ties between contractors and the Pentagon.

This attitude of partnership has leached much of the risk from the defense business, turning it into what author and Pentagon critic Gordon Adams calls "a funny form of capitalism."

In fact, industry and government often are so snugly intertwined that defense contractors help define the enemy threat, essentially creating their own market, and then design, build and test the weapons to meet that threat.

The Defense Nuclear Agency, for example, is responsible for doing much of the Pentagon's thinking about nuclear war.

When DNA wanted to think about "hardening" the electronics in U.S. weapons against the electromagnetic effects of an atomic explosion, it appointed a technical advisory group to study the issue.

Eleven of the 15 advisers, including the chairman and executive secretary, were defense contractors, according to a Defense inspector general's audit last fall.

Almost 90 percent of the millions of dollars subsequently spent on the program went to the same contractors who had recommended themselves for the jobs.

In fact, the Defense Department frequently relies on contractors for everything from pricing data to the inspection of the contractors' own construction projects.

Federal law, for example, gives the government the right to review contractors' financial records to verify cost and pricing information.

But Woodrow Murphy, the Pentagon's chief watchdog at Texas Instruments for three years, was so effectively barred from doing his job that "today I don't even know

where the accounting department is" at the company, according to the retired auditor's testimony to a Senate subcommittee last year.

A defense inspector general's audit team last year looked at 216 Pentagon contracts and found evidence of fraud in 10 percent of them, including 11 in which the contractor had refused to let the government look at the pertinent records.

And when the contractor is caught overcharging the Pentagon, cases may drag on for years. During an appeals process that can be glacial, the contractor gets free use of the taxpayers' money. And there are no penalties for the overcharge unless fraud is proved.

In April 1980, for example, Pentagon auditors found that General Dynamics had made a $2 million error in the company's favor on a contract for F16 warplanes. The contractor quickly agreed that it had made a mistake—but managed to hold onto the money, interest free, for two years.

"FISH IN A BARREL"

Lee Iacocca, chairman of Chrysler Corp., likes to ask his suppliers who also peddle to the military whether there's easy money in defense contracting.

"They start chuckling and they look around to see if the office is bugged," Iacocca said in an interview. "And they say, 'It's like shooting fish in a barrel.' "

Defense executives believe they should be compensated for the trials of serving a single customer—the U.S. government—which can be fickle, meddlesome and capricious.

The government has been so sympathetic to that argument that it has assumed many of the companies' ordinary business costs.

In the commercial world, for instance, companies must dip into profits to pay for product development and sales. The Pentagon, on the other hand, last year gave its 100 largest contractors $3 billion—over and above profits—for independent research and the cost of submitting proposals for new weapons.

In the commercial world, companies usually compete for business, with the losers coming away empty-handed. The Pentagon gives most of its dollars to monopoly or specially chosen producers, despite greater emphasis on competition under Defense Secretary Caspar W. Weinberger.

Even when the Pentagon orchestrates competition, the loser often wins. Two companies dueling for the Army's Hellfire missile business knew before the fight began that each would end up with at least 30 percent of the pot.

"You turn on two of the bull mooses," said Pentagon whistle blower A. Ernest Fitzgerald, "and you pay 'em both."

In the commercial world, a company snaring new business has to gear up with new tools and equipment. In the defense world, the Pentagon often antes up millions of dollars in special tooling that the contractor balks at buying.

In fact, contractors are given rent-free use of more than $10 billion in factories and equipment bought by the government. M1 tanks, F16 fighters, C5 cargo planes and Stealth bombers all are being built by private companies in publicly owned factories.

Businesses in the commercial world may have to borrow money to buy supplies and pay salaries. But the Reagan administration, as one of its first initiatives, agreed to pay large defense contractors up to 100 percent of their costs every month, compared to 80 percent elsewhere in government.

Consequently, Lockheed was able to boast in its 1984 annual report that it has amassed nearly $200 million in progress payments above actual costs.

In the commercial world, companies often have to pay expensive insurance premiums. They also may find themselves losing money to inflation. The Pentagon frequently insures its contractors—even against their own negligence—while picking up the tab for inflation, which in the defense business is assumed to run 30 percent higher than in the economy as a whole.

Finally, in the rare event that the Pentagon decides to kill a weapons program earlier than expected, generous "termination clauses" can cushion the contractor against any financial shock

Thus, when the Army pulled out of a joint plan with the Marine Corps to buy light armored vehicles from General Motors of Canada, the Marines suddenly found themselves buying 758 vehicles instead of 586, paying $20,000 more for each and, for good measure, tossing in a $31 million surcharge, according to congressional testimony.

Defenders of the system contend that if eternal vigilance is the price of freedom, then this "funny form of capitalism" is the price of eternal vigilance. Critics responded that the system has bred precisely the military-industrial complex that Eisenhower fretted about a quarter century ago.

CONTRACT NOURISHMENT

It was known simply as Change Order No. 173, a bureaucratic sleight-of-hand that demonstrated just how understanding a customer the Pentagon can be.

The Air Force had agreed to pay Hughes Aircraft Co. $230,000 apiece for 400 Maverick air-to-ground missiles.

But when Hughes ran into trouble developing the new weapon and threatened to bust its budget, the Air Force cut a new deal for only 290 missiles—at about $500,000 apiece.

That modification, No. 173, was just one small example of a process known in the Pentagon as "contract nourishment."

It is a process that nurtured the Maverick's supposedly "fixed-price" contract from $90 million to $360 million in three years, thanks to almost 300 such change orders.

Over the decades, some large defense contractors have lost money. Others have been swallowed in mergers. But for the most part, the Defense Department has cushioned contractors from the impact of their slips and stumbles, at times even rewarding them for their own mistakes.

One emblem of Pentagon indulgence is the Extraordinary Contractual Relief Act, Public Law 85-804, which has allowed the government to bestow $1.4 billion on troubled contractors since 1958, including the hapless Coloney Co. of Tallahassee.

This law, enacted to protect companies deemed "essential to the national defense," is dormant except in times of national emergency. But because President Harry S. Truman's declaration of emergency at the outbreak of the Korean war in 1950 never has been repealed, the law remains quite alive.

In 1982, for example, Gichner Mobile Systems of Old Forge, Pa., underbid two other firms to win a $1.3 million contract to build "transportable shelters" for the Army.

Gichner then disclosed that it had bid too low after relying on an obsolete tax schedule. The mistake was "so obvious," the company argued, that the Army contracting officer should have saved the company from its own arithmetic. The Army agreed and handed out $62,000.

Defenders of PL 85-804, such as Wayne H. Coloney, vice president of the Florida firm, contend that the government would have lost more money had his company been shut down.

"Obviously I'm biased, but it was a hell of a deal for the taxpayers," he said.

One of the law's most enthusiastic cheerleaders is an arcane legal journal called the Extraordinary Contractual Relief Reporter.

"The fact that a mismanaged company may occasionally benefit from its relief," the journal once said, "is insignificant when compared to the statue's ability to ensure that the government promptly obtains products and services essential to the national defense.

And in truth, most large contractors do not need PL 85-804. Instead, they rely on more informal methods of contract nourishment when things go sour.

As a result, some critics allege, companies that perform poorly earn as much or more than companies building first-rate weapons.

"It's for a very simple reason," said Michael R. Burns, legislative liasion for Business Executives for National Security. "Industry gets paid to fix its mistakes. It's like consumers paying Ford for fixing exploding gas tanks in their Pintos."

Thus, the Air Force paid Lockheed Corp. $1.5 billion to put new wings on its giant C5 airplanes after studies showed that the old wings—which Lockheed had built—were in danger of cracking. Lockheed blamed the government's original specifications for shortcomings in the C5 wings, a charge repeated by most contractors when problems emerge.

The government routinely pays for fixes on a smaller scale, too:

Pratt & Whitney built a jet fighter engine that didn't work as well as the Air Force had hoped. As a result, the Air Force paid Pratt & Whitney nearly half a billion dollars in a multiyear Component Improvement Program—aimed at "improving" the engine up to its original durability goal.

In 77 cases of shoddy construction work reviewed by Pentagon auditors in 1982, only once was the contractor forced to pay for his mistakes.

General Dynamics built a rapid-firing shipboard gun for the Navy that worked beautifully, when it worked. Unfortunately, it also leaked—no small setback for a shipboard weapon—and frequently broke down. It cost $5 million to make the guns watertight and $9 million to make them more reliable. Taxpayers paid for both.

A Navy spokesman explained, "It's part of the evolutionary improvement process common to most weapons and weapon systems."

When Deputy Defense Secretary Carlucci took office in 1981, he endorsed the relatively radical idea that past performance should be considered in awarding future jobs as a way to stop rewarding contractors who fail.

Carlucci, who has worked for Sears World Trade Inc. since leaving the Pentagon two years ago, admits that the idea never left the ground.

"There's a lot of feeling in [the Defense Department] that that would turn into a blacklist, and there's something pejorative about that," he mused. "I still think there's something valuable in an institutional memory."

Even Pentagon attempts to hold contractors responsible by offering incentives sometimes beget additional risk-free profit.

A construction contract for a naval base on the tiny Indian Ocean island of Diego

Garcia, for example, allowed the contractor half of the maximum bonus even for work *rejected* by the Navy, the General Accounting Office found.

Despite a long litany of problems, the contractor pocketed $4.9 million out of a possible $6.8 million.

Pentagon officials argued that the $1.9 million the contractor didn't collect demonstrated "clear, positive actions taken to emphasize to the contractor the need for an efficient, cost-effective construction process."

Similarly, the Army established a $6 million award fee on a contract to engineer the Pershing II missile. By simply devising what was considered a good plan, the contractor qualified for three-quarters of the fee, while only one-quarter was tied to good performance.

"Breaking into the defense business is one of the most frustrating, time-consuming and difficult operations," Navy Secretary Lehman said. "But once you're in, you stay in."●

LET'S HEAR IT FOR SMALL COLLEGES

HON. E. THOMAS COLEMAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. COLEMAN of Missouri. Mr. Speaker, on March 18, 1985, the Washington Post included an editorial by Jonathan Yardley entitled "The Lesson To Be Found in Small Colleges." The editorial highlights some interesting points at a time when many small colleges find themselves at a paradox: A tradition of pride in producing an extraordinary education experience, tempered by rising educational costs that threaten their very existence.

Danger signals point to the strong possibility that many small colleges will be forced to close their doors over the next few years because they are not cost effective. I believe this is a potential disaster for American higher education.

I am the graduate of William Jewell College, a small, liberal art college in Liberty, MO. William Jewell College and other small colleges are important components in our strong, diverse system of higher education. I believe we must work to preserve and strengthen our small colleges.

I hope that my colleagues will take the opportunity to read this interesting viewpoint.

[From the Washington Post, Mar. 18, 1985]

THE LESSON TO BE FOUND IN SMALL COLLEGES

(By Jonathan Yardley)

In all the hullabaloo about higher education that of late has stirred up so much emotion, one detail seems to have gone largely unremarked. The principal subjects of discussion have been the country's large colleges and universities, especially those of the publicly supported variety that have expanded so extravagantly in the years since World War II. There has been, by contrast, relatively little discussion of the country's small colleges, yet they have a good deal to say to us about the matters at hand.

This thought crossed my mind during the past couple of weeks as I spent some time, though hardly as much as I would have liked, at Albion College in Michigan and Mount St. Mary's College in Maryland. Both are private schools with enrollments of about 1,700; both were founded under church affiliation but no longer impose rigid religious requirements on their students; both charge tuition and fees that, though reasonable by comparison with the Ivy League, would be forbidding to many prospective students; both are located in attractive but rather rural and isolated settings.

Both, in other words, are atypical of the colleges and universities in which most American students find themselves, and no attempt will be made here to suggest that they provide, for most students, a realistic alternative to larger and less expensive institutions. But to the visitor who has been immersed in the problems of big-time higher education, they provide a refreshing and instructive contrast. Where the large schools seem more and more preoccupied with perpetuating the professoriate and its various support systems, the small ones actually seem to be concentrating on giving their students something that passes for an education.

In some, of not all, respects, the best thing about small colleges is that they are small. Low enrollments and tight budgets discourage, if not prohibit, the expansion of departments beyond the number of professors needed to teach the required and elective courses. What this means is that professors are expected to devote themselves to the classroom and its inhabitants rather than to the careerist projects through which reputations too often are made in the larger, ostensibly more prestigious institutions. It is neither simplification nor sentimentalization to say that at the small colleges more often than not the students come first.

Not only that, but they are offered an education that is stripped of much of the frivolity so widespread elsewhere. No doubt the small colleges have managed to come up with their full share of courses catering to either the laziness of students or the vanity of professors, but there simply is not room in them for the unchecked proliferation of academic busywork. Thus the English departments actually teach literature, and attempt to imbue in their students some appreciation for and understanding of it; at many of the big schools, by contrast, the English departments are turning into assembly lines for the manufacture of academic "critics" for few of whom, cruelly enough, there will be teaching jobs in academia—the only jobs for which they have been trained—since the professors who taught them have tenured the market all to themselves.

In the liberal arts, at least, the small colleges seem considerably more connected to the world's realities than are the large ones; there is little room in them for departments or programs that do not suit the actual needs of their students. At Mount St. Mary's, for example, there is a writing program, but it is hardly what anyone having an acquaintance with writing programs elsewhere would be led to expect. Yes, it is possible to write short stories and poetry at Mount St. Mary's and have them read by a member of the staff, but "creative writing" is not the program's preoccupation. Rather, it exists to train students in the clear expository writing that will almost certainly be expected of them in whatever careers they choose to pursue. No major in writing is offered; writing is viewed, as it should be, as a necessary corollary to a major in the arts and sciences, rather than an academic end in and of itself.

The small colleges simply aren't in the business of producing "critics" for whom there are no academic feather beds or "writers" who will go forever unpublished. If nothing else, economic realities force them to design—and constantly to redesign—curricula to which their students will respond positively. In small colleges, if student demand for a specific course or even a specific major withers away, then the course or major will be discontinued. This causes unpleasant disruptions, needless to say, and it has caused some legal action over the right of colleges to dismiss tenured professors, but it keeps the colleges on their toes.

This coming to terms with reality does have its pitfalls, chief among which is the temptation to offer trendy courses of study while abandoning traditional ones. Thus some of the small colleges have rushed eagerly into instruction in the use of computers and other technological marvels, perceiving this as a way to attract students. Such policies may prove, in the long run, penny-wise and pound-foolish. But there is little evidence that many of these schools are abandoning the core arts-and-sciences curriculum in order to suit the passing fancy; they seem committed to offering strong education, both basic and rounded, as their primary attraction.

They are not perfect, of course, and the admission had best be made: The principal trouble with small colleges is that, well, they are small. In the specific instances of Albion and Mount St. Mary's, campus life may well be full and free; but it is often the case that small colleges turn so obsessively inward that the atmosphere becomes positively incestuous. A small college is a very small world, and the tendency for it to become utterly preoccupied with itself is exceedingly difficult to resist. The results can be most disagreeable: bitter rivalries among the faculty that invariably descend from the professional to the personal, divisions within the student body among cliques and coteries of various persuasions, fierce resentment against administrators who must make the hard decisions the aforementioned economic realities dictate. Small may be beautiful, but it can be ugly as well.

That, though, is not the point; responsible people at small colleges are fully aware of their potential shortcomings, which is why, among other things, many teachers and administrators live a healthy distance from the campuses where they work. The point, rather, is that in some important respects the small colleges seem more connected with the real business of education than the larger ones, too many of which have gotten too big for their own—not to mention their students'—good. As the country tries to figure out what has gone wrong with higher education and how it can be fixed, the example these colleges set deserves closer attention than it has thus far gotten.●

SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate

committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of the meetings, when scheduled, and any cancellations or changes in the meetings as they occur.

As an additional procedure along with the computerization of this information, the Office of the Senate Daily Digest will prepare this information for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD on Monday and Wednesday of each week.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Thursday, April 4, 1985, may be found in the Daily Digest of today's RECORD.

MEETINGS SCHEDULED

APRIL 5

9:30 a.m.
Joint Economic
To hold hearings on the employment/unemployment situation for March.

HOUSE OF REPRESENTATIVES—*Thursday, April 4, 1985*

The House met at 11 a.m.

The Chaplain, Rev. James David Ford, D.D., offered the following prayer:

Help us, O God, to turn our good words into good deeds, to translate our speaking for others into works of compassion for others. May our faith in You, O God, come to light and be seen through acts of kindness, mercy, justice, and love. This we pray. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Pursuant to clause 1, rule I, the Journal stands approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed without amendment bills of the House of the following titles:

H.R. 730. An act to declare that the United States holds in trust for the Cocopah Indian Tribe of Arizona certain land in Yuma County, AZ;

H.R. 1847. An act to amend title 28, United States Code, with respect to the U.S. Sentencing Commission; and

H.R. 1866. An act to phase out the Federal supplemental compensation program.

The message also announced that the Senate had passed with amendments in which the concurrence of the House is requested, a bill, of the House of the following title:

H.R. 1869. An act to repeal the contemporaneous recordkeeping requirements added by the Tax Reform Act of 1984, and for other purposes.

The message also announced that the Senate insists upon its amendments to the bill (H.R. 1869) entitled "An act to repeal the contemporaneous recordkeeping requirements added by the Tax Reform Act of 1984, and for other purposes," requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. PACKWOOD, Mr. DOLE, Mr. ROTH, Mr. DANFORTH, Mr. LONG, Mr. BENTSEN, and Mr. MATSUNAGA to be the conferees on the part of the Senate.

The message also announced that the Senate had passed a bill, joint resolution, and concurrent resolution of the following titles, in which the concurrence of the House is requested:

S. 883. An act to extend the Export Administration Act of 1979;

S.J. Res. 96. Joint resolution condemning the violence of apartheid in South Africa and requesting an investigation by the Secretary of State; and

S. Con. Res. 38. Concurrent resolution providing for an adjournment of the Senate and the House of Representatives from Wednesday, April 3, or Thursday, April 4, 1985, until Monday, April 15, 1985.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, DC, *April 4, 1985.*

Hon. THOMAS P. O'NEILL, Jr.,
The Speaker, House of Representatives, Washington, DC.

DEAR MR. SPEAKER: I have the honor to transmit herewith a copy of the Certificate of Election received from the Honorable James H. Brown, Secretary of State, State of Louisiana, and the Honorable Edwin W. Edwards, Governor of Louisiana, indicating that the Honorable Cathy (Mrs. Gillis) Long was elected to the Office of Representative in Congress from the Eighth District of Louisiana in the Special Election held on March 30, 1985.

With kind regards, I am,

Sincerely,

BENJAMIN J. GUTHRIE,
Clerk, House of Representatives.

STATE OF LOUISIANA—ELECTION PROCLAMATION

Be it remembered, That on this day, we the undersigned, Edwin W. Edwards, Governor of Louisiana, and James H. "Jim" Brown, Secretary of State of Louisiana, by virtue of and in obedience to Sections 513 and 1277 of Title 18 of the Louisiana Revised Statues of 1950, as amended, did proceed to ascertain the number of votes cast for each candidate for Member of the United States House of Representatives from the Eighth Congressional District of the State of Louisiana, Ninety-Ninth Congress of the United States of America, at the election held March 30, 1985, agreeably to the Constitution and laws of this State, which returns are on file and of record in the office of the Secretary of State of Louisiana and which we do hereby officially announce and declare to be as follows, to-wit:

CONGRESSIONAL VOTE, MARCH 30, 1985, EIGHTH CONGRESSIONAL DISTRICT

Daniel E. Becnel, Jr. (Democrat), 3,305.
Clyde C. Holloway (Republican), 18,013.
Mrs. Gillis "Cathy" Long (Democrat), 61,791.
Frank James McTopy (Democrat), 503.
John W. "Jock" Scott (Democrat), 27,138.

And by virtue of and in obedience to Section 511 of Title 18 of the Louisiana Revised Statutes of 1950, as amended, which provides that a candidate who receives a majority of the votes cast for an office in a primary election is elected and Section 551 of Title 18 of the Louisiana Revised Statutes of 1950, as amended, which provides that the names of candidates who were elected in the primary shall not be printed on the general election ballot, we do hereby officially announce and declare Mrs. Gillis "Cathy" Long to have been duly and legally elected Member of the United States House of Representatives from the Eighth Congressional District of the State of Louisiana, Ninety-Ninth Congress of the United States of America, for the unexpired term.

SWEARING IN OF THE HONORABLE CATHY LONG AS A MEMBER OF THE HOUSE

The SPEAKER. Will the gentleman from Louisiana, Mr. JOHN BREAUX, dean of the Louisiana delegation, kindly escort their newly elected Member to the well of the House?

The Chair recognizes the gentleman from Louisiana [Mr. BREAUX], the dean of the delegation.

THE HONORABLE CATHY LONG OF LOUISIANA

(Mr. BREAUX asked and was given permission to address the House for 1 minute.)

Mr. BREAUX. Mr. Speaker, it is always indeed a distinct pleasure and an honor when a Member of a delegation has the high honor and privilege of introducing a new Member to join our delegation.

It is always particularly a special honor when that new Member is not only a new colleague, but happens to be a very dear friend of everybody in the delegation; I would dare say most Members of the entire House.

CATHY LONG had an election a couple of weeks ago, and had four opponents who dared run against her, and she made short notice of all four of them in winning a first primary victory. I would say the way things are going in our delegation, she may well be the dean of our delegation before too long.

I would like to, of course, say that she is replacing our very dear friend and former colleague, Congressman Gillis Long. I would like to also point out to all Members that following the swearing-in, at 12 o'clock there will be a reception in the Merchant Marine and Fisheries Committee room, which is in 1334 in the Longworth Building, and we would like to invite everyone to come by and visit with CATHY.

Please join me in welcoming our new Congresswoman from the Eighth Congressional District, the Honorable CATHY LONG.

Mrs. LONG appeared at the bar of the House and took the oath of office.

The SPEAKER. The gentlewoman is now a Member of the Congress of the United States. Congratulations.

APPOINTMENT AS MEMBERS OF THE BOARD OF VISITORS TO THE U.S. NAVAL ACADEMY

The SPEAKER. Pursuant to the provisions of title 10, United States Code, section 6968(a), the Chair appoints as members of the Board of Visitors to the U.S. Naval Academy the following Members on the part of the House:

Mr. MURTHA of Pennsylvania;
Mr. WILSON of Texas;
Mrs. HOLT of Maryland; and
Mr. SPENCE of South Carolina.

APPOINTMENT AS MEMBERS OF THE BOARD OF VISITORS TO THE U.S. MERCHANT MARINE ACADEMY

The SPEAKER. Pursuant to the provisions of title 46, United States Code, section 1295b(h), the Chair appoints as members of the Board of Visitors to the U.S. Merchant Marine Academy the following Members on the part of the House:

Mr. MANTON of New York; and
Mr. CARNEY of New York.

APPOINTMENT AS ADVISORY MEMBERS OF THE NATIONAL COMMISSION ON SPACE

The SPEAKER. Pursuant to the provisions of section 203(b), Public Law 98-361, the Chair appoints as advisory members of the National Commission on Space, the following Members of the House:

Mr. FUQUA of Florida; and
Mr. LUJAN of New Mexico.

APPOINTMENT AS MINORITY MEMBERS OF COMMISSION ON SECURITY AND COOPERATION IN EUROPE

The SPEAKER. Pursuant to the provisions of section 3, Public Law 94-304, as amended by section 1, Public Law 99-7, the Chair appoints as members of the Commission on Security and Cooperation in Europe the following minority Members of the House:

Mr. RITTER of Pennsylvania;
Mr. KEMP of New York; and
Mr. PORTER of Illinois.

APPOINTMENT AS MEMBERS OF THE COMMISSION ON THE ELEANOR ROOSEVELT CENTENNIAL

The SPEAKER. Pursuant to the provisions of Public Law 98-162, the Chair appoints as members of the Commission on the Eleanor Roosevelt Centennial the following Members on the part of the House:

Mrs. KENNELLY of Connecticut; and
Mr. FISH of New York.

APPOINTMENT AS MINORITY MEMBERS OF THE TECHNOLOGY ASSESSMENT BOARD

The SPEAKER. Pursuant to the provisions of section 4(a), Public Law 92-484, the Chair appoints as members of the Technology Assessment Board the following minority Members on the part of the House:

Mr. MILLER of Ohio; and
Mr. EVANS of Iowa.

APPOINTMENT AS MEMBERS OF THE JAPAN-UNITED STATES FRIENDSHIP COMMISSION

The SPEAKER. Pursuant to the provisions of section 4(a), Public Law 94-118, the Chair appoints as members of the Japan-United States Friendship Commission the following Members on the part of the House:

Mr. FOLEY of Washington; and
Mr. MILLER of Washington.

APPOINTMENT AS MEMBERS OF THE CANADA-UNITED STATES INTERPARLIAMENTARY GROUP

Mr. SPEAKER. Pursuant to the provisions of title 22, United States Code, section 276d, the Chair appoints as members of the U.S. delegation of the Canada-United States Interparliamentary Group the following Members on the part of the House:

Mr. BARNES of Maryland, Chairman;
Mr. FASCELL of Florida, Vice Chairman;
Mr. GIBBONS of Florida;
Mr. HAMILTON of Indiana;
Mr. OBERSTAR of Minnesota;
Mr. LAFALCE of New York;
Mr. DONNELLY of Massachusetts;
Mr. BROOMFIELD of Michigan;
Mr. HORTON of New York;
Mr. STANGELAND of Minnesota;
Mr. MARTIN of New York; and
Mr. MILLER of Washington.

PERMISSION FOR COMMITTEE ON FOREIGN AFFAIRS TO HAVE UNTIL 5 O'CLOCK, THURSDAY, APRIL 11, 1985, TO FILE REPORTS ON H.R. 1555, THE FOREIGN ASSISTANCE ACT OF 1985, AND H.R. 1931, DEPARTMENT OF STATE AND OTHER AGENCIES AUTHORIZATIONS

Mr. FASCELL. Mr. Speaker, I ask unanimous consent, on behalf of the Committee on Foreign Affairs, that it have until 5 o'clock, Thursday, April 11, 1985, to file reports on the bill, H.R. 1555, the Foreign Assistance Act of 1985, and the bill, H.R. 1931, to authorize appropriations for the Department of State and other agencies.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

□ 1110

NATIONAL CHILD SAFETY WEEK

Mr. GARCIA. Mr. Speaker, I ask unanimous consent that the Committee on Post Office and Civil Service be discharged from further consideration of the joint resolution (H.J. Res. 33) designating the week of September 8 through 14, 1985, as "National Child Safety Week," and ask for its immediate consideration.

The Clerk read the title of the joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from New York?

Mr. HANSEN. Mr. Speaker, reserving the right to object, I yield to the gentleman from Florida [Mr. LEWIS].

Mr. LEWIS of Florida. I thank the gentleman for yielding.

Mr. Speaker, let me take this opportunity to thank the subcommittee chairman, the gentleman from New York, BOB GARCIA, and the ranking Republican, the gentleman from Utah, JIM HANSEN, for their assistance in bringing this resolution to the House floor.

On January 3 I introduced House Joint Resolution 33, legislation designating the week of September 8 through 14 as National Child Safety Week.

As many of us are aware, countless numbers of children are abducted each and every day. Tragically, many of these children are later found to be victims of sexual and physical abuse. And for those children still missing, little, if any information is available for law enforcement to use in locating them.

Clearly, this problem demands our immediate attention. No longer can we stand idly by and hope that child abduction, sexual abuse, and physical abuse will simply disappear.

The establishment of a special week to commemorate child safety will focus needed attention on the tragedy of missing children. It will help to educate communities nationwide about this problem and what can be done to solve it.

Members of Congress, community organizations, and local law enforcement officials can work together during this special week to promote child safety.

Recently, President and Mrs. Reagan expressed keen interest in seeing this resolution passed as quickly as possible. Therefore, I am requesting that the date of this very special week be moved to April 29 through May 5, 1985. The sooner we enact

House Joint Resolution 33, the safer our children will be.

In closing, I would like to thank all my colleagues who joined with me in cosponsoring this resolution, and my thanks to my colleague from Florida, Senator PAULA HAWKINS, for introducing the companion bill in the Senate. We believe ensuring the safety of our children is one of the most important issues facing us today and we encourage the House to pass this worthwhile legislation.

Mr. HANSEN. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

The Clerk read the joint resolution, as follows:

H.J. RES. 33

Whereas every year untold numbers of children throughout the United States disappear from their homes;

Whereas children who are missing from home and are not living in a family environment are frequently the victims of sexual and physical exploitation;

Whereas many local volunteer groups already are working enthusiastically to promote child safety, but much remains to be done in the effort to fully protect our children;

Whereas the safety of our children should be one of our highest national priorities; and

Whereas the designation of a special week to commemorate child safety will draw needed attention to the tragedy of missing children and will help educate communities throughout the country about the problem and what can be done to help solve it: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the week of September 8 through 14, 1985, is hereby designated as "National Child Safety Week". The President is requested to issue a proclamation calling upon the people of the United States to observe that week with appropriate ceremonies and activities.

AMENDMENT OFFERED BY MR. GARCIA

Mr. GARCIA. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GARCIA: Page 2, line 3, strike out "September 8 through 14, 1985" and insert "April 29 through May 5, 1985".

The SPEAKER. The question is on the amendment offered by the gentleman from New York [Mr. GARCIA].

The amendment was agreed to.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed.

TITLE AMENDMENT OFFERED BY MR. GARCIA

Mr. GARCIA. Mr. Speaker, I offer an amendment to the title.

The Clerk read as follows:

Title amendment offered by Mr. Garcia: "Joint Resolution designating the week of April 29 through May 5, 1985, as 'National Child Safety Week'."

The title amendment was agreed to.

A motion to reconsider was laid on the table.

OLDER AMERICANS MONTH

Mr. GARCIA. Mr. Speaker, I ask unanimous consent that the Committee on Post Office and Civil Service be discharged from further consideration of the joint resolution (H.J. Res. 195) designating May 1985 as "Older Americans Month." and ask for its immediate consideration.

The Clerk read the title of the joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from New York?

Mr. HANSEN. Mr. Speaker, reserving the right to object, I do not object but simply would like to inform the House that the minority has no objection to the legislation being considered.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

The Clerk read the joint resolution, as follows:

H.J. RES. 195

Whereas older Americans have contributed many years of service to their families, their communities, and the Nation;

Whereas the population of the United States is comprised of a large percentage of older Americans representing a wealth of knowledge and experience;

Whereas older Americans should be acknowledged for the contributions they continue to make to their communities and the Nation; and

Whereas many States and communities acknowledge older Americans during the month of May: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That in recognition of the traditional designation of the month of May as "Older Americans Month" and the repeated expression by the Congress of its appreciation and respect for the achievements of older Americans and its desire that these Americans continue to play an active role in the life of the Nation, the President is directed to issue a proclamation designating the month of May 1985 as "Older Americans Month" and calling on the people of the United States to observe this month with appropriate programs, ceremonies, and activities.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

JEWISH HERITAGE WEEK

Mr. GARCIA. Mr. Speaker, I ask unanimous consent that the Committee on Post Office and Civil Service be discharged from further consideration of the Senate joint resolution (S.J. Res. 17) to authorize and request the President to issue a proclamation designating April 21 through April 28, 1985, as "Jewish Heritage Week," and ask for its immediate consideration.

The Clerk read the title of the Senate joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from New York?

Mr. HANSEN. Mr. Speaker, reserving the right to object, I do not object but simply would like to inform the House that the minority has no objection to the legislation being considered.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

The Clerk read the Senate joint resolution as follows:

S.J. RES. 17

Whereas the Congress recognizes that an understanding of the heritage of all American ethnic groups contibutes to the unity of our country; and

Whereas intergroup understanding can be further fostered through an appreciation of the culture, history, and traditions of the Jewish community and the contibutions of Jews to our country and society; and

Whereas the months of March, April, and May contain events of major significance in the Jewish calendar—Passover, the anniversary of the Warsaw Ghetto uprising, Israeli Indpendence Day, Solidarity Sunday for Soviet Jewry, and Jerusalem Day: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is authorized and requested to issue a proclamation designating April 21 through April 28, 1985, as "Jewish Heritage Week" and calling upon the people of the United States, State and local government agencies, and interested organizations to observe that week with appropriate ceremonies, activities, and programs.

The Senate joint resolution was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. GARCIA. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on House Joint Resolution 33, House Joint Resolution 195, and Senate Joint Resolution 17, just acted upon.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

TORT SYSTEM NEEDS REFORM ON MALPRACTICE INSURANCE

(Mr. ROWLAND of Georgia asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROWLAND of Georgia. Mr. Speaker, the rising cost of medical care in this country is something that

concerns almost everyone, and I want to address that this morning, particularly from the standpoint of malpractice, which figures greatly into that equation.

I say that because of the cost of malpractice insurance. There is something drastically wrong with the tort system that we have as it applies to malpractice insurance. We find that the premiums have now become in excess of $50,000 annually. The constant threat of malpractice is causing physicians to practice defensive medicine, thus driving up the cost of care we do not know how much, maybe $15 billion to $40 billion annually.

There are many people who are dropping out of the practice of medicine because of this threat. It seems that we have a lottery here where some people are awarded greatly for the injuries they have, and other people are not awarded who should be.

It seems that our tort system needs to have some reform, as it did in the case of workmen's compensation, and also no-fault insurance. State medical boards need to do something more about the negligence that takes place. The legal profession needs to be more open to reform as it applies to malpractice. It seems to me that the Congress is virtually paralyzed on this issue. It is a problem that we need to address, Mr. Speaker.

LONG LIVE RONALD REAGAN, A TRULY GREAT PRESIDENT

(Mr. SOLOMON asked and was given permission to address the House for 1 minute.)

Mr. SOLOMON. Mr. Speaker, President Reagan's successful lobbying for the MX apparently got under the skin of some Members of the opposition last week, including one who ran to the Washington Post crying that the mean old man in the White House cussed at him.

Funny, though, I don't remember the President ever complaining to the Post about some of the downright nasty, insulting, and cruel things said about him here in this Chamber.

We've heard Members of the opposition call the President a liar and a hypocrite. One Member even said he was thankful the President didn't drool.

Mr. Reagan's work habits have been ridiculed, his intelligence questioned, his character assassinated, and his motives impugned. He's been said to have a bloodthirsty foreign policy, no civil rights policy, and a heartless domestic policy.

His aides have been called crooks, his wife a spendthrift, and he himself has been dismissed as a kindly, but out-of-touch old man by people of his own generation.

If you believed just half of what you heard in this Chamber, you'd think Ronald Reagan would just as soon let the elderly get sick, the poor go hungry, and our youth remain ignorant.

But the President, whatever you think of his policies, is at least enough of a man and a political pro to take this criticism in stride.

Or maybe he just isn't listening to the complaining that is coming from the opposition party here on the House floor. And if that's the case, Mr. Speaker, he's just like the American voter.

Long live Ronald Reagan, a great American and a truly great President.

DESIGNATION OF HON. JIM WRIGHT TO ACT AS SPEAKER PRO TEMPORE TO SIGN ENROLLED BILLS AND JOINT RESOLUTIONS UNTIL APRIL 16, 1985

The SPEAKER laid before the House the following communication:

WASHINGTON, DC,
April 4, 1985.

I hereby designate the Honorable Jim Wright to act as Speaker pro tempore to sign enrolled bills and joint resolutions until April 16, 1985.

THOMAS P. O'NEILL, Jr.,
Speaker of the House of Representatives.

The SPEAKER. Without objection, the designation is agreed to.

There was no objection.

□ 1120

THE FOOD SECURITY ACT OF 1985

(Mr. DE LA GARZA asked and was given permission to address the House for 1 minute, and to revise and extend his remarks, and include extraneous matter.)

Mr. DE LA GARZA. Mr. Speaker, I am happy to announce to my colleagues that today I am introducing the Food Security Act of 1985, a 5-year omnibus farm bill, and in conjunction with that, I would like to read the following poem:

THE FARMER FEEDS THEM ALL!

The politician talks and talks,
The actor plays his part.
The soldier glitters on parade,
The goldsmith plys his art.
The scientist pursues the germ
Over the terrestrial ball,
The sailor navigates his ship,
But the farmer feeds them all!

The preacher pounds his pulpit desk,
Brokers read their lengthy tapes,
The tailor cuts and sews his cloth
To fit the human shape.
The dame of fashion dressed in silk
Goes forth to dine or call
Or drive, or dance, or promenade,
But the farmer feeds them all!

The workman wields his shiny tools,
The merchant shows his wares.
The astronaut above the clouds
A dizzy journey dares.
But art and science soon would fade
And commerce dead would fall
If the farmer ceased to reap and sow,
For the farmer feeds them all!

Mr. Speaker, this bill will serve as the framework for the Committee on Agriculture to use in developing comprehensive farm and food policy legislation later this spring.

The bill is designed to extend and revise agricultural price support and related commodity programs; provide for agricultural export, resource conservation, farm credit, and agricultural research, extension, and teaching programs; provide food assistance to low-income people; and ensure consumers of a continued abundance of food and fiber at reasonable prices.

My legislation is built around several basic ideas that I believe are emerging as consensus themes among the many groups interested in the welfare of U.S. agriculture and the contributions of farmers to the national economy. These include:

A belief that the prime objective of agricultural policy should be to make it possible for farmers to return to profitability;

A strong emphasis on helping farmers compete in world markets through effective export policies and programs;

A continuation of needed farm income safety nets and credit assistance programs;

Continued use of the supply management concept where it is necessary, including new surplus control plans, to help return profit to U.S. agriculture; and

A new emphasis on long-term efforts to conserve soil resources.

Mr. Speaker, this bill also takes into consideration the need to restrain Federal spending. It reflects my belief that the farm program must be designed to stabilize and increase farm income in a fiscally responsible manner. What has been said many times by many farmers in the past is still true—farmers want to look to the market for their income, not to the Government.

The Federal farm programs should enable farmers to profit in the marketplace. A continuation of farm programs that do not stabilize and strengthen markets is simply unacceptable.

I must note, however, that agriculture has already made some very substantial contributions toward cost control by trimming existing programs in recent years. And I maintain strongly that, at recent cost levels, Federal farm programs are a good bargain for consumers. These programs, which cost only about 1 percent of the Federal budget, undergird a system that gives our consumers the world's best diet for the smallest percent of consumer income in any major nation.

I do not view my bill, in its present form, as the final, complete body of specific policies and programs that I

expect to see followed in detail. The specific provisions of the 1985 farm legislation will emerge from the work of our agriculture subcommittees, which are currently in the process of examining their individual components of the legislation. This bill will serve as the starting point for the committee's work on drafting that legislation. And it is in that spirit that I introduce the Food Security Act of 1985 today.

AUTHORIZING THE SPEAKER TO ACCEPT RESIGNATIONS AND APPOINT COMMISSIONS, BOARDS, AND COMMITTEES, NOTWITHSTANDING ADJOURNMENT

Mr. DE LA GARZA. Mr. Speaker. I ask unanimous consent that, notwithstanding any adjournment of the House until Monday, April 15, 1985, the Speaker be authorized to accept resignations, and to appoint commissions, boards, and committees authorized by law or by the House.

The SPEAKER pro tempore (Mr. ROEMER). Is there objection to the request of the gentleman from Texas?

There was no objection.

DISPENSING WITH CALENDAR WEDNESDAY BUSINESS ON WEDNESDAY, APRIL 10, 1985

Mr. DE LA GARZA. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule be dispensed with on Wednesday, April 10, 1985.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

NO BASIS IN HISTORY FOR REFUSAL TO SEAT McINTYRE

(Mr. PASHAYAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PASHAYAN. Mr. Speaker, my colleagues in the House of Representatives are doing great harm to this august legislative body by voting against seating Member-elect Richard McIntyre and referring his election to the Election Task Force of the House Administration Committee. No one in this Chamber denies the constitutional right of the House to be the final judge of "elections, returns and qualifications" of its Members. In fact, contested elections are a part of the history of the House.

The manner chosen by the majority of Members to resolve the 1984 McIntyre election is not historically appropriate. The tradition has been, in this century and the last, to seat a Member-elect presenting proper certification. Certification is prima facie evidence of election. However, only in cases where the House had reason to question the elections themselves, has it refused to seat a Member-elect. The House of Representatives is always free to remove a Member after an investigation and to seat the proper person if a mistake has been made.

Richard McIntyre had the proper credentials and should have been seated on January 3, 1985. His election is distinguishable from the previous cases in which the House refused to seat a Member-elect. This was not a case of two people presenting credentials like *Chalmers* v. *Manning* (1883) or *Kemp* v. *Saunders* (1937). It was not a case in which the State's secretary of state impeached the certification like *Chaves* v. *Clever* (1867). It was not a case where election fraud was alleged like *Wiggington* v. *Pacheo* (1877) and *Roush* v. *Chambers* (1961). Mr. McIntyre had the proper certification from the Indiana secretary of state and was entitled to be sworn in on the basis of this unquestioned prima facie evidence.

The doctrine of the separation of powers is being jeopardized by this body. The House's power is not immune from the Supreme Court's ability to review the actions of Congress and to discipline wrongful conduct. I suggest that by failing to accept the certification of Richard McIntyre, the House of Representatives could well have left itself open to adverse Supreme Court action. The integrity of the House, and of the legislative branch, would have been maintained if my colleagues had acted in the time-honored way and seated Member-elect Richard McIntyre.

MESSAGE FROM THE SENATE

The SPEAKER pro tempore. The Chair lays before the House the following message from the Senate.

The Clerk read as follows:

S. CON. RES. 38

Resolved by the Senate (the House of Representatives concurring), That when the Senate adjourns on Wednesday, April 3, 1985, or Thursday, April 4, 1985, pursuant to a motion made by the Majority Leader, or his designee, in accordance with this resolution, and that when the House of Representatives adjourns on Wednesday, April 3, 1985, or Thursday, April 4, 1985, pursuant to a motion made by the Majority Leader, or his designee, in accordance with this resolution, they stand adjourned until 12:00 o'clock noon on Monday, April 15, 1985.

The SPEAKER pro tempore. The question is on the Senate concurrent resolution.

The Senate concurrent resolution was concurred in.

A motion to reconsider was laid on the table.

ADMINISTRATION'S FREE-TRADE POLICY A MISNOMER—NOTHING "FREE" IN IT

(Mr. TAUZIN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. TAUZIN. Mr. Speaker, there is nothing free about the administration's so-called free-trade policy. The actual cost is measured in human suffering—in a mounting inventory of closed factories, in lost jobs and opportunities.

If there is anything free about the administration's trade policy—it's the case and freedom by which trading partners around the globe are getting away with economic murder. The Government of Japan subsidizes its products into our market place with rebated value added taxes, shuts its doors in intricate ways to American imports and this administration rewards them with a lifting of voluntary import quotas—and gets nothing in return but a promise by Japan to send us more subsidized cars.

The Soviet Union subsidizes ammonia production with free natural gas and we watch sadly as ammonia plants in America shut down and American farmers become increasingly dependent upon Soviet Russia for vital fertilizer products. Sadly we watch foreign government after foreign government manipulate imports into our economy, robbing Americans of jobs.

We've taken it on the economic chin long enough. It's time for America to get tough on foreign trade and on countries who refuse to play fair. It's time for reciprocity.

REMOVAL OF NAME OF MEMBER AS COSPONSOR OF H.R. 528 AND H.R. 1460

Mr. LIVINGSTON. Mr. Speaker, I ask unanimous consent to have my name deleted as a cosponsor of the bills, H.R. 528 and H.R. 1460.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

NICARAGUA'S MISKITO INDIANS SUFFERING UNDER SANDINISTA RULE

(Mr. LIVINGSTON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. LIVINGSTON. Mr. Speaker, recently I had the opportunity to meet with Miskito Indian leader Wycliffe Diego, during which he related details of a new wave of Sandinista terror directed against Nicaragua's Indian population.

According to Mr. Diego, on January 2, 1985, in a purported Sandinista act

of good faith, the residents of the Columbus "relocation camp" in the far northeastern corner of Nicaragua were allowed to return to their village of Bihmuna. Ten days later, as the residents were rebuilding their village, Sandinista aircraft completely destroyed the village by aerial bombardment. Twelve villagers were killed.

A month later, on February 12, the Miskito villages of Halover, Waunta, Laya Siska, Kua Laya, Wawa, and Tasbapauni were burned by Sandinista troops; 4,000 Miskitos were left homeless, some 2,000 fled into the jungles. About 300 were captured by the Sandinistas and sent to a new "relocation camp" near Wawa.

It has been asserted that the Sandinistas have been trying to make amends to the Indians since the election of November 1984. If this is the case, they are certainly going about it in a strange way.

THE ADMINISTRATION'S ANTI-HOME-OWNERSHIP USER FEES PROPOSALS

(Mr. MANTON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MANTON. Mr. Speaker, recently the President threatened to shoot down any tax increase that Congress may send him. Given the President's adamant opposition to a tax increase, I am at a loss to understand the rationale behind the administration's proposed new "user fees" on Federal mortgage programs.

Under the administration's proposal, FHA mortgage insurance premiums would be increased from 3.8 percent to 5 percent while the VA fee would rise from 1 to 5 percent. Ginnie Mae, Fannie Mae, and Freddie Mac operations would also be hit with increased fees.

Mr. Speaker, the administration euphemistically calls them user fees. I call them what they are—taxes. To make matters worse, these taxes are aimed directly at middle-income families and first time home buyers. The fees will make it increasingly difficult for young families to purchase a home while making mortgage credit less available and more costly.

Mr. Speaker, the President's proposal is a serious attack on the Federal Government's historic commitment to making homeownership affordable for millions of American families. I urge my colleagues to reject the administration's anti-home-ownership proposals.

RESOLUTION INTRODUCED TO ADDRESS PROBLEMS OF U.S. COPPER INDUSTRY

(Mr. KOLBE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KOLBE. Mr. Speaker, I am introducing today a resolution that would abolish the compensatory financing facility of the International Monetary Fund. A recent study has again brought to our attention the dire condition of the U.S. copper industry. In 1 year alone, 1983, and in one State alone, Arizona, copper producers have lost over $100 million. This situation exists because foreign copper producers, most of which are located in lesser developed countries and are controlled by the various governments, are flooding the market with cheap copper. Why are they doing this? Because Chile, Peru, Zambia, and Zaire all rely heavily on copper exports as a source of foreign exchange. The more copper they produce, the more dollars they get.

Between 1975 and 1983, the IMF has loaned $4.4 billion to Chile, Peru, Zambia, and Zaire. Because of their dependence on copper exports as a source of revenues necessary to pay off the IMF loans, CIPEC countries have responded to a glutted market by increasing, rather than decreasing copper production, as privately owned U.S. companies must do.

The compensatory financing facility was created to assist Fund members to weather temporary falls in commodity prices that were beyond their control. Instead, it now plays an integral part in causing the fall of those same commodity prices. I urge my colleagues to join me in the support of this resolution and eliminate the compensatory financing facility.

□ 1130

A MESSAGE TO THE PRESIDENT

(Mr. WILLIAMS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WILLIAMS. Mr. Speaker, there has been considerable debate ensuing at the White House the last couple weeks. The moderates at the White House, understanding the political failure of the President's Central American policy, are insisting now on a new peace initiative in Nicaragua and they want to wait a few weeks before bringing it to us here in the Congress.

The more conservative advisers of the President are urging him to push ahead with his failed policy and bring it to this Congress quickly.

Mr. President, if you are sincere about the correctness of your Central American policy, come ahead.

Mr. President, if you want to face a full public discussion of your secret war in Nicaragua, come ahead.

Mr. President, if you believe you can convince this Congress to give you $14 million more to continue trying to export democracy through the barrel of a gun, come ahead, make our day.

WE REJOICE WITH EIGHTH DISTRICT OF LOUISIANA; WE GRIEVE WITH EIGHTH DISTRICT OF INDIANA

(Mr. STRANG asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. STRANG. Mr. Speaker, I ask forbearance for this freshman coming to the well to express his views.

Mr. Speaker, we must rejoice with our colleague, Congresswoman LONG of Louisiana, and we must rejoice with the Eighth District of Louisiana, which now is represented in the Congress.

We must, however, Mr. Speaker, grieve for the Eighth District of Indiana, which has been denied a representation in this Congress by deliberate confusion, smoke screens, and phony arguments.

Mr. Speaker, let us seat Rick McIntyre.

METHANOL—THE FUEL OF THE FUTURE

(Mr. WISE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WISE. Mr. Speaker, when I drive home to my West Virginia district today, I am going to be paying 50 cents a gallon for fuel with 120 octane that is so clean burning that it does not need a catalytic converter.

It is not a dream, Mr. Speaker. It is methanol, the fuel of the future.

Thanks to the Celanese Corp., I will be loaned a Ford Escort to run on this alcohol fuel. The car and I will conduct my ususal mobile office schedule, stops in many of my district's 14 counties to demonstrate that this fuel is usable and can have a dramatic economic impact on my State.

Methanol can be made from a variety of feedstocks, natural gas, and particularly coal. A coal-to-methanol industry in my State and region wouldsolve at least part of the unemployment problem.

The fuel costs a great deal less to make than gasoline and it is safer and cleaner to use. Producing methanol from our country's vast supplies of coal will bring down the cost over time while giving us an inexhaustible domestic supply of vehicle fuel.

I am going to be discussing with our State government officials the possibility of initiating a methanol-powered fleet in West Virginia.

If any of my colleagues would like to see me drive off into the future, I invite you to the base of the House steps at 4 o'clock this afternoon. We can only go forward.

REINTRODUCTION OF DEFENSE TARIFFS BILL

(Mr. REGULA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. REGULA. Mr. Speaker, our trade deficit with Japan is out of hand. I continue to hear great tales of Japanese good intentions but nothing changes.

The fact is that it is no one's fault but our own that the Japanese do not trade fairly with us. We have never gotten tough. In fact, our military unilaterally protects their sealanes, insuring the free flow of Japanese products that flood our markets. The Japanese devote the same attention to sharing free world defense costs as they do to fair trade—very little.

It is time to stop talking and start acting. Today, my colleague, Mr. RITTER, and I are introducing the defense tariffs bill. This will give the President the power to impose tariffs on imports from Japan, NATO, and France to recover the amounts we spend on their defense.

Our aim is to provide the President with a new and powerful bargaining tool in negotiations with our allies, notably Japan, to arrive at fair trade and a more equitable allocation of the costs of defending the free world.

THE LID ABOUT TO BLOW ON TRADE DEFICITS

(Mr. HUCKABY asked and was given permission to address the House for 1 minute.)

Mr. HUCKABY. Mr. Speaker, I would like to commend the gentleman who just appeared in the well. I think he is right on the mark.

America is at the leading edge of technology in telecommunications. That is why Japan is dragging its feet to open up its market.

We have a tremendous deficit with the Japanese today. Japan says that we do not understand their system. We do not understand what they are doing.

I would suggest they do not understand us in America. We have been here for years being beat at the conference table in these trade negotiations, but the kettle has been brewing. The lid is about to blow off. America is tired of having Japan's doors closed to them while our doors are open to them.

Hopefully, we can make significant breakthroughs in telecommunications, not like they did last year on the great beef deal, where they let in very small amounts of beef into Japan.

America's rice farmers receive one-tenth of the amount the Japanese rice farmer receives for this rice, yet we are prohibited from selling rice in Japan. It is time we stood up and got tough with the Japanese.

NINETY-SECOND DAY OF NO REPRESENTATION FOR INDIANA'S EIGHTH DISTRICT

(Mr. ROGERS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROGERS. Mr. Speaker, this marks the 92d day since Members of this body were sworn into the 99th Congress and the 92d day that the residents of Indiana's Eighth District have been without representation here in this body.

In a blatant disregard for Indiana election laws, the Democrats have refused to seat Rick McIntyre. What on earth did the half a million people of Indiana Eighth do to deserve this? They elected a Republican in a fair and complete election.

What do they get in return? No representation. Who do they turn to to represent their views, to fight for hometown interests? Who do they turn to for an academy nomination? Who did they turn to last week when we voted on the MX—a benchmark vote?

One thing they have received, the people of that district, is a lesson in the arrogance of the Democratic majority in this House. It is arrogant to deny Rick McIntyre his seat on the basis of informal and unsubstantiated challenges. It is arrogant to throw out an election when no fraud has been alleged and no formal contest has been filed. It is arrogant to ignore Indiana laws by setting up a recount under new rules, all in the name of the same old goal: Preserving the Democratic majority here.

If there is a ballot dispute, let us settle it fairly; but first, let us honor the obvious outcome and the obvious wishes of half a million people in Indiana Eight. Let us seat Rick McIntyre.

AMERICAN GOVERNMENT WORKERS PRIME GAME FOR TERRORISTS

(Mrs. SCHROEDER asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. SCHROEDER. Mr. Speaker, it is sad, horrible fact that people working for the American Government are sometimes considered prime game for terrorists, political extremists, drug dealers, and kooks. While most of the recent incidents have been directed against Americans working abroad, law enforcement officials in the United States have also been targets. The murder of two AID accountants on a hijacked Kuwaiti plane in Tehran last December, and the kidnap and murder of DEA agent Enrique Camarena Salazar are two of the latest incidents where Americans have been kidnaped or killed because they work for the U.S. Government.

Joseph Reed, writing in the March 26, 1985, Wall Street Journal, recites the chilling litany:

> In the past 2 years, three embassies have been obliterated, 19 U.S. diplomats assassinated, and 59 other have been victims of terrorist attack.

And a State Department employee recently wrote to me,

> [G]overnment employees overseas, regardless of agency and whether they work in Africa, the Middle East, South America, or Paris, are terrorism targets purely because they are Government employees. Carrying a diplomatic or official passport can be an automatic death warrant.

We know that something has to be done to stop the carnage. The Foreign Affairs Committee has been pushing the administration for action on preventing terrorism. Yet, because terrorists strike without warning and in unpredictable ways, there is often little we can do until after the fact.

I am introducing legislation today which will provide benefits to U.S. Government employees who are taken captive as a result of their employment or who suffer from terrorist acts against the United States.

The legislation picks up from, and expands on, the temporary Hostage Relief Act we passed in 1980. This bill covers incidents whether they occur in Miami or Tehran. The bill amends title 5, United States Code, to provide compensation, health, and educational benefits to persons who are kidnapped or held captive as a result of hostile action directed against the United States, whether abroad or on American soil. Benefits are provided to employees and contractors of the Federal Government, and members of their families. The bill does not cover members of the Armed Forces because they are covered by other laws.

The bill has the following provisions:

First, where an employee is held as a captive, his or her pay will be deposited into an interest-bearing savings fund.

Second, captives and their families will receive payment for medical and health care expenses not covered by insurance, including psychological counseling or other needed care.

Third, the President is directed to make a cash payment to the individuals taken hostage in Iran on November 4, 1979, as well as to persons taken captive since that date. The President may consider the length of captivity and severity of treatment in determining the amount of the cash payment. A Presidential Commission recommended that the Iranian hostages receive $12.50 a day for each of their 444 days of captivity. This money has never been paid.

Fourth, civil lawsuits and judgments against an individual are put on hold while that person is a captive.

Fifth, educational benefits for a spouse and children are provided, if

the employee is held captive longer than 90 days. After release, the former captive may also be provided with educational benefits under certain circumstances.

We recognize that U.S. citizens are not the only victims of anti-American terrorism. Family members of employees and foreign nationals working for the United States abroad are often caught up in the same violence directed against their American employers. For example, 88 Lebanese were killed or injured in the two bombings of the American Embassy in Beirut.

The legislation provides compensation for such individuals who are killed or disabled as a result of a hostile act directed against the United States. There is an offset for any worker's compensation benefits provided locally that are funded in whole or in part by the United States.

I urge my colleagues to join me in supporting this legislation. The least we can do for those who have been taken captive is to make their lives a little easier when they are released. And we should establish permanent law on this subject, so we are not faced with politically charged and urgent decisions, as we were in 1980.

OILS WELL THAT ENDS WELL

(Mr. DANNEMEYER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DANNEMEYER. Mr. Speaker—

OILS WELL THAT ENDS WELL [1]

Now entrepreneurship is swell,
But the state of the Union's not well.
In the guise of "free market,"
It's but a fat target
For those who buy short and then sell.

As corporate minions assemble,
The weak-kneed among them may tremble.
With management ducking,
The firm's ripe for plucking,
And vultures swoop in to dissemble.

As takeover plots go, it's easy;
The wooing of stockholders—breezy.
It's full speed ahead
'Til the company's bled.
The motive, not method, is sleazy.

Our energy needs notwithstanding,
There's often a lot of grandstanding.
Forget off-shore drilling,
The coffers need filling;
Reap profits before the crash landing.

So taxpayers wince at their lickin's;
Stockholders get mad as the dickens.
They find none too soon
That the new chief's no Boone,
Just their wallets are ripe for the Pickens.

□ 1140

MEDICARE IS SOLVENT

(Mr. WEISS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WEISS. Mr. Speaker, in February, President Reagan submitted a budget that continues to shift Medicare costs onto the backs of the elderly. There was nothing new about that.

Devastating Medicare cuts have been as constant as the changing seasons during the Reagan years. The administration has argued time and again that the elderly must pay more for less because Medicare is swiftly going bankrupt.

Yet now we find that it is the administration's credibility that is going bankrupt. Last week, the Medicare trustees reported that the program is expected to remain solvent far longer than previously expected. In fact, while earlier estimates had projected a deficit by 1987, the latest estimates do not anticipate any serious difficulties until almost the turn of the century.

Now that is good news. No longer is there justification for depriving our elderly citizens of the health care coverage they earned through payroll contributions. We should pay serious attention to a long-term program of overall health care cost controls but we should forcefully reject the Reagan budget proposals that would continue to unfairly burden the elderly, who have already done more than their share to save Medicare.

NO REPRESENTATION IN INDIANA'S EIGHTH CONGRESSIONAL DISTRICT

(Mr. COBEY asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. COBEY. Mr. Speaker, I know that it has been disturbing to the majority leadership that we freshmen continue to come to the well to speak to the Rick McIntyre affair in the Indiana Eighth District. But until this injustice is rectified, we intend to continue to speak out.

I have here before me what is known as a congressional insert sent to my office by a Prof. William Tonso from the Eighth District of Indiana. A constituent can request that their Congressman insert something into the RECORD such as this material. But Professor Tonso has no Congressman to make this request.

This is an excellent article on the nature of gun control and crime in this Nation.

Rick McIntyre was elected to represent his constituents in the Eighth District. He is being denied his rightful place in this House even though he holds a certification for this seat. Consequently the constituents, over half a million of them, constituents like Prof. William Tonso, are being denied representation.

I would like to direct your attention to "Calling the Shots," a recent article by Prof. William Tonso, sociologist at the University of Evansville, IN. Professor Tonso exposes the biased and superficial nature of most of the reporting concerning "gun control" and crime in America. The article raises important questions regarding the debate on a crucial issue in a free society.

"Gun control" is one of the most hotly contested issues in American politics. As a firm believer in the sanctity of the Constitution, I have always held that the right to keep and bear arms for self-protection and defense of the community is inviolable. Yet this right is continuously under attack from the gun prohibitionists and an elite, urban media. These media "elitists," as Professor Tonso calls them, believe that: guns, especially handguns, are evil in themselves; "all reasonable and informed Americans want to do something about the 'gun problem;'" and America is the only modern, urban, industrial nation without effective "gun control" laws. These perceptions result in an antigun bias permeating crime reports or news connected with firearms.

Although these assumptions held by the media have been shattered by impeccable research conducted during the past decade, the American public has never learned the truth. Scholarly research has been unable to penetrate the mass of antigun hysteria devoted to the "procontrol" position in the nation's media. In terms of sheer numbers, Professor Tonso points out that "procontrol information and arguments get 37 inches of print to every anticontrol inch in the print media and more than 7 minutes to every minute in the electronic media." Is there another issue of such importance that receive such slanted coverage?

Had the facts on "gun control" been reported in the major media, the debate about this subject would by now be closed. Professor Tonso points specifically to media blindness regarding the most comprehensive piece of research yet conducted on this subject: a 3-year study, entitled "Weapons, Crime and Violence in America: A Literature Review and Research Agenda," undertaken through a grant from the Justice Department's National Institute of Justice. Ironically, Prof. James Wright and Peter Rossi began this study accepting the procontrol position espoused by the media. By the time they completed their review and analysis of all existing research on the issue, they had backed away from their earlier positions.

The facts uncovered by Professors Wright and Rossi undermine the distorted assumptions held by the media and the antigun lobby. There is no evidence of a domestic "arms race" in response to a fear of crime. Contrary to

[1] With apologies to Curly, Larry, and Moe.

what has been reported, there is no conclusive evidence linking gun ownership to crime. Although antigun forces would have us believe otherwise, there is little public support for handgun bans or harsh restrictions on gun ownership. Of the 20,000 existing gun laws in this country, there is little evidence to suggest that any have reduced violent crime. Finally, these eminent sociologists, after 3 years of exhaustive research, concluded that: "The prospects for ameliorating the problem of criminal violence through stricter controls over civilian ownership, purchase, or use of firearms are dim."

TWENTY-FOURTH ANNIVERSARY OF BAY OF PIGS INVASION

(Mr. PEPPER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PEPPER. Mr. Speaker, April 17th of this year is the 24th anniversary of what we know as the Bay of Pigs invasion, one of the heroic efforts in history to achieve liberation for the people of Cuba from the Communist tyranny as manifested by the regime of Fidel Castro.

That invasion for the purpose of liberating the people of Cuba was carried out by one of the most heroic groups of men ever to attempt such a task in history, the 2506 Brigade. It was an arduous task that they had assumed for themselves, ill-equipped, inadequately supported as they were. A lot of the equipment that they had was outdated and hardly usable. Nevertheless, they fought gallantly for 3 days in the swamps and amid all of the difficulties that they encountered in that very unwelcome terrain.

They were finally defeated by overwhelming force, by the Cuban Government. Many of them were killed, many of them suffered torture, and the survivors the pains and the anguish of imprisonment.

The American people always commemorate heroism anywhere in the world for the cause of liberty and freedom; and therefore I have today introduced a joint resolution that the 17th of April be commemorated as the 24th anniversary of the invasion of the Bay of Pigs by the brave 2506 Brigade for the liberation of the people of Cuba from Communist tyranny.

H.J. RES. 236

Whereas April 17, 1985, marks the 24th anniversary of the first day of the Bay of Pigs attempted liberation of Cuba by the heroic 2506 Brigade, a battle which entailed three days of fighting at a narrow strand of mangrove, bunch grass, coral head, and sand lying 30 miles from the towns of Giron and Playa Larga and bounded by the Bay of Pigs and the Cienga de Zapata swamp;

Whereas, on such day in 1961, the 1400 gallant and intrepid men who made up the brave 2506 Brigade were ill-equipped but possessing immeasurable spirit, courage, and determination, sought in the tradition of the great liberators Jose Marti and Simon Bolivar to liberate from communist tyranny the beautiful isle of Cuba and reestablish freedom and democracy for the people of Cuba, that great island lying so close to the United States; and

Whereas, the patriotic, noble and sacrifical effort of the 2506 Brigade to liberate Cuba was in the same patriotic spirit that prompted other courageous and intrepid men to liberate the American colonies from a foreign monarch and establish freedom and democracy in America; and

Whereas, the people of the United States proudly commend those courageous warriors who fight for the cause of freedom and justice anywhere in the world and the Congress wishes to express the commendation of the American people to the gallant warriors of the 2506 Brigade who made such a historic effort to establish freedom and democracy in Cuba: Now, therefore, be it

Resolved, by the Senate and the House of Representatives of the United States of America in Congress assembled, That April 17, 1985, be commemorated as the 24th anniversary of the Bay of Pigs invasion to liberate Cuba from communist tyranny.

U.S. LEADERSHIP NEEDED TO END SOUTH AFRICA'S APARTHEID

(Mr. PORTER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PORTER. Mr. Speaker, the call for a multiracial democracy in South Africa can no longer be ignored. Recent violence there serves as a harsh reminder to Americans of a system which completely excludes blacks from participation in the government.

The laws and actions of that minority government make all too clear its intention to perpetuate the policy of apartheid which exploits the black majority and deprives them of basic human rights.

There can be no excuse for such a policy and no excuse for the violence which inevitably it engenders.

It is crucial that the United States, always in the vanguard in the fight for human rights, lead the international call for justice in Pretoria.

A significant recent step was the administration's support for a resolution in the U.N. Security Council condemning South Africa's apartheid practices, and I applaud it.

But more is needed. I urge President Reagan to take the lead in efforts to bring an end to apartheid and establish South Africa as an ally who shares with the United States a common commitment to democracy and human freedom.

REPEAL OF IRS AUTOMOBILE LOG REQUIREMENTS

(Mr. ROEMER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROEMER. Mr. Speaker, they say that victory has 1,000 fathers and defeat is an orphan.

The House action 2 days ago when we repealed the auto log provision of the IRS Code has generated numerous claims of authorship. As one who introduced the original piece of legislation, H.R. 600, as the one who got more than 220 cosponsors in Congress, and as one who was asked by the chairman of the Ways and Means Committee to work out the final form of the bill, I take some small and modest credit.

But the purpose of my rising is to give credit to three others. I could give some credit to 100 or to 200, but three others come to mind.

First of all, the gentleman from Illinois [Mr. ROSTENKOWSKI], the chairman of the Ways and Means Committee. Without his support we could not have moved.

Second of all, to the gentleman from Arkansas [Mr. BERYL ANTHONY], a Democratic member of the committee, who did a great job.

And finally to the gentleman from Nebraska [Mr. HAL DAUB] a Republican, whose efforts and work made a good bill even better.

A final word: I warn the House that the other body, as is their usual style, has added a $4.5 billion cost to what was otherwise a good bill. I urge the chairman of the Ways and Means Committee to be careful and to come back with a clean bill. That would be a victory for all of America.

UNITED STATES-JAPAN TRADE IMBALANCE

(Mrs. JOHNSON asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. JOHNSON. Mr. Speaker, yesterday I posed some questions about what constitutes market access for my colleagues and for the Japanese to consider during current talks on opening their telecommunications market.

We have sent strong signals helpful to our negotiators, and I understand from today's headline that the Japanese are suddenly very concerned and are sending a special envoy to Washington.

While I remain skeptical, we may in fact get a mix of technical and symbolic concessions from the Japanese, but with our current trade deficit running at $145 billion, it is time we recognize the realities of the global marketplace, and take action in at least one area where we can permit major competitors from coopting our markets by using foreign aid to subsidize the financing terms of their exports.

We should retaliate by matching their financing offers and leveling the playing field, allowing our companies

to compete on the basis of price and quality of their product and not be shutout by the predatory actions of other governments.

Yesterday, during the foreign aid markup, the Foreign Affairs Committee approved 17 to 6 an amendment for an additional $50 million in economic support funds earmarked for the Defensive Mixed Credits Program.

This action, on which I cooperated with the Trade Subcommittee chairman, Mr. BONKER, complements legislation I will be reintroducing to strengthen our ability to compete abroad.

Mr. Speaker, I encourage my colleagues to support this very important initiative to give teeth to our Mixed Credits Program which we mandated nearly 2 years ago.

We should stop telling our competitors how serious we are about free and fair trade and start showing them.

□ 1150

COVERT AID IN NICARAGUA

(Mr. ADDABBO asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ADDABBO. Mr. Speaker, late last night the President of the United States submitted to the Congress, pursuant to the provisions of title VIII, section 8066 of the Department of Defense Appropriations Act, 1985 Public Law 98-473, enacted October 12, 1984; the following message:

I herewith transmit a classified report on U.S. support for the democratic resistance movement in Nicaragua. On the basis of this report, I have determined that assistance for military or paramilitary operations now prohibited by section 8066(a) of that Act is necessary.

This is a message by the President to remove the embargo which was placed in the fiscal year 1985 DOD Appropriation Act on further direct or indirect aid to support any forces for military or paramilitary operations in Nicaragua.

Under the provisions of the bill, we have 15 days within which to report out a joint resolution of approval after its introduction. The Subcommittee on Defense Appropriations, which I chair, will be reporting a joint resolution within the 15-day period and it will be considered on the floor of the House later this month. It is my hope that as the minority leader, Mr. MICHEL, has told the President, the Congress will defeat the resolution and no covert aid will be provided for military or paramilitary operations in Nicaragua.

YOUTH SUICIDE

(Mr. DIOGUARDI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DIOGUARDI. Mr. Speaker, last month I introduced a joint resolution to designate June 1985 as "Youth Suicide Prevention Month." Mr. Speaker, American adolescents are killing themselves at an average rate of 13 per day. The incidence of youth suicide has more than tripled in the last 25 years and suicide is now the third leading cause of death for Americans between the ages of 15 and 24. Unfortunately, we as a people find suicide so traumatic that we refuse to address this problem and sweep it under the rug. This is a tragic error.

Education, information, and professional guidance can help to significantly reduce the occurrence of youth suicide. This resolution will help to focus national attention on the problem. A similar resolution has already been passed by the Senate. I urge my colleagues in the House to give the same attention to this matter and cosponsor House Joint Resolution 193. Your support will save more American families from the trauma of youth suicide.

PROTEST TO WEAK RESOLUTION ON TRADE DEFICIT WITH JAPAN

(Mr. TORRES asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. TORRES. Mr. Speaker, on rollcall vote No. 45, I voted against House Concurrent Resolution 107, to express the sense of Congress that the President take action to reduce the growing U.S. merchandise trade deficit with Japan. I voted against this resolution in protest to the way it was weakened after having passed the other body on Thursday, March 28. The resolution passed by the House merely calls on the President to take actions to correct the imbalance between the currency exchange rates for the dollar and the yen. Under current law, the President already has this authority. A resolution by the House of Representatives merely reminds him of his authority.

The other body's resolution, on the other hand, directs the President to take all appropriate and feasible action within the power of the Presidency to enforce the rights of the United States under trade agreements to which Japan is a party, and to eliminate acts by Japan which restricts U.S. commerce. Had the House been voting on a resolution of similar force, I would have voted for the resolution.

CHILDREN'S JUSTICE ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York [Mr. DIOGUARDI] is recognized for 5 minutes.

Mr. DIOGUARDI. Mr. Speaker, Monday marked the beginning of Child Abuse Awareness Month, a problem which deserves national attention. In February, I introduced H.R. 1205, the Children's Justice Act. This bill would make positive strides toward alleviating the trauma suffered by children who are the victims of sexual abuse.

In addition, it would help to increase the conviction rate for child molesters, a figure which is now pitifully low.

Mr. Speaker, our Nation's children are the most vulnerable individuals in our society. We, as the legislative body for our country, must make every effort to see that their rights are protected and that their lives are not shattered by heartless and vicious adults.

I urge my colleagues to cosponsor H.R. 1205 and help give thousands of American children a second lease on life.

LEGAL SERVICES CORPORATION ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin [Mr. KASTENMEIER] is recognized for 5 minutes.

● Mr. KASTENMEIER. Mr. Speaker, today I am introducing a bill to extend the authorization for appropriations for the Legal Services Corporation for 3 additional fiscal years. The bill which I am introducing will serve as a focus for the hearings which will be held by the Subcommittee on Courts, Civil Liberties and the Administration of Justice on April 17 and 18, commencing at 2 p.m. on each day. The Corporation is currently funded at $305 million for fiscal year 1985, but legal services programs have suffered severe cutbacks in funding since the Corporation's fiscal year 1981 funding level of $321.3 million was reduced by 25 percent in fiscal year 1982 and held at the $241 million level in fiscal year 1983. Funding did increase to $275 million in fiscal year 1984 before reaching the current level. Nonetheless, increases in inflation and in the poverty population require an adjustment, and I have suggested the $373 million amount—a 16.2-percent increase over the fiscal year 1981 funding level. The sum which I have suggested will certainly be reviewed in the hearings and at our markups. This is the same amount which has been recommended to the Committee on the Budget by the chairman of the Committee on the Judiciary, Mr. RODINO. I do not expect this bill to be the final product of the Committee, and welcome any suggestions to improve service to low-income clients. The Legal Services Corporation provides funds to local legal services programs and support centers which in turn serve legal services clients who are among the most vulnerable and powerless persons in our coun-

try. It benefits all of us when access to justice is available to these clients.●

EXTENSION OF MEDICARE REIMBURSEMENTS FOR OCCUPATIONAL THERAPY

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from Louisiana [Mrs. BOGGS] is recognized for 5 minutes.

Mrs. BOGGS. Mr. Speaker, a recent GAO report on the impact of the Medicare Prospective Payment System [PPS] on posthospital long-term care indicates that patients are being discharged from hospitals sooner and in a poorer state of health than prior to PPS. It also indicated that more patients have extensive service needs following their hospital stay. I am concerned about whether there are enough services available in the community to adequately meet the needs of Medicare beneficiaries. For example, people who have suffered a stroke, heart attack, have arthritis or cancer need sufficient rehabilitation services or they are frequently rehospitalized or confined to a nursing home.

Today, I am introducing a bill which would complete the Medicare coverage of occupational therapy services by extending part B reimbursement to skilled nursing facilities, rehabilitation agencies, and outpatient clinics. The Congressional Budget Office [CBO] has established a cost estimate for this legislation of $10 to $14 million. However, this estimate does not include any of the cost savings of allowing patients to obtain their occupational therapy in the less costly settings rather than in the more expensive hospital ones. You may be interested to know that an hour of occupational therapy treatment can be $20 to $25 less expensive in an outpatient clinic than in an outpatient department of a hospital.

As you know, many patients are placed in skilled nursing facilities when they leave the hospital because they are unable to return home. When their part A benefits are exhausted and they are switched to part B coverage, they are unable to continue occupational therapy, which can make the difference between continued institutionalization and discharge home. If occupational therapy coverge was extended to these patients, their treatment could continue and many could be discharged home, producing a savings to the Medicare Program.

Occupational therapy is a rehabilitative service which focuses on reducing symptoms such as pain and deformity and training patients to function independently regardless of their disability. Therapists teach patients swallowing techniques to remove their dependency on nasal gastric tubes, train them in the use of prosthetic and adaptive equipment and do mobility training to prevent decubitus ulcers to name a few of their services.

You may be interested to know that over 18 national and State organizations are supporting this proposal including National Easter Seal, the Arthritis Foundation, the National Senior Citizens Council, and the National Rehabilitation Association. In addition, many of our colleagues here in the House have joined me as cosponsors. I urge all of you to work with me in support of this legislation.

Mr. Speaker, I ask unanimous consent for the text of this bill to be reprinted in the CONGRESSIONAL RECORD.

H.R. 1985

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) subparagraph (C) of section 1832(a)(2) of the Social Security Act is amended to read as follows:

"(C) outpatient physical therapy services (other than services to which the second sentence of section 1861(p) applies) and outpatient occupational therapy services (other than services to which such sentence applies through the operation of section 1861(g));".

(b) Section 1833(g) of such Act is amended—

(1) by striking out "next to last sentence" and inserting in lieu thereof "second sentence", and

(2) by adding at the end thereof the following new sentence: "In the case of outpatient occupational therapy services which are described in the second sentence of section 1861(p) through the operation of section 1861(g), with respect to expenses incurred in any calendar year, no more than $500 shall be considered as incurred expenses for purposes of subsections (a) and (b).".

(c)(1) Section 1835(a)(2)(C) of such Act is amended—

(A) by inserting "or outpatient occupational therapy services" after "outpatient physical therapy services",

(B) in clause (i), by inserting "or occupational therapy services, respectively" after "physical therapy services", and

(C) in clause (ii), by inserting "or qualified occupational therapist, respectively," after "qualified physical therapist".

(2) The third sentence of section 1835(a) of such Act and section 1866(e) of such Act are each amended—

(A) by inserting "(or meets the requirements of such section through the operation of section 1861(g))" after "1861(p)(4)(A)" and after "1861(p)(4)(B)", and

(B) by inserting "or (through the operation of section 1861(g)) with respect to the furnishing of outpatient occupational therapy services" after "(as therein defined)".

(d)(1) Section 1861 of the Social Security Act is amended by inserting after subsection (f) the following new subsection:

"OUTPATIENT OCCUPATIONAL THERAPY SERVICES

"(g) the term 'outpatient occupational therapy services' has the meaning given the term 'outpatient physical therapy services' in subsection (p), except that 'occupational therapy' shall be substituted for 'physical therapy' each place it appears therein.".

(2) Section 1861(s)(2)(D) of such Act is amended by inserting "and outpatient occupational therapy services" after "outpatient physical therapy services".

(3) Section 1861(v)(5)(A) of such Act is amended by inserting "(including through the operation of section 1861(g))" after "section 1861(p)".

(e) The amendments made by this Act shall apply to expenses incurred for outpatient occupational therapy services furnished on or after the first day of the first month that begins more than 60 days after the date of the enactment of this Act.

LIST OF COSPONSORS

Mrs. Boggs, for herself, Mr. Addabbo, Mr. Barnes, Mr. Bedell, Mr. Beilenson, Mrs. Boxer, Mrs. Collins, Mr. Crockett, Mr. Daniel, Mr. Daschle, Mr. Derrick, Mr. Dwyer, Mr. Dyson, Mr. Fish, Mr. Florio, Mr. Foglietta, Mr. Frank, Mr. Hoyer, Mr. Hyde, Mr. Jacobs, Mr. Jeffords, Ms. Kaptur, Mrs. Kennelly, Mr. LaFalce, Mr. Lehman of Florida, Mr. Leland, Mr. Lowry of Washington, Mr. McCollum, Mr. Manton, Mr. Martinez, Ms. Mikulski, Mr. Murphy, Mr. Oberstar, Mr. Ortiz, Mr. Quillen, Mr. Rangel, Mr. Richardson, Mr. Rinaldo, Mr. Rose, Mr. Skelton, Mr. Smith of Florida, Mr. Solomon, Mr. Swift, Mr. Waxman, Mr. Weiss, Mr. Whitehurst, Mr. Wirth, Mr. Pursell, Mr. Luken, Ms. Oakar, Mrs. Burton, Mr. Mineta, Mr. Green, Ms. Snowe, Mrs. Schneider, Mr. Roe, Mr. Fazio, Mr. Mavroules, Mr. Frost, Mr. Gray, Mr. Guarini, Mr. Neal, Mr. Miller of California, Mr. Stokes, Mr. Clay, Mr. Breaux, Mr. Howard, Mr. Smith of New Jersey, Mr. Walgren, and Mr. Tauzin.

□ 1200

INTRODUCTION OF THE SOCIAL SECURITY MINOR AND TECHNICAL CHANGES ACT OF 1985

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Oklahoma [Mr. JONES] is recognized for 5 minutes.

● Mr. JONES of Oklahoma. Mr. Speaker, today I am introducing the Social Security Minor and Technical Changes Act of 1985, as approved by the Subcommittee on Social Security on April 3, 1985. This bill is a slightly amended version of H.R. 1641, which I previously introduced. I expect the subcommittee-approved bill to be approved by the full Committee on Ways and Means when the Congress returns after Easter, and will seek full House approval as soon as possible after that.●

VACATION OF 30-MINUTE SPECIAL ORDER AND PERMISSION FOR 5-MINUTE SPECIAL ORDER

Mr. RAY. Mr. Speaker, I ask unanimous consent to vacate my listed special order for 30 minutes, and ask to address the House for 5 minutes at this time.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Georgia?

There was no objection.

AMERICAN AGRICULTURE—THE NEED TO PLAN FOR THE FUTURE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Georgia [Mr. RAY] is recognized for 5 minutes.

Mr. RAY. Mr. Speaker, last week, the big news in the Washington Post was that America's farm agencies have finally agreed on something—they have agreed that America's agricultural industry is in trouble.

When you look at the statistics, it's clear why our farm population has been able to unite on this issue:

Less than 3 percent of America's population now lives on farms, compared to 25 percent just 50 years ago.

Net farm income is projected at $19 billion to $24 billion this year, down from $30 billion in 1984 and a high of $32 billion in 1979.

The average farmer's debt to asset ratio is now at 22 percent, the highest since the depression.

Farm exports are predicted to drop to $37 billion in 1985, down from a high of $44 billion in 1981.

Farm indebtedness is near $215 billion, more than double what it was 10 years ago.

More than 200,000 farms have been auctioned off since 1981, and the number is increasing.

Although many farms are in reasonably sound financial shape, at least a third have such severe problems that they may not survive. Perhaps 10 to 15 percent may not last the year. If current trends aren't reversed, many experts believe that 1 of every 3 commercial farms in America will be bankrupt or too far gone to save in 2 to 3 years.

And the American people are leaving the farm at a faster rate than ever before. Only 1.4 percent of America's population is still active in farming and the number of U.S. farms has decreased from 6.8 million in the thirties to 2.4 million in 1984.

So there is agreement that American agriculture is in poor health, and that the industry is facing a severe crisis.

Unfortunately, Mr. Speaker, that's where the agreement ends. Farm agencies, farm groups, agribusiness people, Government, and all factions of the industry are split on how best to approach and solve the problems.

Instead of the industry uniting to focus attention on the problem, we see the various factions starting to fight among themselves over the upcoming farm bill. Each group wants to see to it that they get what they want out of the farm bill, and they aren't focusing on the overall agricultural crisis.

This leaves the people who fashion farm policy in a sticky dilemma. They want to put together programs that will provide stability for American agriculture and they want to help the industry in long-range planning, but they can't get broad, comprehensive advice from the various farm factions.

It is for that reason, Mr. Speaker, that I have written President Reagan urging that he form an agricutural commission. This commission would be made up of experts from all areas of the agricultural industry and they would be able to work in conjunction with our Government to focus attention on the long-range problems of our industry.

The White House is interested in the proposal, and we are working in conjunction with them to put together a list or experts to discuss this commission proposal. This week, I will be sending a letter to each of my colleagues here in the House of Representatives, asking you to provide me with the name of a person from your area of the country who could serve on this discussion panel. In this way, I believe we can get a list of people representing all sections of our country and all the agricultural interests.

Agriculture is our Nation's biggest industry and it is our country's largest employer. When this industry suffers, our entire country feels the effects.

For years we have molded agricultural policy through short 4-year farm bills in an attempt to stay close to developments in the industry. It is time now that we not only focus on the short-term problems of the industry, but develop a long-term policy that would give our farmers some stability.

I was a farmer myself, Mr. Speaker, and I know how uncertain the life of a farmer is. He can't control the weather and he can't control the crops. In many ways, the farmer is at the mercy of the whims of nature. But, in spite of this, the American farmer has become legendary. He produces enough food to feed our country and much of the world. He is more productive than the farmers of any other nation.

But, the whims of our economy are also affecting the farmer and the impact of the rising deficits can be seen more clearly in agriculture than in any other area. The strong dollar and high interest rates have put American farmers in a dangerous debt situation, and many of them are failing.

We can't take all of the uncertainty out of farming, Mr. Speaker, but we can make an effort to look at our agricultural industry in a broader fashion. We can put together a commission to help focus long-range planning in agriculture.

After the Easter recess, I will be introducing a sense of the Congress resolution, urging the President to form this agricultural commission. We already have a number of cosponsors for this resolution, and I hope my colleagues who are concerned about the future of agriculture in this country will join us in introducing this legislation.

There is a giant in this country that threatens to topple, and if it falls, it will bring us all down. To prevent that, it will take all of us working together. I want to provide a way for the agricultural industry to unite, and I believe this commission will do just that.

□ 1210

MY ADVICE TO THE PRIVILEGED ORDERS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas [Mr. GONZALEZ] is recognized for 60 minutes.

Mr. GONZALEZ. Mr. Speaker, I rise this Thursday, Holy Thursday before Easter, in another plea to the privileged orders, this time the privileged orders of America, particularly, as I have said before, my colleagues in the Congress, and the executive branch, more particularly, on this occasion. And it is my hope that my colleagues, as they depart for their various destinations, either to their districts or on some other travel assignment, in this very religious holy period of time, one of the most inspiring, for it evokes the great theme of resurrection, a rebirth or, actually, a resurrection.

In Spanish, there is a word for which there is no equivalent in English or, for that matter, I do not know in any other language. There is an old saying that says, "la vida no retoña." In other words, retoñar is the verb that speaks of that which is evocative in springtime when we have the newly born flowers, plants, trees, blossoms, and what the saying says is, life cannot be remade.

As I say, this is a word or a verb for which there is no exact translation in English and, therefore, the difficulty for me to convey to my colleagues what that means.

But, roughly speaking, what it is that I wish to evoke in my colleagues' minds as they depart to the joyous celebration of this great Easter, that while we are either having our children and grandchildren search for the Easter eggs, or just have an Easter Sunday dinner, that we have Americans down in the jungles of Central America that I firmly believe has not any time before within the last 2½ years of this monumental military buildup that the President has mandated in that part of the world, the heaviest military presence in the history of this part of the world.

At this point we have on what are euphemistically labeled training exercises components of the Texas National Guard. They have been preselected. As one Texas National Guard highly placed commander said, "Yes, we are going to that area in Texas in which

there is a greater density of Hispanic or Spanish speaking."

Let me say for the record, my colleagues, that I do not want to offend any of my other so-called fellow Hispanics, but I do not like the word "Hispanic," because I say I am a Mexican descendent. "Hispanic," when I was growing up a few decades ago, among us had a connotation that was not exactly very acceptable. It meant that some of those that came from the group from which we emerged but finding at that time great distaste and dislike and antipathy to the group and identifying the word "Mexican" with what was the most disagreeable of all would say that they were not Mexican, they were Spanish. And I remember once, I must have been no more than 10 years of age, and I went from my neighborhood on Upson Street where I was born and, as we were accustomed to doing that day and time, go over to the swimming pool, the public swimming pool, called San Pedro Park, which is one of the most beautiful type swimming pools I have ever seen. At that time it was fed by the natural spring waters of the San Pedro Springs which had been flowing since time immemorial and at the time that the Spanish first came there, and the Indians before them, had camped there, and the Spanish settled around these artesian wells, these beautiful, pristine flowing springs. And one day, in the company of my brother 3 years younger than I—and I might point out, so that there can be a clearer picture of what I am talking about, in my family I am the lighter complexioned member among my brothers and sister. There were four other brothers and one sister. And we went, in the company of two other playmates of the neighborhood, and at that time there was no fence around the pool, you did not have to pay any fees, you just went in. They had a lifeguard on duty who came over after I had taken a jump in the pool, and my brother Joaquin had followed me, when the lifeguard said, "Hey, we don't want any Mexicans around here. Get out of the pool."

I do not know what there always has been in me, but I did not get out. But I noticed, with great consternation, that my brother did, fearful and either trembling from the cold water or from the unusual harshness of the occurrence. I said, "Get back in." And he said, "No." Well, I got so angry, I got out of the pool and went up to the bathhouse where I knew a neighbor, a lady by the name of Mrs. Vidaurri was working there, and I complained to her. So she closed the bathhouse where we used to check in the clothing and went down and reprimanded the lifeguard.

But I could never persuade my brother to go back in there that morning. It took some time before that shocking experience had been overcome in his mind and in the minds of two others who had accompanied us.

Well, that is a long time ago, and, thank goodness, the world has changed, and I am able to be elected and, firstly so, in 1956, at a time when my election to the State senate was considered so revolutionary that the only way I can evoke that would be to tell you that if I were to seek the office of President or Vice President and tell you that I would win, it was just as unlikely and as outlandish at that time to say that I would win the race for the State senate. But I did.

And the point is that if I had had to depend on the vote from the group of voters that emerged from the same ethnic background as I, I would have never been elected dogcatcher, because at that time, in 1956, running countywide, this particular group was not even registered 10 percent out of a total voting potential, that is, qualified elector potential, of less than 113,000 voters. And of that number, not even 10 percent were what today are called Hispanic or what variously through the decades of my emerging have been called various things. "Latin Americans" was a most popular descriptive phrase for a while because it was more acceptable, "Mexican-American," never, because that was sort of a derogatory, pejorative, if you please, type of designation.

But I never had any reason to be ashamed of it. Our forefathers had their roots in Mexico for over 400 years.

□ 1220

They had played an integral part in the development of the whole area, including the original province that they went to, which was defined as being in boundaries, the southernmost boundary being what is today the State of Durango, and then as those documents reveal today, as far north as man could walk. Well, that would include, of course, all that trajectory through the United States and through Texas.

So that, in my point of view, and I guess my forebears, is very different from what the common American, historical conditioning view or conditioned view might be. So that I can see that we have in the American people, whether it is in the southwest of Texas or in the East or the South, for that matter, or the West, or the Midwest, that great, residual deposit of the saving sap of democracy and liberty, and that I could never have been elected, especially for such a high, vaunting place as the State senate in 1956, had it not been that many people of all kinds and creeds came out and made it possible for me to win.

Perhaps this is the reason why in later years, ironically, I became the target of epithets and threats; I was burned in effigy in California; I was almost killed in Boulder, CO, because I would not raise my fist, double it, say, "Kill the Gringo," and it was ironic because those demanding this never had had any kind of exposure to the direct discriminatory, crude practices of those ancient days.

Here we have this year of glory of our Lord, 1985, just last week, a commander of the Texas National Guard saying, "Yes, we are going to select this particular group," call them what you will, Mexican-American; "because we think that they are Spanish-speaking, and it would be ideal, to send them down to Honduras."

Now, it so happened that the Governor of Texas acceded to that request, unlike his counterpart, a Republican, incidentally, Governor of California, who refused the same request to deploy the California National Guard.

Right or wrong, the Governor of Texas said, "Well, I consented to that because I was assured they would not have any trouble." Now, this is just like President Reagan, for 14 months, willfully, calculatingly, cold-heartedly ignoring the plain logic, the unanimous advice of the most professional military: The Joint Chiefs of Staff; every one of them.

In the case of the Marines in Beirut, saying, "Oh, well, yes, but they are peacekeepers." Why, they are not going to have any trouble, even though they were beginning to get knocked off by hostile fire. Certainly they were not being killed by friends and allies, I hope to think.

It is just similarly the naivete of a Governor of Texas, who willy-nilly, before consulting, makes a decision and then bases it on some kind of pious promise that nothing is going to happen. Well, the National Guard as well as Marines as well as soldiers are warriors, if they are being sent down for what is supposed to be nonhostile, training purposes, the least one can do is see what it is in the nature of the call that makes it logical to call in the Texas National Guard. They are not going there to play red rover, red rover.

I say they are just being used as pawns; that now, more than ever, because of the nature of this so-called Pine III Operation, there is more than an even chance of violence, in which some of these men will suffer either death or serious bodily harm. What are those circumstances? The circumstances are that we have already had 17 of our active duty military killed in that area. When has this Congress bothered to ask: Under what circumstances? When has this Congress raised any objections or even questions to the President when last year, in September, to be precise, September 18, the Defense Department confirmed what we had been saying and

had been accused of lying about or being inaccurate or being misinformed, and that is that excess military aircraft were transferred from the military to the CIA, which then provided them, at no cost, to the so-called Contras or Nicaraguan rebels.

If that is not a most direct violation of the War Powers Limitation Act that this Congress passed in 1974, then I just do not understand the plain significance of plain, coherent language. Yet, a Governor says, "Oh, I gave my OK; these men can go, they are hand selected." Even though, I do not see him going to the hill country north of San Antonio and preselecting German-speaking citizens to be deployed in Germany. I do not see the President or the Secretary of Defense saying, "Let us see if we can get Jewish members of the faith of America or Arabic-speaking members of our community, and send them to the Sinai." How can we accept this?

I know nobody has spoken out on this, but I am. Because I think it is wrong. Because I think that it is giving a confirmation to a disastrous course of conduct on the part of a very much misguided President, or what history may show to be a zealot lost in his ideology.

Now, let us talk just plain common sense. Let us not talk about the horrors of communism or the unacceptability of the doctrine. I do not know anybody that I have ever met that is a card-carrying Communist or even an avowed Socialist. I have never visited in Russia. I have never gone on plush airplanes like the leading grain merchants of this country, hosting and drinking vodka and cheek-by-jowl with the Russian counterparts, selling them, even at subsidies that the American taxpayers paid for, our grain a few years ago. I never have been with Presidents when they have gone and toasted the, I guess they are Communists, leaders, cheek-by-jowl, and then turning over to them, like a couple of our Presidents have, beautiful Cadillacs, or some kind of luxury limousine with bullet-proof glass and all.

How long, my colleagues, are we going to enjoy the privileges with none of the accountability? How long are we going to tolerate the continuous indulgence of these privileged classes, never contemplated, never foreseen, much feared by those who wrote the basic law that gives us our form of government, and that is a reason for our differentiation until lately, when we have abdicated. When we have traduced that responsibility. Sold our heritage for a mess of pottage; of creature comforts. Placing us in that very comfortable segment of American society. We do not have to worry about being homeless.

□ 1230

We do not have to worry about being homeless. We do not have to worry when we go Easter about a good, fat steak. But let us not forget those who are in less privileged positions.

We just heard one of my distinguished colleagues speak about the plight of the farmer. Earlier I heard debate this week on the unemployment compensation, that the President and his supporters in and out of the Congress willy-nilly tell us there is great recovery, that there is no reason to continue any kind of help and any kind of lifeline to now over 10 million unemployed because they persist in this illusion and delusion that there is no problem, yet admitting to it in little driplets here and there.

I say that those contingents now serving, and until the first week in May in those jungles of Central America are a minute fraction of our citizens, even in Texas, the less than 500 component, they are not too visible except to their relatives. As in the case of the 241 marines, who remembers them? Well, I can tell you four who are remembered, the parents having called me all the way to my district in San Antonio during a break from States like Pennsylvania, Florida, and Ohio. Why would they call me? Because somebody told them I was the only one who had spoken out and had introduced legislation to compensate the dependent survivors because I try not to speak out unless I have some kind of an alternative or some suggestion. I never have believed in just knocking, in just saying this is not good policy or this is an erroneous action. I believe in saying why it is and saying this is what I would suggest, or let us think about it, and let us at least discuss it.

Such is not the case. But let us look at the facts. Let us assume and just a minute or 2 ago, and I say this by way of parentheses, another equally loved and highly respected Member and colleague of this House referred to the so-called Bay of Pigs invasion.

Has anybody ever stopped to ask the question: Suppose that invasion had physically succeeded? Would the people involved in that invasion have been able to govern Cuba? I can tell you categorically no, never. They were so divided themselves even in exile in Miami that it would be impossible to even govern themselves in Miami. So unless the United States were prepared to go in and further than just knocking over the Castro regime, occupy and govern Cuba like we are Grenada. You are not getting a daily report, but we still occupy Grenada. The President said we would be in there and out in 4 days. We still have military, because that is the only way that we can maintain the government of that island along the lines that we say are ideologically acceptable to us.

That is the smallest little place, not even as large as the city that I mainly represent. My city, my district, has about 500 percent more constituents than there are people in Grenada. But the point is that unless we are prepared to do the same thing in every one of these other countries where, because of ideological reasons, there cannot be any other reasons, and I will demonstrate why.

Ideology has never been the basic approach of our pragmatic American people and their rulers in the past. The whole of Central America, and I include the five countries, is no larger than the State of Texas. El Salvador is no bigger than Massachusetts. Honduras, where we now have an immense military presence, better than 10,000 just on land at this point, is about the size of Tennessee. Nicaragua, the source of so much controversy and oratory, is about the size of Iowa, with a total population that would fit just very nicely into the city of Houston, TX. Guatemala, home of one of President Reagan's favorite and most bloodthirsty caudillos, is also about the size of Tennessee. And Costa Rica, the only successful democratic state which we are compelling more and more to be military, could be squeezed within the borders of West Virginia. The total population of El Salvador is about 5 million. Most of the people, 82 percent, live in the countryside. Twenty percent of the people have lost their homes because of this continuing civil war which now even the President does not say Castro and the Russian Communists keep going. Half a million are refugees in their own land, and we have, I am sure, better than 400,000 Salvadorans and refugees right here in our country.

Life in El Salvador is hard. Forty percent of the labor force is unemployed. The last time anyone looked, 58 percent of the population earned less than $10 a month. Only 20 percent earned enough to provide the bare necessities of life. Two percent of the population owns 60 percent of the land. Ninety-six percent of Salvadorans own less than 12 acres. The vast majority of people in the countryside work at $1 a day when there is work, and this year there has not been much work.

No one living can remember when El Salvador had a genuinely democratic government. Yes, there are elections. As they say in Latin America, "A la Norte Americana," but President Duarte controls neither the army nor the National Assembly, and does not have the ability to wangle a budget to operate his own office from the country's government. The truth is the army runs El Salvador just as it always has, and strictly for the benefit of those 12 or 14 families.

Corruption runs deep in El Salvador. Our own AID admits that 20 percent of its funds get skimmed off before even the Central Bank is finished. And justice runs deep in El Salvador, in a country where there have been over 50,000 murders within the last 5 years, and in a country where political murders are still taking place at the rate of over 90 a week, and President Reagan reported a few months ago that that was a tremendous improvement. Think of it. It has been reduced to better than 90 murders a week.

No one has ever been convicted for any one of those murders except under pressure, in the case of the nuns, the Maryknoll Sisters, but that is as far as it got.

Why? Because if the truth were ever compelled, the involvement of our own CIA jowl by cheek with the murders and the assassins and the hit squads, which they call death squads but which the leader of them all, D'Aubuisson, says are "Escuadrones de Gloria," "Glorious our glory squads."

The case of the murder of Archbishop Romero has not been resolved, and that is the reason why. There is no question. It can be documented.

□ 1240

Our own CIA has been right there in the forefront and knows full well, because it was just as much a party to it as anybody.

That again reminds me of an old Mexican saying: "Tanto peca el que detiene la pata como el que mata la vaca.

"He is guilty of as much sin who holds the foot or the leg, as much as he who kills the cow."

In other words, they are accomplices. If anyone needs evidence of the degree of the squalor of El Salvador, remember that this infamous murder of this great archbishop, a man of peace and justice, has yet to be resolved. His killers have not been brought to justice, and they will not be.

In Nicaragua, one need only recall the history of the Somozas who were installed and maintained in power by our Government for 50 years. No government in the world could have been more rotten, more corrupt, more cruel than that of Somoza, nor can there be any denying of our role with him. Can there be any wonder why the people of Nicaragua, now facing a U.S.-financed revolt led by ex-Somoza military people, place more faith in the Sandinistas than in our pious and heretofore empty proclamations about freedom?

Let me say this to my colleagues: The very word, "Sandino," symbolizes what is a hero in that part of the world—"Sandino," the great hero resisting la invasion Norte American—the North American invasion. They have more freedom certainly now, taking into account all of President Reagan's pious mouthings about lack of democracy, than they ever did under Somoza.

In Guatemala we are hardly a symbol of hope. Our record there is abysmal. I visited over 2 years ago with the bishop of Chiapas. That is the Mexican state that borders the Guatemalan border. What he told me has horrified me to this day—30,000 suddenly attacked, 30,000 of the poorest of the poorest of the poor, Indians against which a genocidal effort has been made by this military dictator that President Reagan says is a "great guy." And the bishop was telling me about these Guatemalan soldiers crossing over and invading Mexican territory in pursuit and ripping open the bellies of 7-month-old baby Marxist-Leninists with American bayonets, with American-made weapons. They were not from Castro. They were not Russian, Korean, or Czechoslovakian. They were 100-percent American-made and American-provided. Even now we support a regime that is as bloodthirsty as any on Earth, as unjust as any of us will ever find, as oppressive as any in power or in existence.

Do the people of Guatemala look to us for justice and liberation? Hardly, for President Reagan thinks the local caudillo there is a swell fellow.

In Honduras we have so long supported military dictatorships that any talk of genuine democratic government is a joke. Any talk even of intelligent government in Honduras is a joke. Indeed the story is told of one, a ruling general, who was so incompetent—and even in Tegucigalpa he had stories told about him, and one story when like this:

A street-corner shine boy was telling his customer, "Have you heard the latest story about how dumb General So-and-so is?"

The customer said, "Son, I am General So-and-so."

The shine boy, without missing a beat, said, "That's OK, General. I'll tell it to you real slow."

So much for the reported respect that American-supported regimes have won in Honduras.

Central America, with the happy exception of Costa, Rica, is a place where freedom is a stranger. It is a place where the wealth is held by a tiny few, where power is exercised by force rather than through the consent of the people. It is a place where corruption is endemic, where poverty abounds, and where a hopeless fatalism is the only relief from misery. The enemy that the people of Central America face has a name, and that is misery. It is misery of degradation, of repression, of poverty, and it is a misery of hopelessness.

We say that we abhor Marxism and oppose the Marxists. But what and whom do we support? Do we support government by consent of the governed in Central America? Do we support reform an end to corruption, and end to torture? Do we support education, health, housing?

We support Honduras, and we are building huge military commitments there, but never with the consent of their representatives. They have yet to offer their consent. If we have ever sought the actual support of the people of that country, when has it been? When have we insisted that the generals let the people rule for themselves? When have we insisted that the great landholders pay a decent wage? Hardly, when the ones determining that wage are Americans, malefactors of great wealth. Like J. Peter Grace, that great billionaire princeling who is going to show us how the Federal Government can be dismantled economically, and who is the owner now, through his conglomerate, of what used to be United Fruit and is today Standard Brands. These are people who run everything in Honduras and who define who is a Communist. And that is true of every other country, including Mexico.

What a lot of our people up here are told are Communists by those ruling, wealthy classes are usually those people who have said, "Hey, look! We are tired of being cheated. We want fair wages. Hey, Look! We want a decent house. We want a chance to earn a living."

Those are the "Communists" defined by them and by our neo-Nazis. And I use that word advisedly. I am not using that word as a pejorative phase. I am using that calculatingly. I am a child of that era during which the word, "Nazi," came into vogue.

And this is Mr. J. Peter Grace, who, through his own expressions and by former Nazis like Frick, has surrounded himself with those who clearly reflect the opinions and the views and the interpretations of those that he controls of the wealthy ruling classes in Honduras. As long as they get their dividend, they are going to be very much anti-Communist.

When have we insisted that the governments provide even the most basic services? Do we even insist on open discussion and the right of dissent? We say that we oppose the Sandinistas in Nicaragua, but what and whom do we support there in Nicaragua? When did we ever say to the Somoza government that it had to allow dissent or that it had to allow individual liberty? When did we say to the Somocista regime that it had to end corruption? When did we insist on government of and by and for the people of Nicaragua? Is that what we are saying we support today?

The people of Nicaragua look at Honduras right next door and they see no evidence that this is the kind of

government we insist on or support there. They look at Guatemala and they see no dissent allowed there. They see no free elections, they see no reform, they see no basic respect for human rights. Yet that government has our support and our open-ended commitment. The President is asking us to raise the ante for the first time and provide about $40 million worth of direct military aid to this corrupt and totalitarian Guatemalan regime.

□ 1250

If the people of El Salvador or Honduras or Guatemala or Nicaragua had wanted an end to their misery, since when could they count on help from us? They never could before and the evidence is that they can hardly do so today; yet they want an end to their misery. Who can blame them?

As I have been saying ad nauseum since John Kennedy's day, this world has changed. No longer will those oppressed masses remain oppressed and subdued as they have for 300 years. That is gone forever and we had better recognize it. If they cannot count on assistance from us to end their misery and oppression, should we be surprised that they turn to Marxism or Marxist-Leninism or Castroism or Maoism or any other ism that at least offers them some help? What is it we want to do in Central America, I ask my colleagues? Let us go ahead. Let us assume we will go in, and we will. The way we are going, I predict the headlines will be, "U.S. helicopter shot down. Twelve Americans killed. Nicaraguans now have aircraft. We are going to invade."

We have already had Senators say that that is all it would take for them to vote for an invasion.

But what is it we want to do in Central America? The only decent thing I know we can do is to stand for our own revolutionary principles, which we have failed to do and which the Reagan administration is refusing to do.

What is our aim? What should be our aim? The practical reality is that we are not going to frighten the Sandinistas away, nor are we forever going to be able to prop up corrupt and incompetent regimes elsewhere, anymore than we could prop up Somoza.

I believe that we can only stand for our own principles. Those are the principles that our own people support. Those are the principles that the people of Central America yearn to live by. What would be wrong if we were to insist on sending teachers instead of riflemen? What would be so wrong about sending tools and fertilizers instead of tanks? What would be wrong about insisting on governmental reform instead of winking at corruption and paying off generation after generation of generals and Caldilles?

Where is the sin in calling for honest and open debate, honest and open elections and consent of the government and respect for the rule of law? But when have we ever done these things in Central America?

I tell you, my colleagues, unless we do these things, the people of that part of the world will turn elsewhere for their leadership and their inspiration. It is not that they really want to. Anybody talking to these people will tell you that. It is not that they dislike us. Anybody in direct communication with the masses will tell you that. It is that we are not leaving them any other choice.

Truth will not be denied, as well as justice, in Central America, nor will we succeed in effectively providing the leadership, not through tanks, and I might remind my colleagues, I would not be at all surprised that these headlines that I am predicting is because in these maneuvers now for the first time we are introducing M-60 tanks, plus the British Scorpion tanks. Now, those cannot operate except in those areas on the Nicaraguan border with Honduras where the Nicaraguans have built up their tank strength, so that our maneuvers are provocative. We are in direct alliance with those forces trying to knock out the regime—through what? What we denounce to the world—terrorism.

We, you and I, my colleagues, because we finance the CIA and we refuse to ever hold them accountable. We have let them arrogate to themselves as well as other runaway agencies powers never intended; so we as well as these deprived countries for generations are under the ominous shadow of losing those very selfsame liberties, if we have not already.

Unless we stand for truth and for justice, our policies can never succeed. We will have lost, not because the people of Central America have been gulled and fooled, but because we have been arrogant and have betrayed our own principles.

Shakespeare says: "When nations become complacent and arrogant, the wise gods seal their eyes: laugh ats, strutting to their own confusion.

We have been arrogant and we have betrayed in the process our own basic principles. If we have already foresaken the only moral leadership that I tried my best to convince, not this President, I have been speaking out before, but on April 1 this month, on the first day of April 1980, 5 years ago to the day, I spoke for the first time in the then 20 years I had been in this Congress on the subject matter of Latin America. Even though I had been appointed by the OAS as an observer in the specially held elections in Santo Domingo in 1966, I never considered myself an expert. I do not so now. I have not been an ambassador. I cannot even consider myself an expert on our next door neighbor, Mexico, because we do not have those sources of information that are so necessary to form a complete grasp and understanding, but having been privy to some information provided me by some constituents who were in service in Central America, in Nicaragua during the so-called Sandinista revolt and later at the inception of 1979 of the present turmoil in El Salvador and these individuals, good Americans, so troubled, came to Washington, sought me out, asked me to please convey this to somebody in power.

Well, I could not. President Carter was about as inaccessible, not as much, but almost as much as this President. Of all the six Presidents I have worked with, this is the most inaccessible. He does not even acknowledge a Congressman's letter.

So I took the floor 6 months, after vainly trying to penetrate those layers and processes in the State Department and over in the White House, and to no avail.

What was my plea to President Carter? The same as it is now to President Reagan. And what is it?

Please try to retrieve what we still had on April 1, 1980, and that is some leverage of leadership with our fellow countries that fate has decreed must share this part of the world with us.

Why should we bring back the dead hand of the past with wrong policies of the era of Coolidge and send the Marines, who have occupied Nicaragua in the 20th century alone six different times? Why should we go and for the American people provide that kind of bankrupt leadership, when we still have some residual ability, perhaps no, perhaps it has been eroded now, and stop this unilateral military intervention.

Let us proceed. We have been given a chance by the so-called Contadora governments, and these are the most distinguished and some of the most stable governments there, and have offered the process which we have arrogantly dismissed. First we say, well, it sounds attractive, and then when they come out with the firm package, then we say no.

□ 1300

And the President insists now that his inflexibility, irreversible course is the knocking over of a regime that on the other hand he approves of because we have an Ambassador with credentials in Managua. How much more hypocritical could we be behaving?

I say that it is a shame because America has tremendous residual moral leadership potential and I think it is the only way we can succeed.

President Eisenhower did not think it was above the United States to get together with almost the same countries involved in 1975 as what we call

the Contadora countries almost to a country, and the dispute was that continuing up to then, border dispute between Nicaragua and Honduras, which had led to some hostility. And we did not have any compunction about going in on an equal basis with the corresponding countries called the Contadoras, and then through the World Court we settled the disputes. But America was given the credit for leadership. And I think that if it was feasible and viable in 1957, when the United States would have had more of an opportunity to use more successfully the direct intervention and militaristic gunboat type diplomacy that President Reagan is exercising now, yet our leadership was far wiser at that time and more succesful because until now that pact withstood time.

What would be wrong with us sending the creative forces and tools? Why should we have preempted and left Cuba, sent the doctors, the nurses, the teachers, provided the schools in remote village which up to then had never seen a school? Our religious representatives there kept telling us that. This is the reason they still protest. This is the reason they have been killed by the very forces that the CIA has been working with cheek-and-jowl.

Certainly we cannot accuse these noble and God-destined people, consecrated to the service of God, of being mischievous, of being Marxist-Leninists, of being anti-American? Why can we not accept their advice?

Unless we do, it is inevitable because truth and justice will not be denied ultimately. And it is tragic because we will lose everything else, our ability to provide in competition with even our so-called allies of Europe our goods that are in great demand and have the potential to change the whole complexion of things in those countries. Unless our policies change we are lost. It will not be that the Marxists are so bright, yet we insist on making them very, very bright, very very successful. It will be that our Government has been foolhardy, so unwilling to see the truth, so unwilling to believe in its own principles, so unable to learn from its own mistakes.

In Vietnam, Saigon fell 10 years ago this week. In this decade in between we have learned nothing. We are like the old Bourbon kings. We forget nothing and learn nothing.

In a decade we have again begun to betray ourselves. This time in our own backyard in an area no bigger than Texas. This time we will not be allowed the privilege of apparent survival of a defeat, because involved, as I have said once over for the past 2 years, my colleagues, you are forever proscribing our children, our grandchildren, and our great-grandchildren into a world of hostility and continued and sustained enmity.

If we want to do what we are undertaking to do now in Honduras, and which I say at this point is irreversible, you will ultimately have to be resolving the question of where to get that 100,000 troops supporting the type invasion it will take. It will take no less than 100,000. All the military experts have said so.

Of course, when they say something that is not consonant with what the Commander in Chief says, you do not hear about it, just like you did not hear the unanimous advise of the Joint Chiefs of Staff against the deployment of the Marines in Beirut. You never heard about it until after the catastrophe.

I had been saying it because I had been privy to such intimations of information, as I am today saying that you will not resolve the question of communism, you cannot bomb communism out of existence. The only way is social justice. That is all.

We have been the ones that have made a Fidel Castro a No. 1 leader. No one in the world south of us had ever considered him more than perhaps a good, ferocious ideologue and perhaps a second rater.

But why after the Falklands, and after Mr. Haig had taken 50 or more Argentine soldiers, which at the time was what we needed in Honduras, that was our beginning effort then of so-called destabilizing the Sandinista regime—naturally the Argentine leaders thought, well, if we get into the fracas over the Falklands, the United States will either be for us or be neutral. But what happened, the way it did, and we said no, not only did they pull their troops back, but less than 1 year and 2 months later all those Argentine military leaders who had been touted by Haig and all of our American leaders as bitter, anti-Castro forces, were in Havana toasting Fidel Castro.

Does that mean that Fidel Castro was so able, so smart that he could reverse those Argentinan military? No; it just meant that our ability through leadership diplomatic, moral, if you please, has failed totally. It is time we abandoned these bankrupt policies where Haig 4 years almost to a month drew the line in the smallest country in Central America, in the Western World, is still back on square one.

We have poured over $2 billion, some of it reported, much of it not, just in the military exercises in and around Nicaragua in the last 2 years and several months. We have poured in over $2 billion. Right now our operations in Honduras alone are costing us more than $1 million a day.

Who cares about that? We are supposed to be balancing the budget. Who cares about the catastrophic, untold, and unpredictable costs and the ultimate consequences of this misbegotten, misguided policy of ours, all because we just have not had the faith to remain true and loyal to our basic principles.

I yield back the balance of my time.

The SPEAKER pro tempore. The gentleman yields back 1 minute.

ORDER OF BUSINESS

Mr. ROWLAND of Connecticut. Mr. Speaker, I ask unanimous consent that I may proceed at this time with my special order for today.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

SEATING OF RICHARD D. McINTYRE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Connecticut [Mr. ROWLAND] is recognized for 30 minutes.

Mr. ROWLAND of Connecticut. Mr. Speaker, the controversy of the Rich McIntyre situation continues. Just this week the Wall Street Journal presented what I felt was a very good editorial, and I would like to read it into the RECORD and add it to the long, long list of editorials that we have seen from across this country which have been in support of Rick McIntyre.

The editorial is called "Review and Outlook" and the title is "Stacking the House," which ran in the Wall Street Journal this week.

Let no one doubt that America is a civilized country. Were it otherwise, Republicans and Democrats in the House of Representatives would be out on the Capitol lawn fighting armed duels. The two parties are in the midst of bitter disputes over a vacant Indiana House seat, the gerrymandering of congressional districts and House committee assignments.

Last January, House Democrats refused to seat Richard McIntyre, the Republican who was certified the winner of the race for Indiana's eighth congressional district; that seat is now vacant. The Evansville Press's editorial page has been running a daily box titled "Taxation Without Representation," depicting an empty House desk and a running tally of the days the eighth district has gone without a congressman. This is Day 90.

Today, House Republicans will move to have Mr. McIntyre seated. If the Democrats again vote to bar him, this dispute will lumber toward a conclusion that can help Democrats very little but harm them greatly.

At this moment, the citizens of Indiana are entertaining a delegation of official counters appointed by the House Democrats to retabulate the eighth district's votes.

□ 1310

I yield to the gentleman from Louisiana.

Mr. LIVINGSTON. I thank the gentleman for yielding.

Mr. Speaker, may I ask the gentleman when that was written?

Mr. ROWLAND of Connecticut. I believe this was Tuesday. So we are probably up to about the 93d day at this point.

Mr. LIVINGSTON. That is right. And since then, of course, the House has actually voted on the issue; the Democrats did win once again and Mr. McIntyre has not been seated and Indiana's Eighth District I presume is still without a Congressman.

Mr. ROWLAND of Connecticut. Absolutely. We are at the 93d or 94th day that Mr. McIntyre was not seated even though he was the certified winner. The Democrats took another vote and did win, along party lines. The people, the 500,000 people in the Eighth District of Indiana still do not have representation even though we have had some very significant votes: For example, the MX vote; yesterday for example, we had important votes on the budget and the NASA authorization. We see a consensus and a movement in the House.

We are entering some bigger votes coming down the line this week and next week, as soon as we get back from the recess. We have to assume, since we have not moved to seat Mr. McIntyre that that representation will still go unfounded in that particular district.

Today something interesting happened, we swore in the distinguished Representative from the State of Louisiana. She was the certified winner, certified by the secretary of state, yet we have no problem in swearing in that particular individual.

I yield further to the gentleman from Louisiana.

Mr. LIVINGSTON. I also come from Louisiana I say to the gentleman. The gentleman in absolutely correct. The gentlewoman from Louisiana was sworn in today and we all commend her today on her election. But it seems that the ordinary, reasonable constitutional process is that when the Secretary of State would certify an individual to be the winner of an election that the House of Representatives should respect that certification and he should be sworn in and enabled to take his seat.

I have to recall when I first came to Congress back in 1977, just before I was elected, there was a preceding election in 1976 in which there was a dispute. There was a legitimate claim filed by one of the Democrats who engaged in the primary against the fellow who ultimately won, saying that there was vote fraud. Yet, despite that claim which went through the local courts, the state supreme court, the lower Federal court, the Court of Appeals in the Federal system and ultimately to the Supreme Court, the gentleman who was certified the winner of the Democratic primary and who subsequently beat me in the general election was seated without dispute. And the House of Representatives accepted him. They raised no concern of care about his certification. They swore him in on the same day that all of the rest of the Members were sworn in and it was only 6 months later when the courts ruled that the matter deserved some extra scrutiny, that ultimately he resigned of his own accord, tried to run again, failed at his election efforts and I was ultimately elected to Congress.

The point here is you had a situation where the matter was in the courts and yet the Congress went ahead and certified him, seated him, swore him in, and yet here is an instance that the gentleman raises and I want to commend him for bringing that matter to the attention of the Chamber today, here is a matter where there is much less dispute, no dispute about the certification, no allegations of fraud, or irregularities, a man who has been certified by the secretary of State has been refused admittance to this Chamber. I think it is really a unique historic constitutional precedent which we all should fear unless this particular thing is rectified in the very near future.

I thank the gentleman for yielding.

Mr. ROWLAND of Connecticut. I thank the gentleman for his comments.

Certainly we can make reference to the fact that we did have a recount in that district and the recount clearly showed that Mr. McIntyre was the winner again by some 417 or 418 votes.

Mr. Speaker, I yield to the gentleman from Arizona.

Mr. KOLBE. I thank the gentleman for yielding.

Mr. Speaker, the gentleman from Louisiana, a moment ago pointed out I think exactly the issue, as the gentleman from Connecticut did just before him. I could not help but earlier today as we swore in the gentlewoman from Louisiana to her new seat, think of the irony of this situation. This is the democratic process at work where we have a vacancy and we have a person elected, in this case she brought a certificate in very promptly, just 3 or 4 days after her election. So she is here with her certificate before the House of Representatives and is being sworn into this body. That is as it should be. There is no question about the validity of that certificate of election and nobody has yet to this day challenged the certificate of Mr. McIntyre to represent the people of the Eighth Congressional District of Indiana.

Certainly as one Member of this body it strikes me, as I am sure it must the gentleman from Connecticut, you wonder where does this end? Who can be struck next in this process if we allow, just at the whim of somebody, we ask an individual to stand aside? And not just stand aside for an hour or a day until this issue is resolved; but to stand aside, as the gentleman points out, for better than 3 months, until we can get some resolution of this issue. We have no indication that it will be over soon, that we will be reaching or are getting closer to a resolution of the issue.

I came to this body with a relatively close election, 2 percent, 6,000 votes. Well, it is certainly more votes than Mr. McIntyre won his election by, but I have never had anybody explain to me what is the threshold number of votes that you have to have to win by in order to be seated in this body.

I have always assumed that bringing a valid certificate from your home State, from the secretary of state there, bringing it to this body, that you would then be seated and if there were any allegations as to the election that is something that the House Administration Committee would look into.

Mr. ROWLAND of Connecticut. I thank the gentleman for his excellent remarks.

Mr. Speaker, the gentleman from Arizona and I came into this Congress at the same time as freshmen, each representing 500,000 people, concerned about the process. I think it really hurt for all of us to see this display.

Something else happened this afternoon during the 1-minute discussions. One of our colleagues got up and talked about the fact that there was a constituent from the Indiana district who had sent a letter to this particular Congressman asking for something to be read into the RECORD.

So perhaps earlier on in the session there was not as much significance to this one vote or there was not as much significance to the fact that those people are being represented. But now the public should be more aware than ever that they are not being represented as we move ahead into more substantial votes, into the budget debate, moved to just the mere question of a constituent calling up and saying: "I want my Congresssman to vote yea or nay" or "I want my Congresssman to read something into the RECORD of concern to me."

I think we are starting to realize that as we saw in the vote on the MX, within votes, that we realize the importance of those votes and that representation, and what some of the editorials refer to as "taxation without representation."

I yield further to the gentleman from Arizona.

Mr. KOLBE. I thank the gentleman for yielding.

Mr. Speaker, I agree completely with the point that the gentleman from Connecticut has made. It seems to me again that one of the things that we have to keep in mind in this debate is that regardless of whether or not a person has won by 1 vote, or 1,000

votes, or whether the vote on this floor is by 1 vote or by 434, now, to nothing, that the people of the Eighth Congressional District of Indiana have as much right to be represented in this body as do any of the other citizens of any district in this body.

I think it is most unfortunate that the majority has chosen to take the position they have with regard to this matter. I think it seriously calls into question the processes in the House of Representatives and I think it has been very destructive to the good will that normally should exist in a body like this. And of course the kinds of editorials which have been appearing with greater frequency than ever, I think illustrates that the American people and certainly the news media agree that the citizens of this country have a right to be represented in this Congress and that Mr. McIntyre ought to be seated.

I commend the gentleman for bringing that editorial to our attention because I think it is one of the best editorials that has been written on this subject.

□ 1320

Mr. ROWLAND of Connecticut. I thank the gentleman for his kind remarks.

Mr. Speaker, let me continue with the remarks made in the editorial; and it gets right to what the gentleman from Arizona [Mr. KOLBE] was referring to, and that was the situation that—

Mr. McIntyre won by more than 400 votes when Indiana did the counting. Late last week, Congress counters were in Vanderburgh County, where Washington's Democrats allege the most "irregularities" occurred. The recount cost Mr. McIntyre five votes off his earlier tally. But the recount in another county gained him six votes. Net change so far: one vote.

The editorial goes on to say:

If the House leadership presses forward to a victory on the seating vote today, the members will then go off on Easter vacation, the Washington-directed recounting will continue, possibly for some weeks, and on April 15 quite a few Indianians will be remitting taxes to Washington. Meanwhile, these unrepresented Indianians were locked out of the MX missile voting in the House, and they have had no input whatsoever into that chamber's writing of the farm bill. So far, the Democrats' disenfranchisement of Indiana's eighth district has gained them mainly denunciations from the nation's liberal editorial pages. Moreover, they're handing Republicans a wonderful, high-ground issue for the '86 campaign. Perhaps before the voting to seat Mr. McIntyre, Tip O'Neill can ask project-leader Tony Coelho to run by him again how the party is benefiting from all this.

A vote to seat Mr. McIntyre would make the dispute evaporate by dinner time, but the argument over gerrymandered House seats can't be shut down. Earlier this year a federal district court panel ruled—entirely independently of the McIntyre dispute—in favor of Indiana's Democratic Party, which declared itself the victim of an unconstitutional gerrymander. In 1982, Indiana's Democratic state legislature candidates won 52% of the popular vote but won only 43 of 100 seats. Should the Supreme Court agree that Indiana's local gerrymander is unconstitutional, the impact on the House of Representatives could be great.

Democrats have a 253 to 182 majority in the House. That's a 58%—42% split. But GOP House candidates last November won nearly 50% of the popular vote. A conservation estimate by political analyst Kevin Phillips atributes half of this 71-seat gap to Democratic gerrymandering of House districts. Some House Republicans believe they need only to break through the 200-seat level to precipitate party-switching and vote-switching among conservative House Democrats.

This prospect may partly explain the Democrats' attempts to divide committee assignments in a way that eviscerates the Republicans' voting power. Relations are so low that Republicans have refused to make assignments to several subcommittees and have boycotted hearings.

Gerrymandering is, of course, an abuse practiced by both parties. But its perceived benefit to House Democrats now, added to the disputes over stacked committee assignments and the vacated Indiana seat, conveys to the public the image of a party playing fast and loose with the principle of representation.

I want to thank my colleague from Arizona [Mr. KOLBE] and my colleague from Louisiana [Mr. LIVINGSTON] for their comments, and I think it is very important that we now realize and continue to realize that the so-called liberal press, in editorial pages not only in the Wall Street Journal but across this country and in Indiana are speaking out in favor of the McIntyre situation and are speaking out and asking us to respond and take action this year.

Mr. DORGAN of North Dakota. Will the gentleman yield?

Mr. ROWLAND of Connecticut. Centainly I will yield to the gentleman.

Mr. DORGAN of North Dakota. I thank the gentleman for yielding to me.

Mr. Speaker, I was interested in listening to the gentleman's description of the McIntyre situation, and one of the aspects of that situation that was interesting to me that I would like to hear your comments about was the behavior of the secretary of state in that State in which the secretary of state refused an election certificate after the election occurred, to Mr. McCloskey, who it appeared at that point had won the election and would have in the normal course, had the secretary of state behaved the way a secretary of state normally behaved in that State, would have received an election certificate, but because it was withheld, and a partial recount then put Mr. McIntyre in the lead, the secretary of state issued the election certificate to Mr. McIntyre.

Does the gentleman feel that behavior is unusual?

Mr. ROWLAND of Connecticut. I do not feel the behavior was unusual at all; and I think they were following with their Indiana State law; they had a time period to count the ballots; they had a time period to do the recount, and in the actual recount they came up with I believe about a 400-plus margin.

Mr. DORGAN of North Dakota. If the gentleman will again yield, does the gentleman believe or understand that what the secretary of state in Indiana did in this case was unusual; or does the gentleman understand that this was what the secretary of state normally did in these cases?

The reason I ask the question is, it is my understanding that what the secretary of state in Indiana did was not in sync with what the secretary of state normally does. Normally, a secretary of state in any State, and in Indiana, would issue an election certificate after the election-eve ballots were totaled, and after that count became obvious, at that point Mr. McCloskey was ahead. After a partial recount, Mr. McIntyre was ahead; I do not know who won that race.

The fact is, I am going to vote for whoever this commission determines to be the winner, and recommends to us be certified. I intend to vote to seat that person on the floor of the House.

My concern is that, I have watched the news and television; I saw someone on your side of the aisle again the other day on television say that we were trying to "steal" the seat. That sort of nonsense does not have much place in this House and in good public debate.

What I want to say to you is that there were a number of things that happened in this race that were unusual, one of which was the behavior of the secretary of state in Indiana and the issuance of that certificate, withholding it, first, from Mr. McCloskey when it appeared that he had won, and when that certificate normally would have been issued; and then, second, going ahead and issuing it after the fact to Mr. McIntyre when he pulled ahead.

Mr. LIVINGSTON. Will the gentleman yield to me?

Mr. ROWLAND of Connecticut. I am glad to yield to the gentleman from Louisiana.

Mr. LIVINGSTON. Mr. Speaker, I am not expert on Indiana law, but I can guarantee you that there is not a State in this Union that requires that the secretary of state certify an election on the night of the election.

Louisiana requires that the certification be made some 3 days after the election, once the results are in.

Now on the night of the election, Mr. McCloskey was ahead by about 38 votes, but there was question as to whether or not certain machines were

counted and some machines were counted twice.

Three days after the election, the secretary of state, as I understand it, went according to Indiana law and certified Mr. McIntyre as the winner by some 400 votes.

The fact of the matter is, to this very day Mr. McCloskey has filed no lawsuit, alleged no irregularities; there has never been an allegation that the secretary of state has acted improperly. The secretary of state took a required or prescribed period of time, certified McIntyre the winner, and yet McIntyre—here it is April 4—is not seated in this Chamber.

I would just like to compare this with 8 years ago, there were rampant allegations of fraud and irregularity in the State of Louisiana in my own congressional race in 1976, not against me, thankfully, but against the fellow that ended up beating me in the general election. I did not file those charges of irregularity; they were filed by a Democrat, a candidate who had run for office and who had been deprived, he said, of this victory in the Democratic primary.

He filed charges in court; went all the way through the State and Federal court systems, yet despite the fact that those charges were filed, despite rampant charges of fraud and irregularity, Mr. Rick Tonry was certified by the secretary of state as being the winner of the November elections, when I lost, and in January on the prescribed date he was sworn in, and there was not mention of irregularity or anything. He was deemed by the House of Representatives to be the lawful holder of his seat, the First Congressional District seat of Louisiana.

And that thing went through the courts for 5 months thereafter, and then Mr. Tonry finally stepped down and there was a whole new series of elections.

The point is, in that instance when it was a Democrat candidate who was ultimately declared the winner by the secretary of state, and despite all the fraud allegations, there was not a peep about whether or not he should be seated.

□ 1330

In this instance, a close race, a certification by the secretary of state, not a single allegation of fraud or improper conduct by the candidate who lost against the secretary of state, and yet we have gone 4 months, 4 months without certifying or without accepting or seating the gentleman who won that election.

I do think that it is improper and I think that it is incredible that we continue to act that way.

Mr. ROWLAND of Connecticut. I would just simply like to add another instance that happened in the State of Connecticut. I made reference to it in special orders previously. In the State of Connecticut, we had a legislative race which was very, very close. It happened to be my old State Rep district. In that race, the Republican won by just over 10 votes. They had the recount. No certificate was given. They had a recount immediately after the election. The recount showed that indeed the Democrat won by two votes. So what happened at that point was, the secretary of state gave the certificate to that Democrat who won by two votes. She was seated and sworn in, despite the fact that the House and the Senate were both controlled by the Republicans. Then under the normal order of the process, they had the general elections committee then review and investigate the situation, looking into absentees and any other irregularities that were supposedly brought up, and we found from those discussions that the two-vote margin was indeed proper, and even during that time—and it took several weeks—that district was being represented because the person was sworn in and was seated, even though it was a very close election.

Mr. DORGAN of North Dakota. If the gentleman will yield, first of all, I do not think I suggested that the secretary of state of Indiana acted improperly. I think what I said was that the actions were unusual, that he did not follow the usual course of events.

Mr. LIVINGSTON. Will the gentleman yield for a question?

Mr. ROWLAND of Connecticut. I yield to the gentleman.

Mr. LIVINGSTON. Is it the gentleman's contention that the usual course of events are followed in all 435 cases, in every election in the history of this Nation?

Mr. DORGAN of North Dakota. No. The only point I want to make is that the vilification of the Democrats on this issue is a little disingenuous, at least in my estimation, because we had a Republican secretary of state down in Indiana who rushed to first withhold the certification of Mr. McCloskey and then offered, after a partial recount, for Mr. McIntyre.

The point I wanted to make to you is this, if I might: I lament also the amount of time it has taken to get a Representative from Indiana on the floor of this House. I am prepared to vote for the Republican or Democrat, whoever is declared the winner by the people who count these ballots in the way they should be counted. You know and I think I know and others on the floor know that what happened in Indiana is you had an abomination of a recount down there, each side pulling and tugging in various counties, trying to get their best advantage, in which case we had some ballots whose votes were counted for Governor, for county offices, for State offices, for State legislature, but whose vote on the same ballot for the U.S. House seat was thrown out.

Now, my interest is to see that all of the people who voted in that election have their ballots counted, assuming those votes were fairly cast, and assuming those ballots should be counted by election law, and then have that forwarded to the House and we make a judgment about who won, and I am prepared to vote for either candidate.

I am just saying that I get a little upset when people say we are trying to steal something. We are not trying to steal anything. I think that the motive of a lot of the people in this House who have voted the way I voted is to try and determine who the legitimate winner is and get that person seated representing that district of Indiana.

Mr. ROWLAND of Connecticut. If I may ask the gentleman a question, I appreciate his remarks, and I understand the opinion that he has and why he has that opinion. My question is very simple: Don't you think that those 500,000 people from the State of Indiana in the Eighth Congressional District should have been represented for the past 3 months? And who knows, whether it is going to be the next month or the next 3 months, don't you feel that while we are looking into those so-called irregularities, or whatever they may be—opinions, political or otherwise—don't you think we should be having representation and don't you feel that those people should be represented?

Mr. DORGAN of North Dakota. When you talk about voters, are you talking about all the voters, including the ones that have been thrown out, 5,000 voters' votes that have been thrown out by that recount that was such an abomination?

Mr. ROWLAND of Connecticut. I am talking about people being represented in this House.

Mr. DORGAN of North Dakota. But are you including the voters whose votes apparently have not been counted in those recounts?

Mr. KOLBE. Mr. Speaker, will the gentleman yield?

Mr. ROWLAND of Connecticut. I yield to the gentleman from Arizona.

Mr. KOLBE. I would like to answer the question of the gentleman from North Dakota, if I might. Yes, I think that all those ought to be looked into. There were obviously hundreds or thousands of ballots thrown out in other districts in Indiana. In the case of the Eighth District, it may make a difference in who represents the Eighth District. But there should be no question that that district ought to be represented while the House of Representatives is looking into the sit-

uation to determine who ought to be that Representative.

I cannot help let pass the earlier comment that the gentleman from North Dakota made about the secretary of state of Indiana. The secretary of state of Indiana followed precisely the rules and the processes under which the Indiana election law was required. He is, as the gentleman from Louisiana suggested, not supposed to issue an election certificate on the night of the election. The day afterwards, when the vote changed from Mr. McIntyre to Mr. McCloskey, it became very apparent that some of the precincts, some of the counties had added up, had tallied their numbers incorrectly. It was simply a matter of addition. The court went back and said to those counties, "Retally and send in a new tally sheet to the secretary of state." When those were received, all within the time frame as required by Indiana law, the secretary of state issued a certificate to Mr. McIntyre as the duly elected Representative from that district, just as all the other Representatives, Republicans and Democrats, from all the other districts of Indiana.

Mr. DORGAN of North Dakota. Might I ask one additional question?

Mr. ROWLAND of Connecticut. I yield to the gentleman.

Mr. DORGAN of North Dakota. How does the gentleman respond to the statement by your former colleague, the Republican, Mr. Deckard, who held that seat, who has been quoted in the press, indicating he felt the House did the right thing in seating either candidate. Was that a misquote, or was that an accurate quote by Mr. Deckard? If it was, here is someone from your persuasion saying that he thinks the House did the right thing. And yet there are those of you—not necessarily those of you standing here—those of you in this House on that side of the aisle who go on national television shows and say, "You Democrats are trying to steal something." We are not trying to steal anything. We are trying to figure out who won that election and seat that person on the floor of the House.

Mr. ROWLAND of Connecticut. Let us look past the rhetoric, for a moment. I think we can get away from who stole what. We can get past even some of the rhetoric that we see in the editorials, we can get past who, from what political persuasion, feels what particular way. The bottom line is that there is no one representing those 500,000 people.

We can argue about whose votes were thrown out, whether they were black or white votes, whether they were Republican or Democrat votes, we can argue about who is on what side, but the only partisan thing that has happened is the votes that we see, the three votes that were taken on this floor, the simple votes, where we wanted to have someone seated, Mr. McIntyre was the certified winner, to be seated, and represent those 500,000 people while another recount is going on, while more attention is being given to the situation, and just making sure those people are represented. I do not think it is a lot to ask.

Mr. LIVINGSTON. Will the gentleman yield?

Mr. ROWLAND of Connecticut. I would be happy to yield.

Mr. LIVINGSTON. I would like to also add that those votes really have not been on the issue. Invariably, every time that our side has raised the issue before the House, there comes a motion to table which precedes our motion, and invariably it is an overwhelming Democrat vote against a Republican vote which sends the whole matter back to the Chair until some other time uncertain. And I think that really the gentleman's point is well taken, we should not be concerned about putting the blame one place or another. The fact of the matter is that this is an incident without precedent. There are so many more of us currently holding seats in this Chamber where much more serious disputes have arisen during the course of the election or the campaign, yet we are seated. And in this instance, because the election was close, we have taken the unprecedented step of denying the Eighth District of Indiana the opportunity to seat their Congressman. I think that is wrong. I think it is a bad precedent, and I think it is a bad precedent not only because the Democrats happen to control the House of Representatives, I think it would be a bad precedent if the Republicans controlled the House of Representatives. And, by all statistical analysis, I might expect by, say, 1992 the Republicans might control this House. I would warn the gentleman, or any other Member of the majority party now, that you cannot expect to always be in the majority party. If you wish at some time when you might become in the minority party not to be ruled with a despotic whim of majority rule, regardless of fairness or equity, then I would suggest that you should not treat us that way now.

Mr. DORGAN of North Dakota. If the gentleman will yield for another comment, I understand what the gentleman is saying. All I am saying is this: The argument is, "Seat our guy because we have these procedures that allowed our lawyers to determine in the election recount that these 5,000 people's votes should not be counted, so our guy wins if you keep those out" I think what we ought to do is have a recount that is fair and seat the winner. I am not sure who the winner was. If I knew who the winner was, I would vote to seat the person.

Mr. ROWLAND of Connecticut. It is not a question of seating our guy or your guy or any guy.

Mr. LIVINGSTON. Will the gentleman yield for one question? If in this most recent recount of many, admittedly, it turns out that Mr. McIntyre is the winner, do I understand the gentleman——

The SPEAKER pro tempore. The time of the gentleman from Connecticut [Mr. ROWLAND] has expired.

Mr. DORGAN of North Dakota. The answer is yes.

Mr. LIVINGSTON [continuing]. That the gentleman would not turn it over to a special election?

Mr. DORGAN of North Dakota. Absolutely.

Mr. LIVINGSTON. I thank the gentleman for his answer.

Mr. ROWLAND of Connecticut. I thank my colleagues for participating in this special order.

ORDER OF BUSINESS

Mr. LIVINGSTON. Mr. Speaker, I ask unanimous consent that my special order be heard at this time.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

MORE EVIDENCE OF SANDINISTA ABUSE OF HUMAN RIGHTS

The SPEAKER pro tempore (Mr. RAY). Under a previous order of the House, the gentleman from Louisiana [Mr. LIVINGSTON] is recognized for 60 minutes.

Mr. LIVINGSTON. Mr. Speaker, I would like to commend the gentleman from Connecticut for taking out the previous special order and for his eloquent presentation of his case.

Mr. Speaker, in the next few hours or days, the subject of U.S. assistance or lack of assistance for the freedom fighters in Nicaragua will again probably hit the top of the front page, and I think that it is important that the United States try to gain some perspective about what is happening in Nicaragua today.

The fact is that the Sandinista government which controls Nicaragua is a Marxist government, and that their rule or their reign, there are right now, abuses perpetrated against the people of Nicaragua going on day after day.

One of the major considerations of the Organization of American States, in withdrawing recognition of the Somoza government, which preceded the Sandinista government, was that that regime, that is the Somoza regime, had a record on human rights which was admittedly atrocious.

I think it is ironic that today the record of the Sandinistas makes Somoza look like a piker. Now, I do not mean to stand here and justify the rule of Anastasio Somoza, but I would like to demonstrate that there is a contrast, that there is a comparision that should be noted by all of the Members in this Chamber as we go forward on this issue in the next few days or weeks.

This past fall, the Nicaraguan Human Rights Commission, in exile, presented testimony before the OAS Inter American Commission on Human Rights. Alberto Suhr, a victim of the Sandinista human rights policy, presented testimony for the Commission.

While it is by no means complete, I would like to commend the statement to my colleagues as another in the ever-growing volume of evidence of Sandinista human rights abuses. The statement should reinforce the need for the United States to morally, politically, and diplomatically support those Nicaraguans who are fighting to regain freedom and pluralism in their country.

The statement follows, and it was gathered, again, by the Human Rights Commission of Nicaragua, in exile, and presented by Alberto Suhr to the OAS Human Rights Commission on October 1, 1984. Although the Sandinista government admits to having only some 4,000 prisoner, of which none are political, data compiled up to the 22nd of June, 1984, has determined the existence of over 50,000 political prisoners. Now, that is 50,000 people, held politically, within the confines of Nicaragua, in prison, by the Sandinista government include the following:

In the Zona Franca, the largest prison, which used to be a factory and is close to the airport near Managua, there are 12,457 prisoners. In Tipitapa, 11 kilometers from Managua, there are 8,124 prisoners. In Boaco, 77 kilometers from Managua, there are 482 prisoners.

Diriamba, 640 prisoners; Jinotepe, 570 prisoners; Rivas, 1,236 prisoners; Grenada, 2,701 prisoners; Nandaime, 131 prisoners; Santo Tomas and Juigalpa, 1,733 prisoners. Now, these are all different prisons scattered around the country of Nicaragua within some degree of proximity of Managua.

In Bluefields in jail there are 2,340 prisoners; in Matagalpa, 4,200 prisoners. There are in Jinotega, 2,411 prisoners. In Esteli, 1,790 prisoners; Ocotal, 1,200 prisoners; Cinco Pinos, 6,400 prisoners; El Chipote, 1,280 prisoners; in Leon, 3,700 prisoners; Chinandega, 1,555 prisoners; Posoltega, 800 prisoners; Puerto Cabezas, 1,338 prisoners; and Chichigalpa, 320 prisoners.

Mr. Speaker, before I go on, let me point out that this is a nation of fewer than 7 million people. We are a nation of some 230 million people, and we have, I dare say, barely that many prisoners.

This information about this number of prisoners does not include the prisoners estimated at 4,700 who are held in clandestine jails of which we know the location of only 16 of those jails.

Now, the report asks the OAS International Commission to form a committee to go to Nicaragua, and with a special guide, be taken to these jails. So far, to the best of my knowledge, that has not happened. The OAS, in fact, refused, and said that it was not their concern because the Commission on Human Rights was in exile outside of the country, and not actually in Nicaragua.

I dare say in a Marxist regime they would not be doing so good and their report would not be quite so thorough if they were in Nicaragua. The report indicates that the prisoners live in conditions where cells are, on the average, only about 5 by 5 meters, and in these cells an average of 80, 80 prisoners, are kept, although some special cells contain 100 or 110 prisoners. This forces the prisoners to live literally one on top of the other.

There are some bunks in the cells, maybe an average of seven double bed bunks made of plywood in each cell. Sanitary conditions in the cells are nonexistent. There are no lavatories in most of the jails. The prisoners are given a 5-gallon bucket in which to urinate and have bowel movements. The pail is allowed to be emptied once, on certain occasions, twice a day, although this permission to empty the bucket may vary upon the jail's warden's mood on that day, and the intentions of harassment to the prisoners.

The bucket then serves no purpose, and the prisoners, when they have one, are forced to urinate in plastic bags in which they might have some food kept. The prisoners then urinate and so forth, and I am not going back onto this; that is disgusting. But these are the conditions under which maybe 80 to 100 prisoners are kept in a 5- by 5-meter jail.

It goes on: At the time to take a bath, which can occur every day or once or twice a week, the prisoners are let out in groups of three cells and given 10 minutes to shower and eventually wash their underwear or their uniforms, which is done with the uniforms to save time. There are only 17 showers and 17 toilets per cell block, and these are outside in the open, with a wall surrounding the wash area. In 10 minutes time, the water is shut off, and if the prisoner has been able to bathe or not is his problem, and if he is lathered with soap, well, he just gets back into the cell full of soap.

Failure to leave the showers or the toilet bowl upon order can result in severe beatings. The pails are emptied on the shower floor in order to save time, and also as the gutter that takes the excrement out goes on the borderline of the shower floor.

Food is scarce and given out only in such quantities that will keep the prisoners alive. On the average, prisoners have lost some 40 percent, 40 percent of their original weight. On occasions where relatives are allowed in, food is taken to the prisoners and left in the patio. Each prisoner then goes to have his food sack searched; the food is thrown on the ground and in some cases stepped upon so as to guarantee that there are no files in the bread or in the banana, so the Sandinistas say.

□ 1350

This food is nevertheless carefully picked up by the prisoner to save for hard times, no matter if it is full of sand or mud.

The prisoners are constantly harassed on a daily basis. For example, in those cells where it is impossible to determine whether it is night or day, a person might be awakened at several different hours to take his meal or shower or take his pail out to be emptied, making the prisoner believe it is daytime or nighttime, not letting them know.

All reading material, as well as radios, cards, or TV is strictly forbidden. One prisoner once was shot for having had a small pocketbook type Bible found. His name was Enrique Reyes Potosme and he was only 17 years old.

In order to continue the harassment, the relatives of prisoners on those rare visiting days on which visitors are allowed in are searched in indecent ways, forcing some prisoners to tell their relatives that they prefer not to have them visit in order to avoid this kind of harassment. There have been occasions on which a wife or the mother of a prisoner has been raped, and the guard who raped the visitor goes to the prisoner and tells him of this and makes fun of the prisoner.

The Human Rights Commission has volunteered to have the names of these rape victims given to them, but has not done so up to the time of the writing of this report, so as to avoid any more repressive acts on the prisoner or his family.

On those days that the freedom fighters have any sort of special victory over the Sandinista forces, and of course the freedom fighters are still down there and gaining strength on a daily basis, the Sandinista government gets even with the prisoners in various different ways, using different types of torture.

The most common type of mass torture is forcing the prisoner to lie face down with his hands on his neck and wet the floor with a high-pressure hose, to keep it wet for 2 or 3 days, not allowing the prisoner to move, even to go urinate in the pail. He must stay in

this position, as the threat goes, or be shot. Sometimes he is forced to the floor naked or in his underwear, sometimes with full uniform, which is a very, very heavy drill, pocketless sort of jump suit. In both cases the floor is wet. On these occasions, the food might be doled out and the food is thrown to him on the floor in that place where the prisoner is. The prisoner can be allowed to move his head to try to pick up the food with his mouth, but he cannot move the rest of his body.

On July 7, 1984, four political prisoners died in the Zona Franca jail in the pavilion No. 3 due to health complications arising from this type of torture. These men were Gustavo Mendieta Aguilar, Rafael Sandoval, Joaquin Pereira Bustamente, and Sabastian Romero Cedeno.

Another type of group torture is the putting of 800 to 1,000 prisoners in a bathroom and again, as already indicated, they are in the open, with only a surrounding wall, no roof overhead. The prisoners were left there for several hours, sometimes up to 10 hours at a time. For a better understanding, the report shows that the bath house comprises 17 showers and 17 latrines, which are only 12 by 28 meters across. That gives you an area of 336 square meters and puts an average of three prisoners to the square meter, including latrine area and the shower areas. There have been cases where the prisoners have been left there standing under sun or rain for up to 18 hours, although the average stay is only, the report says, 10 hours.

Special select prisoners are held to a wall or tied to a chain link wall where Communist guards take turns, hour upon hour, hitting the prisoners, never too hard, but never too soft. This can take place until the Sandinistas get bored in their game.

Prisoners are put in metal or steel boxes for misbehaving. The word "misbehaving" can be cataloged as anything from a bad look at a guard to a comment on conditions in the jail or to a movement made while in line under orders for rigid standing. Sometimes a prisoner can be made to stay in his steel box several days without food or water.

The report goes on to discuss certain specific instances of torture, and I think that it is important that we focus on individuals, because we are dealing with human beings who are suffering these atrocities, these tortures at the hands of the Sandinista government in Nicaragua, and it is too easy for us to think about the nebulous folks who are some 1,200 miles to our south without really focusing on individuals. These are human beings that we are talking about.

For example, Leonidas Sandoval and Eugenio Manzanares, both ex-National Guardsmen in their early 20's, were stripped naked, tied to a chain link fence inside the pavilion No. 3 of the Zona Franca jail and beaten continuously for about 15 minutes, later held by several Sandinistas and Cuban guards by their testicles into which a syringe needle was introduced violently several times until they fainted. Later they were revived and this act was again committed on both of them in front of several hundred prisoners who were forced to watch. This was to install fear into the rest of the prisoners and make sure they knew the same thing could happen to them if they tried to escape or cause trouble.

Sandoval and Manzanares were left tied to the fence and unattended despite their constant crying, and died, one 3 days later and the other 2 days later, with severe inflammation of their lower abdomen. When a guard would pass by and hear them cry, the prisoners would receive kicks.

Ramond Colindres, Anibal Reys Calderon, and Reger Eucabio Zelaya—and I apologize to these gentlemen for probably mispronouncing their names—the last one, Eucabio Zelaya was 14 years old.

These three people were tied with hands behind their backs, and by the feet. Held by guards, they had their eyes plucked out with spoons by a guard. First one of them had one eye plucked out, then the second had one eye plucked out, and then the third had one eye plucked out. This was done in sadistic order so each could see what happening to the others. After the third person had suffered the severance of his eye, the Sandinista guards commenced on plucking out the second eye of the first person, then the second person, and then the third.

While they cried and moaned on the floor, they were constantly beaten with sticks or given kicks. They were later taken out to the yard where they tied to posts and left to die of infection and hunger.

My colleagues, one of those victims was 14 years old.

Oswaldo Perez and Juan Mendoza Arquello, these two fellows suffered general practice, which is actually put upon all the prisoners. Some prisoners, chosen at random, are given boiling water baths, which is thrown on them with a pail. They are alive, but their names are withheld for security reasons so that they or their families will not suffer persecution. Several prisoners had resulting and severe burns from this treatment. The report indicates that they know two who died. Presumably they are talking about the two that I just named.

Enrique Putoy, Jaime Navarro, Omar Nunez, Santiago Mendez, Plutarco Ramirez and Eugenio Ramirez, the last two brothers, were all tortured as examples as to what could become of anyone opposing the Sandinista regime. They were forced out of their cells, and in the presence of some 600 prisoners had their ears perforated with ice picks like piece of steel rods.

My Speaker, this is inhumane, and I am sure that people watching at this time are probably just overwhelmed with the atrocity of what I am describing, but I am describing acts alleged by the Human Rights Commission in exile, acts which were performed by representatives of the Sandinista government upon prisoners in Nicaraguan jails. This torture that I just described was ordered by the chief of the penitentiary system, called Capt. Raoul Cordon.

□ 1400

The victims, those six victims that I indicated, were later shot and buried in one of the many mass graves existing on prison grounds.

Rene Toruno was taken from his cell, stripped naked in the courtyard, had a hand grenade tied to him with tape, and was taken to a small crevice about a hundred yards from the prison, where the pin on the hand grenade was pulled as he was thrown into the crevice. Several seconds later, an explosion was heard, and the guards were seen returning and laughing.

There are other tales of torture, some of them perpetrated by Commanders Thomas Borge, a leader of the Sandinista revolution, and Daniel Ortega, one of the other leaders of the revolution, who in May or June 1982, it is alleged, came to pavilion No. 2 of the Zona Franca jail and offered troops to start shooting at the jail. The walls were metal, and the bullets passed through, killing 48 people. Those who were wounded in this 2-hour-long situation were taken out and forced to kneel befored Borge, who, one by one, according to this report, on some six prisoners, put a bullet in the base of their necks. Some 76 prisoners died like this. No exact figures are available, as the bodies were never seen nor given to their relatives. Publicly, it is known, according to this report, and the International Red Cross intervened. Yet the Sandinista government said it was an attempt to escape and only 18 were wounded, according to the Sandinistas.

To prove their point of view, some prisoners were taken at random, wounded on purpose, and sent to a hospital where they were ordered to say that they were wounded in an escape attempt.

Those killed in this massacre were taken on a helicopter that landed on prison grounds and, according to the statements of other guards who mentioned the case with one or another of the prisoners, were thrown into the nearby volcano which is active.

Mr. Speaker, that concludes the report which was gathered by the Human Rights Commission of Nicaragua in Exile and presented by Alberto Suhr to the OAS Human Rights Commission on October 1, 1984.

We would all like to think that the material covered in this report, some of which is too horrible to even think about, did not really happen. The fact of the matter is that within the last few months I personally have been introduced to individuals who said that they were tortured at the hands of the Sandinista government. One gentleman was a preacher out in the hinterlands of Nicaragua who was accused of dealing with the Contras, meaning the freedom fighters. He claimed he had no relationship with the freedom fighters. In fact, he claimed to be only a preacher, a fundamentalist preacher, who was apprehended by the Sandinista military in the course of his going from one town to another. They tied him to a tree, they shot him in the foot, and they cut off his ears.

I have met this individual. I have seen his head, and he does not have any ears. He did not make it up.

There was another individual from Bluefields, a representative of the black community, who protested when the Sandinista army went into Bluefields and started mistreating some of the inhabitants. They shot at the feet of some of the inhabitants, and they jammed a newspaper down the throat of one poor older woman when she protested about the shooting. And this fellow spoke up and tried to protest on behalf of the old woman, and they threw him in jail and left him there for several weeks or a few months, and during the course of his imprisonment they tore out his fingernails.

I have met that gentleman, I have seen his fingers, and his fingernails are torn out.

Mr. Speaker, the Sandinista government uses the technologies of the modern day to torture inhabitants, residents, and citizens of Nicaragua. As we go forward into the next few weeks of debate, we will make decisions on the issue of whether or not to support the Contra movement, the freedom fighters of Nicaragua, the people who are intent on nothing more than to restore pluralism, restore the rights and privileges that all of us in this country enjoy, the freedom of religion, the freedom of the press, the freedom of assembly, the freedom of association, and the freedom to participate in open elections and fair elections. Until we decide to support those individuals who are fighting for freedom, as we go forward into this debate, then we should continue to be mindful that the Government of Nicaragua as it exists today is a dictatorship, a Marxist totalitarian government which perpetrates atrocities on its citizens, and if we permit it to continue to exist in its current form, we will be turning a blind eye to all atrocities in the world. And we dare not do that.

Mr. Speaker, if we value our own freedoms, if we treasure the land in which we live, we must be mindful that there are individuals who live only a few hundred miles to our south who are suffering indignities, torture, imprisonment, and death, and we must be concerned about those people.

Mr. Speaker, I yield back the balance of my time.

EXPLANATION OF THE DUTIES OF INDIANA'S SECRETARY OF STATE CONCERNING ELECTIONS

(Without objection, Mr. STRANG was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. STRANG. Mr. Speaker, the purpose of my remarks and the reason I rise is to point out that in the recent discussion over the last hour of the McIntyre case it should be pointed out that the secretary of state of Indiana does not have the right to certify any election until a minimum of 10 days has passed, and indeed he did not certify those results until November 26. And in the case of Mr. McIntyre, when he got the retabulated and corrected numbers, it was done on December 13.

Mr. Speaker, when we are discussing this case, we have to remember that this is one of fairness, and I appreciate the opportunity given to me to address the House at this time.

IMPORTANT INITIATIVES IN THE WRITING OF THE 1985 FARM BILL

The SPEAKER pro tempore (Mr. BRUCE). Under a previous order of the House, the gentleman from Missouri [Mr. COLEMAN] is recognized for 60 minutes.

Mr. COLEMAN of Missouri. Mr. Speaker, we have asked for this time today to explain to the House the initiatives that the Republican members of the Agriculture Committee yesterday announced in the form of a press conference, and we thought we would take this opportunity today to discuss the individual parts and the initiatives that we think are very important to the discussion as we move toward writing a 1985 farm bill.

As the Speaker is well aware, that is one of the highest agendas in this body, and we recognize the seriousness of the problems that confront American agriculture. We will be faced with writing this bill in an environment that has seen an unprecedented number of farmers simply go out of business. We have had a 50-year watershed of bankruptcies and foreclosure, and I guess the least one can say is that it is tough on America's farms today.

We have already had before the House this year an emergency farm credit proposal. Bills that passed the House and also one that passed the other body and ended up being sent to the President have not provided any emergency relief, and we recognize that the planting season is upon us.

□ 1410

So we have directed our attention to a more long-range and more long-term approach and we feel that just talking about the problem is not sufficient. We feel that we need to be part of the constructive process of coming up with solutions and having new ideas placed on the table; so the Republican members of the House Agriculture Committee have been meeting for weeks putting together what we think are some very good ideas, proposals, if you will, that are new and we think very interesting.

Congressman BOB SMITH, our colleague from Oregon, has helped organize this effort on behalf of the House Republican committee members. At this time I would like to yield to the gentleman from Oregon [Mr. SMITH] and have him make any comments he might have at this time, as we will hopefully have other Members join us in explaining various proposals that we have put forward and laid on the table that we are very excited about in the new Republican initiative.

So I yield to the gentleman from Oregon.

Mr. ROBERT F. SMITH. Mr. Speaker, I thank the gentleman from Missouri for taking this time, because I think as he has outlined, there is no question that this may be the most important issue facing America, since agriculture truly is the backbone of this country. I thank the gentleman for doing that today.

I would like to make a statement, with his permission, regarding the Republican program which we have just announced as of yesterday.

Mr. Speaker, this Nation needs a workable, creative, and realistic blueprint for the survival of American agriculture. Republican members of the House Agriculture Committee are united here today to dedicate 1985 as the year we start returning control of the business of farming to the farmers.

Government has blurred America's image of the hard working, independent farmer. We know that American farmers want a partnership with government, not a handout from it. We're convinced that farmers want to break the cycle of dependency as much as we know it must be broken.

But Republican members of the committee know just as well that you can't do it overnight, and you can't do

it by warming over the old programs that brought us to today's crisis on the farm.

We are developing what we believe are creative alternatives to current programs. At the appropriate time during committee action on the 1985 farm bill, we will be offering all these recommendations in greater detail. But for now, we're anxious to share some of the goals and concepts behind our efforts, and we offer them in the spirit of cooperative leadership for the tremendously difficult job that lies ahead.

We have agreed to a Republican "Blueprint for the Survival of American Agriculture" encompassing five straightforward goals. Specific commodity programs in the 1985 farm bill must be judged by these standards:

First, recapture American agriculture's competitive edge in world and domestic markets.

Second, create for American agriculture a bridge from government domination to an improved marketplace.

Third, recognize profitability as a key element in the long-term stability American agriculture.

Fourth, guarantee American consumers a plentiful and stable supply of nutritious food and fiber products.

Fifth, provide an effective farm policy which is budget responsible.

Without question, American agricultural production needs room to grow and that must primarily be through overseas' sales. We must be able to expand sales at home and abroad, regardless of the value of the dollar, in the face of subsidies offered by competing governments, against foreign producers who are willing to sustain decades of losses to kill competing producers.

We believe improved market presence is the key to elimination of government domination of farm activity. Once those sales are secured through the application of creative new government production and marketing tools, we believe the basic need for most government intervention and supports will dissolve.

Farming, just like any other American enterprise, must be allowed to prosper in the free market system. Without the fuel of profit, we believe the engines of farming will sputter and fail.

An orderly and gradual shift of farm production and marketing policy away from reliance on government should return farmers to the natural system of success or failure in the marketplace. Government's role is not to assure success but to assure the opportunity for success.

Today Americans spend only 17 percent of disposable income for food. That continues to be one of the best bargains in the world. Our programs reaffirm government's most basic farm policy promise: A stable plentiful supply of nutritious food and fiber products within the economic reach of every family.

Finally, we have promised to be budget responsible. We are prepared to demonstrate that even government can be thrifty. We are committed to maintaining the cost commodity control segments of the 1985 farm bill at or below the previous year's budget levels.

We haven't tried to rescript every word in current law or to refute every proposal on the table today. Instead, we have concentrated on bringing a breathe of fresh air to those sections where we need change the most.

Our concepts include innovative programs in these areas: Marketing loans, bonus commodities, sodbuster provisions, target technology to small- and medium-size farms, export certificates, conservation reserve, contract sanctity provisions, and budget restraint.

We cannot be allowed to overlook budget considerations. If every agency of the Federal Government offered proposals which exercised the same restraint of this Republican blueprint, we would slice $38 billion off the fiscal year 1986 budget.

So I think there is hope for agriculture with this kind of program. It means that the Government is not going to turn its back on American agriculture and it means that there is an opportunity for agriculture to grow and to be prosperous.

I thank the gentleman for yielding the time he has to me for this statement.

Mr. COLEMAN of Missouri. Mr. Speaker, I thank the gentleman again and I commend him for his leadership in our activities leading up to the unveiling of our proposals yesterday and his continuing participation in leadership on this issue.

I would like to say a few words about the section dealing with the conservation, credit, and rural development aspects of our initiative.

First of all, we support a good sodbuster bill. Soil is indeed one of our most precious natural resources and it cannot be replaced as fast as we are losing it. We must take action now, we believe, to save our land.

It is our belief that the Federal Government should not continue to subsidize the breaking of new fragile land that is not suitable for cropping. Provisions under our title would discourage producers from bringing marginal, fragile land into production, and allow farmers to concentrate their efforts on their most productive land. Farmers who produce commodities on highly erodable land that has not been in production for the last 10 years and who have no approved conservation plan would not be allowed to participate in Government farm benefits.

At the same time, I might add, we believe that we ought to have a conservation reserve of a long-term nature. That, Mr. Speaker, means that the Federal Government, who encouraged farmers to plant fence row to fence row during the 1970's, has an obligation now to take some of that out of production.

A conservation reserve program will encourage the retirement of this marginal land, fragile land that should never have been cropped in the first place, by extending financial incentives for taking that land out of production and converting it to less intensive uses, such as pasture or permanent grasses or timber.

In conjunction with our soil conservation efforts, we are asking the Secretary of Agriculture to work with the EPA to develop regulations for nonpoint source pollution. This would emphasize the Department's interest in preserving water quality, while protecting the interests of agriculture.

Important regulatory decisions on this matter should be made not in a vacuum. It is important that these decisions be made by someone who has knowledge and an understanding of farm interests.

Now, our Republican initiative also includes a farm debt restructuring and conservation set-aside concept, proposed by Congressman FRANKLIN from Mississippi. This proposal would assist debt-ridden farmers in taking marginal land out of production in return for long-term easement for public conservation, hunting, recreational, and wildlife purposes.

□ 1420

At this time, Mr. Speaker, I would like to yield to the gentleman from Mississippi [Mr. FRANKLIN] who has created a new idea, a new approach, and a new way of trying to do two things at once. We are very proud of his initiative and recognize it, and I would at this time yield to the gentleman from Mississippi [Mr. FRANKLIN].

Mr. FRANKLIN. I thank the gentleman very much for yielding. I compliment him on taking this time to discuss this new Republican initiative for agriculture.

I also want to state that the gentleman from Missouri [Mr. COLEMAN] is the ranking minority member on the Conservation and Credit Subcommittee, and it is through his leadership that many of the things have been incorporated in this new plan. And it certainly is through his leadership that we have been able to come together as a unit to say to America and to the American farmer that we understand the problems and that we are willing, and ready, and able to come up with new and innovative ideas to try and correct some of the deficiencies that exist in Government policy in the two areas of credit and conservation.

I would like to state that in my district, in 1985, the Farmers Home Administration has expended approximately $113 million for crop production loans for the 1985 crop year. The Farmers Home Administration has penetrated my district's credit market for short, intermediate, non-real estate secured agricultural credit by 65 percent. That means 65 cents out of every dollar that goes into farm operations for credit and operating funds comes from the U.S. Government.

We must be aware of the fact that credit decisions in agriculture cannot continue to be made by the U.S. Government. And it should be our long-range objective to move those decisionmaking responsibilities from the Government to the private sector.

However, we, through this Republican initiative, are well aware of the fact that this cannot be done overnight and provide the kind of credit for our farmers in 1986 and the years following that will get the job done in agriculture because many of our farmers would be without a credit home.

I would like to advise the gentleman from Missouri and my other colleagues that for 15 or 20 years in Mississippi, the risk in the private sector through our farm credit system, through our commercial banks, and through our other agricultural lenders, has been systematically shifted from the private sector to the Government. And be assured that that private sector, after having spent 15 or 20 years getting rid of those risks in agricultural lending, is not going to voluntarily take them back tomorrow or the next day.

We, on the Republican side of the Agriculture Committee, understand this and we are ready, willing, and able to come up with remedies that will make a transition of credit from the Government to the private sector in an orderly fashion so that as many of those farmers can remain in business as possible under the extreme circumstances that now exist in the United States.

At the same time, I would like to point out to my colleagues one of the reasons why the Government has had to take so much of a share of the credit market in the Mississippi Delta. For example, farmers have, for years, been increasing their operations of row crop farming to justify the kind of money that it takes to borrow and plant these crops. And to do this, they have been forced, sometimes by Government policy, to clear bottomland hardwood timber, to drain swamps, and to put marginal land into production that should never have been put into production.

I think we should recognize this is a problem, and I think that the credit crisis that all of us have heard about on this House floor, and that we have been discussing for months here in this Congress has an excellent opportunity to marry with a dire need in our Nation to return some of those marginal farmlands to their natural state, to replant the bottomland hardwoods, to preserve the swamps and the lowlands that are so bountifully there—or were there—that have been turned into agricultural row croplands so that we can provide habitat for our wildlife and for our waterfowl. Particularly along the Lower Mississippi Valley, an area of our country that is most familiar to me, we have been destroying our natural wildlife habitat for farming purposes for years.

The sad thing about this, my friends and colleagues in this Congress, is that that marginal land that has been cleared and put into row crop production is helping to kill the farmer and is adding to the debt burden that he now has because he is not able to make money out of that marginal land that he has put into production. In fact, it is costing him money and those debts are accumulating.

The Farm Debt Restructure and Conservation Set-Aside Act of 1985 would work as follows: Those Farmers Home Administration borrowers who find themselves in this predicament, in debt, and normally in my area that farmer farms 1,000 acres—he has about 250 or 300 acres of ice cream land on that average farm. That is the land that is high and sandy that we call good cotton land that is very productive. He also has 350 or 400 acres of what I call high heavy land. That is the land he puts his rice on and soybeans and his wheat and feed grains. And it is good productive land, and it should stay in production.

But almost every one of those average farms in my district has another 250 to 350 acres that was formerly a swamp, or a slew or in bottomland hardwoods which has been cleared to put into row crop production. And on that land he is making 6 to 10 bushels of soybeans an acre and it is helping kill him.

What this proposal would do is it would take that 350 acres of marginal land and allow that FmHA farmer who is in debt to turn that land over to the Government on an easement basis for no less than 50 years, with a conservation program situated so that land would be put to its best conservation use. The land could be put back into bottomland hardwoods, or into a swamp for waterfowl habitat, for migratory birds. And in exchange for him giving up that land to the Government for conservation use, he would be allowed to write down the amount of his Farmers Home Administration debt by the appraised value that the Farmers Home Administration is carrying for that land.

This would do two basic things. It would help with the credit crisis. It would allow that typical farmer in my district who qualifies, to be left with two-thirds of his land, which would be the most productive land he has. He would also be left with only two-thirds of his debt to the Farmers Home Administration.

With that reduction in the amount of debt, and with his most productive land left, he would probably be able to cash-flow his operation so he could then go out of the Government sector and into the private sector and show a cash flow that would enable him to be financed on a guarantee basis with the Farmers Home Administration or be able to obtain the financing on his own without the Government. And that is what we are trying to do.

The other benefit, of course, would be that that land which is now row cropped, eroding, and is actually killing the environmental interests throughout the country, would be preserved for the future generations of this Nation so that they can enjoy it.

Right now, people ask the question: "What are the budget implications?"

My colleagues, let me tell you how I view this. Right now, the Farmers Home Administration is carrying on its books for the U.S. Government what it calls assets. And these assets are notes that farmers have signed with the Farmers Home Administration to secure the millions and millions of dollars that the Government has loaned those farmers to produce their crops. Those notes in the amount of that debt, in many instances, exceed the value of the property that secures it; therefore, the assets the Government has, in the form of those notes, are worthless. And the Government has the opportunity to foreclose and to lose all of that asset, the millions of dollars that are represented by those notes, because that land in a forced sale is not going to bring enough money to repay the Government the value of those notes that the Government holds.

What we intend to do by this new method is to exchange those notes which are worthless for valuable assets and rights to the public and the taxpayers who have paid millions of dollars into our farms. And the public will have the right to utilize that land, and the taxpayer may have a place to hunt.

I do not know if the gentleman from Missouri has the same problem I do in Mississippi, but many of the people who grew up in my county, grew up knowing how to hunt and fish and loving the wildlife, and loving to get out in the woods and to get out in the country, and to participate with nature.

□ 1430

Recently these people are being denied that right because the land that is available for hunting has been

secured by the wealthy—the doctors and the lawyers from the cities who have formed hunting clubs and who have exclusive memberships. The average taxpayer in Mississippi is finding it very difficult to find a place to hunt. This new concept would allow this asset, the real land that is now going to be put back to its natural state, to be utilized by those thousands of taxpayers out there who have provided the funds to keep these farmers in business and who now find themselves in the position where the Government has worthless assets in the form of the notes that it holds.

The concept will do a lot of good things, I would suggest to my colleagues. I would urge all of you to look at the concept, to see if you can adopt it and to see what applications it might have to your specific areas back home. I think if you look at it closely, you cannot only apply it to the bottom land areas, the delta areas of Mississippi that I am from, but to almost any area of this Nation where farmers forced by Government policy and for other reasons have expanded their operations onto marginal farmlands which has helped kill them, which has helped exacerbate the credit problem. I would appreciate your looking at it.

I want to again thank the gentleman from Missouri [Mr. COLEMAN] for yielding me this time. I want to again commend him for taking this time so that we can present this new program for American farmers to the American people.

I thank the gentleman.

Mr. COLEMAN of Missouri. Mr. Speaker, I thank the gentleman. It is that type of innovative idea that we think this Republican alternative has a lot of fine applications.

Let me say that the concept that the gentleman from Mississippi [Mr. FRANKLIN] has put forward, as he said, can be applied in different ways in different areas of the country.

In my area in Missouri, we have 70,000 acres that are now owned by the Farmers Home Administration because of defaulted notes that farmers have had.

Some of those acres would qualify under the gentleman's program and maybe, if not for 50 years in this particular case because it is not owned by individuals but by the Government, that could be put into some sort of cover and also some sort of wildlife habitat. That is the type of application that I can see in our particular part of the country.

I yield to the gentleman further.

Mr. FRANKLIN. I thank the gentleman for yielding further.

The concept also applies to the acreage that has been accumulated in Government inventory through Farmers Home Administration foreclosures and also through the fact that of those farmers who have been financed with the FmHA, many of them have thrown up their hands and have said, "I can't go any further," and have actually turned that land back over to the Government.

We have literally thousands of acres of Government-inventoried land in my district and certainly this concept would apply to that land and it would not be as complicated because the Government already has title to that land. The concept which is incorporated in H.R. 1000, the bill that I have introduced, also has provisions for the land which has been returned to the Government and is in Farmers Home Administration inventory.

I appreciate the gentleman's pointing that out.

Mr. COLEMAN of Missouri. I thank the gentleman again.

Because of time constraints, Mr. Speaker, I am going to yield now to the gentleman from Kansas [Mr. ROBERTS] and come back to some of my remarks about the credit section.

The gentleman from Kansas has some very fine ideas and ones which I think the Congress will examine very closely.

I am certain that he has already made an impact on the outcome of the final draft of the 1985 farm bill, whatever form it might take. It is this type of new idea and the gentleman's concept of the marketing loan program which he will explain to us now, which are the types of things that we are very proud of in this initiative.

The gentleman from Kansas is indeed a leader in this activity and in this area.

Mr. Speaker, I yield to the gentleman from Kansas.

Mr. ROBERTS. I thank the gentleman for yielding.

Mr. Speaker, first I would like to say before going into that particular concept that I think there is some good news with regard to agriculture, more especially finally some good news for our farmers.

You know when we have the chore of writing the farm bill every 4 years it is always a very, very difficult process. That process has to be bipartisan if we are going to have a farm bill.

But with regard to our efforts here I am extremely pleased we have been able to work together and put together a Republican alternative.

In this regard I want to thank Mr. MADIGAN from Illinois, our leader, who, as I said yesterday in our press conference, has been the godfather of this effort. If there has been a foreman or a guy who has rounded us up and more or less get us headed at least in one direction it has been Mr. ROBERT SMITH of Oregon. I want to compliment him as well as my friend from Missouri [Mr. COLEMAN], Mr. COMBEST, Mr. MARLENEE, Mr. FRANKLIN, and others.

The reason I think that a Republican alternative is so important and so newsworthy is that it simply means that the administration proposal, as publicized by the Stockman approach, is not going to work, so we had a choice and we are not leaving any reservations, so to speak. Most of the press reports have indicated that Republicans disagree with the administration and they have proposed a different kind of alternative. That is not the case at all.

We just met with Secretary Block. Secretary Block early on said that we are going to disagree but at least let us have some common agreement with the goals of this administration. So that is what we are doing.

In this regard from my own personal standpoint I am going to work with the President, I am going to work with the Secretary, but I do not work for them.

Mr. COLEMAN of Missouri. I think we just visited with the Secretary. He says that our goals are the same. Now we will work together. That is something we ought to emphasize. We just have a different way of getting to those goals.

Mr. ROBERTS. I do not think we are really telling tales out of school here if we simply emphasize the point that once we get a budget in place, and that is the most important thing we have to do in this Congress and the most important thing we have to do for farmers, consumers, or businesspeople or whatever, then we can proceed with this difficult process. But I think the biggest thing that we have done as Republicans is we have come up not simply by discussing the problem and not simply by proposing issues that we know we cannot win—some people around here will prefer an issue rather than a bill; this package is budget-responsible. This package will work. It is innovative; it contains many new ideas. I think the Secretary will work with us.

Sure we are going to have a chore with some of the folks down at the White House and other places, but that is always the case in any farm bill.

Now with regard to what I would like to talk about, I have the privilege of being the ranking member on the Subcommittee on Department Operations, Research, and Foreign Agriculture of the Committee on Agriculture, which is a lot of words and it simply means that we are in charge of exports.

Now we have a hearing going on right now and I have to get back to that hearing. But if we are going to solve the farm problem we have to make sure we regain our market shares with regard to our exports. We have to export our product.

Now I come from wheat country. I have 58 counties out on the prairie and we grow more wheat than any other State. We have to export two-thirds of it if we are going to get to the cost of production and save a generation of farmers.

So if we are going to regain those markets, since we lost them, since the 1980 embargo, and because of the high dollar value we have got to come up with something very innovative. Just today when we had the Under Secretary, Dan Amstutz, before our subcommittee we pointed out that we have a burgeoning amount of stocks in surplus that we must get rid of even before we consider the 1986 farm bill. There is no reason, no reason why we cannot have some contingency plans right now in order to start this in an orderly process. One of these plans by Congressman EVANS of Iowa is to take our surplus stocks in this CCC—and we are going back into the grain business, folks should understand that, we are not supposed to be doing it—we are going to have 7 million bushels of grain in surplus, we should use all stocks, not just grain, but go ahead and take advantage of the value of the dollar index and for every one of our customers who wants to purchase this grain we can supply them with this extra value of surplus stocks. That is innovative. We can do it now. It is going to save money.

Mr. COLEMAN of Missouri. The gentleman is suggesting that the proposal is that because of the value of the dollar being so high in order to get back those markets overseas that when we do have a purchase from overseas that we give them a bonus of additional bushels of whatever grain it might be to offset the high value of the dollar so that we are not outcompeted because of that dollar value in the international markets?

Mr. ROBERTS. That is precisely correct and the value of the Republican alternative is this: Mr. EVANS takes the value of the dollar in 1980 in say country X, he compares it with the value of the dollar in 1984, he uses that as an index. We already have that as an index. Then he can equate that to the bushels of grain or excess milk or butter or whatever it is we are trying to talk about. It can work. We need to be doing it now rather than pay these storage costs and the costs of forfeiture of those commodities that we are going to pay in 1986.

It is $1 billion, I can tell the gentleman right now in terms of wheat alone. I think that is certainly a program we need to step forward.

□ 1440

Mr. ROBERT F. SMITH. Will the gentleman yield?

Mr. ROBERTS. I yield to the gentleman.

Mr. ROBERT F. SMITH. Just for clarification, as an example let us assume that Canada has a 75 cent dollar, let us say; which is close, we have a dollar dollar. If we wanted to trade with Canada under your program, there would be $1.25 a bushel offered to Canada just for the exchange rate.

Is that a correct analysis?

Mr. ROBERTS. I am not too sure that Canada will be in the business of importing our grain, but it is a good example, and I think any country that would work in that fashion, that the gentleman is accurate in that description.

Mr. ROBERT F. SMITH. If the gentleman would yield further, I suppose that also means that, let us take the European Community which we know subidizes heavily all of agriculture, also we have a terrific discrepancy between the dollar and the franc or the mark, even the pound; then this would go part way to offset those heavily subsidized agricultural products in foreign countries; it would not take it all, but it would certainly make us more competitive in world markets with those heavily subsidized countries.

I understand that to be true.

Mr. ROBERTS. That is correct. It would send the strongest possible message that I know we could send to the European Common Market which, by the way, now is in the business of producing more wheat than the United States.

The value of the dollar, if you equate that as a subsidy, so to speak, to those farmers is worth approximately 55 cents a bushel. Now how in earth are we going to compete with that? This is the way that we can compete.

We can regain those market shares, and we need to do it now. We do not need to be sitting around and studying this, and this is all part of the Republican program.

Mr. ROBERT F. SMITH. I thank the gentleman.

Mr. ROBERTS. I would like to go on just for a very brief moment, Mr. Speaker, in regards to the marketing loan concept, and then my colleague from Montana will go into the third leg of the stool here in regards to get to a much better supply management program with his plan in regards to wheat certificates.

The idea of the marketing loan concept is to reach out to the administration and say "Look, we agree with your goal to become more competitive. We know we have to do that. We know we have to lower the loan rate. But in doing so, your own price projections show us walking through 2, 3, 4 even 5 crop years with prices far below the cost of production: $2.50 wheat and $2.00 corn."

And if you think we have problems in farm country now, if you put in those price projections, you will see a further decline in land value, you will see more problems up and down the entire lending structure of agriculture to the point that I feel we could march a whole generation of farmers right off the cliff.

I do not think we want to do that. Sure, we can compete with Argentina in 1990 with wheat—wheat that was projected to be maybe $2.20, but there is not going to be anyone left in my country to compete, or for that matter, any wheat producer.

So why not take a marketing loan concept? Put the marketing loan at whatever level you want, but let us use the example of the cost of production, which for wheat would be $4.38.

Then the farmer would have to, he would have to get rid of the grain; it would be a recourse loan. At the end of the 9 months he has to pay back that loan, but only at the average world price.

So, if we are to explain to the consumer, and if we are to explain to our colleagues here in the Congress, what we are doing is we are building an income bridge to protect that farmer's viability when we compete with our competitors, and we lower that loan rate, and we do not ratchet it down by 5 percent and 5 percent and walk to what I have labeled the "Valley of Death."

I can recall in regards to this administration, there seems to be some tie to maybe Death Valley Days. We need to hook up the 20-mule team Borax thing and get this thing going; let us move that loan rate down, OK, let us compete, but let us not sacrifice the farmer in the process.

We can make it budget-conscious. We have already tried that with Mr. MARLENEE's proposal; you can apply it just to the export acres. You could tie in an acreage reduction program, just for the cost alone of what this is going to cost us in 1986, $1.2 billion; you could put a floor under it at 270, and then you are not losing farmers; and you are market-competitive.

You can use the same adjectives, the same adverbs as Mrs. Stockman's brilliant son uses. We are competitive, we can get there from here, and we still do not hurt the farmer.

I yield to my friend, the gentleman from Montana.

Mr. MARLENEE. I appreciate my friend and colleague from Kansas, who is yielding, my colleague who has so ably represented the wheat producer, the agriculture producers across this Nation.

Mr. Speaker, my producers are just as concerned as everyone in the United States of America; every other taxpayer, about the amount of money that this Congress is spending.

What assurances can you give me that the proposals that are being

made now, basically by Republican representatives meeting of the Ag Committee? What assurances can you give me that these are budget-responsible proposals that will come in under last year's spending?

Mr. ROBERTS. In the first place, I would reply to my colleague that the overriding concern of the producer in my district is the same as his.

We know that the farm program is not working well and is costing far too much. So we know, number one, that we have to be budget-responsible. We took last year's levels of spending—and I might add that if every other agency of Government and every other program in Government around this place used last year's levels as a freeze, we would save, we would cut some $40 billion worth. So we will take the freeze at last year's levels.

Under that kind of a concept, you have already had a cost estimate as to the wheat certificate plan, and we have already had a cost estimate in regards to the bonus commodity plan, and we are now crunching the numbers on the marketing loan, and we can make that work with the variables that we can plug into it and save money from the current program levels. We can save money and still do this and have a better program.

Mr. MARLENEE. I might add, it appears that we can be much more cost-effective with the money that we are spending.

Mr. ROBERTS. Without question.

Mr. MARLENEE. I thank my colleague for yielding.

Mr. ROBERTS. It is expenditures that are an investment.

Mr. Speaker, if I may just continue for a moment in regards to cargo preference, that is a big issue in regards to the Public Law 480 program, not to mention our exports.

We have had a recent court ruling, a very unfavorable ruling, and within the Republican initiative there is legislation that will address that problem. I am very pleased to announce that yesterday, Secretary Block, speaking on behalf of the administration, indicated their strong support for this legislative relief.

We cannot exist at a time when we are going ahead with export initiatives to have that kind of a burden placed upon those initiatives.

Now, if it is in our best interests to have a strong U.S. flagship fleet; and I suggest and I do agree that that is the case, let us have truth-in-funding, if you will, and take that funding from either the Department of Transportation or the maritime people; whatever.

Mr. ROBERT F. SMITH. Will the gentleman yield?

Mr. ROBERTS. I yield to the gentleman.

Mr. ROBERT F. SMITH. I thank the gentleman for yielding to me.

The question of cargo preference, explain to me what that is and how it affects farm policy.

Mr. ROBERTS. It simply means that, in regards to any sale entered into by the U.S. Government, that 50 percent of that product has to be shipped on U.S. vessels. But because of the maritime wages and the cost of doing that, that is going to cost American farmers $120 million at the landed cost of that product, and while we have no quarrel with the maritime folks—we are not in an adversarial role in that respect at all—we simply do not want that taken out of the hide of the Kansas wheat farmer when he is trying to export his product.

So if we would have truth-in-funding, in fact, and take those moneys from the maritime fund or whatever and—we will even take the first hit; we will even pay for it the first year, but after that I think that would answer a lot of the problems.

What the legislative relief would do would be to keep cargo preference on Public Law 480 and the AID shipments, but exempt these kind of innovative programs that we are talking about.

Mr. ROBERT F. SMITH. I thank the gentleman.

One other question, if I may, so I can understand what the gentleman is proposing; I did not hear him suggest that we eliminate the maritime industry—is he suggesting that we move that part of the budget out of the agriculture budget to maybe the Commerce Department, or the DOD so that America can exactly see who is paying for our maritime program.

Is that what he is indicating?

Mr. ROBERTS. Never let it be said that this Member from Kansas, where very seldom do we find U.S. flagship vessels sailing down the Arkansas—if they did, we could see them from a great distance I can assure you—is opposed to a strong U.S. flagship fleet. We are not trying to get into an argument with those folks. That is precisely what I am suggesting.

Mr. ROBERT F. SMITH. If the gentleman will yield further, I was interested because U.S. flagships do come up the Columbia River into a port very near me in Oregon, and I cannot go home and defend a system which would eliminate that program.

Mr. ROBERTS. No, this is a reasonable compromise, I would assure the gentleman, and I appreciate the gentleman's time.

□ 1450

Mr. COLEMAN of Missouri, I thank the gentleman.

Mr. COMBEST. Mr. Speaker, will the gentleman yield?

Mr. COLEMAN of Missouri. I think the gentleman from Texas would like to have a few minutes, and I yield him whatever time he wishes to consume.

Mr. COMBEST. I thank the gentleman.

Mr. Speaker, there were a couple of points that have been made that I think we should try to bring together. So many times it appears, at least from certainly some of the individuals who represent an urban constituency or those who refer to themselves as representing the consumer group, that we in agriculture, we who represent agricultural districts, are not consumers ourselves or that many times the interests that we wish to take relative to strong agriculture policy is not in the best interest of the consumer. But there are a couple of things that I think we ought to point out.

No. 1, this country has the least amount percentage per capita spent of any nation in the world for food items. We have basically established through many, many years of government programs and government involvement in agriculture what I think we could realistically refer to as a cheap food policy. We are not in any interest whatsoever not concerned with the consumer, but in fact a strong agricultural policy that provides for an opportunity for farmers and ranchers to make an income, to make a profit, providing this Nation with food and fiber, in the long run is certainly to the best interest of the consumer public. We are consumers in agriculture. We consume a lot of food and and a lot of other items as well. But I think it is important to note that we have got to always make sure that we have maintained a strong industry in this country so that we do not become totally dependent upon some foreign country for supplying us with food.

Another matter, too, that I would like to again emphasize, and I think it is of overwhelming importance in this, and I am very glad to be a part of this committee and of this effort, is that so many times today we have heard discussion of budget responsibility. And it certainly is of the interest of this committee to deliver a type of farm program that is within reason and certainly is within the budget restraints, and I think that we can do that. I think the point that I want to make here is the fact that we are trying to develop a program that does provide an opportunity for that farmer, that does provide an opportunity under good management to make a profit. I think that profitability is what we have got to return to agriculture.

I do not know of a problem in agriculture that cannot be solved by providing a profit or providing the opportunity to make that profit. That is what this Member wants to do in this involvement.

I certainly appreciate the time from the gentleman from Missouri, and I am very glad to be a part of this process.

Mr. COLEMAN of Missouri. We are very glad to have the gentleman a part of this process. As a new Member of the House Agriculture Committee and the Congress, we feel that we have gotten a tremendous contribution on the gentleman's behalf already into the process, and we really appreciate his involvement in this proposal and floor activities, and as we develop the 1985 farm bill, and the wisdom of the counsel of the gentleman from Texas.

At this time, Mr. Speaker, I would like to yield to the gentleman from Montana (Mr. MARLENEE), who is the ranking Republican on the Feed Grains Subcommittee and who would like to explain one of his initiatives in this Republican farm proposal.

Mr. MARLENEE. I appreciate my colleague yielding, my colleague with whom I have labored for 9 long years on the Agriculture Committee and who has done such an able job in the various positions he has served on in that committee.

I would ask the question, Mr. Speaker, of my colleagues and of the people of this Nation: Is it not about time that we change the direction of agricultural policy, an agricultural policy in the past that has not worked, an agricultural policy that has led us into a position where our producers are drowning in a sea of surplus grain, where the taxpayers are drowning in the amount of tax dollars and deficits that result from trying to subsidize an agriculture with programs that will not work in today's world.

It is time we change agricultural policy, the direction of that policy.

We need to keep an income net, if you will, some of the basic structures that we have to protect farmer income, but we need to reorient some of those dollars we are spending on farm programs, reorient those dollars toward making us competitive on the world market.

That is what we have endeavored to do with the Republican initiatives and proposals that we are putting forth.

The export certificate program, the bonus commodities for export, the marketing loan concept, all of these proposals are designed to destroy the price umbrella that our competitors enjoy because of the high value of the dollar, export subsidies and export overproduction in foreign nations.

The export certificate program will work very simply. It is an addition to the program for income protection we now have, utilizing some of those dollars for making us competitive. The producer simply receives an export certificate with the grain, if he complies with the program, on the export portion of his production. That passes to the buyer, to the exporter, when he buys the grain, and then when he shows proof of sale on the export market he is reimbursed for that certificate value.

All in all, these proposals will come in under last year's budget, we can guarantee that. They will result in more income for the producer at his level, and they will result in less surplus, more grain sold overseas, and in reducing the deficit that we have in our trade balance. Those are all important factors for the United States of America and its policymakers to take into consideration, given the deficit problems, the surplus problems and the budget problems we have today.

I thank my colleagues for yielding.

Mr. COLEMAN of Missouri. I thank my colleague from Montana for his contributon. The gentleman is a Member who has been dedicated to agriculture, has been an agricultural leader here, and we are very happy to have him participate in this special order this afternoon.

I would like to yield several minutes, Mr. Speaker, to my colleague, my friend from Missouri [Mr. EMERSON].

Mr. EMERSON. I thank my colleague from Missouri for yielding, and I want to commend him for taking this time to make it possible for us to have a discussion of the issues here relating to efforts that we Republicans on the House Agriculture Committee have been making toward coming up with some constructive proposals to solve some of the problems of agriculture. I particularly want to commend our colleague from Oregon [Mr. SMITH], a very distinguished legislator, who has led this effort, and to say that while we style our efforts as a Republican approach, an alternative approach to what we presently have and perhaps to what the administration has suggested, that we welcome the support and the cooperation of our Democratic colleagues in this effort.

I think that we all know that the problems of agriculture certainly go beyond any partisan bounds. There are enough problems out there that we need the help of everyone in trying to solve them, and I just want to make sure that we do, as we proceed here, let our Democratic colleagues know how much we welcome their participation and their discussion with us as we try to solve the problems that we are indeed addressing. Beyond that, I would say, I think, Mr. Speaker, that there is an awareness among us that some of the problems in agriculture are not going to be solved by the farm bill. The larger items of the deficit and its relationship to high interest rates and the strong dollar overseas are something that we cannot address in an agriculture bill. Likewise, while there is a lot that we can do relating to trade in the 1985 farm bill, there are some problems there that will not be solved, trade problems that will not be solved in this bill, as well, and we are going to need the cooperation not only of our colleagues on the Agriculture Committee but of the trade representatives and of the administration in addressing some of these very critical trade issues, because I find, as I travel around my very large 25-county congressional district that assurances to our farmers that they are playing on a level playing field in world markets is one of their greatest concerns, and I think that anything and everything we can do to give them those assurances they deserve to have.

I thank once again my colleague from Missouri for yielding to me, and I appreciate his making this opportunity available to all of us.

Mr. COLEMAN of Missouri. I thank my colleague and, of course, we know of his leadership in agriculture, so we are so very happy to have two of us from Missouri on the Agriculture Committee, and I thank him for participating in this special order this afternoon.

Mr. Speaker, as I was saying earlier, in the area of credit we have a few more proposals I would like to put forward, and those are: We understand that the farm credit system is undergoing tremendous stress. This is a system of cooperative lenders, and the Governor of the farm credit system should look into the viability of this system. It has $80 billion worth of agricultural loans already on the books that are out there. And some of them are being in default. Some of them are not being paid back. And we think that the farm credit system ought to make a study and it ought to bring it back to the Congress and ask us to take any steps that they feel necessary and indeed through our own independent investigations determine that we ought to strengthen this system before a crisis occurs and it is too late. While we are too late again to recognize the need and too late to provide any relief to the emergency farm credit situation phenomenon which is presently in the country, we must now turn our attention to the long-term credit needs of credit reform. And from that standpoint we feel that if we are going to have more Farmers Home Administration guaranteed loans, that that guaranteed loan program work and that we feel that it has not worked as well as it should have and could have in the past, and that there are other guaranteed loan programs by the Federal Government that seem to be working better.

□ 1500

We ought to examine those; we ought to tailor our programs in Farmers Home to those very constructive, good proposals that are already working in the guarantee area.

From that standpoint, we would call for a review of this program, and make those necessary comparisons and adjustments to make sure that these programs that sound so very good when

they are announced, actually are implemented, actually are used and that we have the participation, by lenders and farmers, in any guaranteed program in the future.

Finally, Mr. Speaker, let me simply say that the economic and social needs of rural America must constantly be coming under evaluation. It is an absolutely truism that the recovery that has occurred in many parts of America has not reached rural America. Because of that, special consideration must be given this sector to the needs of our small communities, and the people who live in them.

Mr. Speaker, let me say in conclusion that we have heard today from Republican members of the House Agriculture Committee. New initiatives, proposals, things we would like to have laid on the table for discussion, as we start the process of formulating a 1985 farm bill.

We are in the process now, in our committee, of having hearings in the various subcommittees, and then when we get back at the end of this month and into early May, we will be having full committee consideration of various proposals. We think we have made a constructive contribution to this discussion.

New ideas and initiatives that should be used as a basis for a new approach to American agriculture and a Federal policy thereto. These are all threads, Mr. Speaker, and a lot of other threads are being prepared out here by different organizations and individuals, but they have to be woven together to make a mosaic of an 1985 farm bill.

We think we have made substantial contribution to that effort; we are proud of our effort. Again, let me say that we started this as a Republican initiative, recognizing that there is a Republican administration, but we want to work with them and we want to work with our colleagues on the other side of the aisle, because there are not just Republican and there are not just Democrat answers to the farm problem. We all know that the agricultural interests of this Nation, if we were to put all the Members together, would probably occupy 35 or 40 of these 435 seats.

We have to work with our urban colleagues, we have to have an understanding in this country, not just to the Congress, but members of the general public, of the needs of American agriculture and the viability of the food and fiber system that we have. That is why we think that this proposal, while initiating through the efforts of those Republicans on the committee, we wish to reach out and incorporate other ideas and participate in a true dialog with our colleagues on the other side of the aisle, with the people in the Department, and with all farm organizations and farmers in this Nation.

Mr. Speaker, with that in mind, let me conclude my remarks and again thank the gentleman from Oregon for this tremendous contribution for welding together a group of people in this House to formulate new ideas in a platform for the future in American agriculture.

NATIONAL AIR TRAFFIC CONTROL DAY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Arkansas [Mr. HAMMERSCHMIDT] is recognized for 10 minutes.

● Mr. HAMMERSCHMIDT. Mr. Speaker, yesterday I introduced a resolution, together with Congressman MINETA, to designate July 6, 1986, as National Air Traffic Control Day.

July 6, 1986, marks the 50th anniversary of the establishment of an airways traffic control system by the U.S. Bureau of Air Commerce. The purpose of this system was to assure adequate spacing between airplanes flying along established air routes and to prevent congestion at airports.

Today, this purpose is more important than ever. More people are flying than ever before. Since passage of the Airline Deregulation Act in 1978, the number of operating airlines has increased significantly. Anyone who has flown during the past few months knows that at times the system appears to be stretched to the limits.

Yet, the system continues to operate safely. This is a credit to both the highly trained personnel involved and to the sophisticated technology that has been developed during the past half-century.

Establishing a national air traffic control day will serve to publicize the significance of this safe and expeditious movement of aircraft and its importance to the economy of our Nation. Educational and celebratory events and exhibits on that day will serve to foster public awareness of the progress that has been made in the science of air traffic control over the past 50 years. It will help to bring together system designers, system manufacturers, system operators, system users, and other members of the aviation community to share their knowledge and promote a safer and more efficient air traffic control system.

For all these reasons, I am pleased to cosponsor this resolution.●

EXECUTIVE BRANCH'S ATTEMPT TO IGNORE A PUBLIC LAW

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas [Mr. BROOKS] is recognized for 5 minutes.

● Mr. BROOKS. Mr. Speaker, I want to take this opportunity to bring the Members up to date on a matter of great importance to us all. Last year, Congress passed the first major procurement reform bill in almost 40 years, the Competition in Contracting Act of 1984 (Public Law 98-369). Besides drastically restricting the use of sole-source procurements, the act greatly strengthened the GAO bid protest function to provide timely and equitable relief to companies who have been denied the opportunity to compete for Government contracts. Notwithstanding, the President unilaterally declared that the new authorities given to the GAO were unconstitutional. Subsequently, the Attorney General issued an opinion declaring these provisions to be unconstitutional. OMB Director Stockman then ordered Federal officials to violate the law.

These actions were challenged in recent hearings held by the Government Operations Committee. We found that Mr. Stockman's order was unprecedented and unparalleled. Never before has the executive branch embarked upon a wholesale suspension of a duly enacted law. This order directly undermines the constitutional system which has fostered the strength and health of our great Nation for over 200 years. These views were confirmed by every witness, except those representing the administration, who testified, including several eminent constitutional law scholars. Others have reflected the same sentiments in written testimony submitted for the record.

I wish to submit for the RECORD two articles on a recent decision by the district court in New Jersey which completely confirms the constitutionality of the law.

[From the New York Times, Apr. 3, 1985]

ACCOUNTING OFFICE MAY REVIEW U.S. CONTRACTS, JUDGE RULES

(By David Burnham)

WASHINGTON, April 2.—A Federal district judge has upheld a law authorizing the General Accounting Office to review disputed Government contracts despite the Reagan Administration's view that the law violates the separation of powers embodied in the Constitution.

The decision supported Democratic and Republican leaders in Congress who said that the Administration acted improperly when it instructed Federal agencies in December not to obey a provision of a law, which Mr. Reagan signed in July.

The judge, Harold Ackerman, who sits in Newark, made the ruling last Wednesday in case involving a New Jersey concern that had sought a pipe cleaning contract at the United States Military Academy at West Point.

The Justice Department and Reagan Administration officials, including David A. Stockman, director of the Office of Management and Budget, have argued that the head of the General Accounting Office could not be given authority over the executive branch because he was an officer of Congress.

But Judge Ackerman ruled, "The facts do not bear out defendant's attempt to label the Comptroller General a legislative officer."

Judge Ackerman cited a 1964 Federal court decision that said the Comptroller General served as an officer of the legislative branch while investigating matters relating to the expenditure of public funds but also served as the chief accounting officer of the United States. It is for this reason that the Comptroller General is appointed by the President.

The dispute centers on the Competition in Contracting Act, a law passed by Congress in 1964 to force agencies such as the Defense Department to increase the use of competitive bidding.

A recent report by the House Government Operations Committee found that at least two-thirds of the billions of dollars spent each year by the Federal Government for goods and services was spent without competitive bidding.

The act authorizes the General Accounting Office to hold hearings and offer advisory opinions on protested bid awards.

But the Reagan Administration argued the provision violated the constitutional principle of keeping separate the powers of the executive, legislature and judiciary.

A Justice Department spokesman said the decision was under review and that the Administration had not decided how to respond to it or whether to appeal it.

Judge Ackerman also questioned the explanation offered by former Attorney General William French Smith as to why the Justice Department had decided not to enforce the disputed provision. Mr. Smith said the department had acted as it did to achieve a speedy judicial resolution of issues. "In spite of these assurances," the judge wrote, "the litigating posture of the executive defendants in this case seemed to be one designed to avoid a judicial resolution of the lawfulness of the agencies' conduct in continuing to disobey the law."

Judge Ackerman's ruling involved Ameron, Inc., a New Jersey concern that was not awarded the contract to clean water pipes at the West Point Military Academy even though it had offered the lowest bid.

Judge Ackerman granted the concern's request that the contract for the West Point work not be signed until the accounting office has reviewed it.

[From the Washington Post, Apr. 1, 1985]

COURT RULES ARMY CORPS OF ENGINEERS BROKE LAW

A federal judge in New Jersey has ruled that the U.S. Army Corps of Engineers violated the law when it followed Reagan administration instructions to ignore a provision of a new law designed to promote competition in contracting.

The law, passed last year as part of the Deficit Reduction Act, authorized the General Accounting Office to delay the awarding of a government contract if a timely, legitimate protest had been filed by a losing bidder. The Justice Department, however, had told agencies to ignore that provision because it was unconstitutional. It said the GAO, as an arm of Congress, could not overrule executive branch agencies.

Judge Harold A. Ackerman's ruling came on a case involving Ameron Inc., a contractor seeking a water pipe cleaning contract at the U.S. Military Academy. Ameron went to court after the Army ignored its plea to the GAO to delay the award.

Ackerman, in his decision Wednesday, said the legal position of the administration "seems to be one designed to avoid judicial resolution of the lawfulness of agencies' conduct" in disobeying the law.

"The functions of the comptroller general [GAO chief] in ensuring that contracts are awarded in accordance with the law is . . . constitutional as the comptroller general is appointed by the executive and, therefore, may exercise law enforcement functions," he said.

The ruling pleased Rep. Jack Brooks (D-Tex.), who wrote the statute, and House lawyers who had filed a brief in support of the firm.

"It's a resounding vindication for the House and the statute," said Stephen R. Ross, general counsel to the House Clerk. "It's high time for the administration to instruct the federal agencies and federal officials to comply with the law. . . ."●

COMMUNICATION FROM THE HONORABLE MARTIN SABO

The SPEAKER pro tempore laid before the House the following communication from the Clerk of the House of Representatives:

HOUSE OF REPRESENTATIVES,
Washington, DC, April 4, 1985.

Hon. THOMAS P. O'NEILL, Jr.,
The Speaker, House of Representatives, H-202 Capitol, Washington, DC.

DEAR MR. SPEAKER: This is to inform you, pursuant to Rule L(50) of the Rules of the House of Representatives, that Ms. Georgia O'Brien, a caseworker in my district office, has received a subpoena issued by the District Court for the Fourth Judicial District of the State of Minnesota, County of Hennepin.

After consultation with the General Counsel to the Clerk of the House, I will inform you of my determinations as required by the House rule.

Sincerely,

MARTIN OLAV SABO.

THE DEINDUSTRIALIZATION OF AMERICA—HOW WE'RE BEING MADE A COLONY AGAIN

(Mr. DINGELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. DINGELL. Mr. Speaker, today I would like to place in the RECORD an incisive speech made at the Democratic Issues Conference in Greenbrier, WV, on March 2 by Mr. Lee A. Iacocca, president of Chrysler. Because it offers such a penetrating insight into the trade problems our country faces today, I commend this speech to my colleagues:

THE DE-INDUSTRIALIZATION OF AMERICA—HOW WE'RE BEING MADE A COLONY AGAIN

It's an honor and a pleasure to be invited here today. And I'm happy to see so many old friends.

I understand you're here to try to find the bus that hit you last November.

I honestly didn't realize how bad you people were hurt until I picked up the New York Times one day in January. There was a story that said, and I quote, "The Democratic Party is the Chrysler Corporation of American politics."

Now, it's bad enough getting buried under a landslide, but if I were you, I wouldn't take that kind of slander lying down!

Maybe misery loves company, and that's why you invited me.

But—just for the record, I'm non-partisan. Last year I spoke to the Marching and Chowder Society. I don't know if it accomplished anything, but I guess it didn't do any harm; I had a good year . . . They sure as hell had a good year. Now it's a year later, and I'm a little older (for sure) and a little wiser.

And the election's over and by the way, I should note that you had a good year too. You got elected! You fought off the tidal wave: You must have done something right; you must have outcommunicated somebody. So, congratulations to you.

Now that the election's over, however, I've gotta tell you the truth: I never figured out what it was all about. I learned more in one year about separation of church and state, abortion, prayer in school (I thought they were running for President—not Pope) . . . and less about the gut issues . . . than I would have thought possible in a Presidential election year in the world's greatest democracy. I haven't even heard the finish to the President's trip down the California coast!

CLEAR DIFFERENCE

But let me tell you, while I may not have been able to figure out what the election was about, I sure can read the results. And I don't mean the electoral results . . . I mean the real-world results; the fallout.

For one thing: I have never seen a clearer ideological cleavage than the one that exists today. There used to be a great big gray area—I guess it was called the "center"—where both sides milled around. A consensus area. But not today; it's as clear as a bell . . . two mountains and a great empty valley where the middle used to be.

Maybe I should say it's clear on one side; the administration's side. They managed to obscure it a little during the election, but—now that it's over—it's sure as hell clear where they want to go and how they want to get there. To be honest, I'm not quite so sure about the Democratic side of the gulf . . . it's not so clear to me . . . but I'll get to that later.

Also, to be honest with you, I've got to give the administration side some points . . . at this snapshot in time. Inflation is down . . . interest rates are down . . . confidence is up . . . employment is up. Hell, that's why they got elected. I don't know whether it's luck . . . or skill. But it's on the record. And, as a so-called fat-cat businessman, I don't have a helluva lot to bitch about. We did just make $2.4 billion . . . and that's more than Chrysler made in its 60-year history! And we're off to a good start in 1985. I should be dancing in the streets. That's what business is all about . . . right?

But I'm not dancing in the streets. Actually, I'm scared! I just finished the best year in my personal history, from a commercial standpoint: sold a couple of million cars, one and a half million books, and got an obscene bonus. And I'm scared! And I've got news for you: so are a lot of other people, in the midst of these days of wine and roses.

We're worried about what's beneath the surface . . . what's under the veneer of the Dow Jones averages and the corporate profits reports. Is it real? Is it lasting? Or is it just a Halloween candy with a great big needle inside? We may be wrong . . . we may be nuts (a lot of people think so) . . . But—

we are worried. And not just about ourselves, for a change. About America . . . and where it's going. About what our kids are going to wake up with.

It's not a new feeling, for me. Most of you know I've been expressing my thoughts on the subject for a couple of years now. But let me tell you about the night the dichotomy really hit me.

It was the night before our last Board meeting, early last month. The night of the State of the Union message. We had a dinner for the Board, and we reported all the good news: $2.4 billion in profits, a fantastic sales month (best in the industry) in January; and meaningful progress in our two most important operating areas—quality and productivity. It was a night for festivity, and those nights don't come around two often.

ROCKS AHEAD

But you know what we did, after cigars? We sat around and worried: About where the hell our company and our country were headed . . . about the things that were outside our control . . . about our frustration at our inability to make an impact in the areas that counted. (And these weren't all Democrats talking—sure, Owen Bieber was there, and Joe Califano and Juanita Kreps—but there were some damned conservative Republican CEO's there.) And then we all went back to our hotel rooms and we listened to the State of the Union Message.

It was eerie. It was like Alice going through the looking glass. We had been talking about what we called the Deindustrialization of America . . . and the President was talking about the revitalization of industrial America! And I thought to myself: One of us is looking through the wrong side of the glass!

Mr. Reagan talked about his vision of what he wants America to be: strong and prosperous and free. Well, I happen to share that vision. And I'm sure all of you do, too. There's only one difference. The President thinks we're almost there. And I see that vision fading further and further into the distance.

In fact, I've almost lost sight of it because I've got to see what's right before my eyes—an America that is losing its ability to compete.

Let me tell you what I thought I saw—we saw—on our side of the looking glass.

What we saw was the world's greatest industrial giant slowly strangling. An America that is hiding all of it's losses under a pile of public debt. We saw a country that is paying its way today by writing a blind balloon note that will someday come due and cripple its kids.

PARADISE LOST

We saw a budget deficit gone abruptly and totally out of control. A deficit that—during the first term of this administration—exceeded the total run up during our first two hundred years as a country . . . through 8 wars, 2 depressions and 39 administrations. A deficit that may, in the next four years, blow that total to smithereens! A deficit that currenly carries an interest bill of $117 billion per year . . . compared to a bill of $53 billion per year just four years ago! That's an annual "fixed charge" on just staying open for business! It doesn't pave a single road . . . build a single school . . . or hire a single policeman . . . or fuel a single space shot. It's dead weight, and it's going to crush us.

We saw an America whose core "smokestack" industries are fighting for their lives while the country literally looks the other way and talk's about a bold economic future based in high-tech and services. We saw the most productive farmers in the world in trouble . . . serious trouble. So much trouble, that earlier this week an entire state legislature paid its way to come to Washington and plead for help . . . and were met by the Secretary of Agriculture.

We saw a proud company like Caterpillar—always considered one of the best-managed companies in the world—brought to its knees while it waited for an abnormal currency relationship, and a one-sided trade policy, to get straightened out. A company with a brand new, half-finished plant in Peoria that it will never move into . . . a plant that it (and the State of Illinois) now want to sell to me. A plant I can no longer afford, because I'm a victim of the same disease.

That's what we saw that night the President was telling the nation that "a great industrial nation is reborn." Let me show you as graphically as I can what we saw.

[Graphics omitted from RECORD.]

I like to start with this one because it pretty much covers my lifetime. It's our balance of trade in goods and services since 1930.

We barely slipped into the red in the thirties when the whole world was in a depression.

The last time we went below the line was in World War II. (And in those days, they were sinking our ships.)

Look at the toboggan ride we've been on since 1980. Last year we dove into a deficit again, and it looks like we're heading right to the bottom.

Well, that's the "Reagan Recovery" (everything to the right of that yellow line). It's been harder on us than world depression and world war.

And this is the real culprit—our trade deficit in goods.

We went from a $40 billion surplus to a $123 billion deficit in just four years. That's a swing of $163 billion.

And all the projections are for the nosedive to continue. We've got to re-do the chart because we're already going through the bottom.

This is where we're losing—and it's everywhere. It's not just cars, folks, it's all across the economy.

Look long and hard at this one, because it should be titled "The De-Industrialization of America." That's what you're seeing here.

Petroleum is still the biggest contributor, but at least it hasn't gotten much worse in four years. But every other industry is going in the dumper.

Cars and trucks—$29 billion more lost here (and that was with quotas on.)

Iron and steel—down $7 billion.

Textiles—down $9 billion.

And look at number four up there—Telecommunications. That's high tech, right? That's what's going to save us when old smokestack America goes under? Well, it's losing ground faster than the rest of us.

Now, I only have room for the top ten industries involved in trade. But look at the "other" category, that's all the smaller ones. They dropped by $83 billion.

So everybody gets a piece of the action.

You just saw who the losers are. Guess who the big winner is. You got it—Japan.

We had a $3 billion deficit with them in '80, and last year it was $37 billion.

I guess that speaks for itself.

This one shows imports penetration by industry. On the top are those industries in which imports have been restrained (the trade "managed"), and on the bottom the ones in which the door have been wide open.

The import market share of cars, trucks and steel has stabilized or gone down with the restraints. (We put those restraints on because we had hit our "threshold of pain" in those industries, by the way. And I'll talk more about that in a few minutes.)

But look what's happening to the other guys. Look at the high tech boys. In simiconductors, the share held by foreign companies went from 6 percent to 15 percent since 1980. Computers—from 3 percent to 13.

Paper, machine tools, lumber—all up substantially.

What does this tell you? Well, for one thing, it tells you who to expect to have coming down to see you, if they haven't already.

We were there a couple of years ago. Steel has been to see you. The farmers are there now. The machine tool guys have been in. The high tech people are on their way . . . and the lumbermen.

You better free up your calendars.

And this is the final slide. So far we've been talking about money. But this is the real measure of our trade deficit—jobs.

In 1980, 1.2 million Americans had jobs because of our trade surplus. In 1984, 3.7 million of them were on the street because of our trade deficit. (We've put over a million Japanese to work, though, and a couple of million other people around the world.)

In his State of the Union Address, the President said Americans are "hopeful, bighearted, idealistic, daring, decent, and fair."

Well, this chart shows how "hopeful, bighearted, and idealistic" we are—toward the Japanese and others.

But it also shows that we aren't very "daring, decent and fair"—to our own people.

Well, those charts tell the whole story, don't they? They show the "De-Industrialization" of America. And they show something else—they show America becoming a colony . . . again. You know the definition of a colony: A colony is a settlement which ships raw goods to a mother country, which then ships back finished products.

Earlier this year I was in Philadelphia for a big birthday party they have every year for Ben Franklin. I gave a speech in which I pointed out that America's largest exports to Japan were corn, soybeans and coal—all foodstuffs and raw materials. Then I said that Japan's top exports to us were cars, trucks and video recorders—all high-value manufactured goods.

I told them we're becoming a colony again. Just like we were in Ben Franklin's time. Except we've adopted a new "mother country" this time around. It's not England, it's Japan!

REKINDLE SPIRITS

President Reagan says we're about to have a "New American Revolution." Well, I want him to remember why we had the first one. It was because we didn't want to be a colony anymore. We threw the tea in the harbor, remember?

I told those people in Philadelphia that I was glad old Ben Franklin wasn't here to see what we're doing to his revolution.

I think we do need a new revolution. I think we need a new Declaration of Independence, too. And I think we need them fast.

Well, I've been talking about our new colonial status and about the deficits, until I'm hoarse. Nobody listens. They nod and look the other way. Maybe they don't give a damn. Or maybe they really believe we'll grow our way out of the problem, like it was acne or something.

Two and a half years ago, the President asked me into the oval office to talk about the deficit. I had a simple plan to cut it in half, and he liked it. ($60 billion was needed to cut it in half then—now it takes $100 billion or more.) I said, "Hey, slap a tax on gasoline at the pump . . . now. (15 cents per gallon, to be exact) Slap a tax on imported oil . . . now. Go to Cap the Knife and say, knife me out $15 billion or 5 percent . . . now. Go to Tip—sorry, Tip, it's equality of sacrifice time—and say give me a matching 5 percent or $15 billion in entitlements."

Do you know what they said to me, two and a half years ago? They said "Defense is not negotiable! Yes, the government is too fat and too inefficient and must be cut down; but not in defense! As soon as you get to the Pentagon, you're looking at a model of efficiency—a Swiss watch—and you'll have to trust us on that because it's classified and we can't talk about it!"

THAT SINKING FEELING

I said, "Hey, I can take 5 percent out of anything . . . try me." They said bug off. And what are they are saying two and a half years later? That defense is not negotiable.

And what happened to my gas tax idea? Nothing. "Wirthlin said that's a loser. We can't do that." To which I say, two and a half years later, why not? We don't have an energy policy . . . right? Gas has dropped in price like a rock . . . right? We thought we'd be at $2 a gallon by now . . . right?

We're still the only country with cheap gas because we barely tax it. Every penny at the pump gets you a billion dollars. And every dollar on a barrel of imported oil gets you two billion.

That's a three-for-one shot because you cut the budget deficit, the trade deficit, and you conserve energy.

Instead, they now want to roll back the fuel economy standard from 27.5 MPG to 26 MPG! What the hell kind of a signal to the people is that?

So they blew me out. They're still blowing me out. Man, they're consistent. But now, two and a half years later, let me tell you what really terrifies me. It's the thought of carrying the current budget deficit and the current trade deficit into a recession! And one's coming, boys and girls, and quicker than you think. Maybe just in time for the farmer's fall planting season!

NAIVE AMERICANS

What do you do, then? You can't raise taxes in a recession. (Hell, the President won't even touch them during prosperity!) You can't cut social costs in a recession. The defense money is committed. The car business will go to hell; the Japanese—quotas off—will get 50%, maybe 60%. There goes steel and aluminum and rubber and glass and computer chips. (By the way, for you high tech guys, the auto industry is the biggest customer for computers and semi-conductors after the military.) And then the banks and the airlines and a few thousand McDonald's drive-ins! Now, what do you do about the deficits, Mr. President? You can't grow your way out and you can't shrink your way out. You've got no options left . . . and we're dead!

I don't think anybody's doing this to us on purpose. I think it's a matter of ideology, and a matter of priorities. Their ideology is clear, and pure: Free trade and hands off the economy. Their priorities are clear: Take care of your friends and keep the pressure on Russia . . . whatever that takes.

I'm no communist, folks, but it's not Russia that's laying waste to my business, and to most of the rest of business in this country. It's Japan . . . our friend. While, by the way, we pay to defend him against our enemy!

And I'm not against ideological purity, either. Show me a guy with no ideals and I'll show you a hack and a prostitute. But if you're the only guy in the game who's trying to play it straight up—if you're the only guy without a plan to compete—you're gonna get your clock cleaned!

The President put it pretty well in his State of the Union Address, when—making his point about national security—he said, "We cannot play Innocents Abroad in a world that is not innocent." I say, "Eureka, Mr. President . . . you've found it! But turn around and apply it." Why are we the only people playing Innocents Abroad in a trade world that is not innocent? Tell me, please. Before the whole farm is gone.

Everybody knows that the deck is stacked and the yen-dollar is stacked. Even his own advisers know it, and admit it. But it doesn't seem to matter; I've been talking about the level playing field for years . . . and there's nobody on the other end of the line. While I've been talking, the field tilted some more: The yen is now at 260 to the dollar. It was 201 when I started yelling, and 230 last year. That makes a U.S. car $600 worse off than it was a year ago!

People like to point the finger for all our trade problems at American management and the American worker . . . although I note that most of the people doing the pointing are neither managers nor workers. But we're not all that bad. We know how to compete, and—as Americans—we know how to fight; it's our nature . . . in war or in commerce. So we roll up our sleeves, we get cracking, we improve our qualtiy by a ton and our productivity by 10-15% in a year . . . and the yen/dollar wipes it all out. Now, what do I tell the troops?

TRIAL AND ERROR

It's discouraging. And I've gotta tell you, I've tried everything I could think of. Last May I made a proposal to the League of Women Voters. I went to them because I'd given up on the administration and I thought: Maybe I can at least get a debate going. I said, "Hey, I'm tired of the bum rap. So I'll tell you what I'll do. I'll freeze prices on our small cars indefinitely . . . and I'll stop all further offshore sourcing indefinitely. Everybody wins: The consumer, the worker, the country. One caveat: The government comes to the party, too, and agrees to straighten out the playing field with Japan . . . or keep quotas in place until that's done. And the Union agrees to base its future wage demands on demonstrated quality and productivity improvements."

OK? They all stood up and applauded, and I thought: "Oh boy, I just hit the hot button."

I might as well have stayed in bed. Sure, Owen Bieber grunted and said he'd come to a meeting. But the administration said, "That's industrial policy. That's not our cup of tea." But you know what was worse? I never heard from Ford or General Motors, either! In fact, GM just said, "Take the quotas off and let us get on with our plan to bring in a million cars from the Far East. We'll build Cadillacs here."

But I was naive. We froze our small car prices anyway; GM didn't. Today, to keep our Belvidere and Newark and St. Louis plants running, I'm giving 8.8 percent financing and free automatic transmissions on all our small cars—which adds up to as much as a thousand dollar cut on some models—plus I'm giving a $500 certificate to every good American who bought an American-built car from Chrysler when we were in trouble.

CUT AND RUN

We call it "Thank you, America." But somebody else is saying, "He's screwing America." The FTC came out and said, again, (and on cue) that we've ripped off the American consumers by $1 billion a year during quotas, and the ITC says it was closer to $2 billion a year. It's crazy. Even the math is crazy. The Commerce Department says that an additional 1.1 million Japanese cars will pour in. Brock says 750,000. Then the FTC says lifting of quotas will cost only 4,600 jobs! And they have to be smoking something funny over there. You ought to look into the Jim Millers and the Paula Sterns of the world. Because our math says 1.1 million cars is 450,000 jobs, and 750,000 cars is 300,000 jobs.

Well, who cares if they can't even get the numbers right. You finally have to say to yourself, "Hey, what am I doing here? This isn't my job. I've got a business to run. Look at the facts, dummy. The facts are that they believe they're right . . . they won't compromise . . . and they set the rules! You'd better adapt."

So, I've got news for you. I'm adapting. I'm adapting because I know it's over when the fat lady sings . . . and I just heard the fat lady sing: 12 to nothing in the cabinet council vote on quotas. And don't worry about the math on jobs lost.

So I said to my guys, "Forget it." We fought the good fight. We took it all the way through the bottom of the ninth. But even Yogi Berra said, "It's over when it's over."

So we sat down with our people last week and we went through all our product plans and all our investment plans. I said: "Assume no quotas and a mild recession . . . assume the car industry is off 15 percent and there are four and a half million foreign nameplates per year in this market, most of them shipped here and a few of them built here. And then tell me what we can afford, without keelhauling the company all over again."

And we looked at the numbers . . . and we gulped . . . and we went through our plans, program by program and plant by plant. And we did what we had to do, as businessmen. That's what they pay us for.

And then I sent our guys down to Washington. I said "Tell the administration that we may not be able to read tea leaves, but we can sure as hell read 12 to zip. Tell 'em we fought the good fight against the deficits and against the tilted playing field . . . but when they vote 12-0—when we can't even get a hung jury—with a trade deficit in goods at $123 billion . . . we know it's over. And we play by the rules. So count us in with your pals at GM. Tell your other pals in Japan that we want 200,000 cars a year from our Japanese partner, Mitsubishi . . . starting now." Tell 'em Iacocca says he's entitled to his fair share of the deficit!"

And our people delivered the message. In fact, one of our guys got a little carried away and told Bill Brock that Iacocca was going to stop doing commercials because he

doesn't have any credibility selling Japanese cars.

It'd be funny, if it were't so sad: do you know what the administration people said to all that? They nodded . . . they were pleased we finally saw the light! The fat lady sang . . . for the second time.

So. Next week I'll meet with our Board (including Bieber) and I'll spell it all out for them. I've just given you the opening shot here today: Get the hell to the Far East and match General Motors . . . fast. I've got to take the Board through the details: What capacity we're not going to add in this country; what capacity we'll cut back, and where; what capacity we may mothball. Which product programs are cancelled . . . which are amended . . . which ones proceed full tilt.

EXPORTING JOBS

And then, assuming I've got Board approval, I'll tell the press . . . and the press can tell the world. In the meantime, the details are confidential: We've got to talk to our own people before they read it in the papers.

And then we'll go do it. Plan "B," we call it. And we'll survive: We know how to survive. We know how to live like cockroaches, because we've had to. And we're fighters.

But the sad thing is: We're not the only ones. A lot of others are going to say, "Okay, what's good for GM may not be what's good for America this time around . . . but it's apparently good for Chrysler . . . and it's probably what's good for us." And it'll add up. It's not just the Japanese plants that won't be built here, because quotas are gone. It's the American plants that will be closed here . . . and, worst of all, the American plants that will be built there. Along with the American supply base that will follow

Lord knows, I'm not happy about it. I didn't want to do it this way. I didn't want to surrender to a policy which lets the Japanese call all the shots. And that's what we have, now.

The theory, of course, is that the Japanese will show restraint because if they go too far, Congress will get mad and step in.

The message to the Japanese is: "The American people, led by their Congress, have a tolerance level and you better not overstep it."

So the administration is stepping out of the picture, and letting the Japanese test your mettle. And the Japanese, in their wisdom, are going to find out just what your threshold of pain is. They're going to send in all the cars they can, but stop just one short of hearing you say "enough."

They'll try for two-and-a-half million cars the first year. Then they'll ease up to 2.7, then 2.9. They'll see if they can go to 3.2 by '88, maybe 4.8 by '89. Who knows? Why are we letting them set the numbers and the policy? Why are we going to let them lead the United States Congress around by the nose?

Why are we letting the Japanese test our threshold of pain? What are we, masochists?

By the way, for you the threshold of pain comes when we cancel a plant in one of your districts. And a few of you are going to reach it very soon.

Don't expect any help from the administration, because they're all ideologically committed on inaction. They believe in the "invisible hand" that will reach down and right all wrongs. Well, it's become an iron fist, and it's pounding us into the ground.

Let's look at the facts.

We've got a $37 billion trade imbalance with Japan. Our doors are wide open and theirs are practically locked. Does anybody want to argue that Japan isn't protectionist?

Even under free trade rules (I think), if, you're a protectionist, the other guy gets to retaliate. Well, Japan is a protectionist. Why can't we retaliate?

The purists say, "No, if you shut them out, they'll do it to you." Well, they already are, aren't they? What more are they going to do to us?

Sure, they buy raw materials, because that creates labor. But they won't take finished goods, because that's our labor.

Potatoes, yes; potato chips, no, because that's labor.

Tomatoes, yes; tomato puree, no.

Oranges, yes; orange juice, no—don't squeeze the oranges because that's value added.

Don't worry about starting a trade war: We're already in one. When the other guy is shooting at you (taking your jobs) aren't you allowed to shoot back?

The Japanese have made it perfectly clear that they don't intend to open their markets. They aren't being devious about it. They've said it.

So, I don't blame the Japanese for what's happening. Hell, I admire them. They're smart enough to know they're in a trade war, and tough enough to win it.

It seems to me that when you're losing a war, you try for a truce before you get bled white. You use your strongest bargaining chip to freeze the situation before you lose everything.

Well, cars were our chip, and we just gave it away yesterday! We gave it away and got nothing in return. If this were defense instead of trade, they'd call it "unilateral disarmament!" Do you think the president is going to give his missiles away?

SMALL FAVORS

Which bring me, inevitably, to you. The loyal opposition: the majority party in the House of Representatives. The 'jobs' people! Where the hell do you stand? For your district first, and the country second . . . or the other way round?

I think you've missed a bet; I've got a theory about why the "Great Communicator" communicates so well. He appears to be talking to America, and for America. He's got the flag wrapped so tightly around him you can't get hold of a corner of it. You're tagged as the "special interest" people. It may not be a fair tag, but it's not entirely unfair. Let me give you an example.

GM recently announced a paper project called 'Saturn' . . . no details, just some huge investment numbers and a plant somewhere . . . and the whole country is pouring in to see Roger Smith, hat in hand. State by state. City by City. Governors, Mayors, Representatives and State Legislators are lining up outside the GM building like they were holding a fire sale.

A couple of states have put up billboards along the freeways in Detroit, I guess hoping Roger Smith will see them on the way to work.

Last Tuesday, seven governors went on the Phil Donahue show to pitch their states for Saturn and it looked like a studio game show. (The governor of Minnesota even got cut off by a Kleenex commercial.)

Well, let me tell you, ladies and gentlemen, you're fighting over the crumbs, Saturn is just a dropping from the table. You're fighting over one plant with a few thousand jobs. Meanwhile, millions of jobs are pouring out of the country.

Don't fight over whether the crumbs fall in Michigan or Illinois or Texas. Get together, and fight to keep the whole damn banquet in America—or at least the main course!

Right now, a lot of you are fighting each other! The hell with "free trade" and "fair trade" and "laissez-faire" and "let the best man win"! I want that new plant and those new jobs in my town and I'll fight with fire to get them.

Except nobody's fighting for the country! Isn't that your job? You're not in your state assembly; you're in the United States House of Representatives . . . right? You're the loyal opposition . . . right?

I think there's a hell of an opportunity for you right now, and let me tell you why.

Rightly or wrongly, the Republicans have generally been seen as the party of economic growth.

Fairly or unfairly, the Democrats have been painted as the party of economic redistribution.

I don't have to remind you which one of those images has been selling the best lately.

But now things are all twisted around. Republican policies have been redistributing America's wealth—and not among Americans, but among everybody else in the world.

I believe they're losing their grip on the growth issue, and it's yours to grab.

Now, I'm not a politician, but when I see every major industry in the country getting knocked out of the box . . . when I see the farmers twisting in the wind . . . when I see kids in Detroit dropping out of school in the 10th grade because they know there are no jobs waiting . . . when I see all that, I also see a strong, new political coalition bubbling up out there.

DROPPING THE BALL

We aren't talking about narrow issues here like taxes, or defense, or abortion. We're talking about where America goes from here.

We're talking about what kind of country America is going to be, and what kind of people we're going to be.

Are we going to hook and job and compete? Or are we going to put our heads in the sand?

Are we just going to be "hopeful, bighearted and idealistic?" (Like the President says.)

Or are we going to protect what we've built . . . maybe build on it some more . . . and give our kids something more to look forward to than fighting over the crumbs?

I thinks it's a pretty basic tune, and I know it plays. I've sung it on the Philadelphia Mainline, to blue collar people, and to ethnic groups, and it plays.

It plays to the three-piece-suit guys in New York, and even to all those people in California driving around in their Toyotas and BMW's.

It plays to young people worried about their future, and to old people worried about what kind of a country they've leaving their kids.

It plays everywhere, and I'll tell you why, It's because Americans don't like to be losers. And when you lay it out for them that bluntly, they respond.

I know there's a coalition out there, because people keep telling me about it and telling me (and that includes some people in this room) that I've got to hang in there. I get 500 letters a day to confirm this, following the chapter in my book. Hell, my own Board told me that at that dinner discussion

last month! They said, "Don't you quit. You've got to keep fighting."

Well, let me repeat it for you. It's not my job. It's your job, and it's your opportunity. It's your issue . . . to seize on and to lead. I'll help; I'll join in; I'll line up some business support; I'll keep making speeches.

I've been carrying this fight already for a couple of years, but I've had to ask myself, "What the hell am I doing running around screaming about things like jobs and quotas?" I'm a businessman. I've even got a partner in Japan. I'm practically a traitor to my class.

Hey, this isn't my fight, it's yours.

You're the "jobs party," right? Well, three and a half million of them have been "free-traded" right out the window. Where are you?

Where's the purity of your ideology? I know about the administration. Whatever you can say about them, they're certainly true to their colors. These guys are just about as ideologically pure as anybody can be. They're all going to sit in heaven with the virgins, believe me.

We know where to get idealism. What we need is some pragmatism. And I guess you people are the last hope for it.

Maybe, like the New York Times says, you are the "Chrysler Corporation of American politics" right now. Well, take it from the guy who was there, you've got nowhere to go but up.

One reason Chrysler got in trouble was because it thought it would "grow" out of its problems as the economy got better. But the economy didn't get better. So we had to act.

We had to set some tough priorities. We had to make some damn painful sacrifices. We had to get single-minded about survival.

We also had to get everybody pulling together—and that's not too hard once they understand that if they don't, they're dead.

But most of all, we had to communicate. We had to convince practically the whole country that we were going to make it.

LOSERS WE ARE NOT

The headlines were saying we couldn't survive, but we went to the American people and said, "Give us a chance." I think we stood for something. We must have touched them somehow, because we're back, stronger than ever.

So let the Times call you anything they want. But if you pull together, and you go to the American people and communicate, and they see that you stand for something, then your stock will come back up, too.

And what's the message? What do you stand for?

How about standing up and saying that you have a vision for America, too. But it does not include leaving our trade doors wide open when the other guy's are closed.

Or giving our jobs away, or becoming a colony again, or burying our kids under a dungheap of public debt.

Instead, talk about a vision of an America that is "daring, decent, and fair"—but toward Americans!

Good luck to all of you. And thanks for having me.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. KOLBE) to revise and extend their remarks and include extraneous material:)

Mr. LIVINGSTON, for 60 minutes, today.

Mr. HUNTER, for 60 minutes, today.

Mr. WALKER, for 60 minutes, today.

Mr. MCCOLLUM, for 60 minutes, today.

Mr. COLEMAN of Missouri, for 60 minutes, today.

Mr. HAMMERSCHMIDT, for 10 minutes, today.

Mr. ROWLAND of Connecticut, for 30 minutes, today.

Mr. DIOGUARDI, for 5 minutes, today.

(The following Members (at the request of Mrs. BOGGS) to revise and extend their remarks and include extraneous material:)

Mr. ANNUNZIO, for 5 minutes, today.

Mr. KASTENMEIER, for 5 minutes, today.

Mr. UDALL, for 5 minutes, today.

Mrs. BOGGS, for 5 minutes, today.

Mr. DE LA GARZA, for 5 minutes, today.

Mr. MILLER of California, for 10 minutes, today.

Mr. JONES of Oklahoma, for 5 minutes, today.

Mr. RAY, for 30 minutes, today.

(The following Members (at the request of Mr. COLEMAN of Missouri) to revise and extend their remarks and include extraneous matter:)

Mr. MONTGOMERY, for 5 minutes, today.

Mr. BROOKS, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. DINGELL, and to include extraneous matter, notwithstanding the fact that it exceeds two pages of the RECORD and is estimated by the Public Printer to cost $1,802.50.

(The following Members (at the request of Mr. KOLBE) and to include extraneous matter:)

Mr. EMERSON in six instances.

Mr. BROWN of Colorado in two instances.

Mr. KOLBE.

Mr. HANSEN.

Mr. EDWARDS of Oklahoma.

Mr. PORTER.

Mr. ROTH.

Mr. LIVINGSTON.

Mr. HUNTER.

Mr. COUGHLIN.

(The following Members (at the request of Mrs. BOGGS) and to include extraneous matter:)

Mr. BRYANT.

Mr. LELAND in two instances.

Mr. BEDELL.

Mr. HEFTEL of Hawaii.

Mr. FORD of Michigan in two instances.

Mr. MOODY.

Mr. YATRON.

Mr. HOWARD.

Mr. MANTON.

Mr. WIRTH.

Mr. PICKLE in two instances.

Mrs. SCHROEDER.

Mr. BORSKI.

Mr. FUQUA.

Mr. ROSE.

Mr. HUBBARD in two instances.

Mr. LIPINSKI.

Mr. LANTOS.

Mr. SOLARZ.

Mr. FASCELL.

Mr. SCHUMER.

Mr. ORTIZ in two instances.

Mr. BARNES.

Mr. STARK in three instances.

Mr. CONYERS.

SENATE JOINT RESOLUTION REFERRED

A joint resolution of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S.J. Res. 96. Joint resolution condemning the violence of apartheid in South Africa and requesting an investigation by the Secretary of State; referred to the Committee on Foreign Affairs.

ENROLLED BILLS SIGNED

Mr. ANNUNZIO, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 730. An act to declare that the United States holds in trust for the Cocopah Indian Tribe of Arizona certain land in Yuma County, AZ;

H.R. 1847. An act to amend title 28, United States Code, with respect to the U.S. Sentencing Commission; and

H.R. 1866. An act to phase out the Federal supplemental compensation program.

ADJOURNMENT TO MONDAY, APRIL 15, 1985

Mr. COLEMAN of Missouri. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to.

The SPEAKER pro tempore. Pursuant to the provisions of Senate Concurrent Resolution 38 of the 99th Congress, the House stands adjourned until 12 o'clock meridian, Monday, April 15, 1985.

Thereupon (at 3 o'clock and 5 minutes p.m.), pursuant to Senate Concurrent Resolution 38, the House adjourned until Monday, April 15, 1985, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

971. A letter from the Chairman, National Credit Union Administration, transmitting the 1984 annual report of the Administration, pursuant to the act of June 26, 1934, chapter 750, section 102(d) (92 Stat. 3680); to the Committee on Banking, Finance and Urban Affairs.

972. A letter from the Secretary of Education, transmitting final regulations in connection with administration of final funding priorities for research in education of the handicapped, pursuant to GEPA, section 431(d)(1) (88 Stat. 567; 90 Stat. 2231; 95 Stat. 453); to the Committee on Education and Labor.

973. A letter from the Secretary of Education, transmitting a draft of proposed legislation to amend the Carl D. Perkins Vocational Education Act in order to clarify certain of its provisions and improve the operation of the programs authorized by that act; to the Committee on Education and Labor.

974. A letter from the Secretary of Energy, transmitting notice of the delay of the national energy policy plan, pursuant to 42 U.S.C. 7321 (b), (c); to the Committee on Energy and Commerce.

975. A letter from the Secretary of Transportation, transmitting the annual report on railroad financial assistance; to the Committee on Energy and Commerce.

976. A letter from the Acting Director, Defense Security Assistance Agency, transmitting the Department of the Air Force's proposed lease of defense articles to Canada, pursuant to 22 U.S.C. 2796(a); to the Committee on Foreign Affairs.

977. A letter from the Assistant Secretary of State for Legislative and Intergovernmental Affairs, transmitting a copy of the original report of political contributions for Charles A. Gillespie, Jr. of California, to Ambassador of the United States to the Republic of Colombia, pursuant to Public Law 96-465, section 304(b)(2); to the Committee on Foreign Affairs.

978. A letter from the Associate Director, Bureau of Educational and Cultural Affairs, U.S. Information Agency, transmitting a proposed waiver of limitation on foreign travel by the former Members of Congress relative to their Salzburg Seminars, pursuant to 22 U.S.C. 2460 nt. (Public Law 98-164, section 207(a) (fiscal year 1984-85)); to the Committee on Foreign Affairs.

979. A letter from the President, Overseas Private Investment Corporation, transmitting a draft of proposed legislation to amend the Foreign Assistance Act of 1961 with respect to the activities of the Overseas Private Investment Corporation; to the Committee on Foreign Affairs.

980. A letter from the National President, the Girl Scouts of the U.S.A., transmitting the 35th annual report of activities, pursuant to the act of March 16, 1950, chapter 62, section 7 (H. Doc. No. 99-50); to the Committee on the Judiciary and ordered to be printed.

981. A letter from the Chairman, National Advisory Committee on Oceans and Atmosphere, transmitting a report entitled: "North Pacific Fur Seals: Current Problems and Opportunities Concerning Conservation and Management"; to the Committee on Merchant Marine and Fisheries.

982. A letter from the Assistant Secretary for Civil Rights, Department of Education, transmitting a report on compliance and enforcement activities, pursuant to Public Law 96-88, section 203(b)(1); jointly, to the Committees on Education and Labor and the Judiciary.

983. A letter from the Assistant Secretary of State for Legislative and Intergovernmental Affairs, transmitting a report on the transfer of property under the Panama Canal Treaty of 1977, pursuant to 22 U.S.C. 3784(b); jointly, to the Committees on Foreign Affairs and Merchant Marine and Fisheries.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. HAWKINS: Committee on Education and Labor. House Resolution 72. Resolution to reaffirm the House's commitment to the Job Corps Program, with amendments (Rept. No. 99-38). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. JONES of North Carolina (for himself, Mr. UDALL, Mr. LENT, Mr. YOUNG of Alaska, Mr. BREAUX, Mr. HUBBARD, Mr. SHUMWAY, Mr. FIELDS, Mr. HUGHES, Ms. MIKULSKI, and Mr. LOWRY of Washington):

H.R. 1983. A bill to eliminate unnecessary paperwork and reporting requirements contained in section 15(1) of the Outer Continental Shelf Lands Act, and sections 601 and 606 of the Outer Continental Shelf Lands Act Amendments of 1978; jointly, to the Committees on Merchant Marine and Fisheries and Interior and Insular Affairs.

By Mr. ASPIN:

H.R. 1984. A bill to limit the amount that the Department of Defense may obligate during fiscal year 1986 for military basic pay and payments for currently accruing military retirement benefits, and for other purposes; to the Committee on Armed Services.

By Mrs. BOGGS (for herself, Mr. ADDABBO, Mr. BARNES, Mr. BEDELL, Mr. BEILENSON, Mrs. BOXER, Mrs. COLLINS, Mr. CROCKETT, Mr. DANIEL, Mr. DASCHLE, Mr. DERRICK, Mr. DWYER of New Jersey, Mr. DYSON, Mr. FISH, Mr. FLORIO, Mr. FOGLIETTA, Mr. FRANK, Mr. HOYER, Mr. HYDE, Mr. JACOBS, Mr. JEFFORDS, Ms. KAPTUR, Mrs. KENNELLY, Mr. LAFALCE, Mr. LEHMAN of Florida, Mr. LELAND, Mr. LOWRY of Washington, Mr. MCCOLLUM, Mr. MANTON, Mr. MARTINEZ, Ms. MIKULSKI, Mr. MURPHY, Mr. OBERSTAR, Mr. ORTIZ, Mr. QUILLEN, Mr. RANGEL, Mr. RICHARDSON, Mr. RINALDO, Mr. ROSE, Mr. SKELTON, Mr. SMITH of Florida, Mr. SOLOMON, Mr. SWIFT, Mr. WAXMAN, Mr. WEISS, Mr. WHITEHURST, Mr. WIRTH, Mr. PURSELL, Mr. LUKEN, Ms. OAKAR, Mrs. BURTON of California, Mr. MINETA, Mr. GREEN, Ms. SNOWE, Mrs. SCHNEIDER, Mr. ROE, Mr. FAZIO, Mr. MAVROULES, Mr. FROST, Mr. GRAY of Pennsylvania, Mr. GUARINI, Mr. NEAL, Mr. MILLER of California, Mr. STOKES, Mr. CLAY, Mr. BREAUX, Mr. HOWARD, Mr. SMITH of New Jersey, Mr. WALGREN, Mr. TAUZIN, Mr. BROWN of California, and Mr. FORD of Tennessee):

H.R. 1985. A bill to amend title XVIII of the Social Security Act to authorize payment for occupational therapy services under part B of the Medicare Program; jointly, to the Committees on Ways and Means and Energy and Commerce.

By Mr. CONYERS:

H.R. 1986. A bill to prohibit any Federal contract from being awarded to any person with investments in South Africa, until the Government of South Africa makes substantial progress toward an end to discrimination based on race or ethnic origin; jointly, to the Committees on Government Operations and Foreign Affairs.

By Mr. BIAGGI (for himself and Mr. RANGEL):

H.R. 1987. A bill to permit the exclusion from gross income of certain work-related sick pay received by New York City police officers and firefighters; to the Committee on Ways and Means.

By Mr. BONKER (for himself and Mr. ROTH (by request):

H.R. 1988. A bill to amend the Foreign Assistance Act of 1961 with respect to the activities of the Overseas Private Investment Corporation; to the Committee on Foreign Affairs.

By Mr. DORGAN of North Dakota (for himself and Mr. DASCHLE):

H.R. 1989. A bill entitled: "The Mandatory Fish Inspection Act of 1985"; jointly, to the Committees on Merchant Marine and Fisheries and Agriculture.

By Mr. DOWDY of Mississippi:

H.R. 1990. A bill to amend titles XVIII and XIX of the Social Security Act concerning the definition of the term "physician"; jointly, to the Committees on Ways and Means and Energy and Commerce.

By Mr. DOWNEY of New York (for himself and Mr. GRADISON):

H.R. 1991. A bill to eliminate import quotas on sugar; to the Committee on Ways and Means.

H.R. 1992. A bill to eliminate import quotas on sugar and to make amendments to section 22 of the Agricultural Adjustment Act of 1933 and section 201 of the Agricultural Act of 1949; jointly, to the Committees on Ways and Means and Agriculture.

By Mr. EDWARDS of Oklahoma:

H.R. 1993. A bill to authorize Federal agencies to accept volunteer service of individuals and nonprofit organizations to carry out certain activities of such agencies; to the Committee on Post Office and Civil Service.

By Mr. EVANS of Iowa:

H.R. 1994. A bill to amend the Internal Revenue Code of 1954 to clarify the conditions under which scholarship and fellowship grants will be excluded from gross income; to the Committee on Ways and Means.

By Mr. FEIGHAN:

H.R. 1995. A bill to amend the Railroad Retirement Act of 1974 to permit retirement, without certain deductions in annuity amount, by certain persons who have not attained the age of 62 years but were involuntarily separated from their last railroad employment; to the Committee on Energy and Commerce.

By Mr. FISH:

H.R. 1996. A bill entitled: "The International Organization Staffs' Children Survivors, and Retirees Act of 1985"; to the Committee on the Judiciary.

By Mr. FORD of Michigan (for himself, Mr. HAWKINS, Mr. SKELTON, Mr.

COLEMAN of Missouri, Mr. OWENS, and Mr. BIAGGI):

H.R. 1997. A bill to make certain technical and conforming amendments to the Library Service and Construction Act, and for other purposes; to the Committee on Education and Labor.

By Mr. FRANK:

H.R. 1998. A bill to provide that section 402(a)(31) of the Social Security Act, which requires that certain income of a stepparent living with a dependent child be taken into account in determining such child's need under the Aid to Families with Dependent Children Program, shall not apply in any case where the stepparent was already living with the child at the time such section became effective; to the Committee on Ways and Means.

By Mr. GUNDERSON:

H.R. 1999. A bill to define U.S. policy toward the Republic of South Africa, to provide incentives to the Government of the Republic of South Africa to eliminate apartheid, and for other purposes; jointly, to the Committees on Government Operations and Foreign Affairs.

By Mr. DE LA GARZA:

H.R. 2000. A bill to extend and revise agricultural price support and related programs, to provide for agricultural export, resource conservation, farm credit, and agricultural research and related programs, to continue food assistance to low-income persons, to ensure consumers an abundance of food and fiber at reasonable prices, and for other purposes; to the Committee on Agriculture.

By Mr. HEFTEL of Hawaii (for himself, Mr. DOWNEY of New York, Mr. FOWLER, Mr. MATSUI, Mr. GREGG, Mrs. SCHNEIDER, Mr. FAZIO, Mr. WOLPE, Mr. HALL of Ohio, Mrs. BURTON of California, Mr. MARKEY, Mr. HORTON, Mr. CONTE, Mr. JEFFORDS, Mr. MAVROULES, Mr. RALPH M. HALL, Mr. LUJAN, Mr. QUILLEN, Mrs. BOXER, Mr. FAUNTROY, Mr. DELLUMS, Mr. SEIBERLING, Mr. MOAKLEY, Mr. AKAKA, Mr. FISH, Mr. LEHMAN of Florida, Mr. UDALL, Mr. WALGREN, Mr. CONYERS, Mr. DASCHLE, Mr. BROWN of California, Mr. DURBIN, Mr. BEDELL, Mr. ANDERSON, Mr. VENTO, Mr. MINETA, Mr. SOLARZ, Mr. EDWARDS of California, Mr. KASTENMEIER, Mr. YATRON, Mr. FUQUA, Mrs. LLOYD, Mr. BRYANT, Mr. LELAND, Mr. DYMALLY, Mr. PANETTA, Mr. EDGAR, Mr. STANGELAND, Mr. WYDEN, and Mr. NEAL):

H.R. 2001. A bill to amend the Internal Revenue Code of 1954 to extend and phase out the energy tax credit for investments in certain classes of conservation and renewable energy property, and for other purposes; to the Committee on Ways and Means.

By Mr. HENDON:

H. Res. 60: Mr. LAGOMARSINO, Mrs. VUCANOVICH, and Mr. WALKER.

H. Res. 99: Mr. RANGEL, Mr. FAUNTROY, Mrs. COLLINS, Mr. DELLUMS, Mr. HAYES, Mr. LEVINE of California, and Mr. REID.

H. Res. 111: Mr. PEASE, Mr. MILLER of California, Mr. NIELSON of Utah, Mr. MORRISON of Connecticut, Mr. SENSENBRENNER, Mr. HOPKINS, Mr. PENNY, Mr. ROEMER, and Mr. DURBIN.

H. Res. 112: Mr. HORTON, Mr. WHITEHURST, Mr. DYMALLY, Mr. SAVAGE, and Mr. MARTINEZ.

H. Res. 125: Mr. SMITH of Florida and Mr. ECKART of New York.

DELETIONS OF SPONSORS FROM PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, sponsors were deleted from public bills and resolution as follows:

H.R. 528: Mr. LIVINGSTON.

H.R. 1460: Mr. LIVINGSTON.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

77. By the SPEAKER: Petition of the City Council of Duluth, MN, relative to covert activities in Nicaragua; to the Committee on Appropriations.

78. Also, petition of the director of administrative services, Saginaw, MI, relative to the Federal budget; to the Committee on Banking, Finance and Urban Affairs.

79. Also, petition of the Sanctuary Committee of Eliot Church, Newton, MA, relative to the sanctuary movement; to the Committee on the Judiciary.

80. Also, petition of the Mid-Ohio Valley Mayors Association, relative to revenue sharing; jointly, to the Committees on Government Operations and Public Works and Transportation.

SENATE—*Thursday, April 4, 1985*

(Legislative day of Monday, February 18, 1985)

The Senate met at 12 noon, on the expiration of the recess, and was called to order by the President pro tempore [Mr. THURMOND].

PRAYER

The Chaplain, the Reverend Richard C. Halverson, D.D., offered the following prayer:

Let us pray.

In these closing hours before recess, God our Father, help the Senate to accomplish what is needed so that the ghosts of unfinished business will not haunt them during these next 10 days. Knowing that a heavy schedule of difficult and complicated legislation awaits them upon return, and that requests and demands of constituents lie in waiting for them, grant that they may make time for personal and family needs. Some will be on a very intensive travel schedule—protect them in their journeys, keep them from accident and illness, and give them a safe return.

Especially we commend our leadership to You, Father. Though it is impossible for them to escape the burden of their responsibility, help them to get some relaxation and rest. Bless all who are a part of this large family during these special days of celebration.

And, Father, having just, in this last hour, seen Mohammed Amin's most recent film on the tragedy of Africa, I want to thank You that the Senate passed the African famine relief bill and for the compassion of the American people.

In the name of Him who is love. Amen.

RECOGNITION OF THE MAJORITY LEADER

The PRESIDENT pro tempore. The distinguished majority leader is recognized.

SCHEDULE

Mr. DOLE. Mr. President, under the standing order, the two leaders have 10 minutes each, to be followed by a special order, not to exceed 15 minutes, for the Senator from Wisconsin [Mr. PROXMIRE].

There will be a period for the transaction of routine morning business, not to extend beyond 1 p.m., with statements therein limited to 5 minutes each.

Following the conclusion of routine morning business, the Senate will turn to the consideration of certain executive items if cleared for action. I discussed each of the four possibilities with the distinguished minority leader last evening. If they are cleared for action, we will approve the nomination of Donald Ian Macdonald and Rosemary M. Collyer. If the nominations of General Doolittle and General Eaker are received, those will be acted upon.

Following the conclusion of today's business, the Senate will stand in adjournment, in accordance with the provisions of Senate Concurrent Resolution 38, until 12 noon on Monday, April 15, 1985.

I repeat, as I indicated last evening, that there will be no rollcall votes today. If we should get into the position where someone would request a rollcall vote, that matter would be postponed.

RECOGNITION OF THE ACTING MINORITY LEADER

The PRESIDENT pro tempore. The distinguished acting minority leader is recognized.

Mr. CRANSTON. Mr. President, I have nothing at this stage.

Mr. DOLE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. GRASSLEY). The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. DOLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. DOLE. Mr. President, last evening before we recessed I discussed two nominations with the distinguished minority leader, Senator BYRD, and he indicated it was satisfactory to him that we proceed on these two nominations today. Therefore, I ask unanimous consent that the Senate go into executive session to consider the following nominations on the Executive Calendar: Calendar No. 78, Rosemary M. Collyer; Calendar No. 99, Donald Ian Macdonald.

There being no objection, the Senate proceeded to the consideration of executive business.

The PRESIDING OFFICER. The nominations will be stated.

NATIONAL LABOR RELATIONS BOARD

The assistant legislative clerk read the nomination of Rosemary M. Collyer, of Colorado, to be General Counsel of the National Labor Relations Board.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

The assistant legislative clerk read the nomination of Donald Ian Macdonald, of Florida, to be Administrator of the Alcohol, Drug Abuse, and Mental Health Administration.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

Mr. DOLE. Mr. President, I move to reconsider the votes by which the nominations were confirmed.

Mr. CRANSTON. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. DOLE. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. DOLE. Mr. President, I ask unanimous consent that the Senate return to the consideration of legislative business.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECOGNITION OF SENATOR PROXMIRE

The PRESIDING OFFICER. The Senator from Wisconsin is seeking recognition and is recognized.

Mr. PROXMIRE. Mr. President, I have a special order, is that correct?

The PRESIDING OFFICER. Yes; the Chair recognizes the Senator from Wisconsin for his special order not to exceed 15 minutes.

THE BIG THREAT TO THE AMERICAN ECONOMY: MILITARY SPENDING

Mr. PROXMIRE. Mr. President, what is the sinigle most important advantage the United States has over

● This "bullet" symbol identifies statements or insertions which are not spoken by the Member on the floor.

51-059 O-86-20 (Pt. 6)

the Soviet Union from a strickly military standpoint? Is it our size? No. The Soviet Union is larger in area and has a bigger population. Is it our natural resources? No. Both countries are blessed with enormous natural resources in roughly equal measure. Is it our education and the skill of our workers and scientists? This is a different capability to measure. But again, both countries are blessed with gifted scholars and scientists. Both countries have universal public education and very high literacy rates.

Then what is the difference that gives the United States an obvious and decisive military advantage? The answer is: The American economic system. The decisive superiority of the American economy compared to the Soviet economy constitutes our clearest and far and away our most significant advantage. Last year, this country's economic system produced about twice as much as the Soviet Union produced. The U.S. economy is literally twice as big, twice as productive as the Soviet economy.

So what does that mean militarily? Military significance of economic strength became dramatically clear in World War II. It was the United States, the arsenal of democracy, that won World War II. Sure, we had inspired political and military leadership with Franklin Roosevelt and great military leadership with Gen. George Marshall and Gen. Dwight Eisenhower. We had gallant allies. But can there be any doubt that it was American factories that produced the inexhaustible and endless supply of tanks, planes, munitions, and guns that finally did the job?

Is this American economic power that won World War II still the essence of military power in this nuclear world? The answer is: Yes. And more than ever. Today we need much of our big and productive economy to be able to afford to produce thousands of tanks at $3 million per copy, tens of thousands of planes at up to $30 million each, and tens of billions for such as the MX missile. Make no mistake about it, we are in a critical arms race with the Soviet Union. Why don't we have the economic strength simply to win this race for military power? The answer is simple. We cannot win it. We could not win it even if we went on the same all-out time footing as we did with the dedication to the cause this country developed in World War II. We could not win this time. And why? Because no one can win. Almost everyone recognizes this truth.

But there is another truth that almost no one recognizes. What is it? It is the grim fact that although we cannot win, we can lose. We can lose without a bomb being dropped or a shot fired. We can lose because of the devastating effect of the massive military spending that threatens this Nation over the next 15 or 20 years in the onrushing arms race.

Unless we are able to negotiate a truly comprehensive arms control agreement with the Soviet Union, the momentum of the arms race will carry us into more and more costly expenditures, from a trillion dollar antimissile defense ("star wars"), through an additional $50 billion per year lookdown, shootdown antiaircraft and anticruise missile defense, plus a new series of penetrating offensive missiles to break through the Soviet defenses, and of course, a sharply stepped-up conventional warfare capability to move in and take over when and if the enormous expenditures for antimissile defense achieve their purpose and make nuclear war obsolete.

Mr. President, this arms race will bring on a massive increase in taxes or series of runaway deficits that will drive the national debt and interest rates so high that the only spending that will exceed military spending will be the overwhelming cost of paying interest on the national debt. With an all-out, superpower arms race, the national debt could easily be $10 trillion by the year 2000. With the sky-high interest rates such borrowing would develop, interest on the debt would then range between $1 and $2 trillion a year. Could our great economy support that kind of spending? Mr. President, even if we eliminated all Federal Government spending except for the military and interest on the national debt, we would require a huge and punishing increase in Federal taxes to begin to bring the deficit under control. What an absolutely incredible waste, Mr. President.

What can we do about it? We can avoid that waste by simply recognizing that both superpowers have everything to gain and nothing to lose by negotiating a comprehensive and mutual end to the arms race with strict verification to detect cheating, and with a recognition that since both nations would lose so much by a renunciation of the treaty, and since cheating would seriously threaten renunciation, there would be a realistic prospect that both signatories would abide by the treaty.

Somehow, the leaders of our Nation have not grasped what the people of our country have shown they fully understand in referendum after referendum—that is, that the time to end the arms race has come. It is not a matter of idealism. It is a matter of the toughest kind of hardheaded realism. The national security of our country depends above all on our free and immensely productive economic system. The greatest threat to that system is the exploding Federal deficit. To bring that deficit under control, it is imperative that we end the runaway cost of the arms race.

THE TERRIBLE EXPERIMENTS

Mr. PROXMIRE. Mr. President, survivors of the Nazi death camp at Auschwitz recently returned on the 40th anniversary of the camp's liberation. Among them were Eva Moses Kor and her fraternal twin, Miriam Moses Czaigher. They were among the 1,500 pairs of twins who underwent experiments at the hands of Josef Mengele, the infamous Nazi doctor who sought the perfection of one race by the destruction of another. Of the 1,500 pairs of twins who entered the camp, less than 180 individuals came out alive.

Separated from their mother at the age of 10, Eva and Miriam were taken by this "Angel of Death." Tattooed and clothed in rags, Eva and Miriam became guinea pigs for Mengele's demented experiments. Their childhood stripped from them, they were subjected to blood transfusions and numerous injections of unknown solutions. They watched as other children entered the camp and were immediately taken to the gas chambers, knowing that their own survival was only the result of some sick plan to continue the horrors which surrounded them.

Eva and Miriam are now left with the nightmares. They cannot escape the images of death. Smokestacks remind them of crematoriums; certain smells become the stench of death. They think of their mother, to whom they never said goodbye.

Remember that Eva and Miriam are survivors of a camp in which 4 million people were murdered. Their inexpressible pain and sorrow speak for the many who never left the camp. Eva and Miriam are messengers of that grim era, pleading for a moral courage that will prevent future repetitions.

Witnesses to the near destruction of their race, guinea pigs to madmen in the pursuit of their insidious dreams, Eva Moses Kor and Miriam Moses Czaigher are victims of a selective hatred. We can, we must, find the moral courage to eliminate this hatred. I urge the Senate to move promptly toward this noble goal by ratifying the Genocide Treaty.

S. 886—HAZARDOUS WASTE REDUCTION ACT

Mr. PROXMIRE. Mr. President, today along with Representatives SCHNEIDER and WYDEN and 47 House cosponsors, I am reintroducing the Hazardous Waste Reduction Act, a tax collected from owners and operators of hazardous waste treatment, storage, and disposal facilities. Its proceeds will be used for clearing up hazardous waste sites.

While this bill has a few changes from the one we introduced in 1983, the overall scheme is the same—tax

land disposal of hazardous waste to create an economic incentive for use of other environmentally superior methods such as recycling, neutralization, or high temperature incineration.

The waste end tax is a fair, economically efficient system for raising revenues for Superfund while correcting the economic imbalances which currently encourage unsafe, landbased hazardous waste disposal.

The bill would tax all the forms of land disposal regulated by the Resource Conservation and Recovery Act [RCRA] including landfills, surface impoundments, and injection wells, whether disposed of on or off-site.

All forms of land or ocean disposal except injection wells are taxed at the rate of $20 per ton. Injection wells are taxed at the rate of $5 per ton. Wastes disposed of in violation of RCRA would also be subject to the $20 per ton rate.

In addition, wastes rendered nonhazardous within 1 year of receipt at the treatment, storage, and disposal facility would receive full credit against the tax.

The tax applies to all the wastes classified as hazardous under RCRA and excludes those not covered such as small generator and mining wastes.

The tax is expected to raise $286 million a year based on data obtained from EPA and the Chemical Manufacturer's Association and is levied on the so-called "wet weight" basis which EPA believes is a simpler, more predictable system than the "dry weight" waste tax introduced earlier by Senators BENTSEN and MOYNIHAN.

It also works well as a component of the broader, comprehensive funding packages introduced for raising Superfund revenues.

I ask unanimous consent that the bill, a question and answer sheet on the bill provided by the Northeast-Midwest Institute, and a summary of the major provisions of the bill be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 886

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act is cited as the Hazardous Waste Reduction Act of 1985.

SEC. 2. WASTE END TAX.

(a) IN GENERAL.—Chapter 38 of the Internal Revenue Code of 1954 (relating to environmental taxes) is amended by adding at the end thereof the following new subchapter:

"SUBCHAPTER D—WASTE END TAX

"Sec. 4691. Imposition of tax.
"Sec. 4692. Exemptions.
"Sec. 4693. Credits.
"Sec. 4694. Application of tax and termination.
"Sec. 4695. Definitions.
"Sec. 4696. Records, statements, and returns.

"SEC. 4691. IMPOSITION OF TAX.

"(a) IN GENERAL.—There is hereby imposed a tax on the following:—

"(1) QUALIFIED MANAGEMENT UNIT.—The receipt of taxable hazardous waste in any qualified hazardous waste management unit.

"(2) OCEAN DUMPING OR EXPORT.—The receipt by any person of taxable hazardous waste for export or for disposal in the ocean pursuant to a permit under section 102 of the Marine Protection, Research, and Sanctuaries Act of 1972 (33 U.S.C. 1412).

"(b) AMOUNT OF TAX.—

"(1) IN GENERAL.—Except as otherwise provided in this subsection, the amount of the tax imposed by subsection (a) shall be $20 for each ton of hazardous waste which is taxed.

"(2) UNDERGROUND INJECTION.—For each ton of taxable hazardous waste placed in a qualified hazardous waste management unit operating pursuant to a permit (or interim status) under section 3005 of the Solid Waste Disposal Act which is an underground injection well for which a permit is in effect under part C of title XIV of the Public Health Service Act (the Safe Drinking Water Act), the amount of tax shall be $5.

"(3) FRACTIONAL PART OF TON.—In the case of a fraction of a ton, the tax imposed by subsection (a) shall be the same fraction of the amount of such tax imposed on a whole ton.

"(4) ADJUSTMENT OF RATES OF FISCAL YEAR AFTER 1986.—

"(A) ANNUAL ESTIMATES.—Before October 1, 1986, and before October 1 of each subsequent fiscal year during which the tax under this section is in effect, the Secretary shall estimate the amount of revenues expected to be derived from taxes under this section for the fiscal year which includes such October 1.

"(B) PERCENTAGE ADJUSTMENT IN RATES.—If revenues estimated under this paragraph for a fiscal year are estimated to be less than $286,000,000, the Secretary shall, by rule effective October 1 of the fiscal year concerned, increase the rates of tax under paragraphs (1) and (2) for that fiscal year. The amount of the increase shall be expressed as a percentage of the rates applicable under paragraphs (1) and (2). Such percentage shall be the same for rates applicable under each such paragraph.

"(C) AMOUNT OF ADJUSTMENT.—The percentage promulgated under subparagraph (B) shall be the percentage which the Secretary estimates to be necessary to result in total revenues from the tax under this section during the fiscal year concerned of $336,000,000.

"(c) LIABILITY FOR TAX.—

"(1) QUALIFIED HAZARDOUS WASTE MANAGEMENT UNITS.—The tax imposed by subsection (a)(1) shall be paid by the owner or operator of the qualified hazardous waste management unit at which the taxable hazardous waste is received.

"(2) EXPORT AND OCEAN DUMPING.—The tax imposed by subsection (a)(2) shall be paid by the person exporting the taxable hazardous waste or the person holding the permit issued for transport for ocean disposal under section 102 of the Marine Protection, Research, and Sanctuaries Act of 1972.

"(d) TIME FOR PAYMENT OF TAX.—The tax imposed by this section with respect to any taxable hazardous waste shall be paid at close of the calendar quarter during which the taxable hazardous waste became subject to tax.

"(e) TAX ON OTHER PLACEMENT.—

"(1) IMPOSITION.—There is hereby imposed a tax on the placement of any taxable hazardous waste in any facility or location at which such hazardous waste is not received by any unit or person referred to in paragraph (1) or (2) of subsection (a).

"(2) AMOUNT.—The amount of the tax imposed by this subsection shall be $20 for each ton of hazardous waste which is taxed, adjusted as provided in paragraph (4) of subsection (b).

"(3) PERSON LIABLE.—The tax imposed by this subsection shall be paid by the person placing the taxable hazardous waste in the facility or location concerned.

"(4) GENERATOR STORAGE FOR ALLOWABLE PERIOD.—The tax imposed by this subsection shall not apply to the placement of any taxable hazardous waste on the premises of the generator thereof for a period which does not exceed the allowable generator accumulation period.

"(5) NOT REGULATED UNDER SOLID WASTE DISPOSAL ACT.—

"(A) SMALL QUANTITY GENERATOR WASTE.—The tax imposed by this subsection shall not apply with respect to small quantity generator waste.

"(B) OTHER EXEMPT WASTE.—The tax imposed by this subsection shall not apply to the placement of any taxable hazardous waste in any facility, vehicle, or location (including any wastewater storage or treatment tank) if such placement is not, as of the date of the enactment of this section, required to comply with permit, interim status, or manifest requirement under subtitle C of the Solid Waste Disposal Act.

"(6) PLACEMENT IN VEHICLES FOR TRANSPORT.—The tax imposed by this subsection shall not apply to the placement of taxable hazardous waste in a vehicle which is required to transport such taxable hazardous waste to a facility or person referred to in paragraph (1) or (2) of subsection (a).

"SEC. 4692. EXEMPTIONS.

"(a) RESPONSE UNDER SUPERFUND.—The tax imposed by section 4691 shall not apply to the receipt of taxable hazardous waste by, or placement of any taxable hazardous waste in, any facility or location in the course of carrying out any removal or remedial action under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 if—

"(1) such removal or remedial action is carried out in accordance with a plan approved by the Administrator or the State; and

"(2) the release or threatened release which caused the removal or remedial action occurred before October 1, 1985.

"(b) MOVEMENT FROM CLOSED INTERIM STATUS FACILITY.—The tax imposed by section 4691(a)(1) shall not apply to the receipt of any taxable hazardous waste in any facility operating pursuant to a permit under section 3005(a) of the Solid Waste Disposal Act (or under a State program authorized under section 3006 of such Act) if such waste has been removed, pursuant to any order issued by the Environmental Protection Agency, from a facility operating pursuant to interim status under section 3005(e) of such Act which is being closed pursuant to such order.

"(c) STUDY WASTES.—The tax imposed by section 4961 shall not apply to the disposal of any solid waste which is required to be studied under subsection (f) or (p) of section 8002 of the Solid Waste Disposal Act unless, after the completion of the studies, a law is

enacted subjecting such wastes to the tax imposed under section 4691.

"(d) CERTAIN QUALIFIED WASTEWATER TREATMENT FACILITIES.—

"(1) EXEMPTION.—The tax imposed by section 4961 shall not apply to any qualified wastewater treatment facility.

"(2) ADDITIONAL REQUIREMENT AFTER NOVEMBER 8, 1988.—Effective November 8, 1988, the exemption under paragraph (1) shall not apply unless the qualifed wastewater treatment facility—

"(A) is in compliance with the requirements of section 3004(o)(1)(A) of the Solid Waste Disposal Act (relating to minimum technological requirements), or

"(B) meets the requirements of paragraph (2), (3), or (4) of section 3005(j) of the Solid Waste Disposal Act (relating to certain interim status surface impoundments).

"SEC. 4693. CREDITS.

"(a) MOVEMENT TO ANOTHER UNIT.—

"(1) CREDIT ALLOWED.—Under regulations prescribed by the Secretary, if—

"(A) a tax under section 4691 is imposed by any person with respect to any quantity of taxable hazardous waste (hereinafter in this subsection referred to as the 'first taxable event'), and

"(B) a tax is subsequently paid by any person under section 4691(a) (1) or (2) with respect to such quantity of taxable hazardous waste (hereinafter in this subsection referred to as the 'second taxable event'),

then a credit or refund (without interest) shall be allowed to the person who paid the tax at the time of the first taxable event in the amount determined under paragraph (2). Such credit shall be treated as an overpayment of the tax imposed with respect to such first taxable event.

"(2) AMOUNT OF CREDIT OR REFUND.—Except as provided in paragraph (3) with respect to underground injection wells, the amount of credit or refund determined under this paragraph with respect to any quantity of taxable hazardous waste is the lesser of—

"(A) the tax imposed with respect to such quantity by reason of the first taxable event, or

"(B) the tax paid with respect to such quantity by reason of the second taxable event.

"(3) RECEIPT AT UNDERGROUND INJECTION WELL.—If

"(A) a tax under section 4691(a)(1) is imposed on any quantity of taxable hazardous waste received at a surface impoundment (first taxable event), and

"(B) a credit is allowable under paragraph (1) of this subsection by reason of the receipt of such quantity of taxable hazardous waste at an underground injection well (second taxable event),

the amount of credit or refund determined under this paragraph with respect to such quantity is the amount by which the tax imposed with respect to such quantity by reason of the first taxable event exceeds the tax paid with respect to such quantity by reason of the second taxable event.

"(b) TREATMENT OR CONVERSION OF TAXABLE HAZARDOUS WASTE.—

"(1) CREDIT ALLOWED.—Under regulations prescribed by the Secretary, if

"(A) a tax under section 4691 is paid by any person with respect to any taxable hazardous waste;

"(B) no credit is allowable to such person under subsection (a) of this section for tax; and

"(C) such taxable hazardous waste is subjected by such person to qualified treatment or conversion,

then the tax paid by such person with respect to such taxable hazardous waste shall be allowed as a credit or refund (without interest) to such person in the same manner as if it were an overpayment of tax imposed by section 4691. If such qualified treatment or conversion is completed before the time for payment of the tax imposed by section 4691, in lieu of applying the preceding sentence, no tax shall be imposed on such taxable hazardous waste by section 4691.

"(2) QUALIFIED WASTEWATER TREATMENT FACILITIES.—No credit shall be allowed under this subsection for treatment or conversion at a qualified wastewater treatment facility.

"(3) LAND TREATMENT.—No credit shall be allowed under this subsection for land treatment.

"(4) VIOLATION OF EPA RULES.—The credit under this subsection shall not apply to any treatment or conversion which violates any requirement (other than a procedural requirement) of Federal or State law relating to the management of taxable hazardous waste, including any requirement in effect under subsection (q) of section 3004 of the Solid Waste Disposal Act (relating to hazardous waste used as fuel) or subsection (1) of such section 3004 (relating to dust supression).

"SEC. 4694. APPLICATION OF TAX AND TERMINATION.

"(a) PROSPECTIVE APPLICATION OF TAX.—The taxes imposed by section 4691 shall not apply to the receipt or placement of any hazardous waste in any facility or location before January 1, 1986, or to the export of any hazardous waste before January 1, 1986.

"(b) TERMINATION.—The tax imposed by this section shall not apply to the receipt or placement of any hazardous waste in any facility or location after September 30, 1990 or to the export of any hazardous waste after September 30, 1990.

"SEC. 4695. DEFINITIONS.

"For purposes of this subchapter—

"(1) TAXABLE HAZARDOUS WASTE.—The term 'taxable hazardous waste' means hazardous waste which was identified or listed under section 3001 of that Act on or before the date of the enactment of this section (and which is not thereafter removed from such identification or listing).

"(2) HAZARDOUS WASTE.—The term 'hazardous waste' has the meaning provided by section 1004 of the Solid Waste Disposal Act and the regulations thereunder. No substance (including household waste) which is not treated as a hazardous waste under such regulations shall be hazardous waste for purposes of this subchapter.

"(3) SMALL QUANTITY GENERATOR WASTE.—The term 'small quantity generator waste' means waste which is generated by a generator who does not generate more than 100 kilograms of hazardous waste in any calendar month.

"(4) UNDERGROUND INJECTION WELL.—The term 'underground injection well' has the same meaning as when such term is used in the Safe Drinking Water Act and the regulations thereunder.

"(5) TON.—The term 'ton' means 2,000 pounds.

"(6) ALLOWABLE GENERATOR ACCUMULATION PERIOD.—The term 'allowable generator accumulation period' means the period (allowable under subtitle C of the Solid Waste Disposal Act) during which a generator of hazardous waste may accumulate hazardous waste on-site without being required to obtain a permit under section 3005 of that Act (or under a State program approved under section 3006 of that Act). Such period includes any storage period allowed under section 3004(d)(6) of such Act.

"(7) QUALIFIED WASTEWATER TREATMENT FACILITY.—The term 'qualified wastewater treatment facility' means any wastewater treatment facility (including any surface impoundment within such a facility which contains treated wastewater during the secondary or tertiary phase of biological treatment or which holds treated wastewater after treatment and before discharge)—

"(A) for which a permit under section 402 of the Clean Water Act is in effect; and

"(B) which is required to comply with ground water monitoring requirements generally applicable to facilities having permits under section 3005(c) of the Solid Waste Disposal Act.

"(8) QUALIFIED HAZARDOUS WASTE MANAGEMENT UNIT.—The term 'qualified hazardous waste management unit' means—

"(A) the smallest area of land on or in which hazardous waste is placed (if such waste is not placed in or on a structure); or

"(B) if hazardous waste is placed in or on a structure, the structure in or on which such waste is placed which isolates the hazardous waste within a treatment, storage, or disposal facility which is operating pursuant to a permit (or pursuant to interim status) under section 3005 of the Solid Waste Disposal Act or under a State program authorized under section 3006 of such Act.

"(9) QUALIFIED TREATMENT OR CONVERSION.—

"(A) CHANGE WITHIN 1-YEAR.—The term 'qualified treatment or conversion' means treatment or conversion of any taxable hazardous waste which is completed within 1 year after receipt or placement of such waste at the first facility or location where a tax was imposed on such receipt or placement under section 4691.

"(B) TREATMENT OR CONVERSION.—The term 'treatment or conversion' means any method, technique, or process, which changes taxable hazardous waste into a substance which is no longer a taxable hazardous waste.

"(C) TREASURY RULES.—The Secretary shall promulgate rules to carry out this paragraph including rules for determining the application of the 1-year period referred to in paragraph (A) to fungible quantities hazardous waste which are not separately identified prior to treatment or conversion.

"(10) LAND TREATMENT.—The term 'land treatment' means the application of waste onto, or the incorporation of waste into, the soil surface.

"SEC. 4695. RECORDS, STATEMENTS, AND RETURNS.

"(a) IN GENERAL.—Every person subject to taxation under this subchapter shall keep records, render such statements, make such returns, and comply with rules and regulations as the Secretary may prescribe to ensure proper assessment, payment, and collection of the taxes imposed by section 4691.

"(b) OTHER RECORDKEEPING.—The Secretary shall consult with the Administrator of the Environmental Protection Agency and the Chief of the United States Army Corps of Engineers to ensure that records, statements, and returns required to be kept, rendered, and made under this section shall be consistent, to the extent possible, with the reports required to be submitted to the Administrator under the Solid Waste Disposal Act, title XIV of the Public Health Service Act (the Safe Drinking Water Act), and the Marine Protection, Research, and Sanctuaries Act of 1972. The Secretary may require any person who is required to maintain

records under any such Act to submit copies of such reports or make such reports available to the Secretary.".

(b) REVENUES FROM ADDITIONAL TAX DEPOSITED IN HAZARDOUS SUBSTANCE SUPERFUND.—Subparagraph (A) of section 221(b)(1) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (relating to establishment of Hazardous Substance Superfund) is amended by striking out "section 4611 or 4661" and inserting in lieu thereof "section 4611, 4661, or 4691".

(c) CLERICAL AMENDMENT.—The table of subchapters for chapter 38 of such Code is amended by adding at the end thereof the following new item:

"SUBCHAPTER D—WASTE END TAX".

(d) EFFECTIVE DATE, ETC.—

(1) IN GENERAL.—The amendments made by this section shall take effect on January 1, 1986.

(2) STUDY, ETC.—

(A) IMPLEMENTATION OF WASTE END TAX.—Not later than April 1, 1986, the Secretary of the Treasury shall submit to the Congress a report on the progress being made in preparing for the implementation of the waste end tax imposed by subchapter D of chapter 38 of the Internal Revenue Code of 1954 (as added by this section).

(B) ALTERNATIVE WASTE END TAX.—Not later than January 1, 1987, the Secretary of the Treasury shall submit to the Congress his recommendations (if any) for a waste end tax which—

(i) would raise an amount of revenue equivalent to the anticipated revenue from the waste end tax imposed by such subchapter D, and

(ii) is designed to discourage the disposal of hazardous wastes in environmentally unsound manners (and to accomplish this result with maximum administrative feasibility).

(3) RECOMMENDATIONS REGARDING CERTAIN WASTES.—In the case of any hazardous waste which is not a taxable hazardous waste within the meaning of section 4693(1) of the Internal Revenue Code of 1954, if the Administrator of the Environmental Protection Agency lists or identifies such waste under section 3001 of the Solid Waste Disposal Act after January 1, 1985, the Administrator shall simultaneously transmit to Congress his recommendations respecting the taxation of such waste under section 4691 of the Internal Revenue Code of 1954.

QUESTIONS AND ANSWERS ABOUT THE HAZARDOUS WASTE REDUCTION ACT

WHO PAYS THE TAX?

The tax is collected from the owners and operators of treatment, storage and disposal facilities (TSD) permitted under the Resource Conservation and Recovery Act (RCRA). All hazardous wastes regulated under RCRA must be taken to a permitted TSD facility.

According to EPA, there are 4,818 of these off-site on-site facilities currently in operation. Ninety-five percent of all treatment, storage, and disposal takes place at only 240 facilities.

WHAT TYPES OF WASTE DISPOSAL ARE TAXABLE?

All forms of land disposal regulated by RCRA would be taxable, including landfills, surface impoundments used for disposal, and injection wells. The tax also would apply to land treatment, ocean disposal, and the export of hazardous waste.

The tax would apply to any wastes treated or disposed of in violation of RCRA permits.

Both on-site and off-site disposal would be subject to the tax. EPA estimates that 85 percent of all hazardous waste disposal occurs on-site, typically in large surface impoundments or injection wells.

WHAT ARE THE TAX RATES?

All forms of land disposal except injection wells would be taxed at a rate of $20 per ton. The $20 rate would apply to landfills, disposal surface impoundments, waste piles, and land treatment. The $20 rate also covers ocean disposal, the export of hazardous waste, and wastes treated or disposed of in violation of RCRA permits.

The disposal of hazardous wastes in underground injection wells would be taxed at a rate of $5 per ton.

WHAT ABOUT TREATMENT OF HAZARDOUS WASTE?

The bill provides that wastes rendered nonhazardous by RCRA standards within one year of receipt at the TSD facility would receive full credit against the tax. This credit would cover such treatment processes as incineration, recycling, and the neutralization of corrosive acids. Wastewater treatment under Clean Water Act permits would not be subject to the tax.

Any waste that remains hazardous after twelve months of treatment would be taxed. This provision is intended to prevent "pseudo-treatment" (such as solar evaporation ponds) to avoid the tax.

Residues from any treatment process that are land disposed would be subject to the tax. The tax also would apply retroactively to any waste treated in violation of permit specifications.

WHAT TYPES OF WASTE ARE TAXABLE?

All wastes classified as hazardous under the Resource Conservation and Recovery Act at the time this waste-end tax legislation is enacted into law would be taxable. These include toxic as well as characteristic wastes that are ignitable, corrosive, or reactive.

ARE ANY HAZARDOUS WASTES EXCLUDED FROM THE TAX?

All hazardous wastes not covered by RCRA's regulatory framework are exempt from the tax. Examples include small generator wastes, mining waste, the temporary on-site storage of hazardous waste (90-day limit), and the discharge of effluents permitted under the Clean Water Act.

Waste removed from a Superfund site to a permitted land disposal facility would not be taxed, in order to help keep down the cost of cleanup. While it would be more appropriate to destroy Superfund wastes than to shift them to another land disposal facility, the choice of cleanup method under the program should be determined under guidelines provided by Congress, rather than through waste-end tax policy.

In addition, a number of existing disposal sites are expected to close, due to their inability to meet more stringent operating requirements imposed by Congress during reauthorization of RCRA. Wastes removed from these closed sites to permitted facilities would not be taxed. As with the exclusion for Superfund wastes, the rationale is to avoid creating obstacles to compliance with RCRA regulations.

HOW MUCH REVENUE WOULD THE TAX RAISE?

The bill would raise an estimated $286 million per year, a figure based on data derived from EPA and the Chemical Manufacturers Association. The revenue estimated is calculated below:

Method	Volume (thousand metric tons)	Tax per ton	Revenue (millions)
Landfills	3	$20	$60
Land treatment and waste piles	1	20	20
Disposal impoundments	1	20	20
Injection wells	32	5	160
Convert from metric to English tons			26
Total revenue			286

All volume estimates are expressed in metric tons, while the tax is based on English tons (Metric Tons:English Tons=1.1:1). The volume data is taken from EPA's Westat Survey, except for disposal impoundment figures, which are derived from a survey conducted by the Chemical Manufacturers Association.

HOW WOULD THE TAX BE PAID?

The tax would be paid by the TSD facility on a quarterly basis upon receipt of hazardous waste. A full credit would be provided for all wastes rendered nonhazardous by treatment within 12 months of receipt at the facility. To avoid double taxation, full credit would be provided for waste moving from one unit or facility to another.

HOW WOULD THE TAX BE ADMINISTERED?

RCRA requires that all off-site disposal be recorded on a manifest, and on-site disposal on an operating log. In addition, all waste disposal facilities are required to prepare a comprehensive biennial report listing the amount and types of waste handled.

These documents will provide the basis for record-keeping under the tax. The bill directs the IRS to refine further the reporting system for tax purposes. An EPA study has concluded: "Although changes to the existing reporting and information systems are necessary to provide data on an annual basis for all facilities, these changes are not likely to impose a large incremental burden on the regulated community, the states, or EPA."

WOULD THE TAX RATES PROVIDE AN INCENTIVE TO REDUCE WASTE DISPOSAL?

Yes. An EPA study found that a waste-end tax would have a significant effect in shifting waste to treatment. Relatively low tax rates provide a substantial incentive to reduce high volume disposal of liquid wastes. This is due to the economies of scale that can be realized in treating large volumes of waste.

For example, the EPA study estimated that at a $5 per ton rate, about a quarter of all wastes now injected in deep wells could be rendered nonhazardous through treatment, principally by neutralizing corrosive and reactive wastes.

ARE THE GOALS OF WASTE REDUCTION AND RAISING REVENUE FROM THE WASTE-END TAX CONTRADICTORY?

Both objectives can be accommodated if the revenue projections for the waste-end tax are based on the most conservative estimates possible.

For this reason, a number of waste management activities that would be subject to the tax—and would produce some revenues—deliberately were excluded from the revenue estimates because they are difficult to quantify. They include wastes "stored" in the land for longer than the RCRA 90-day limit, wastes "treated" for longer than 12 months, and wastes taxed because of a violation of treatment or disposal permits.

The bill also provides for an automatic upward adjustment of the rates for any year

in which the waste-end tax revenues fell short of projections.

This provision is similar to that included by the administration in its Superfund reauthorization proposal.

WHY TAX DEEP WELL INJECTION?

An estimated 32 million tons of hazardous wastes are injected into deep wells every year, making this method the largest source of land disposal in use today. While little is known about the deep wells, the available evidence suggests cause for concern about the environmental side-effects of this technology.

Leaks at Chemical Waste Management's deep wells in Vickery, Ohio prompted the state EPA to slap two fines totalling $16 million on the site operators. The rupture of an injection well in Presque Isle, Pennsylvania led to the possible contamination of Lake Erie, and to the site's placement on the Superfund National Priority List. The industry trade journal Chemical Week has warned about the potential hazards of deep well injection.

The lower rate of $5 per ton for injection wells provided by the bill compensates for the fact that wastes must be diluted to be suitable for this method of disposal.

WHY NOT TAX ON A DRY-WEIGHT BASIS?

Wastes with a higher water content are not necessarily "better" than solid wastes. Liquid wastes are more mobile, more liable to move into groundwater, and less susceptible to containment through land disposal.

The practical effect of a dry-weight tax would be to reduce drastically revenues from injection wells. For example, the non-water content of injected wastes ranges from 1 to 5 percent of total volume. A $50 per ton dry-weight tax would raise as little as 50 cents per ton on a wet-weight basis from wastes injected into underground wells.

An EPA study concluded that a dry-weight tax would be more complex to administer and take longer to implement than a wet-weight tax. As a result, it would be virtually impossible to predict revenues from a dry-weight tax.

The same EPA study found that the high cost of sampling ($35 to $70 per barrel) for non-water content would make the tax prohibitively expensive for small business.

WILL A WASTE-END TAX ENCOURAGE ILLEGAL DISPOSAL?

EPA compared states with waste-end taxes to those without to determine whether the reported incidence of midnight dumping increased with the tax. The study found no such correlation.

EPA has indicated that a waste-end tax could help refine the existing data on the treatment, storage and disposal of hazardous waste. The data could be used by both the IRS and EPA to target subsequent permitting and enforcement activities.

HAVE STATE WASTE-END TAXES PRODUCED THE REVENUES PROJECTED?

In the summer of 1984, EPA conducted a survey of the waste-end tax programs in eight states.

In six states, waste-end taxes had generated 71 to 98 percent of projections; in two states, revenues were ahead of projections. (For perspective, the Superfund feedstock tax has realized 78 to 84 percent of revenue projections).

EPA found that previously reported shortfalls in initial revenues from waste-end taxes were due primarily to inadequate data on actual waste volumes, overall economic recession during the startup period, failure to account accurately for the cost of tax exemptions, and lack of programmatic resources during startup.

SUMMARY OF PROXMIRE HAZARDOUS WASTE REDUCTION ACT

TAXABLE PARTIES

Owners and operators of Subtitle C RCRA permitted "TSD" facilities. According to EPA, there are 4,818 of these offsite and onsite disposal facilities currently in operation, and 95 percent of all treatment, storage, and disposal takes place at just 240 facilities.

TAXABLE EVENTS

All forms of land disposal including surface impoundments, underground injections wells, and landfills. Any treatment technology, including land treatment, that does not render waste nonhazardous within one year. The export of hazardous waste. The ocean disposal of hazardous waste.

EXEMPTIONS

All treatment methods that render waste nonhazardous within one year. Waste-water treatment facilities permitted under the Clean Water Act. All wastes excluded from RCRA's regulatory framework. Waste removed from a Superfund site to a permitted land disposal facility. Waste moved from existing sites closed under RCRA.

TAX RATES

$20 per ton for all forms of land disposal, export, and ocean disposal. $5 per ton for the underground injection of hazardous waste.

ADMINISTRATION

The tax is collected only from facility operators, using existing RCRA manifests and operating logs to monitor taxable and nontaxable events.

The tax is collected on a "wet weight" basis, so as to streamline administration and to guarantee a steady flow of revenue.

REVENUE PREDICTABILITY

This waste-end tax is expected to raise $286 million a year, based on the latest available data on the amount of waste that is land disposed. The bill contains a provision mandating an increase in the rate should the tax fall short of its revenue goal.

Mr. MOYNIHAN. I ask unanimous consent that we might proceed as if in morning business.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MOYNIHAN. I thank the Chair.

The PRESIDING OFFICER. The Senator from New York.

ISRAEL'S TREATMENT OF PRISONERS IN LEBANON

Mr. MOYNIHAN. Mr. President, we have learned with the arrival of today's New York Times that the U.S. Department of State has charged that the State of Israel had apparently violated the Fourth Geneva Convention in the treatment of prisoners which it has taken during fighting in Lebanon and is moving to facilities in Israel at this time.

The State Department said that Israel "is prohibited regardless of motive" under the terms of the Fourth Geneva Convention. The report in the Times goes on to state that "The Convention deals with treatment of prisoners and the obligation of occupying powers."

It may be, Mr. President, that there is general confusion in these matters in the Department of State. I do not think so. There is nonetheless a confusion reflected in this news report because the Fourth Geneva Convention which was signed on August 12, 1949, is "The Geneva Convention relative to the protection of civilian persons in time of war."

The relevance of this charge is at least twofold. First, this is not the first time that the U.S. Government has chosen to direct this accusation against the State of Israel. In the other instance, it was done in a most formal and legal setting, a setting in which actions are taken that have consequences in international law, which is to say the Security Council of the United Nations.

In March 1980, the United States voted with the unanimous council to find Israel in "gross violation" of the Fourth Geneva Convention with regard to settlement of Israeli citizens on the West Bank of that part of the Jordan River.

At that time, Israel became the first country ever to be found guilty by any organ of the United Nations of violating the Fourth Geneva Convention, and there was at least some interest aroused into just what this convention was.

I wish, Mr. President, I could on this very short notice—which I have felt compelled to use because the Senate is about to go out of session for almost another 2 seeks—provide a more comprehensive and detailed account of the Fourth Geneva Convention. But I believe I can provide one that will serve, and which is essentially accurate.

The origins of the agreement go back to the 1907 Hague Convention on Belligerent Occupation, which dealt with the question of the protection of civilians during the time of war, and the Geneva Convention of 1929 relative to the treatment of prisoners of war.

Time passed, and the horrors of the Second World War took place, specifically the horrors of Nazi occupation in different parts of Europe and most especially Poland, where the major extermination camps were established.

In the aftermath of Allied victory in World War II, a number of German officials were tried at Nuremberg for war crimes and were found guilty. Some were imprisoned; some were executed and some were not executed, the assertion being that individuals are responsible under international law for the acts of their Government.

Afterwards—in the period that also saw the founding of the United Nations, when it was thought that inter-

national law and organization held the best hope for maintaining the peace just established. As part of this effort, it was deemed advisable to recodify, to the extent this was possible, the conventional international law that had been first codified in the Hague Conventions, taking into account the extraordinary, unprecedented, theretofore unimaginable behavior of the Nazi Government during World War II. The Fourth Geneva Convention accordingly made provision for what were called grave breaches, making them liable as individuals for their conduct just as states were liable for theirs, although states were not put under the category of entities capable of grave breaches.

This was understood to be, and legitimately was, a retroactive attempt to declare the conduct of the Nazis in Poland, Czechoslovakia, and France as having not just been reprehensible, but criminal. There was no attempt to make it apply retroactively to any individuals. It simply said that this is the judgment of the world on that conduct and will be the judgment of the world on any such future conduct.

Mr. President, it is the great and ultimate irony and corruption of the Geneva Conventions that of all the nations of the world, in all the wars, states of belligerency and violence that have occurred since 1949, only one nation has ever been found guilty of the Fourth Geneva Convention. That is Israel.

Even as the Soviets in their propaganda declare Zionism a form of racism, and constantly assert that the massacre at Babi Yar was a collaboration between the SS and the Zionists, even so, they could never have expected the triumph of seeing the U.S. Department of State not once but now twice assert what they have charged, which is that Israeli behavior falls under a statute designed to prohibit Nazi behavior.

The lie, Mr. President, is sinking in. The language has been corrupted. The victims of the Holocaust are more and more accused of perpetrating the same crimes which we summarize under the term of "Holocaust."

It is not as if this has not been noticed. We have called attention to this over and over. In 1980, the U.S. Government voted with the Soviet Union to find Israel in gross violation of a convention that made Auschwitz a crime—perversely charging that the construction of apartment buildings within sight of the city of Jerusalem somehow was the moral or legal equivalent of the gas chambers at Auschwitz.

In 1980, there was a generalized outcry. The Secretary of State was called to hearings in the Committee on Foreign Relations. There was much discussion about whether there had been some misunderstanding or some difficulty in communication. Yet no effort was made to withdraw or revise or reverse American agreement to the proposition, to state that in fact our country did not agree. If there had been a confusion in the instructions given the U.S. Mission to the U.N., we could have said that, whatever the vote at the Security Council table was, the United States did not intend to vote that way and does not believe that. But we did not make any such attempt.

Now, 5 years later, we repeat it.

Mr. President, it was not necessary for the State Department to have leveled this charge. What is more, it is not logical. I cannot suppose a court would in any way sustain the charge or at one level even admit it.

There is behind the Geneva Convention the presumption of a European-type conflict in which armies in uniform are engaged in combat one with the other, the treatment of civilians by uniformed Nazis being so unprecedented, so without imagined consequences, that the convention rather avoided the issue of irregular warfare.

For the Department of State should have said, with reference to this week's transfer of prisoners, that a state of belligerency exists in southern Lebanon, and that if we have any arguments with the conduct of the Israeli forces, we do so under, not the fourth, but the third Geneva Convention, which has to do with the treatment of prisoners of war.

From every photograph we have seen, I think we understand the Israelis have taken into custody young men of fighting age, of an age to bear arms. They have removed some of them to Israel, just as we brought German prisoners of war to the United States during World War II. They have put them into facilities where they are detained. They are being treated as prisoners of war. Nobody is being shot; nobody is being tortured; nobody is being starved. In point of fact, the Israelis are withdrawing from the area in question and having difficulty doing so precisely because young men dressed in civilian clothes are attacking and killing their soldiers.

It is as prisoners of war that these young men are being treated, and it is in the more general context of a situation in which violent conflict takes place between groups that are not regular armed forces of a national government with uniforms, but are nonetheless in some ways even more violent.

I was on the beachhead at Beirut in the autumn of 1983 just before the departure of our Marines from there. I have never seen the extent of the artillery exchange taking place on the slopes of the mountains just above Beirut and down into Beirut.

Not the largest barrage in history, certainly, but a continued artillery duel with great consequences to be seen in the explosions and the debris and the smoke and dust in the air and the guns, some of them, not 3 or 4 miles offshore, off the beachhead.

Yet I do not imagine that there was a single artillery crew among those attacking the U.S. Marines there in uniform. Yet they were in every respect belligerent and engaged in rather complicated forms of belligerency.

The question is: Why does the Government of the United States, in the face of the self-evident fact that the Government of Israel is dealing with the problems of withdrawing from a sector of another country in which they have been in belligerent occupancy, as law would have that term, cite this Fourth Geneva Convention, which is bound to be repulsive to the sensibilities of anyone who knows its origin and the occupation which brought it into existence. This statement, in effect, associates the United States with the most obscene untruths—lies—about the State of Israel which we have heard from the Soviet Union and its allies over the last decade. Why does the Department of State repeat it?

Has the United States ever chosen to raise the question of the conduct of Vietnam in Cambodia in the context of the Fourth Geneva Convention? No.

Has the United States ever addressed itself to the conduct of Iran in the context of the Fourth Geneva Convention? No.

Has the United States ever raised the issue of the Fourth Geneva Convention with respect to any country—anywhere—save the State of Israel? To the extent that I am aware, the answer is "No."

In that situation, Mr. President, one is moved to ask: What does the State Department intend by this? Why are they treating this one country so differently from others? Why do they make charges which are not necessary and are not sustainable?

The persons in question are manifestly not civilians, protected in time of war by the Fourth Geneva Convention. The young men we see in the photographs are clearly capable of armed behavior and belligerent behavior. They are not being mistreated and not being detained any longer than one expects in a period in which the Israelis are going to be able to remove themselves altogether from Lebanon. The difficulties of this whole experience no one need question. But the persistence with which the State Department brings up the Fourth Geneva Convention argues either an utter lack of sensibility as to the implications of that charge, or a complacency and willingness that the charge be made. Whichever it is, Mr. President, it has to be regretted and should be rejected.

I would hope we might hear from the Department in this matter. I shall send these remarks to the Secretary of State and ask if he would not see that some response is in order. I shall put the response in the CONGRESSIONAL RECORD. And I shall then take the matter to the Committee on Foreign Relations to see if they do not consider this a subject appropriate for further inquiry. Once was shameful, twice becomes a pattern of disgrace.

I ask unanimous consent that the New York Times report, to which I have referred, be printed in the RECORD, along with the excerpts from the relevant Foreign Relations Committee report.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the New York Times, Apr. 4, 1985]

UNITED STATES ACCUSES ISRAEL OF VIOLATING PACT ON SHIITE CAPTIVES

(By Bernard Gwertzman)

WASHINGTON, April 30.—The Reagan Administration said today that Israel had apparently violated an international agreement on Tuesday when it transferred 1,100 Lebanese detainees from southern Lebanon to Israel.

The State Department said the transfer of the Lebanese from the Ansar detention camp to the territory of the "occupying power"—Israel—"is prohibited regardless of motive" under the terms of the Fourth Geneva Convention of 1949. The convention deals with treatment of prisoners and the obligations of occupying powers.

In Jerusalem, a Foreign Ministry spokesman said the detainees transferred to Israel had been accorded all the privileges due prisoners of war under the Geneva Convention, although he said they did not qualify for that status.

CHARGES ALSO BY RED CROSS

The assertion by the State Department today was its first criticism of Israel's actions in southern Lebanon since the Israelis began to withdraw their troops earlier this year.

Similar charges against Israel were leveled today by the International Committee of the Red Cross in Geneva.

On Tuesday, the Israelis began dismantling the Ansar camp, moving 1,100 prisoners to a detention camp in Israel. The Israeli Army indicated on Tuesday that these detainees, whom it characterized as the most violent of the prisoners, had been "temporarily" transferred there so as not to impede further Israeli withdrawals.

ABOUT 750 PRISONERS ARE FREED

About 750 other prisoners were freed by the Israelis today after being taken to a town near Tyre.

Most of the prisoners held in the camp were Shiite Moslems and the others Sunni Moslems and Palestinians. Most were said to have been arrested by the Israelis for "security violations," according to military sources in Israel.

"We've consistently taken the position that the Fourth Geneva Convention applies to areas of Lebanon under Israeli occupation," the statement said. "According to the convention, protected persons are to be detained only within the occupied territory. Their transfer to the territory of the occupying power is prohibited regardless of motive.

"It appears that Israel's actions are inconsistent with the pertinent provisions of the Geneva convention," it said.

The Israeli official in Jerusalem said the transfer was in compliance with the convention because Article 49 of the document also says that protected persons can be removed outside of occupied territory "when for material reasons it is impossible to avoid such displacement."

A State Department spokesman, Kathleen Lang, said the Israelis had apparently violated Articles 49, 76 and 77 of the convention. Israel became a party to the convention in 1951 and the United States in 1955.

Article 49 says: "Individual or mass forcible transfers, as well as deportations of protected persons from occupied territory to the territory of the Occupying Power or to that of any other country, occupied or not, are prohibited, regardless of their motive."

The article adds, "Persons thus evacuated shall be transferred back to their homes as soon as hostilities in the area in question have ceased."

Article 76 says, "Protected persons accused of offenses shall be detained in the occupied country, and if convicted they shall serve their sentences therein."

Article 77 says those persons accused of offenses, or convicted, "shall be handed over at the close of occupation, with the relevant records, to the authorities of the liberated territory."

NO SIGN OF PENALTY

Despite the accusation, there was no indication that the Administration planned to penalize Israel for the move. American officials, including Secretary of State George P. Shultz, have been sympathetic to Israel's problems in withdrawing from southern Lebanon. The United States has criticized Syria and Lebanon for not reaching an agreement with Israel on an orderly transfer of power to the Lebanese authorities as the Israelis withdrew.

Mr. Shultz, was not asked about the withdrawal issue when he testified this morning before a Senate Appropriations subcommittee. But he was pressed by Senator Dale Bumpers, Democrat of Arkansas, on whether the Administration would support Israel's request for $1.5 billion in additional funds for the 1985 and 1986 fiscal years, above the $4.6 billion already allocated or proposed for Israel.

The House Foreign Affairs Committee was considering the foreign aid bill and was expected to approve the additional funds. But Mr. Shultz said Israel had not adjusted its economy to the extent necessary for the additional aid to have lasting effect.

"Prime Minister Peres has taken a number of very courageous steps, but in my judgment they aren't there yet," he said of Prime Minister Shimon Peres's program. "The Israeli economy needs a lot of straightening around. There are a lot of things the Government of Israel needs to do."

He said that before acting on the additional aid, Washington should wait for concrete action by Israel in such areas as cuts in the budget, adding, "I think that goes for Congress as well as the Administration."

SHULTZ MEETS WITH ARENS

Mr. Shultz, who is regarded as one of Israel's chief supporters in Washington, met later today with Moshe Arens, a member of the Israeli Cabinet, who had been ambassador here and later Defense Minister in the last Government. According to Israeli officials, Mr. Arens and Mr. Shultz discussed several matters, including the possibility that Mr. Shultz might have diplomatic discussions with various Middle East leaders after he attends Holocaust ceremonies in Israel on May 10.

The issue of whether Israel had violated the Fourth Geneva Convention also arose under President Carter, but in another connection. The Carter Administration said Israeli settlements in the occupied West Bank were in violation of that convention because Article 49 said that "the occupying power shall not deport or transfer parts of its own civilian population into the territory it occupies."

President Reagan, however, had said before his election that it was not illegal to have the settlements, and subsequently his Administration no longer referred to that provision. It has merely said the settlements were an obstacle to peace because of Jordan's concern that they made it less likely that Israel would agree to any sort of withdrawal from the area.

ISRAEL DEFENDS ACTION

TEL AVIV, April 3.—A spokesman for the Foreign Ministry in Jerusalem said today that the guerrillas transferred Tuesday from a prison camp in Lebanon to an Israeli camp had been accorded all the privileges due prisoners of war under the Geneva Convention, although he said they did not qualify for the status.

The Israeli official said the detainees did not merit prisoner-of-war status under the convention. He said the conditions for such status were that they had served under the command of a responsible officer, wore a uniform or clear identification of military allegiance, bore arms openly and abided by the accepted regulations defining conduct during war.

Replying to assertions that the Israelis had violated the Fourth Geneva Convention by transferring "protected persons" across an international border, the spokesman drew attention to Article 49, which permits the occupying power to evacuate a given area "if the security of the population or imperative military reasons so demand."

The same paragraph also says "protected persons" shall not be detained "in an area particularly exposed to the dangers of war."

The spokesman said that there was already considerable fighting among Lebanese factions in the area and that the situation would become more dangerous as the Israelis completed their withdrawal.

EXCERPTS FROM SENATE EXECUTIVE REPORT NO. 9, 82D CONGRESS, 1ST SESSION, REGARDING THE FOUR GENEVA CONVENTIONS FOR THE PROTECTION OF WAR VICTIMS

1. MAIN PURPOSE OF THE CONVENTIONS

The purpose of these conventions is to improve the treatment to be given persons who become the victims of armed conflict and to relieve and reduce the suffering caused thereby. To that end the four conventions are designed to modify, clarify, and develop existing international rules and practices dealing with the condition of wounded and sick in the armed forces in land and maritime warfare, prisoners of war, alien enemies within the territory of a belligerent and the inhabitants of areas subjected to military occupation.

At the present time the United States is a party to four basic conventions covering all these subjects except that relating to alien enemies in the national territory; but as

early as the Italo-Ethiopian conflict and the Spanish Civil War it had become apparent that their provisions were in need of reexamination. The conventions referred to are: The Geneva Convention of 1929 for the amelioration of the condition of the wounded and sick in armies in the field; the Geneva Convention of 1929 relative to the treatment of prisoners of war; Hague Convention No. IV, respecting the laws and customs of war on land; and Hague Convention No. X, for the adaptation to maritime warfare of the principles of the Geneva Convention of 1906.

Experience acquired during 1939–45 amply demonstrated the necessity of bringing these instruments up to date, making them susceptible of more uniform application and more definite in interpretation, and further improving them so as to provide greater and more effective protection for the persons whom they were intended to benefit.

Until the present time there has not been in existence a separate, comprehensive treaty establishing standards of humane treatment for civilians in time of war, although the matter is partially dealt with, so far as concerns territory under belligerent occupation, in the regulations annexed to Hague Convention No. IV of 1907. For this reason, a new convention was drawn up at the Geneva Conference in 1949, which spells out to a degree never before attempted the obligations of the parties to furnish humanitarian treatment to two broad categories of civilians: enemy aliens present within the home territory of a belligerent, and civilian persons found in territory which it occupies in the course of military operations.

The essential point is that all of the conventions now before the Senate, with the exception of the convention of civilians, are based, fundamentally, on treaty obligations which the United States had previously accepted. The function of the new texts is to provide better protection and to adapt the earlier treaties to modern conditions. So far as the policies of the United States are concerned, the convention on civilians, while new in form, reflects generally the practices which we ourselves have followed.

* * * * *

(d) Civilian persons (Convention No. IV)

The Convention on Civilians, as already noted in this report, adheres closely to principles to which the United States has subscribed previously, either in earlier international undertakings (the regulations annexed to The Hague Convention No. IV of 1907), or in its own treatment of internees within its territory during the last great war. Because however, the convention is completely new in form and creates a number of new international obligations for the parties, particularly with respect to alien enemies within the home territory of a belligerent, its provisions merit examination in somewhat greater detail than those of the three conventions thus far discussed.

(1) Scope and Coverage of the Convention

Article 4 identifies as a person protected by the convention anyone who, during a conflict or military occupation, falls into the hands of a power of which he is not a national. The convention does not, however, protect nationals of a state not bound by it, nor nationals of a neutral state found within belligerent territory as long as that state maintains diplomatic representation with the latter. Nor does it cover individuals who are protected by the other three conventions under consideration.

Protected persons suspected of hostile activities within the metropolitan territory lose only such rights and privileges under the convention as would prejudice the state's security. Similarly, protected persons in occupied territory who are detained for spying or sabotage, or as persons under definite suspicion of activity hostile to the security of the occupying power, may be deprived of all rights of communication under the convention (permitting contacts with relatives and the protecting power) where absolute military security so requires. However, such persons must be humanely treated and shall also be granted the full rights and privileges of a protected person at the earliest date consistent with the security of the state or occupying power (art. 5).

Articles 1–3 and 8–12 are those common articles already discussed above which concern the applicability of the convention to undeclared and civil war, to protecting powers and related matters.

Part II of the convention (arts. 13–26) deals with the general protection of populations against certain consequences of war.

(2) Hospitals and Safety Zones

Article 14 encourages the parties to establish within their territories hospitals and safety zones organized to protect and shelter young children, the aged, wounded, and sick and expectant mothers from the effects of war. Neutralized zones may be established, upon agreement between the parties, in regions where fighting is going on, for wounded and sick combatants and noncombatants, or civilian persons not participating in the hostilities (art. 15). The parties agree to facilitate measures taken to search for killed and wounded, to protect them against pillage and ill-treatment (art. 16) and to try to arrange for the removal from besieged or encircled areas of the wounded, sick, infirm and aged persons, children, and maternity cases (art. 17).

Articles 18–23 provide for the immunity of civilian hospitals from attack, the manner of their identification by the Red Cross emblem, the circumstances under which such protection is lost by acts harmful to the enemy, and the protection to be accorded personnel engaged in the operation of civilian hospitals. Similar provision is made for the protection of hospital convoys on land and sea, and of aircraft used for removing wounded and sick when properly marked with the emblem and flying on courses agreed between the parties. Under specified conditions protecting a party from improper use, the free passage of medical supplies, food, and clothing for children and maternity cases is stipulated.

Articles 24–26 relate to the welfare of children under the age of 15 and measures for facilitating the establishment of contact between members of a family who have been separated because of the war.

Part III is the largest and most important portion of the convention (arts. 27–141). It sets forth the principal obligations of the parties with respect to the two broad categories of persons which it protects: (a) alien enemies and other protected persons within the territory of a party to the conflict (sec. II) and (b) persons residing in territory which is occupied by the enemy (sec. III).

(3) Provisions Applicable to Both National and Occupied Territory

Certain common provisons applicable to both categories are set forth in articles 27–34 (sec. I). These common articles provided for humane treatment of the individuals protected, and bind the parties to respect their person, honor, family rights, and religious customs. Women are to be especially protected against any attacks on their honor and against enforced prostitution. Any distinction in treatment based upon race, religion, or political opinion is specifically forbidden. It is, however, recognized that a party may be justified in taking such measures of control and security in regard to protected persons as may be necessary because of the war.

Article 30 seeks to put teeth into the protection given, by requiring the parties to give protected persons "every facility for making application to the protecting powers, the international committee of the Red Cross, the National Red Cross (Red Crescent, Red Lion and Sun) Society of the country where they may be, as well as to any organization that might assist them."

Detaining powers must facilitate visits by other humanitarian or relief organizations to persons in their custody.

Coercion of any kind to elicit information from protected persons is prohibited (art. 31), as are any measures causing the physical suffering or extermination of such persons, including mutilation or so-called scientific experiments not necessitated by medical treatment (art. 32). A familiar precept of The Hague Regulations of 1907 (art. 50) is found in the prohibition of collective penalties, and of the punishment of a protected person for offenses which he has not committed (art. 33). Pillage (also prohibited in art. 47 of The Hague rules), reprisals against a person or his property and the taking of hostages are prohibited (arts. 33–34).

(4) Aliens in Territory of a Party to the Conflict

The convention grants to any protected person during a conflict the right of voluntary departure unless contrary to the national interests of the state. In the event that permission to leave is denied, the convention provides that the applicant's request shall be reconsidered by an appropriate court or administrative board designated by the detaining power (art. 35). This is analogous to the United States practice during World War II in giving interned enemy aliens hearings before advisory boards which recommended release, parole, or continued internment to the Attorney General. Persons permitted to leave are entitled to take with them necessary funds for expenses and reasonable amounts of personal effects.

Articles 27 and 38 require protected persons in the territory of a belligerent to be treated humanely, even while confined pursuant to a sentence involving loss of liberty (art. 37). Apart from the special measures of security and control contemplated by articles 27 and 41, their situation continues to be regulated in principle by the provisions concerning aliens in time of peace; but in any case they are entitled to receive individual or collective relief sent to them, medical attention if needed, and to practice their religion. Children under 15 and pregnant women and mothers of children under 7 years of age enjoy any preferential treatment provided for the nationals of the state concerned (art. 38).

Protected persons who have lost their employment as a result of the war must be permitted to find paid work on the same basis as nationals, except for security requirements. If they cannot support themselves as a result of security measures the detaining power must insure their support and that of

their dependents (art. 39). On the other hand, they may be compelled to work only to the same extent and under the same conditions as nationals of the territory. Alien enemies, however, may only be compelled to do work normally necessary to insure the feeding, sheltering, clothing, transport and health of human beings, and not related directly to the conduct of military operations (art. 40). This, too, is a general reflection of past American practice.

Under article 42, the internment or placing in assigned residence of protected persons may be ordered only if the security of the detaining power makes it absolutely necessary; and, if such internment is maintained, the internee is entitled to periodic review of his case by an appropriate court or administrative board at least twice yearly.

Article 43 introduces, with respect to internees, the concept of the protecting power borrowed from the 1929 Prisoner of War Convention. Unless the individual himself objects, the detaining power must give to the protecting power the names of any protected persons who have been interned or thereafter released. Similar opportunities to communicate with the protecting power are provided for internees as are enjoyed by prisoners of war. Protected persons may not be transferred to a power not party to the convention (art. 45) nor may the detaining power automatically treat as enemy aliens exclusively by virtue of their nationality of an enemy state refugees who in fact enjoy the protection of no government (art. 44).

(5) Occupied Territories

Articles 47-78 of the convention deal with the highly important subject of the treatment of inhabitants of occupied territory by the occupying power. In that connection, it should be noted that articles 27-34, which have already been discussed, are common both to this portion of the convention and that dealing with enemy aliens in belligerent territory.

This portion of the convention constitutes the first successful attempt in almost 50 years to revise treaty law dealing with belligerent occupation. It presents primarily a refinement, expansion, and clarification of the regulations annexed to The Hague Convention IV of 1907 respecting the laws and customs of war on the land, by which the United States is presently bound. The provisions do not replace The Hague rules but are supplementary to them as between powers which are bound by the 1899 or 1907 conventions, and are also parties to the 1949 document (art. 154).

Articles 47 prohibits the occupying power from depriving protected persons who are in occupied territory of the benefits of the convention by any change it may attempt to make in the government of that territory or its institutions, or by agreements between the occupying power and the authorities of the occupied territory, or by annexation thereof in whole or in part. Protected persons found therein who are not nationals of the dispossessed power must be given an opportunity to depart in accordance with procedure established pursuant to article 35 (art. 48). Article 49 prohibits individual or mass forcible transfers and deportations of protected persons from occupied territory to another country; but evacuation of specific areas is permissible for imperative military reasons or the security of the population (art. 49). Specific measures to insure the care, health, and education of children and prohibiting changes in their personal status are set forth in article 50. Compulsory military service by protected persons in the armed forces of the occupant is prohibited, along with pressure of propaganda aimed at inducting voluntary enlistment. Forced labor of protected persons is forbidden unless they are over 18 years of age, and then must be limited to work necessary either for the needs of the army of occupation, public-utility services, or for the feeding, sheltering, clothing, transportation, and health of the inhabitants. Compulsory work in connection with military operations is excluded (art. 51).

(6) Welfare of the Inhabitants

Article 55 considerably enlarges the responsibility of an occupying power with respect to the welfare of the occupied territory. Under article 43 of The Hague regulations, that obligation was stated merely as one to "ensure, as far as possible, public order and safety." Moreover, the occupant, under article 52, could only requisition goods and services "for the needs of the army of occupation." Article 55 of the Civilian Convention goes beyond this by imposing upon the occupying power the duty of ensuring the food and medical supplies of the population to the best of its capabilities, even if it has to bring these in from outside the territory. Services may be requisitioned, as previously noted, for the benefit of the population. Foodstuffs, articles, or medical supplies may still be requisitioned for the use of occupation forces and administrative personnel, but only if the requirements of the civilian population have been taken into account.

Articles 56-63 set forth the obligations of the occupant relative to the maintenance of hospital and medical establishments, the prevention of disease, relief consignments and their distribution, and the activities of Red Cross societies.

(7) Punishment of Criminal Offenses

Article 64 substantially rephrases article 43 of The Hague rules which required the occupant to respect "unless absolutely prevented," the laws in force in the country. Instead it is now provided that the penal laws of the occupied territory shall remain in force, with the exception that they may be repealed or suspended by the occupying power when they constitute a threat to its security or an obstacle to applying the convention. Local tribunals will continue their functions with respect to offenses covered by such laws. Penal laws enacted by the occupant may not be retroactive (art. 65). The occupying power is authorized to try offenses against such laws by its properly constituted, nonpolitical military courts, provided they sit within the territory (art. 60). Only provisions of law applicable prior to the offense and in accordance with general principles of law may be applied by the courts (art. 67). Internment or simple imprisonment is the maximum penalty which may be applied to offenses intended solely to harm the occupying power but which do not constitute an attempt on the lives or persons of members of the occupying forces or administration, nor a grave collective danger nor damage property of the occupying forces or installations used by them (art. 68).

It is further provided in article 68 that the penal provisions promulgated by the occupying power may impose the death penalty upon protected persons only for cases of espionage, sabotage, or intentional offenses which have caused the death of one or more persons—"provided that such offenses were punishable by death under the law of the occupied territory in force before the occupation began."

The United States attached a reservation to this provision at the time of signature, which is discussed in a later section of this report. (See sec. 9 below.)

Articles 70-76 contain enlightened provisions safeguarding the rights of protected persons arrested for criminal offenses. Among other things accused persons are assured the right to be informed promptly of the charges against them, to call witnesses and present evidence, to defense counsel and an interpreter, the right of appeal and to have the protecting power notified of particulars of the proceedings. No person condemned to death may be deprived of the right of petition for pardon or reprieve and, except in grave emergencies, execution of the death sentence may not be carried out before the expiration of 6 months from the date of receipt by the protecting power of notification of final judgment confirming such sentence (art. 75). Article 76 provides that protected persons who are accused of offenses shall be detained in the occupied country and serve their sentences there if convicted. Under article 77, protected persons, who have been accused of offenses or convicted by the courts in occupied territory, shall be handed over at the close of occupation to the authorities of the liberated country, with all relevant records.

(8) Treatment of Internees

Regulations for the treatment of internees are contained in articles 79-135, which are similar in a great many respects to the provisions governing the treatment of prisoners of war and need not, therefore, be recataloged here. They embrace such matters as places of internment, food and clothing, hygiene and medical attention, religious, intellectual, and physical activities, personal property and financial resources, administration and discipline, relations with the exterior penal and disciplinary sanctions, transfers of internees, deaths and release and repatriation. A final section (arts. 136-141) concerning information bureaus and a Central Information Agency also follows closely provisions on the same subject in the Prisoners of War Convention.

8. ADMINISTRATIVE REVIEW OF DETENTION AND INTERNMENT DECISIONS

The committee's attention was particularly drawn to articles 35, 43, and 78 of the Convention on Civilians. Under article 35, a protected person who has been denied permission to leave the home territory of a belligerent in time of war is entitled to have such denial reconsidered by an appropriate court or administrative board designated for that purpose by the detaining power. A similar right is provided by article 43 for persons who have been interned or placed in assigned residence in a belligerent's home territory. In article 78 it is likewise provided that persons who have been placed in internment or assigned residence in occupied territory shall be entitled to review or reconsideration by a competent body. From information furnished to the committee by the executive branch it appears that the administrative boards and the competent bodies contemplated by the three articles to reconsider decisions in these cases may be created with advisory functions only, leaving the final decision to a high official or officer of the government. This understanding of the provisions appears to be a reasonable one to the committee.

A spokesman for the Department of Justice emphasized that the internment provisions of the Civilian Convention do not require a belligerent government to hold a

hearing before it interns an alien enemy in time of crisis, and that policies which the United States have heretofore followed would not be handicapped thereby. However "they do require that the internment weapon be used with discrimination and commonsense, and that opportunities for reconsideration be provided as a safeguard against mistakes. The internment policies and procedures followed by the United States in World War II would comply with articles 42 and 43."

9. APPLICATION OF THE DEATH PENALTY IN OCCUPIED TERRITORY

Of the four conventions, the only instrument to which the United States made a reservation at Geneva was the one on civilians. Article 68, paragraph 2, of that convention in its present form permits the imposition of the death penalty by an occupying power only in cases involving espionage, serious acts of sabotage, or international offenses causing the death of one or more persons; provided, however, that such offenses were punishable by death under local law in force before the occupation began. Adoption of this limitation upon the death penalty was due to the efforts of a number of countries, some of which had experienced wholesale imposition of this extreme measure under military occupation, and others of which have abolished the death penalty in their legal systems. Our own Government, while willing to agree not to impose it except in the three categories of cases listed in article 68, was unable to accept the proviso further limiting its use. Along with the United Kingdom, we took the position that an occupying power would be unable to protect its own forces adequately against the activities of illegal combatants unless it retained the power to take drastic legal action to meet the situation. From a practical standpoint, moreover, the limitation in article 68 would permit an ememy on the point of being dislodged from the national territory to repeal a death penalty law previously applicable, thus opening the way to all kinds of subversive activities against the occupant which would not be punishable by death. Reasons of this kind impelled the United States to sign the convention with a reservation in the following form:

"The United States reserves the right to impose the death penalty in accordance with the provisions of article 68, paragraph 2, without regard to whether the offenses referred to therein are punishable by death under the law of the occupied territory at the time the occupation begins."

Similar reservations to article 68 were made by the United Kingdom, Canada, New Zealand, and the Netherlands.

The committee considers that the reservation is essential to the protection of the national interest and, accordingly, in reporting interest and, accordingly, in reporting the convention to the Senate, recommends that it be included in the resolution giving its advice and consent to ratification.

10. RELEASE AND REPATRIATION OF PRISONERS OF WAR

During the Korean armistice negotiations the most contested legal issue was whether the parties were obligated to compel prisoners to be repatriated against their will, or whether the detailing power could in its discretion grant asylum to any prisoner who desired it. The United Nations Command maintained the position that all prisoners who wished to be repatriated were entitled to repatriation, but that international law did not require force to be used if they were unwilling to return. The Communists asserted that forced repatriation was prescribed under the principle of article 118 of the 1949 convention on prisoners of war. That article provides in part:

"Prisoners of war shall be released and repatriated without delay after the cessation of active hostilities."

In the United Nations General Assembly in the fall of 1952, during debates on the Korean armistice negotiations, the Soviet bloc sought to maintain the thesis that the principles of articles 118 and 7 (which prohibits renunciation of rights by a prisoner) did not encompass a grant of asylum to prisoners of war. The exchanges, in which our own Government took a leading part, developed that the practice of many nations, including the practice of the Soviet Government, was authority for granting asylum to prisoners of war; that at Geneva, in 1949, the negotiators proceeded upon the premise that the doctrine of asylum was applicable; and that they did not intend to overturn customary law in this respect. Both General Assembly Resolution 610 (VII) and the eventual armistice agreement in Korea permitted the individual prisoner of war a free choice between return and asylum under safeguards of impartial supervision. The fact that it is a unrestricted opportunity of repatriation, and not an absolute obligation or predetermined fate of repartriation which the prisoner is given under article 118, was similarly recognized by the General Assembly in Resolution 427 (V) of December 14, 1950, and reaffirmed in Resolution 741 (VIII) of December 7, 1953.

Members of the committee, exploring the problem of involuntary repatriation with the executive branch, were informed at the hearing that the United States official position continues to be that maintained in Korea and overwhelmingly supported in the resolution of the General Assembly, and that article 118 does nothing to change accepted principles of international law under which asylum is applicable to prisoners of war.

The committee unqualifiedly concurs. It finds nothing in the Geneva conventions of 1949 which will compel the United States forcibly to repatriate prisoners of war who fear political persecution, personal injury, or death should they return to their homeland. That article, being intended for the benefit and the well-being or prisoners, will permit the United States to continue the policy of nonforceable repatriation, while at the same time leaving it free, where necessary, to refuse requests for asylum. The interpretation which has thus prevailed gives due weight to the word "release" in article 118, is faithful to precedent and legislative history, and is fully consistent with the great humanitarian purposes which underlie all four of the conventions.

* * * * *

12. THE "GRAVE BREACHES" PROVISIONS

In an earlier section of this report, reference was made to a number of common articles of the conventions relating to sanctions for what is described as "grave breaches." (See sec. 6 above.) Thus, for example the first paragraph of article 49 of the convention on wounded and sick in armed forces in the field provides—

"The high contracting parties undertake to enact any legislation necessary to provide effective penal sanctions for persons committing, or ordering to be committed, any of the grave breaches of the present convention defined in the following article."

Article 50 defines such "grave breaches" as "any of the following acts, if committed against persons or property protected by the convention: willful killing, torture or inhuman treatment, including biological experiments, willfully causing great suffering or serious injury to body or health, and extensive destruction and appropriation of property, not justified by military necessity and carried out unlawfully and wantonly."

These provisions gave rise to a searching discussion in the committee concerning the possible extent to which they might be construed as enlarging the power of the Federal Government of the United States to enact penal legislation, beyond that now vested in it under the Constitution.

Administration witnesses stated that the undertaking in article 49 was not designed to enact an international penal code, and that it was not intended that there be any enlargement of existing Federal power, which it was felt was already adequate for that purpose. On the other hand, they pointed out that the acts enumerated in article 50 were all acts already condemned by Federal and State criminal law.

At the request of the committee, which felt that no doubt should be allowed to subsist on a question of such importance, this testimony was later supplemented by an authoritative communication from the Department of Justice to the chairman, under date of June 7, 1955, discussing the matter in some detail. The letter pointed out that broad authority exists under those clauses of the Constitution which empower Congress to "define and punish * * * offenses against the law of nations (art. I, sec. 8, clause 10)" which, it is well established, includes the power to provide for the trial and punishment of offenses against the laws of war; and under the war powers as set forth in the Constitution which provide a basis for Congress to regulate the treatment accorded by the United States to enemy wounded and sick, inhabitants of territory under our military occupation, and civilian internees. Moreover, article I, section 8, clause 14, which gives the Congress the right "to make rules for the Government and regulation of the land and naval forces" would warrant enactment of penal sanctions for mistreatment of such "protected persons" by members of our Armed Forces.

The committee is satisfied that the obligations imposed upon the United States by the "grave breaches" provisions are such as can be met by existing legislation enacted by the Federal Government within its constitutional powers. A review of that legislation reveals that no further measures are needed to provide effective penal sanctions or procedures for those violations of the conventions which have been considered in this portion of the report. It should be emphasized, in any event, that the grave breaches provisions cannot be regarded as self-executing, and do not create international criminal law.

The committee was also concerned as to whether these provisions as to "grave breaches" would impose criminal liability upon persons without official status. However, it is clear that these provisions of the conventions do not convert into a "grave breach" every corresponding crime in which a protected person is the victim, but are concerned primarily with the action of civilian or military agents of a government. It should further be noted that as a practical matter only individuals exercising governmental power would normally be in a position to maltreat such protected groups as

prisoners of war, civilian internees or the inhabitants of occupied territory.

13. RESERVATIONS TO THE CONVENTION BY THE SOVIET BLOC

Members of the Soviet bloc (Albania, Byelorussia, Soviet Socialist Republic, the Bulgarian People's Republic, the Hungarian People's Republic, Poland, the Rumanian People's Republic, Czechoslovakia, the Ukrainian Soviet Socialist Republic, and the Soviet Union) entered a group of reservations which are of such potential significance that the committee considered at some length the desirability of specifically stating in the resolution of ratification that the reservations are unacceptable to the United States and that we could not agree to them as proposed changes in the convention.

These reservations pertain to common article 10 (art. 11, Civilians Convention), article 12 (art. 45, Civilians Convention), and article 85 of the Prisoners of War Convention, the reservation respecting the latter article being the most important. The possibility that the reservations might be used by the Soviet bloc to evade normal international obligations under the conventions in a broad sphere has been the subject of most extensive examination by the executive branch and the committee.

Article 85 deals with the treatment of prisoners of war who are prosecuted and sentenced for precapture offenses. It provides:

"Prisoners of war prosecuted under the laws of the detaining power for acts committed prior to capture shall retain, even if convicted, the benefits of the present Convention."

A typical reservation of the Soviet bloc (that of the Soviet Union) to this article is worded as follows:

"The Union of Soviet Socialist Republics does not consider itself bound by the obligation, which follows from article 85, to extend the application of the Convention to prisoners of war who have been convicted under the law of the detaining power, in accordance with the principles of the Nuremberg trial, for war crimes and crimes against humanity, it being understood that persons convicted of such crimes must be subject to the conditions obtaining in the country in question for those who undergo their punishment."

A reservation of this kind raises the question as to whether the Soviet-bloc countries will consider themselves bound by the convention to accord to prisoners of war accused of war crimes, as described in the reservation, the benefits of fair trial which the convention insures. By reasonable construction and its literal wording, the reservation quoted above declares that it is only when the prisoner of war has been convicted of a war crime that he ceases to benefit from the provisions of the convention. Accordingly, it would appear that the protection of the convention would continue through trial and, indeed, until exhaustion of the appellate proceedings provided by the convention.

There is, however, no definite assurance, beyond the reasonable construction of the language used in the reservation, that the Soviet bloc intends thereby to recognize the applicability to prisoners of war of the provisions of the convention respecting trial and appeal. On the other hand, in the light of the practice adopted by Communist forces in Korea of calling prisoners of war "war criminals," there is the possibility that the Soviet bloc might adopt the general attitude of regarding a significant number of the forces opposing them as ipso facto war criminals, not entitled to the usual guaranties provided for prisoners of war. As indicated above, however, the Soviet reservation expressly deprives prisoners of war of the protection of the convention only after conviction in accordance with the convention.

In view of the foregoing, the committee concurs with the conclusion of the executive branch that the most satisfactory means of dealing with these reservations is to make it clear that the United States does not accept them, but proposes to enter into treaty relations with the Soviet-bloc countries with respect to the remaining, unreserved parts of the conventions. If in the event of armed conflict any of those countries were to exploit reservations in an unwarranted manner so as to nullify the broad purposes of the conventions, such action would, of course, alter the legal situation for the United States; and this Government would be free to reconsider its position. It is hoped that the members of the Soviet bloc may one day find it possible to withdraw their reservations, or will at least construe and apply them in a manner compatible with their legal and humanitarian obligations. In the meantime, by having treaty relations the United States has obtained agreement to the best standards of treatment and is in the soundest position to protect our nationals.

To avoid any possibility of misunderstanding on this aspect of the conventions, the committee, in reporting the conventions to the Senate, recommends that there be included in the resolutions giving its advice and consent to ratification a statement adapted to each convention in the following form:

"The United States, rejecting the reservations—other than to article 68, paragraph 2, of the Civilian Persons Convention—which states have made with respect to the Geneva conventions, accepts treaty relations with all parties to those conventions, except as to the changes proposed by such reservations."

It is the committee's view that this statement adequately expresses the intention of our Government to enter into treaty relations with the reserving states so that they will be bound toward the United States to carry out reciprocally all the provisions of the conventions on which no reservations were specifically made.

* * * * *

16. IMPORTANCE OF THE CONVENTIONS TO THE UNITED STATES

The history of war years since the 1929 conventions were formulated is a tragic testimonial to their value and to the importance of improving their provisions in ways dictated by the cold and cruel logic of belligerent experience. In the same way, the mistreatment of American civilians abroad in World War II has demonstrated that such civilians, particularly if they are interned, need the general benefits of the protection secured to prisoners of war. During that terrible conflict the United States, without the compulsion of an international agreement, applied the principles of the 1920 convention to civilians interned in the country; and in occupied territories our relief and reconstruction activities not only went far beyond the requirements of the Hague regulations, but stand as a model for all enlightened nations to emulate, should civilization unhappily be visited, once again, by the scourge of war.

If it be objected that the treatment of our soldiers captured in Korea by the Communists was in many respects ruthless and below civilized norms, it is also true that without the convention, that treatment could have been still worse.

Our Nation has everything to gain and nothing to lose by being a party to the conventions now before the Senate, and by encouraging their most widespread adoption. As emphasized in this report, the requirements of the four conventions to a very great degree reflect the actual policies of the United States in World War II. The practices which they bind nations to follow impose no burden upon us that we would not voluntarily assume in a future conflict without the injunctions of formal treaty obligations.

We should not be dissuaded by the possibility that at some later date a contracting party may invoke specious reasons to evade compliance with the obligations of decent treatment which it has freely assumed in these instruments. Its conduct can now be measured against their approved standards and the weight of world opinion cannot but exercise a salutary restraint on otherwise unbridled actions. If the end result is only to obtain for Americans caught in the maelstrom of war a treatment which is 10 percent less vicious than what they would receive without these conventions, if only a few score of lives are preserved because of the efforts at Geneva, then the patience and laborious work of all who contributed to that goal will not have been in vain.

(Later the following occurred:)

Mr. MOYNIHAN. Mr. President, earlier I spoke at some length about the significance of the Fourth Geneva Convention and its origins in the aftermath of the conduct of the Nazi Government in occupied territory during World War II.

At this point, Mr. President, I ask unanimous consent that I may append to my statement a portion of the report published by the Committee on Foreign Relations, at the time the Senate voted to give its advice and consent to ratification of the Fourth Geneva Convention.

The committee voted, on June 9, 1955—unanimously—to recommend ratification of the Convention. On July 6, 1955, the Senate voted, 77 to 0 to consent to ratification.

On that day, Senator Mansfield noted about the 1949 Convention on the Protection of Civilians, frequently called the Fourth Geneva Convention, that it—

is a detailed attempt to avoid the bitter experiences and horrors of the concentration camps of the last war.

That the survivors of those concentration camps, and their heirs, should be the only ones accused by the American Department of State, of having violated those conventions, is disgraceful.

REALITY AND THE MX

Mr. MOYNIHAN. Mr. President, in the last several days, we have learned that the Committee on Armed Serv-

ices has begun to make a large and impressively innovative proposal with respect to the deployment of the MX missile, which question occupied so much of our time earlier in this session. Having agreed to unfence the second 21 missiles, and the Congress having done so at the committee's recommendation, the committee now proceeds to ask itself, how many more of these missiles should be built?

The distinguished ranking member Mr. NUNN has suggested 40 ought to be a limit. His distinguished associate Mr. WARNER has suggested 50—50 in silos and another 50 to be deployed in some other manner.

The unmistakable impression one has is that now that we have gone through that debate on unfencing the 21, in which many of us argued the great inadvisability of deploying this missile in a first-strike mode in those silos in Wyoming and found ourselves not attended to, frankly, if I may put it that way, that all along, there was in the committee an awareness that this was a problem.

The problem, Mr. President, is, very simply, that the MX missile was begun as the Minuteman IV. It was meant to succeed Minuteman III in the very silos. It was designed before the United States became aware that the Soviet Union has developed or was developing a superior continental ballistic missile which could target and destroy those silos in a hard place.

I have said this before, Mr. President. I was in the Cabinet at the time Mr. Secretary Laird, in 1969 or 1970, arrived to say the Soviets had just launched something enormous, something without precedent in range and accuracy, which missile we finally recognized as the SS-18, which led us to an immediate decision that we had to get out of those existing Minuteman silos, that they could not serve as a retaliatory land-based triad of a deterrent mode.

Then the great mistake was made. The Air Force, having some sense of some cost or whatever, took the very same Minuteman IV model and went out looking for a basing mode in the desert. It wandered 15 years in the desert until it became clear there was no place you could put this except in the very silos for which it was originally designed. By that time, we appeared to have quite forgotten why we had to get out of those silos in the first place.

Finally, in a mood of amnesiac disassociation with reality, we decided to put the same missile back in the same silos which, 15 years earlier, we had decided we had to abandon. Indeed, an Air Force briefing officer not long ago told a group of students from Columbia School of Journalism, if only we had kept calling this the Minuteman IV, people would understand why we have to have it.

Of course, there was much pleasure in learning that the MX, the Peacekeeper, or what you will, fit precisely into these existing silos—not surprisingly, Mr. President, because it was designed for them.

Now, it was a very alarming thing to think we were going to continue to deploy these in the numbers intended. Grant that the administration of Mr. Reagan has cut from 200 to 100 the proposed number. Even so, it was too many.

Not a day after the decision of the House, the Soviet General Secretary, Mr. Gorbachev, referred to them as a first-strike missile. They have understood them to be that.

Now, here in the Senate we appear to be coming to our senses and planning to limit very carefully the number that are to be deployed in this mode. And I would want to welcome this. I want to welcome it as we go forward with a Midgetman which is a mobile missile, as we go forward with the Trident submarines, one going to sea every year now, the D-5 missile coming on, cruise missiles in every known conformation. The Armed Services Committee is clearly coming to its senses in this regard, and I do not mean to say really more than they have thought it over and the more they have thought it over the more they have seen the reason some of us have opposed this missile in this deployment mode. Without claiming that the argument has persuaded them entirely, clearly they have persuaded themselves, and this is to be welcomed. We welcome it not least because there was no reason for us ever to suppose that this missile and this decision would in any way affect the Soviet behavior at Geneva. I speak as an observer sent by the Senate to these talks. I have not yet been to Geneva. I expect I shall have much opportunity to do so in years ahead.

There is something that is both admirable and just a little bit unsettling in the continuous American expectation that some very generous act toward the Soviets will produce a generous response. The President has said—and one admires him for saying it—that he would like to develop the space defense initiative and then share the information with the Soviets.

Mr. President, I have to say that again history reminds us of things we might wish were otherwise. Under President Truman, the United States proposed to give the atom bomb to the United Nations at a time when we alone had the technology. The Soviets vetoed that. Later, with President Eisenhower, we proposed the Atoms for Peace program in which we would use atomic energy basically as a source of power for developing countries. President Eisenhower wanted to share it with the Soviets, a sharing which they vetoed. President Eisenhower proposed the open skies situation in which we would open our skies to one another's surveillance and make sure we knew what each other was doing, no surprises and no tricks. Again, the Soviets said no. And I cannot imagine they have changed, that they will say yes now. They might. We should certainly pursue it. But in the meantime the difficulties are real and not to be misunderstood.

Sometime before the vote on the MX treaty the Honorable McGeorge Bundy, now a professor of history at New York University and national security adviser to Presidents Kennedy and Johnson, gave the Morris and Edna Zale lecture at Stanford University in which he set forth in my view a realistic and carefully argued case that we must expect a long and difficult and probably unsuccessful negotiation with the Soviets at Geneva, so long, that is, as we insist that we will not give up our space defense initiative and they insist until we do there is nothing else to talk about. It was in this context, well before our MX debate, that Mr. Bundy said that will have no impact whatever on the proceedings in Geneva; other things entirely will drive the decisionmaking process on both sides. I believe him to have been right. And now that we find the Senate reconsidering the whole MX decision, cutting it back to a point which was manageable if not necessary, it is helpful, I believe, to have access to Mr. Bundy's insights into the reality of the nuclear discussions and the immediacy of nuclear danger in these years ahead which will be characterized by long, protracted and probably not successful negotiations, certainly not successful given the expectations which our negotiators have and which they ought to have and which we support and encourage but which in the meantime should not lead us to suppose there are not other actions in the real world that will have larger and more immediate consequences.

Mr. President, I ask unanimous consent that the full text of Mr. Bundy's Zale lecture be printed in the RECORD.

There being no objection, the lecture was ordered to be printed in the RECORD, as follows:

REAGAN II, THE RUSSIANS AND NUCLEAR DANGER: FLIMFLAM AND REALITY IN 1985

(Remarks of McGeorge Bundy)

The right place to begin a discussion of nuclear danger in February 1985 is with a straightforward recognition that unless there are radical changes of policy in Moscow or Washington or both, changes more radical by far than any that have occurred until now in the 40-year history of nuclear weapons, there is no prospect whatever of any new agreement in the field of strategic arms control during the second Reagan administration. We can expect, from both sides, the most earnest protestation of undying dedication to the pursuit of

radical reductions in offensive weaponry, and Mr. Reagan in particular is likely to continue to keep talking of his own dream of a world without nuclear weapons. But the firmly stated—and I believe deeply held—convictions of both governments make the prospect of any new and substantial agreement limiting offensive strategic weapons so remote that it is a mistake for anyone, in or out of government, to spend much time working on the sort of agreement that might currently be achievable and desirable if the positions of the two governments were to change. I think the right points for attention and concern are different: they have to do with damage limitation in the short run, and a search for a new and stronger public understanding in the long run. I will come back to both toward the end of my remarks, but first, I think, you will expect me to tell you why I am so gloomy about the present prospect.

The most immediate and largest obstacle to any new arms control agreement is Star Wars, by which phrase I mean the increasingly firm commitment of the Reagan administration to the long-run objective of providing a thoroughly reliable defense against Soviet ballistic missiles—a defense which, in Mr. Reagan's unrepentantly repeated words, would make these missiles "impotent and obsolete." The President does not like the term Star Wars. But the official public statements of his own administration, including in particular a White House pamphlet issued in early January, continue to give pride of place to the notion of a layered defense that will attack Soviet missiles at four stages of their flight. Moreover, both defenders and critics of this general scheme are agreed that the most important and conceivably rewarding layer is the attack on the missiles while in their boost phase—the phase in which the propellants that lift them and speed them on their way are still burning—and attack in those first minutes of their flight is literally impossible unless major components of the attacking system are predeployed in space where they necessarily become prime targets for a countersystem. The President's initiative, in short, looks toward deployments in space that will inevitably stimulate military competition in such exotic weaponry as space mines, mirror melters, anti-laser lasers and the like. Star Wars is a name that fits.

Star Wars blocks new arms control agreements because there is no prospect that the Soviets will sign a new agreement while this objective continues to have commanding Presidential priority, and no prospect that the Reagan administration will trade it away even in return for dramatic unilateral reductions in Soviet offensive weapons. Both Washington and Moscow have now made these positions entirely clear, and there is no good reason to suppose that either side will fall back from its position at any point in the next four years. The Soviet stand has been clear and firm since the very first week after Mr. Reagan's famous speech of March 23, 1983: it is that the President's initiative, while it continues, will require intensified Soviet efforts in both offensive and defensive systems. It is entirely true that the existence of the Star Wars program is one major reason for the Soviet return to Geneva; the other is that their walkout had long since become counterproductive in terms of European and American opinion. But they have come back to denounce it, not to accept it, and to trumpet its dangers to our European friends—a labor on which they are already well embarked. They will make no agreement that lets Mr. Reagan's program run free. Nor will they be mollified by assertions that the program, for the next few years, will be limited to the research the ABM treaty permits. They are doctrinaire believers in the proposition that the imperialists always have intentions even worse than the ones they admit, so it stretches credulity to suppose that they will not take the administration at its word when it tells us all that this research is aimed at finding, and presently building and deploying, an effective space-using defense. The Soviet government will make no agreement legitimizing that ambition. I have yet to meet a serious student of Soviet behavior who disagrees with this assessment.

Until the last month or so it has been possible to hope that the position of the United States government might be less inflexible. Back in November, when I joined with three friends to argue that Mr. Reagan could have Star Wars or arms control but not both, the four of us believed that the President's evident and genuine desire for progress in arms control, and the clear-cut incompatibility between Star Wars and any such progress, might lead him to sober second thoughts about the value of his initiative, whose costs and dangers all four of us found great, and then on to a considered choice of arms control instead. There were rumors at the time that some members of his own administration hoped that he might turn in this direction. But all such hopes, in and out of the administration, have now proved vain. As he presided over the preparations for the Shultz-Gromyko meeting of last month, the President came to the opposite decision, ruling firmly and clearly that Star Wars is not to be traded away for anything. It is not to be a bargaining chip. Its friends have lost no time in reinforcing that decision. Secretary Weinberger, a self-styled "true believer" in Star Wars, told the Senate Foreign Relations Committee on January 31 that no top official of the government favored trading off this program for Soviet cuts in offensive weapons. Finally, on February 11, the President himself told the New York Times flatly that there would be no such trade. Star Wars will be on the table—to be praised by one side for its peaceful objectives and denounced by the other as profoundly destabilizing, but it will not be there for trading.

What we can expect in Geneva, then, is not a negotiation but a contest for public approval. Neither side is likely to walk away in anger, because that act, in and of itself, would meet widespread disapproval. The meetings will be a forum for propaganda, and it is hard to suppose that either side will have much to say in private beyond what it is prepared to see in the newspapers very soon thereafter. The conditions for a serious negotiation are absent, and in their absence the requirement to play to the galleries will be compelling on both sides. Pressures in this direction will be increased by the quite extraordinary incapacity of the mass media to distinguish between real and unreal international events. It is not worth your time or mine to pursue the matter further, except to say that the probable result will be a noisy draw in which each side will be damaged in the eyes of sensible observers by its addiction to wholly one-sided descriptions of the situation. In effect, we shall have a competition in flimflam. Negotiators on arms control will be right back where they were between 1945 and 1958—conducting a dialogue of the deaf in which the object of both sides will be to appear blameless in a situation of real negotiation.

This prospect has at least one advantage: it gives time for reflection. It will not be interesting in the next four years to argue for or against the desirability of particular specific positions that are plainly not negotiable with one side or the other. It will not be necessary to try to summon support for or against a particular prospective result. At the most it will be important simply to assist in discrediting the more extreme and inaccurate claims of both sides. What makes much more sense, and is much more worth our attention, is to consider the kinds of inquiry and assessment that it may be useful for all of us to attempt in these years of nonnegotiation. My own belief is that there are very good uses for this time. Underneath the stalemate in strategic lie failures of understanding, on both sides, that are in need of the kind of careful attention and study that simply do not happen except in an off-season.

But first it is important to understand the depth and strength of the forces driving the two sides to these mutually irreconcilable positions. Take the Americans first. If Mr. Reagan's unreal vision of a world in which all nuclear missiles are obsolete were the only force behind the decision not to bargain over Star Wars, one might question its firmness and durability. One proposition that has become increasingly clear (to almost everyone except Mr. Reagan) in the two years of debate since the Star Wars speech is that that there is in fact no real prospect of a defense of populations strong enough to banish the possibility of mutual devastation by the use of nuclear missiles. Mr. Reagan had it right the first time: a nuclear war cannot be won and must never be fought. He could have put it more strongly: a strategic nuclear war which engaged even small fractions of existing arsenals in attacks against populated areas would be a common catastrophe, even if we had a Star Wars kill rate of 90%. There is no escape from the underlying mutual vulnerability of populations in any Star Wars scheme, and serious analysts on both sides of the argument have now acknowledged this reality.

But there remains the claim of the friends of Star Wars that while it will never defend all our people, it can indeed protect some of our weapons. For large and powerful groups in the administration and in Congress, the defense of some of our weapons is no trivial objective—it is indeed a matter of great urgency. Those of us who are critical of Star Wars must take time to understand this second and very different line of argument.

When we look behind Mr. Reagan's sunny rhetoric to the thinking of the men and women at the second and third echelons of his administration, we find an entirely different view of the need for Star Wars or something like it—a view governed not by Mr. Reagan's unreal hope that the weapons can be rendered obsolete, not indeed by hope at all, but by fear. Mr. Reagan may tell us that America is back, standing tall, and his commonsensical Secretary of State George Shultz can tell the Veterans of Foreign Wars that "our strategic deterrent has been restored," but that is not what the boys and girls in the back room believe. To find out clearly what they think, we must move from official statements and speeches to the documents produced by the private group which, more than any other, is responsible for the public articulation of the view of these matters that currently dominates the working levels of the Reagan administration. We must turn to the Committee on the Present Danger. Keep it in your

mind, as we look at the Committee's current opinions, that its founder was Paul Nitze, that its General Counsel until this month was Max Kampelman, that Kenneth Adelman of ACDA is on leave from its Executive Committee, and that the basic argument of the Committee, first against Salt II, and then against the overall defense policy of every administration since its founding, including the Reagan administration, is that we are now dangerously No. 2, and that nothing we are now doing or planning will change that condition.

The Committee has many worries, but the most important, and the most characteristic, is its belief that the United States today would be unable to make a credible response to a Soviet pre-emptive attack on American land-based missiles in their currently vulnerable silos. This is the famous window of vulnerability. Two years ago it seemed to be closed, when the Scowcroft Commission concluded that the American strategic triad was survivable "as a whole," but the Present Dangerites disagree. They believe that a successful Soviet attack on U.S. ICBM's could be made today, and that in reply to such an attack the United States would currently have no acceptable choice. They believe further that the capacity for such an attack creates the opportunity for successful atomic blackmail. All this, in their view, is fundamentally the consequence of an enormous Soviet superiority in the throw-weight of land-based strategic missiles, and this conviction leads not only to a firm belief in efforts to reduce that special advantage, but also to a conviction that even a partially effective missile defense is greatly to be desired. Such a defense, unlike the one in Mr. Reagan's dream, need not be anything like perfect. What is necessary is to complicate the task of the Soviet planner so that he will no longer be able to feel confidence in his capacity to make a successful pre-emptive attack. One supporter of this kind of "defense for deterrence" is Edward Teller, and his argument is that we can provide it "by inducing doubts in the minds of the policy makers of the Kremlin * * * If we manage to create serious doubts, then I believe attack will never come because I am confident that the Soviets are not adventurous." (Teller to Senate Committee on Armed Services, Subcommittee on Strategic and Theater Nuclear Forces, May 2, 1983)

Let us then look the window of vulnerability in the eye. By the account of the Present Dangerites themselves we are right in the middle of the worst years of the window—the Soviet advantage in prompt hard-target kill capability is greater now than it will be in a very few years, and greater than it was when Mr. Reagan became President. How is it that the President and the Secretary of State can bravely tell us that our deterrent has been restored? The only plausible answer, and the right one, is that the window of vulnerability never existed. It is worth our while to take a closer look and see why.

Let us assume a Soviet leader deeply determined to defeat the United States in a nuclear war at acceptable cost. Here are some questions that such a leader might put to his commander of strategic rocket forces.

The dialogue begins:

Q. If you can execute this attack, what percentage of the American missiles can you knock out?

A. I think we can get nearly all of them.

Q. Are you certain?

A. We have never done anything like this, so there is necessarily some uncertainty.

Q. How much?

A. No one can be sure.

Q. Can you promise me that we would not get 100 or 200 warheads fired right back from the missiles we missed?

A. No one can promise that, but we can hope.

Q. And you think hope is enough?

This first exchange should end the discussion, but let us suppose our commander is less honest or has more faith in the perfection of a simultaneous mass launching never attempted before, or even that this answer does not trouble the leader. The questioning continues:

Q. Some 30 percent of his bombers will be on alert. They will escape?

A. We cannot promise that they will not.

Q. What will they do?

A. We must assume that they will attack us.

Q. How many hundred megatons would that bring down on us and on what targets?

A. We don't know, but we would shoot some of them down.

Q. Like those Korean airliners? But hundreds of megatons would get through?

A. I cannot say they would not.

I think the interview will surely have ended by now, but if it has not the next set of questions might go like this:

Q. And what about his submarines, the ones at sea? How many warheads do they have?

A. 2000 or so.

Q. What will he do with them?

A. The Committee on the Present Danger says he won't dare use them, because we would then destory him utterly.

Q. Do you believe that?

A. It is not a military question.

Q. So I have to decide for myself? How can I assume that they won't use them? They don't have to use the whole force, after all. Couldn't they just fire about 500 warheads from 3 or 4 submarines and hold the rest in reserve? And where would we be then, no matter what they aim at?

A. The Committee on the Present Danger hasn't thought of that.

Q. Aren't you glad they are not doing our thinking?

Let me try your patience with one last set of questions, a set that might well have been the very first.

Q. If we attack all the American weapons and command posts we can hit, how many will survive?

A. That will depend on whether the Americans execute a launch under attack.

Q. But that is what we would do, as you know. So what is the chance that they might do the same thing?

A. I do not know.

Q. If they take this course, who gains by the exchange?

A. Neither side gains, because both will suffer enormous collateral damage, but our side loses much more than theirs in military damage.

Q. So there is an unknown chance, larger than 0 and less than 1, that the attack would be an instant catastrophe?

A. That is correct.

Even before the last question, the outcome of the inquiry was already sufficient to cancel the pipedream. But this final and inescapable uncertainty—the possibility of an American launch under attack—is in and of itself sufficient to make a pre-emptive strike an act of self-destructive insanity.

I hope my point is clear. Let me emphasize that I am not describing American responses for which I assert inevitability, or even wisdom. I am trying instead to demonstrate the absolutely inescapable presence of possibilities which are bound to be appalling to the Soviet leadership. The weapons that may survive the best possible attack, and that may be fired back, are just too many and too destructive for any sane leader to take an action that could so easily let them loose against his own country. In this fundamental respect, the realities have not changed in 30 years, and I know of no way to improve on the language used by Nikita Khrushchev to John F. Kennedy on October 26, 1962, at the height of the Cuban missile crisis: "You may regard us with distrust, but you can at any rate rest assured that we are of sound mind and understand perfectly well that if we launch an offensive against you, you will respond in kind." This fundamental truth is only underlined and reinforced by the vast and varied capabilities for reply which are outlined in our imaginary dialogue.

So the nightmares of the Committee on the Present Danger simply do not translate into golden hopes for the leader of the Russians. The uncertainties that Edward Teller hopes to create by Star Wars are already overabundant today. Strategic stalemate is strong. Safety for both sides is still, as Winston Churchill long ago foresaw, the sturdy child of terror.

Nightmares caused by unreasonable fear do not always yield to reasonable analyses, and the more zealous believers in the window of vulnerability are likely to hug their fears all the more closely as their unreality becomes evident, but our national opinion as a whole is less neurotic, and I believe it is well within the bounds of possibility over the next few years that most of us will come to understand that our strategic deterrent is in fact entirely adequate today.

In these same fallow years we can also make a beginning, if we work at it, on another and harder task. Overshadowed in public discussion by Star Wars, but vastly more massive, in current outlays, is our own buildup of offensive weapons. In large part, though not entirely, this buildup is driven by countervailing and war-fighting doctrines developed over the last ten years which place new and wholly unrealistic requirements upon our armed services. Starting from a sensible recognition that in the dreadful event of nuclear war the President must have additional choices between spasm and surrender, theorists with more technical expertise than common sense have imposed upon our military commanders requirements for multiple options, and for prevailing in protracted warfare, that are in their turn now generating enormous wish lists put forward with the justification that this is what national policy requires. This particular action-reaction cycle has had much too little attention from Americans, but its increasing mass and momentum is wholly uncontrolled by a Secretary of Defense who has made it his mission to defend with indiscriminate zeal the unexamined and uncoordinated requests of his subordinates. In nuclear weaponry we need to fight our way back to the simple and common-sense understanding that as long as our forces are adequately survivable, enough is more than enough at levels long since reached. That too will take time.

Let us now consider the Russians. What is it that makes them so completely unwilling to negotiate for a new agreement while the Strategic Defense Initiative remains in place? And what about their contributions

to the concealment of reality and the propagation of flimflam?

I believe that in these matters the Soviet government, just like the American Committee on the Present Danger, takes much more counsel of fear than of hope. That government endured four years of American monopoly, ten more years of overwhelming American superiority, and another decade in which it had to recognize that the Americans remained "ahead." Soviet experience of dangers surmounted, and also of humiliation received in the Cuban missile crisis, has intensified in them a determination not to be second. Whether and how far they have hoped to have usable superiority is a quite different question, and one on which opinions vary. But I think there can be no doubt of their determination not to fall behind.

A second durable element in the Soviet attitude towards these matters is a deep respect for the capabilities of American science and technology. The Soviets have first-class scientists, and they have developed first-class weapons systems. They have the obvious advantage of a dictatorial capacity to mobilize without fear of public opposition, and no one, at least since Sputnik, has accused them of incurable backwardness. But their respect for what Americans can do when they really want to remains high, and accordingly they view the Star Wars program with a deep concern for the danger that it may produce new systems against which they must take every possible precaution if they are to keep their own offensive deterrent alive and strong.

This basic reasoning impels the Soviet Union not only to a sustained propaganda campaign against Star Wars, but also to an energetic response of its own. Its most powerful reaction will be simply to strengthen and modernize its own nuclear forces so as to be able to penetrate any plausibly expectable defensive shield. The certainty of this strong Soviet reaction, extending across the spectrum from propaganda to procurement, was central to the analysis of the Star Wars program that the four of us offered in Foreign Affairs, and I find it instructive that in the torrent of criticism which we have received from Star Wars apologists, there has not been a single suggestion by anyone that the Soviet response to the program will be different from what we predicted. The Soviets will do their utmost not to let their missiles be disarmed by new American defenses, and I must say I am not surprised at the absence of counterargument on this point, because American believers in Star Wars advance the same rationale in warning of Soviet strategic defenses. Thus Caspar Weinberger: "If the Soviets get strategic defense and we don't, it would be very much like a world in which the Soviets * * * had a nuclear weapon and we did not." That, he believes, "you can't allow."

The current response of the Reagan administration to this Soviet line of argument is that there is no need to make such a stir about what is, after all, still only a research program. The Soviets themselves have had such a program for many years, and in some ways their efforts in this field have been more extensive than our own. So what's the fuss? This argument is better logically than psychologically, and again the best answer to it is simply to examine the attitude of our own leaders toward the Soviet effort. Here is Caspar Weinberger again: "The Soviets are perhaps not violating the letter of the [ABM] treaty, but they are violating the spirit of it because they are investing very large sums in a huge effort in trying to develop a kind of defense that isn't authorized by the treaty, and presumably they would either ask for revision of the treaty or they would simply deploy it." It would be hard to find a more precise description of the Soviet view of our own program.

But before we start feeling sorry for these understandably concerned Russians, we must take note of the fact that they are themselves a most considerable part of the current problem. It is the more important to do this because it is one of the less constructive characteristics of the Soviet government that it has only the most limited capacity for understanding its own contributions to nuclear danger; it also has no audible domestic critics. Over the last fifteen years, the Soviet Union has indeed engaged in a massive and entirely excessive buildup of offensive weapons. Beyond that, it has itself played fast and loose with the requirements of the ABM treaty, most notably in the construction of the radar near Krasnoyarsk. Finally and most fundamentally, its continuing and relentless belief in the value of secrecy and deception makes it an extraordinarily difficult partner in any effort for reliable agreements. Let me comment briefly on each of these three failings.

It is impossible to study the opinions that dominate the Reagan administration without recognizing the depth and strength of the belief that the United States is gravely threatened by the massive Soviet buildup of ICBM throw-weight. I have already indicated my own belief that this concern is excessive, but I do not think it possible to avoid the conclusion that the Soviet buildup is still more excessive. It is true, of course—although the administration regularly forgets to tell us—that Soviet ICBMs represent more than two-thirds of all Soviet strategic forces, while the American ICBMs are a much smaller part of our own force. It is also true that these forces do not in reality confer any usable superiority. But it is entirely predictable that when one side builds a force of such enormous magnitude with such theoretical capabilities, there will be strong reactions on the other side. If the United States had built this grossly excessive force, we can be sure that criticism from American liberals and from observers in other countries would be strong and sustained. We can and should do our best to develop a less fearful American approach to our comparisons of two forces both of which exceed any reasonable need, and we certainly do not need to follow Mr. Richard Perle in making a numerical religion out of the notion of essential equivalence. Yet it does not seem reasonable to suppose that we can expect our people to accept a drastic double standard over time. The Soviet buildup, which continues, is very much a part of the problem, and what may be an even larger part of the problem is that the Soviet government persistently refuses to recognize this reality, either in public or, as far as one can tell, even in its private deliberations. This performance, far from incidentally, has a close parallel in Soviet deployment aimed at Western Europe.

The second Soviet contribution to an atmosphere of mutual mistrust is the existence of real and substantial Soviet violations of existing agreements. Much the most important of these, in the field of nuclear arms control, is the radar near Krasnoyarsk. The ABM treaty specifically prohibits the deployment of early warning radars except "along the periphery" of each nation's territory. The Krasnoyarsk phased array radar is a massive new installation which gives every sign of being just such an early warning radar. Moreover in military terms, from the Soviet standpoint, there is unfortunately excellent reason for just such a radar with just this orientation in approximately this location. The Krasnoyarsk radar fills a gap in Soviet early warning systems that is of particular importance because it covers the Bering Sea and the North Pacific, areas from which the Soviets are bound to fear submarine missile attack, and the more so as these missiles become highly accurate. It is regrettable but evident that the commanders of Soviet missile forces (like some of their American counterparts) think it important to have a capability for launch-under-attack, and a radar of this kind will be literally indispensable for such a capability in the coming decade. Thus in criticizing the Soviet position on the Krasnoyarsk radar I am not saying that I cannot understand Soviet reasons for it, or even that it constitutes an enormous threat in terms of effective ballistic missile defense; it does not. Assessed in that context, it is only one among many necessary elements in any remotely effective missile defense system, and a highly vulnerable one at that. It does not, as some administration spokesmen suggest in debate, create a clear and present danger of a Soviet ABM breakout.

But a violation is a violation, and Soviet officials show very little understanding of the consequences of the Krasnoyarsk radar. Worse yet, they indulge in the evasive tactic of asserting that this radar is no more than a satellite tracker, an assertion which is wholly unpersuasive to those with the best capacities for technical assessment of the kinds of radar that this installation resembles. We have here, by the persuasive weight of the evidence so far, one more illustration of the propensity of Soviet leaders to suppose that if they give something an innocent name they can also give it protection from foreign complaint. The Krasnoyarsk radar does not become a satellite tracker because that is what the Soviets call it, any more than the United States, twenty-three years ago, could be expected to treat nuclear missiles in Cuba as defensive simply because Gromyko said they were.

The treaty violation and the attempted deception in the Krasnoyarsk radar are samples of a rather broader Soviet characteristic which has been with us from the very beginning of the nuclear age—the Soviet conviction that secrecy, insulation and deception are all vital elements in the strength of the Soviet state. We try to keep some secrets ourselves, and we are not wholly above deception. But the difference between our two societies on this front is much more than a difference of degree. For Soviet leaders it is genuinely an act against nature to engage in the kind of candid and continuous exchange of accurate information that is essential to reliable arms agreements in the increasingly complex nuclear world of the 1980s. A highly relevant if somewhat recondite example is that of the encryption of telemetry—the sending in secret of data would otherwise permit the United States to make technical assessments of Soviet compliance with agreements when Soviet missiles are tested. The clause in the SALT II treaty that covers this point was bitterly debated, and the resulting language is far from unambiguous. Now the Soviet military appear to be gradually narrowing their own interpretation of that clause, if they are not indeed directly flouting it. The Soviet government seems entirely unable to bear in mind on a continuous

basis that its intense addiction to secrecy and to deception creates obstacles of a profound and far-reaching character to the very agreements it so ardently professes to desire. To pretend that this problem does not exist is another piece of flimflam.

So there is more than enough misbehavior on both sides to give us ground for anticipating very little beyond self-serving argumentation in Geneva. And we have not covered every problem of this kind. Under the general umbrella at Geneva there will be a renewal of discussion on missile forces of intermediate range, and there we can expect to see the familiar and unconstructive dance in which the Soviets seek to split the NATO partners, while the Western allies for their part seek to maintain the increasingly implausible argument that British and French forces, present and perspective, are not part of the East-West balance. There will be no serious negotiation, and much will be said on both sides that is undeserving of respect.

So what shall we do in the meantime? First, I think it is not a counsel of gloom to urge that we look the Geneva realities in the eye. No durable American interest, indeed no common interest of our two great countries, is served by pretending that either one is currently taking a genuinely constructive approach to nuclear arms control. Understanding of the real if excessive fears of each side should not blind us to the weaknesses in each side's argumentation and the unhelpful elements in each side's behavior. It will be good for us to recognize flimflam for what it is.

Second, it is important to insist that since no serious negotiations will be taking place, it is quite simply fraudulent to claim that any particular American undertaking is an important factor in the bargaining process. We have seen that Mr. Reagan has firmly decided against any use of Star Wars as a bargaining chip, but administration spokesmen continue to argue that domestic support for Star Wars is essential to the U.S. position in Geneva. Because this initiative may well be part of the cause of the Soviet return to the table, it is argued that it is necessary also to the negotiations, but the argument makes no sense. Since there will be no bargaining over Stars Wars in any case, the prospect of agreement will not be increased or decreased in the slightest by the level of Congressional support for the requested appropriations, or by the degree of Congressional approval of particular elements of the program the Pentagon sends up. In the same way, it makes no difference whatever, for Geneva, whether the MX missile is voted up or down in the new decisions that the Congress will be making this spring. There has always been ambiguity in the concept of bargaining chips, and that ambiguity has sometimes led to votes that did not reflect the best possible analysis of the real value of particular systems. The impasse that the two sides have now created for themselves removes any excuse for thoughtless consent to whatever may be claimed as important for the negotiating process.

What we should do instead, and I am happy to say that Kenneth Adelman has made this same recommendation himself, is examine each nuclear program on its merits. If the MX is entirely without strategic merit when compared to other alternatives, as I believe, it should be scrapped. This will be an indication of good sense, not weakness. There are plenty of other weapons programs whose real deterrent value is positive and not negative, and those programs are the ones that we will need at the bargaining table when the day arrives for a serious effort at agreed reductions.

But the most important target for this kind of honest and independent assessment is the Star Wars budget—the budget of what the administration calls the Strategic Defense Initiative. There are a number of criteria upon which Congress should insist. First, it should hold the administration to its own professed intent of remaining within the terms of the ABM treaty. The Krasnoyarsk radar is almost surely a Soviet violation, but is should not be treated, as some administration leaders have suggested, as a license for American infringement of the ABM Treaty. Instead we should stick to research, as the President has promised Mrs. Thatcher and the rest of us, and Congress should be particularly vigilant against tests of any sort in space. As the program continues, Congress should also insist on the kind of close attention to cost-effectiveness and survivability that has now been promised in the recent White House pamphlet. We may note in passing that the acceptance of the test of cost effectiveness is in and of itself a demonostration that no perfect system is attainable—because any such system would indeed be worth whatever it might cost. Congress should insist on what has been promised: systematic and sustained attention to the balance of advantage in various systems and countersystems. Especially in space, there remains reason for the gravest doubt that space-based system can ever be cheaper than the systems designed to knock them out. Only a clear-cut reversal of this balance could ever justify the expense of space-based defense. And while this presumption against space-based system endures, there is every reason for the Congress to do its best to slow down, and if possible prevent, the further weaponization of space. There is currently a Congressionally enforced moratorium on the testing of ASAT weaponry, and there is no argument from arms control and none from current military urgency for the abandonment of that moratorium.

Finally and more broadly, we must recognize that it is entirely unrealistic to talk or act as if there were any early escape in prospect from the reality of mutual deterrence. This is not the consequence of any particular theory of deterrence; it is the consequence of the thermonuclear realities that Winston Churchill understood so clearly thirty years ago. It may be satisfying to the friends of unlimited buildup—or the friends of unilateral disarmament, for that matter—to talk as if there were an early escape available from the prospect of mutual destruction in any nuclear war, but that is not the reality. We do not escape from mutual deterrence simply by deploring it. Rather we can escape the disaster of mutual destruction only by respecting it as an unavoidable possibility. It could happen.

So what we must respect most of all, as both technology and doctrine drive both sides toward systems of increasing accuracy and toward capabilities for very rapid action that are bound to be deeply troubling in any time of crisis, is the imperative requirement upon both great governments to keep well clear of the nuclear brink. We are adversaries, but we have a common interest in avoiding any and all confrontations that could be driven beyond our control by the rush of events an by resulting incentives for hasty action. Even our friends the Present Dangerites usually admit when pressed that their nightmares of a Soviet first-strike could only come true if a beleaguered Soviet government should conclude that all-out war was inevitable and decide to go first as a least bad option. But what they omit is that we have no need to place them, ever, in that desperate position.

And since I have been gloomy on so many other points, I am glad to be able to end my talk with an affirmation of my deep belief that this most vital common interest has in fact been continuously understood at the highest levels of both governments ever since they both looked into the abyss during the Cuban missile crisis. What both sides understood then remains true today—true in a way that is completely independent of all the intervening changes in the stockpiles systems of both sides: a nuclear war between our two countries simply must not be allowed to happen, and the only way to be sure it does not happen is for our political leaders, all of them all the time, to stay well away from the brink.

JOAN BARONE

Mr. MOYNIHAN. Mr. President, I wish to bring to the attention of the Senate what most of us have individually known and have found almost difficult to deal with as individuals even as we think it appropriate to respond as a body. Last month at the age of 38, Joan Barone died. Joan was a friend of just about every Member of this body, a professional friend, but it was her quality of grace, of a grace abounding, if I could say, that one could not know her professionally without feeling to have met her personally as well. She was the loved wife of Michael Barone, a journalist and scholar of equal eminence. For years she was the producer of the CBS Sunday morning news program Face the Nation. Those of us, and that would include most of us, who have appeared in that setting have arrived with trepidation, alarm, even at times despair, to be greeted by journalists bent upon enhancing that attitude on our part, it being one that made their own work of demolition all the easier and more satisfying, if I might say, such has been my impression.

It was Joan's great quality to welcome, to reassure, to encourage, and then, in the aftermath, no matter how ruinous a performance had been to reputation or truth—good as to reputation or deceptive as to truth—to thank us with her great warmth and assure us that we would be welcome back and, indeed, find the occasion to do so.

The personal story is one that has been stated with great care and love by Lou Cannon in the Washington Post on March 18, in his column entitled "We Remember Joan Barone." Mr. President, having read nothing so lovely by way of remembrance, I ask unanimous consent that Mr. Cannon's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE REMEMBER JOAN BARONE

This is a personal column. It has nothing to do with President Reagan or the other usual suspects at the White House. Maybe it has something to do with journalism. It is a column about my friend Joan Barone, 38, who died of cancer last week at her Washington home.

The obituary told us that Joan had been Phi Beta Kapa at Mills College and a graduate student at Harvard and that she came to Washington in 1970 as a researcher at The Washington Post. It told us that she became a researcher at CBS in 1973, and producer of "Face the Nation," and that she was a producer of "CBS Evening News" when she died.

That is what the obituary said. Here are some things it did not say.

For starters, Joan Barone was an important person in this city where the people who count are supposed to be presidents, senators, lobbyists and media stars. Joan was none of the above. But she had an impact on the influential through the force of her personality and professionalism.

Throughout her life, Joan had an obsession with politics, and it was appropriate that she was discovered by my colleague, David S. Broder, who was lecturing at Harvard in the fall of 1969. Joan was in his seminar and Broder remembers that she said to him, "My major is Zoroastrian philosophy, but I'm really interested in politics." She impressed Broder so much with her attitude and ability that he recommended her for a research opening at The Post the following year.

She also made a big impression on the national news staff of The Post, particularly those of us who came from small newspapers and thought that researchers worked in laboratories. We remember her abundant energy and her willingness to tackle any project, no matter how many others she had under way. We remember her tendency to go beyond the specific question we put to her and answer the questions we should have asked.

At CBS, in the final year of the Nixon presidency, she was an instant asset. Lesley Stahl recalls that she was a "walking encylopedia" on Watergate who had stored in her head the actors, dates and principal events of that fascinating political drama.

Joan's enduring love was "Face the Nation," for which she served as researcher and assistant producer before becoming producer. It will not come as a revelation that visiting reporters sometimes wing it, relying on what we fondly believe to be a store of knowledge rather than on careful preparation. This didn't wash with Joan. We came prepared when she was there because we didn't want to be shown up in the warm-up discussion.

Joan was difficult to ignore. In the days when she was a researcher, reporters were reminded by cue cards late in the show about questions they needed to raise. I can still see her impatiently waving those cue cards with timely reminders such as "China" or "Reagan's health." Usually, we asked the questions.

Skilled politicians who are interviewed on television typically display all the spontaneity of the Wehrmacht. They prefer set speeches to candid answers. Joan thought that the questioning should get somewhere. "Make news," she would exhort reporters. She was a model of the perseverance that prompts public officials to reveal something of themselves and their policies.

Joan fought cancer for a decade before she died. During that time she was a great friend to persons with lesser problems and an inspiration to those of us who think that journalists and politicians too often get away with less than their best. She was generous with her time and advice. She remembered kindnesses and slights. She was a friend for life. She could spot a phony at a distance.

Joan made no mystery of her politics. I hope to give the ideologues no comfort when I say she was a Democrat who shared, with this reporter, the opinion that Hubert H. Humphrey was one of the greatest Americans never elected president. But Joan's fair-mindedness invariably transcended her personal views. She ratified the bedrock journalistic belief that professionalism triumphs over ideology.

Joan's memos were a marvel of meticulousness, written in a handwriting so small it almost required a magnifying glass to read them. She spoke in a small voice. Throughout her life she was remarkably self-effacing, never assuming that people knew of her accomplishments. Well, we remember her, all right. We remember that she had tiny handwriting and a big heart.

We remember that she was a mother and a wife and a devoted daughter and a first-class friend. We remember that she did fine work in pain and fear and made a difference.

Joan Barone left behind the treasure of her memory. We remember her so well that we can never forget her.

DEATH OF ROBERT L. McMANUS, SR.

Mr. MOYNIHAN. Mr. President, with a great sense of personal loss, I report to the Senate the death of one of the most distinguished New York journalists of his time, Mr. Robert McManus, Sr., who died in Albany, at age 68, on March 18.

Bob McManus was a personal friend, a godparent to one of the Moynihan children, and a standard which I, as a young man and as an adult, tried to maintain.

Few people in his profession were so respected. He covered the great Governors of New York State, from Franklin D. Roosevelt to Mario M. Cuomo. His simple virtues and truth-telling and kindness had touched men and women in political life for two political generations.

It was perhaps the nicest statement of his career that, having left the newspaper profession in 1956, as I recall, to become a press aide to then Governor Harriman of New York, he put himself in a situation of manifest jeopardy. It was then the strict rule of the capital in Albany and of the press in Upstate New York that an individual who had gone to work in a political office could not return as a newspaper man to a city room. Being a man of equal dedication to the principles of journalism and the platform and principles of the Democratic Party, he was torn when he was asked to make that decision, but he did.

Then, in a short 2 years, when Mr. Harriman was defeated for election by Mr. Nelson A Rockefeller, Bob McManus and his beloved wife, Janet, and their very large family faced the glum prospect of having neither a political nor a journalistic career; whereupon, Nelson Rockefeller made a gesture characteristic of him in many ways. He inquired about the reputation of Bob McManus as a press secretary. Bob reported to the press what was going on in the government, explained the Governor's position, made the best case he could, but kept it precisely to the confines of fact and reasonable judgment.

Having inquired of the press corps what they thought of Robert McManus, and having learned that the universal judgment was that a press secretary would not be found who was more respected by the press corps, Governor Rockefeller made the quite extraordinary judgment—for that time—to say that Bob McManus should stay on; that he met the standards of the press corps, and those were standards which the new administration would wish to abide by as well—and stay on he did.

Then, from having been a newspaperman, he gradually became an institution of the State government. When Governor Wilson succeeded Mr. Rockefeller, he kept on Bob McManus. When parties changed and Hugh Carey, a Democrat, came to office, he kept on Bob McManus. Finally, under Governor Cuomo, Bob retired, at the time of Mr. Cuomo's governorship.

It was a full and rich life which enriched those who shared it as either readers or associates or, most especially, his friends. We mourn his death and send our special love to his wife and to his many and marvelous children.

Mr. President, I ask unanimous consent that an obituary of Robert McManus, Sr., which appeared in the Albany, New York Times Union, be printed in the RECORD.

There being no objection, the obituary was ordered to be printed in the RECORD, as follows:

[From the Times Union, Albany, N.Y., Mar. 19, 1985]

ROBERT McMANUS SR. DEAD AT 68; EX-NEWSMAN, AIDE TO ROCKEFELLER

(By Carol DeMare)

Robert L. McManus Sr., a retired state official and former aide to the late Gov. Nelson A. Rockefeller, died Monday in St. Peter's Hospital, Albany. He was 68.

He had a long history of respiratory and heart ailments.

McManus retired in April 1983 after 12 years as deputy commissioner for communications for the state Department of Environmental Conservation. He had an illustrious career as a newspaperman, an aide to two governors and as a public relations official.

Born Nov. 8, 1916 in Binghamton, McManus served from 1959 to 1966 as press secretary to Rockefeller in the late governor's heyday.

He was Rockefeller's spokesman during his two unsuccessful attempts in the 1960s to win the Republican presidential nomination, and during Rocky's controversial divorce from Mary Todd Rockefeller in 1962, which ended 31 years of marriage.

McManus was at the governor's side in the early 1960s when state lawyers boldly filed court papers condemning 98 acres of Albany property to build the South Mall, now known as the Empire State Plaza, taking local Democrats by surprise.

From 1966 to 1971, he was the Rockefeller administration's director of communications before going to EnCon. He directed EnCon communications in the mid-1970s during the controversy over the discovery of PCBs and other toxic wastes. EnCon, subsequently, was the lead agency in a landmark agreement forcing the General Electric Co. to help finance the cleanup of PCBs in the Hudson River.

McManus came to Albany in the late 1940s as a political correspondent, covering the state Legislature for the Binghamton Press.

In 1956, he left reporting to become a speech writer for Democrat Gov. Averill Harriman, and joined Republican Rockefeller after his 1958 election.

McManus began his Press career as a copy boy during summers while attending Holy Cross College.

After graduating from Holy Cross in 1939, he worked full time as a general assignment reporter and later as a political writer.

He interrupted his work for the Press to serve two years with the Associated Press in Buffalo and Albany, before returning to Binghamton.

His acumen at covering politics stemmed from family history. His father, David F. McManus, was Broome County Democratic chairman during the 1930s and 1940s, and a contemporary of the late Daniel P. O'Connell, Democratic political boss of Albany County until his death in 1977.

Newsman Tom Cawley, a colleague at the Press, called McManus a "very, very good political reporter. Excellent."

Cawley, who free-lances a column for the Press, remembered when McManus covered a Binghamton Common Council meeting in the late 1940s. There was considerable opposition on the council to reappropriating city budget money for public library books.

McManus was "pretty offbeat in his coverage," Cawley said. He asked each of the 13 council members to produce a library card. Only two could. The story "got the library its appropriation," Cawley said.

Another friend, U.S. Sen. Daniel Patrick Moynihan, D-New York, said of McManus, "The craft of journalism begins with a commitment to truth, to find it, to tell it. Few men in his generation so embodied that commitment or so fulfilled its purpose. He enlarged his calling and enriched his friends."

Harry F. O'Donnell of Elmira, a McManus colleague from their Albany reporting days and state government work, said, "The ranks of old pros are diminished by the passing of Bob McManus who, most certainly, was an authentic professional in two exciting and exacting fields.

"Bob earned recognition as one of the best during an historical era of New York state and national politics, ranging from Franklin D. Roosevelt's long tenure as president up to Mario Cuomo's eventful arrival on the Albany and national scene."

O'Donnell, a former Associated Press reporter in Albany and later an aide to four New York governors and a New York City mayor, said he and McManus "know that we wouldn't have traded our life's time-frames for any other period in history."

Cawley and O'Donnell recalled McManus' dry wit. One day, at the Press, a vaudeville act paraded a horse into the city room as a promotion gimmick.

The entertainers were told to take the horse to McManus' desk.

For several minutes McManus continued to write his column, refusing to look up. Finally, his colleagues yelled to him.

McManus glanced up, then quipped, "This is the first time they ever brought a whole horse in here."

He married the former Jeanette Manning in Binghamton July 8, 1942. He was a parishioner of Albany's Blessed Sacrament Church.

McManus' mother was the former Agnes McCabe.

Besides his widow, McManus leaves five sons: Robert L. Jr. of Albany, a former political writer for The Times Union, Thomas D. of Lihue, Hawaii, Terence J. of Rock Springs, Wyo., John M. of Columbus, Ohio, and Timothy P. of San Francisco; four daughters: Katherine Bruin of Marblehead, Mass., Christine Mullin of Scotia, Ellen M. McManus of Saratoga Springs, and Mary Elizabeth McManus of Albany; two brothers, Donald McManus and John McManus, both of Binghamton; a sister, Grace Leary of Elmira; and 11 grandchildren.

Services will be at 9:30 a.m. Thursday in the McVeigh Funeral Home, Albany, and at 10 a.m. in Blessed Sacrament Church. Burial will be in Calvary Cemetery, Glenmont.

Memorial donations may be made to Covenant House, 460 W. 41st St., New York, N.Y. 10036.

Mr. MOYNIHAN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. SIMPSON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

The PRESIDING OFFICER. The Senate will now begin a period of routine morning business.

SENATOR WARREN G. MAGNUSON'S BIRTHDAY

Mr. DANFORTH. Mr. President, respect and admiration describe my feelings toward the distinguished former Senator from Washington, Warren G. Magnuson.

I was a freshman Senator from Missouri when Senator Magnuson was at the heighth of his career—a career characterized by dedicated, effective and compassionate service on behalf of the American people. It was once said of Senator Magnuson that he is a man who "never sought to make the world perfect," but who "sought to make it better." Make it better he has.

Senator Magnuson is responsible for landmark legislation in many areas. As chairman of the Commerce Committee, I personally admire his tremendous achievements in several areas under the committee's jurisdiction. His accomplishments in consumer protection are responsible for current Federal policy in this critical area. The list of major consumer laws which he authored is truly remarkable.

In 1974, he was author of the Magnuson-Moss Warranty Act which required manufacturers to make warranties clear and to live up to their promises. In addition, he was author of the Flammable Fabric Act which set flammability standards for fabric, draperies and, more importantly, children's sleepwear. The numerous other laws which Senator Magnuson authored include: The Poison Prevention Packaging Act, the Toy Safety Act, the Truth in Lending Act, the Truth in Packaging Act, the Truth in Labeling Act, and the Highway Safety Act.

Senator Magnuson was also a leader on environmental issues within the Commerce Committee's jurisdiction. For instance, he authored the Ports and Waterways Safety Act of 1972 which established stringent standards for the construction and operation of tanks. In fact, the Senator is often referred to as "Mr. Oceanography" because of his role as a prime mover in the field of ocean-related legislation.

Senator Magnuson's concern for the rights of American fishermen against foreign interlopers is well known. In this regard, the Senator authored the Magnuson Fisheries Management and Conservation Act, legislation that set a 200-mile limit on foreign fishing ships.

As a successor to the former chairman of the Commerce Committee, I am inspired by his accomplishments. Be it health, consumer protection, transportation, communications or the environment, Senator Magnuson was there working on behalf of the American people. During his time in Congress, which spanned almost 50 years, he left an indelible impact on our Nation's history and future.

Happy Birthday Maggie.

THE BIRTHDAY OF SENATOR WARREN MAGNUSON

Mr. THURMOND. Mr. President, I am pleased to join with a number of my colleagues in paying tribute to my good friend, former Senator Warren Magnuson of the State of Washington, on the occasion of his 80th birthday on April 12.

Senator Magnuson, who was my immediate predecessor as President pro tempore of the Senate, has given a lifetime of public service to his country and his home State of Washington. Following his admission to the Washington Bar in 1929, he served as special prosecutor in King County. As a member of the Washington State Leg-

islature, he sponsored a bill that became the country's first unemployment compensation law. Senator Magnuson's record as assistant U.S. district attorney and King County prosecuting attorney helped him win election to a seat in the U.S. House of Representatives in 1936, where he untiringly strove to represent his people.

In 1944 he was elected to the Senate, and within a decade, he became chairman of the Interstate and Foreign Commerce Committee, which later became the Commerce, Science, and Transportation Committee. He also served on the Appropriations Committee and became chairman of that committee. As a member of the Aeronautics and Space Sciences Committee, he became a leading advocate of Government-sponsored oceanography research as an aid to national defense. He cosponsored the Magnuson-Moose Warranty Act, which requires that warranties on certain consumer products meet minimum standards.

Senator Magnuson served his country as a lieutenant commander in the Naval Reserve and is a member of the American Legion and the Veterans of Foreign Wars.

It has been my distinct honor and privilege to succeed my esteemed former colleague, Warren Magnuson, in the office of President pro tempore of the Senate. He has inspired generations of Americans with his style of patriotism and leadership. I join my colleagues to honor him and congratulate him on the occasion of his 80th birthday, and I wish him well in all future endeavors.

THE 80TH BIRTHDAY OF SENATOR WARREN MAGNUSON

Mr. HOLLINGS. Mr. President, I wish to offer my best wishes to a former colleague, Warren Magnuson, on the occasion of his 80th birthday.

During his 36 years in this body, Maggie became one of the greatest and most influential Senators in our Nation's history. Few have left a greater mark on our Government. I know, because I served with him on the Appropriations and Commerce, Science, and Transportation Committees. It was in these two committees where Maggie's most significant achievements were born.

As chairman of the Commerce Committee for 22 years, Maggie ushered in a new era in consumer protection, transportation, and environmental policy. It was he who put together the legislation establishing the Consumer Product Safety Commission, truth in advertising laws, Amtrak, Conrail, the National Science Foundation, and important pollution laws.

On appropriations, he championed the cause of medical research. His initiatives included the establishment of the National Institutes of Health, the National Cancer Institute, and the National Health Service Corps.

Thanks to Warren Magnuson's many years of distinguished service in the Senate, America is a cleaner, safer, and more healthful society. He will always be remembered for his contributions to our Nation.

I join my colleagues in extending Maggie my heartiest congratulations as he celebrates his 80th birthday on April 12. May he enjoy continued good health and many more birthdays in the years to come.

CATFISH FARMING IN ARKANSAS

Mr. BUMPERS. Mr. President, yesterday Senator PRYOR and I and our wives, Betty Bumpers and Barbara Pryor, hosted a catfish luncheon in the Russell Building for Senators, and we had an excellent turnout. Some of the Senators who attended had eaten catfish all their lives, and so they already knew what a delicious and nutritious food it is. Others enjoyed it for the first time yesterday.

Our fine chefs were Carter and Debbie Harrison from Carlisle, AR, and the delectable meal of Arkansas farm-raised catfish, with all the trimmings including hush puppies and slaw, was sponsored by the Catfish Farmers of Arkansas.

The Catfish Farmers of Arkansas have prepared a paper describing the benefits of a thriving aquaculture economy entitled "Catfish Farming Past, Present, Future." I ask unanimous consent that this paper be printed in the RECORD.

There being no objection, the paper was ordered to be printed in the RECORD, as follows:

CATFISH FARMING—PAST, PRESENT, FUTURE

Fish Farming, because of its present size and potential, can have a significant impact on our balance of trade deficit and the general well being of Agriculture in the United States.

The deficit of trade is one of the greatest problems confronting our nation today. Quoting from the National Aquaculture Plan:

"Aquaculture has the potential to provide at least part of the fresh and frozen products that currently are imported. The U.S. imports 60 percent of the fishery products consumed domestically, and the resulting trade deficit in 1978 amounted to about $2.6 billion, or 28 percent of the nation's total trade deficit for non-petroleum products."

The increasing imports and resulting deficit of trade in fish and fishing products is alarming. Imports of fish and fishery products, both edible and non-edible, totaled $5.1 billion in 1983 with a total deficit of trade of $4.1 billion. With the abundance of natural resources (land and water) in the U.S. and with a firm commitment from government and industry at this time, we could change this fish and fishery products deficit item to a balance of trade surplus item within 5 years. This is truly an attainable goal.

Although the United States is traditionally not a fish eating nation, per capita consumption of fish has increased about 25% since the 1960's. Department of Commerce statisticians, home economist and others project even a greater increase in fish consumption in the future due to:

1. A more health conscious population.

2. Reports by the Surgeon General emphasizing high fat/high cholesterol dangers, and benefits of eating more fish.

3. More consumer accessibility due to the product being placed in supermarkets, fast-food establishments and restaurants. For example, Church's Fried Chicken Chain has recently signed a contract to purchase 50 million pounds of catfish for it's national outlets. Others will follow.

Again, quoting from the National Acquaculture Plan:

"Aquaculture can provide economic incentives in agricultural areas of high unemployment and depressed economic activity. It has particular potential for increasing employment opportunities and encouraging the economy in rural areas, in places where large operations have displaced small-scale coastal fishing, and in agricultural communities with surplus land and labor. Initiation and expansion of new and associated business, such as feed and fertilizer operations, would provide increased tax revenues to the local governments."

A major problem confronting today's grain farmer is excess production. Fish farming can alleviate the excess by:

1. Diverting acreage from grain crops to fish farming (a crop not in excess).

2. Utilizing grain and grain by-products such as corn, wheat, milo, soybean and rice in fish feeds. In catfish feeds alone, these products used amounted to over 500 million pounds in 1984 and the demand for these crops will increase as fish farming grows.

The benefits of diversification of America's farmers into aquaculture are obvious. While helping to reduce our deficit of trade balance, fish farming will benefit our total farm economy.

Fish farming is a relatively new industry as compared to other agricultural enterprises. Trout farming dates back to the 1950's and catfish farming had it's beginning in the 1960's. Pen-rearing of salmon, and several other industries are even more recent.

In 1960, catfish production totaled only 325,000 pounds worth $100,000. Growth has been phenomenal. In 1984, the industry production was calculated to be over 250 million pounds worth about a quarter of a billion dollars at the farm level. This translates into a $1.5 billion industry when considering economic multipliers. The phenomenal growth of the Catfish Industry illustrates that the American public will accept, and even demand, a high quality domestically-produced fish product. However, will we as a nation make available the resources to the practicing and potential fish farmers to meet the growing needs? If we do not provide the essential resources, our nation's consumers will look elsewhere, probably to overseas sources. This will assuredly increase our imports, and thus increase further these deficits of trade balances.

Research, much of it conducted at the Fish Farming Experimental Station, U.S. Fish and Wildlife Service, in Stuttgart, Arkansas, has contributed greatly to the phenomenal growth of the catfish industry. Some of the achievements are:

1. Research in nutrition and feeds has resulted in better quality and lower-priced formulations.

2. Studies of diseases and parasites which were previously disastrous to the economics of fish farming are now effectively controlled.

3. Research in water quality management has increased the 800 pound per acre average production in 1960 to 1,500 pounds in 1977. Many farmers are producing over 5,000 pounds per acre today.

4. Developments in harvesting gear and techniques used exclusively by catfish farmers today were developed at the Fish Farming Developmental Station, U.S. Fish and Wildlife Service, Kelso, Arkansas. The Kelso Station was placed in stand-by status (closed) in 1975.

5. Research conducted at the University of Arkansas-Pine Bluff, and in the Arkansas Agricultural Experiment Station System has been instrumental in providing vital information to small farmers, cage operators, and major producers.

Additional research is essential if we are to maintain this phenomenal growth in catfish farming. Research into genetics, feed development, water quality management, better harvesting and transportation techniques, disease control, and other management needs is vital to the growth and prosperity of the fish farming industry. The need for extension assistance to disseminate these research findings is essential. The leaders of this country must recognize the importance of funding and staffing the Stuttgart Laboratory, reopening the Kelso Station, and supporting the state institutions involved in fish farming.

REFLECTIONS ON ATTITUDES TOWARD SOUTH AFRICA

Mr. HECHT. Mr. President, the unbridled rhetorical assault on the Republic of South Africa, tantamount to a declaration of economic warfare, is scandalous. It provides an ego trip for demagogues to criticize an imperfect society struggling to improve democratic processes and economic benefits for its citizenry, but this behavior in the Halls of Congress undermines true American foreign policy interests and indeed the interests of the black Africans it is intended to help.

The key question is: Do we lambaste friendly countries with parliamentary governments because they do not have perfect social systems? Is it not better to applaud the progress they are making toward more representative government? Do we permit a vision of the best conceivable democracy to justify destroying a political entity visibly making every practical effort to maintain an orderly and prosperous society that looks very good in comparison with most other African nations? In other words, is it wise to allow aspiration for the best to be an enemy of the good?

Gentlemen, it seems to me that some of us who know little about South Africa or the alternatives that might result from our punitive attitudes are committing precisely this folly. The result could be an added injury to black and white people alike in South Africa and conceivably the end of one of the few parliamentary governments based on Anglo-Saxon legal concepts on the whole continent of Africa. Is this our goal? Is it in the international interest of the United States? I say no.

Let us turn away from this vindictive "holier than thou" assault on the decent people of the South African Government plainly engaged in a constructive and orderly effort to create a more representative political system. The alternative is aiding and abetting the forces of violence and revolution intent on overthrowing the reform-mined South African Government. Is that sensible for us or for the black and white population of South Africa? Again I say no.

The reason for my decision is based on recent history. Throughout Africa we see many states that have accepted Soviet help and adopted the totalitarian Soviet model of government. Ethiopia is the most conspicuous example. The people are starving. The Soviet Union gives them guns and military hardware. These gifts are not to make the people better off, but to encourage them to meddle in the affairs of non-Communist neighboring states in order to destabilize them socially, and if possible, destroy them politically.

The Republic of South Africa is the target of this kind of Soviet-inspired game plan, involving mobilization of hostile pressures from outside and direct support of violent revolutionary action inside. The fact is the modern economy of South Africa that has drawn so many black laborers to work there is the only hope for economic growth and adequate food in all of the states of the southern cone of Africa. The assault on the stable and productive South African society, which we are being asked to join, is an attack on political and economic progress in all of Africa. If we join, we are becoming catspaws in a Soviet game that few understand though it is plain to see.

The history of the past 25 years shows that we should avoid repeating our previous errors in situations like this one. Shall we undermine a government, admittedly imperfect, that is trying to introduce democratic processes and feed its people better? Or shall we help the revolutionary critics who really want to destroy the social fabric in order to create their own totalitarian control system?

I think the answer is clear. It does not matter if the result is communism or fanatic Islamic fundamentalism or any other arbitrary, undemocratic political system. It is a tragedy.

Is Vietnam better off now with its harsh political controls, concentration camps, desperately poor economy, and expansionist war in Cambodia, than it was when at least in South Vietnam there was a parliamentary and electoral process and substantial free-enterprise economic activities. No, of course not.

Is Iran better off now with its wildly arbitrary rule by the Khomeini Moslem fanatics, its civil disorders and murders, its costly war against Iraq, and its vulnerability to Soviet infiltration from Afghanistan, than it was under the reform-minded regime of the Shah? No, of course not.

Gentlemen, let us not repeat these past follies. The Republic of South Africa is a friendly nation with tremendous economic assets for all of Africa and a strategic location at the vital junction point of the Indian and Atlantic Oceans. It is moving sociologically and politically in the right direction. If we help undermine this society the result will be similar to what followed in Vietnam and Iran. It will be disastrous for all, including the Americans who are now creating a storm of criticism of the Republic of South Africa.

Let us instead try to support and build up governments moving in an orderly way in the direction of representative and productive society. Let us for once heed the lessons of history and the facts of international life, not our narrow emotional reactions based on our own special circumstances in this fortunate country. Our influence because of our good fortune and strength is too great for us to let ourselves be manipulated needlessly into leaning in the wrong direction. For heaven's sake, let us desist from this unseemly attack on South Africa.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Saunders, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Acting President pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

MESSAGE FROM THE HOUSE RECEIVED DURING THE RECESS

ENROLLED BILLS AND JOINT RESOLUTIONS SIGNED

Under the authority of the order of the Senate of January 3, 1985, the Secretary of the Senate, on April 4, 1985, during the recess of the Senate, received a message from the House of Representatives announcing that the Speaker had signed the following enrolled bills and joint resolutions:

S. 781. An act to amend the Biomass Energy and Alcohol Fuels Act of 1980 to

clarify the intention of section 221 of the act;

H.R. 1239. An act making urgent supplemental appropriations for the fiscal year ending September 30, 1985, for emergency famine relief and recovery in Africa, and for other purposes;

S.J. Res. 35. Joint resolution to authorize and request the President to issue a proclamation designating April 21 through April 27, 1985, as "National Organ Donor Awareness Week";

S.J. Res. 50. Joint resolution to designate the week of April 1, 1985, through April 7, 1985, as "World Health Week," and April 7, 1985, as "World Health Day";

S.J. Res. 62. Joint resolution commemorating the 25th anniversary of U.S. weather satellites; and

S.J. Res. 79. Joint resolution to designate April 1985, as "Fair Housing Month."

H.J. Res. 74. Joint resolution to designate the week of September 8, 1985, as "National Independent Retail Grocer Week"; and

H.J. Res. 186. Joint resolution designating April 2, 1985, as "Education Day U.S.A.".

The enrolled bills and joint resolutions, except for H.R. 1239, were signed on April 4, 1985, by the President pro tempore [Mr. THURMOND].

The bill H.R. 1239 was signed on April 4, 1985, by the Vice President.

MESSAGES FROM THE HOUSE

At 1:20 p.m., a message from the House of Representatives, delivered by Mr. Berry, one of its reading clerks, announced that the House has passed the following joint resolution, without amendment:

S.J. Res. 17. Joint resolution to authorize and request the President to issue a proclamation designating April 21 through April 28, 1985, as "Jewish Heritage Week."

The message also announced that the House has agreed to the following concurrent resolution, without amendment:

S. Con. Res. 38. Concurrent resolution providing for an adjournment of the Senate and the House of Representatives from Wednesday, April 3, or Thursday, April 4, 1985, until Monday, April 15, 1985.

The message further announced that the House has agreed to the following concurrent resolution, in which it requests the concurrence of the Senate:

H. Con. Res. 107. Concurrent resolution to express the sense of the Congress that the President take action to reduce the growing U.S. merchandise trade deficit and that he take action to respond to unfair international trade practices of Japan.

The message also announced that pursuant to the provisions of section 3, Public Law 94-304, as amended by section 1, Public Law 99-7, the Speaker appoints as members of the Commission on Security and Cooperation in Europe the following minority Members on the part of the House: Mr. RITTER, Mr. KEMP, and Mr. PORTER.

The message further announced that pursuant to the provisions of 46 United States Code 1295b(h), the Speaker appoints as members of the Board of Visitors to the U.S. Merchant Marine Academy the following Members on the part of the House: Mr. MANTON and Mr. CARNEY.

The message also announced that pursuant to the provisions of section 203(b) of Public Law 98-361, the Speaker appoints Mr. FUQUA and Mr. LUJAN as advisory members of the National Commission on Space on the part of the House.

The message further announced that pursuant to the provisions of section 6968(a) of title 10, United States Code, the Speaker appoints as members of the Board of Visitors to the U.S. Naval Academy the following Members on the part of the House: Mr. MURTHA, Mr. WILSON, Mrs. HOLT, and Mr. SPENCE.

The message also announced that pursuant to the provisions of Public Law 98-162, the Speaker appoints as members of the Commission on the Eleanor Roosevelt Centennial the following Members on the part of the House: Mrs. KENNELLY, and Mr. FISH.

The message further announced that pursuant to the provisions of section 4(a) of Public Law 92-484, the Speaker appoints as members of the Technology Assessment Board the following minority Members on the part of the House: Mr. MILLER of Ohio and Mr. EVANS of Iowa.

The message also announced that pursuant to the provisions of section 4(a) of Public Law 94-118, the Speaker appoints as members of the Japan-United States Friendship Commission the following Members on the part of the House: Mr. FOLEY and Mr. MILLER of Washington.

The message further announced that pursuant to the provisions of title 22, United States Code, section 276d, the Speaker appoints as members of the U.S. delegation of the Canada-United States Interparliamentary Group the following Members on the part of the House: Mr. BARNES, Chairman, Mr. FASCELL, Vice Chairman, Mr. GIBBONS, Mr. HAMILTON, Mr. OBERSTAR, Mr. LAFALCE, Mr. DONNELLY, Mr. BROOMFIELD, Mr. HORTON, Mr. STANGELAND, Mr. MARTIN of the New York, and Mr. MILLER of Washington.

ENROLLED BILLS SIGNED

The message also announced that the Speaker had signed the following enrolled bills:

H.R. 730. An act to declare that the United States holds in trust for the Cocopah Indian Tribe of Arizona certain land in Yuma County, AZ;

H.R. 1847. An act to amend title 28, United States Code, with respect to the U.S. Sentencing Commission; and

H.R. 1866. An act to phase out the Federal Supplemental Compensation Program.

MEASURE PLACED ON THE CALENDAR

The following concurrent resolution was read, and placed on the calendar:

H. Con. Res. 107. Concurrent resolution to express the sense of the Congress that the President take action to reduce the growing U.S. merchandise trade deficit and that he take action to respond to unfair international trade practices of Japan.

ENROLLED BILL AND JOINT RESOLUTIONS PRESENTED

The Secretary reported that on today, April 4, 1985, she had presented to the President of the United States the following bill and joint resolutions:

S. 781. An act to amend the Biomass Energy and Alcohol Fuels Act of 1980 to clarify the intention of section 221 of the act;

S.J. Res. 35. Joint resolution to authorize and request the President to issue a proclamation designating April 21 through April 27, 1985, as "National Organ Donor Awareness Week";

S.J. Res. 62. Joint resolution commemorating the 25th anniversary of U.S. weather satellites; and

S.J. Res. 79. Joint resolution to designate April 1985, as "Fair Housing Month."

S.J. Res. 50. Joint resolution to designate the week of April 1, 1985, through April 7, 1985, as "World Health Week," and to designate April 7, 1985, as "World Health Day."

EXECUTIVE AND OTHER COMMUNICATIONS

The following communications were laid before the Senate, together with accompanying papers, reports, and documents, which were referred as indicated:

EC-810. A communication from the Secretary of Health and Human Services transmitting, pursuant to law, a report on the Medicare hospital wage index study; to the Committee on Finance.

EC-811. A communication from the Chairman of the Council on Environmental Quality transmitting, pursuant to law, the Council's 1984 Government in the Sunshine Report; to the Committee on Governmental Affairs.

EC-812. A communication from the Comptroller General of the United States transmitting, pursuant to law, the 1984 GAO Annual Report; to the Committee on Governmental Affairs.

EC-813. A communication from the Head of the Information Section of the U.S. Copyright Office, transmitting, pursuant to law, the Office's 1983 Freedom of Information Report; to the Committee on the Judiciary.

EC-814. A communication from the Secretary of Agriculture transmitting, pursuant to law, an interim rule regarding the financing of commercial sales of agricultural commodities; to the Committee on Agriculture, Nutrition, and Forestry.

EC-815. A communication from the Acting Director of the Defense Security Assistance Agency transmitting, pursuant to law, a report on a foreign military assistance sale to Thailand; to the Committee on Armed Services.

EC-816. A communication from the Acting Assistant Secretary of State for Legislative and Intergovernmental Affairs transmitting, pursuant to law, the annual report on the Panama Canal Treaties; to the Committee on Armed Services.

EC-817. A communication from the Assistant Secretary of the Navy transmitting, pursuant to law, a report on a decision to convert the T-2 aircraft maintenance (J501) function at Training Squadron 26, Chase Field, Beeville, TX, to performance under contract; to the Committee on Armed Services.

EC-818. A communication from the Assistant Secretary of Defense transmitting, pursuant to law, an addendum to the DOD report on technology security; to the Committee on Armed Services.

EC-819. A communication from the Chairman of the National Credit Union Administration transmitting, pursuant to law, the NCUA 1984 Annual Report; to the Committee on Banking, Housing, and Urban Affairs.

EC-820. A communication from the Chairman of the Federal Financial Institutions Examination Council transmitting, pursuant to law, the Council's 1984 annual report; to the Committee on Banking, Housing, and Urban Affairs.

EC-821. A communication from the Secretary of Transportation transmitting a draft of proposed legislation to authorize appropriations for pipeline safety programs for fiscal years 1986 and 1987; to the Committee on Commerce, Science, and Transportation.

EC-822. A communication from the Secretary of Commerce transmitting a draft of proposed legislation to amend the Coastal Zone Management Act of 1972; to the Committee on Commerce, Science, and Transportation.

EC-823. A communication from the Chairman of the Federal Maritime Commission transmitting, pursuant to law, the Commission's 23d annual report; to the Committee on Commerce, Science, and Transportation.

EC-824. A communication from the Secretary of Transportation, transmitting a draft of proposed legislation to repeal section 1214 of the Merchant Marine Act of 1936; to the Committee on Commerce, Science, and Transportation.

EC-825. A communication from the Secretary of Transportation transmitting, pursuant to law, the annual report on railroad financial assistance; to the Committee on Commerce, Science, and Transportation.

EC-826. A communication from the Secretary of Energy transmitting, pursuant to law, notice of the intention to delay submission of the national energy policy plan from April 1 until September 5, 1985; to the Committee on Energy and Natural Resources.

EC-827. A communication from the Chairwoman of the U.S. International Trade Commission transmitting, pursuant to law, the annual report on trade between the United States and nonmarket economy countries; to the Committee on Finance.

EC-828. A communication from the Board of Trustees of the Federal Hospital Insurance Trust Fund transmitting, pursuant to law, the trustees 1985 annual report; to the Committee on Finance.

EC-829. A communication from the Board of Trustees of the Federal Old-Age and Survivors Insurance and Disability Insurance Trust Funds transmitting, pursuant to law, the trustees 1985 annual report; to the Committee on Finance.

EC-830. A communication from the Board of Trustees of the Federal Supplementary Medical Insurance Trust Fund transmitting, pursuant to law, the trustees 1985 annual report; to the Committee on Finance.

EC-831. A communication from the Chairman of the National Advisory Committee on Oceans and Atmosphere transmitting, pursuant to law, a report on the conservation and management of North Pacific fur seals; to the Committee on Foreign Relations.

EC-832. A communication from the Director for Legislative Affairs, AID, transmitting, pursuant to law, an amended report on program allocations for fiscal year 1985; to the Committee on Foreign Relations.

EC-833. A communication from the Chairman of the Federal Trade Commission transmitting, pursuant to law, the Commission's 1984 Government in the Sunshine Report; to the Committee on Governmental Affairs.

EC-834. A communication from the Chief Immigration Judge, Department of Justice, transmitting, pursuant to law, a report of grants of suspension of deportation under section 244(a)(1)(2); to the Committee on the Judiciary.

EC-835. A communication from the Chairman of the Railroad Retirement Board transmitting a draft of proposed legislation to eliminate the 1985 rail industry pension cost-of-living adjustment; to the Committee on Labor and Human Resources.

EC-836. A communication from the Administrator of the Veterans' Administration transmitting a draft of proposed legislation to extend certain veterans' health programs; to the Committee on Veterans' Affairs.

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. HELMS, from the Committee on Agriculture, Nutrition, and Forestry:

John R. Norton III of Arizona, to be Deputy Secretary of Agriculture.

(The above nomination was reported from the Committee on Agriculture, Nutrition, and Forestry with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. GOLDWATER, from the Committee on Armed Services:

Mr. GOLDWATER. Mr. President, from the Committee on Armed Services, I report favorably the attached listings of nominations.

Those identified with a single asterisk (*) are to be placed on the Executive Calendar. Those identified with a double asterisk (**) are to lie on the Secretary's desk for the information of any Senator since these names have already appeared in the CONGRESSIONAL RECORD and to save the expense of printing again.

The PRESIDING OFFICER. Without objection, it is so ordered.

ROUTINE MILITARY NOMINATIONS WHICH HAVE BEEN PENDING WITH THE SENATE ARMED SERVICES COMMITTEE THE REQUIRED LENGTH OF TIME AND TO WHICH NO OBJECTIONS HAVE BEEN RAISED, APRIL 4, 1985

*1. Lt. Gen. Walter F. Ulmer, Jr., U.S. Army (age 55), to be placed on the retired list; and

*2. Maj. Gen. Crosbie E. Saint, U.S. Army, to be lieutenant general. Ref. No. 148

*3. Maj. Gen. Alfred G. Hansen, U.S. Air Force, to be lieutenant general. Ref. No. 150

**4. Col. Pierce A. Rushton, Jr., U.S. Army, to be Director of Admissions, United States Military Academy. Ref. No. 156

Total 4.

**1. In the Air Force there are 48 appointments to the grade of colonel and below (list begins with Donald D. Fate). Ref. No. 161.

**2. In the Air Force there are 38 appointments of graduates of the Uniformed Services University of the Health Sciences to a grade to be determined by the Secretary of the Air Force (list begins with Raymond L. Brewer). Ref. No. 162.

**3. In the Army there are 19 permanent promotions to the grade of colonel and below (list begins with Ricardo Alba). Ref. No. 163.

**4. In the Army there are 1,636 appointments to the grade for second lieutenant (list begins with Harald K. Abbenhaus). Ref. No. 164.

*5. Adm. Steven A. White, U.S. Navy (age 56), to be placed on the retired list. Ref. No. 169.

*6. Rear Adm. George W. Davis, Jr., U.S. Navy to be vice admiral. Ref. No. 170.

*7. Rear Adm. James E. Service, U.S. Navy to be vice admiral. Ref. No. 171.

**8. In the Marine Corps there are 209 appointments to the grade of second lieutenant (list begins with Mark D. Abelson). Ref. No. 173.

**9. In the Naval Reserve there are 568 permanent promotions to the grade of captain (list begins with James L. Abbot, III). Ref. No. 174.

Total 2,521.

(The nominations ordered to lie on the Secretary's desk were printed in the RECORD of March 28, April 1, and April 2, 1985, at the end of the Senate proceedings.)

By Mr. GARN, from the Committee on Banking, Housing, and Urban Affairs:

Beryl Wayne Sprinkel, of Virginia, to be a Member of the Council of Economic Advisors.

(The above nomination was reported from the Committee on Banking, Housing, and Urban Affairs with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first and second time by unanimous consent, and referred as indicated:

By Mr. PROXMIRE:

S. 886. A bill entitled the "Hazardous Waste Reduction Act of 1985"; to the Committee on Finance.

By Mr. DOLE:

S. 887. A bill to amend the Internal Revenue Code of 1954 to extend the deduction for expenses incurred in connection with the elimination of architectural and transportation barriers for the handicapped and elderly; to the Committee on Finance.

By Mr. DURENBERGER:

S. 888. A bill entitled the "Economic Equity Act"; to the Committee on Finance.

By Mr. SIMPSON (by request):

S. 889. A bill to amend the Atomic Energy Act of 1954, as amended, to eliminate duplicative Federal Register notices relating to the Commission's Agreement State program; to the Committee on Environment and Public Works.

By Mr. SIMPSON (by request):

S. 890. A bill to provide applicants for, or holders of, a productions facility license or a utilization facility license with access to certain Federal criminal history records; to the Committee on Environment and Public Works.

By Mr. SIMPSON (by request):

S. 891. A bill to amend the Energy Reorganization Act of 1974, as amended, to clarify notification requirements for noncompliance, and for other purposes; to the Committee on Environment and Public Works.

By Mr. GLENN:

S. 892. A bill to amend the Solid Waste Disposal Act to clarify the jurisdiction of the Environmental Protection Agency over the regulation of solid waste mixed with radioactive materials at Department of Energy Atomic Energy Act facilities; to the Committee on Environment and Public Works.

By Mrs. HAWKINS:

S. 893. A bill to create the Florida panther National Wildlife Refuge in the State of Florida; to the Committee on Environment and Public Works.

By Mrs. HAWKINS:

S. 894. A bill to abolish parole as of the effective date of the Sentencing Reform Act of 1984; to the Committee on the Judiciary.

By Mr. SIMPSON (by request):

S. 895. A bill to authorize appropriations to the Nuclear Regulatory Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and section 305 of the Energy Reorganization Act of 1974, as amended, and for other purposes; to the Committee on Environment and Public Works.

By Mr. GRASSLEY (for himself, Mr. ABDNOR, Mr. ANDREWS, Mr. BOREN, Mr. HEINZ, Mr. MITCHELL, Mr. PRYOR, Mr. SYMMS, and Mr. ZORINSKY):

S. 896. A bill to amend the Internal Revenue Code of 1954 to apply rural electric cooperative plans to the provisions relating to cash or deferred arrangements; to the Committee on Finance.

By Mr. BENTSEN:

S. 897. A bill for the relief of Christy Carl Hallien of Arlington, Texas; to the Committee on Armed Services.

By Mr. GRASSLEY:

S. 898. A bill to clarify the standards under which attorneys fees may be awarded prevailing defendants under 42 U.S.C. 1988; to the Committee on the Judiciary.

By Mr. GRASSLEY (for himself, Mr. HARKIN, Mr. DURENBERGER, and Mr. GLENN):

S. 899. A bill granting the consent of Congress to the Midwest Interstate Compact on Low-level Radioactive Waste Management; to the Committee on the Judiciary.

By Mrs. HAWKINS:

S. 900. A bill to protect the public investment in right-of-way lands of the Cross Florida Barge Canal; to the Committee on Environment and Public Works.

By Mr. MOYNIHAN (for himself and Mr. D'AMATO):

S. 901. A bill to prohibit the enforcement of certain interstate compacts which may be discriminatory in nature, and to which Congress has not granted consent; to the Committee on the Judiciary.

By Mr. DECONCINI:

S. 902. A bill to establish Federal standards and regulations for the conduct of gaming activities within Indian country, and for other purposes; to the Select Committee on Indian Affairs.

By Mr. SIMPSON (for Mr. DOLE (for himself and Mr. STEVENS)):

S.J. Res. 106. Joint resolution to approve the obligation of funds available under Public Law 98-473 for supporting military or paramilitary operations in Nicaragua; to the Committee on Appropriations, pursuant to Public Law 98-473, provided that if the Committee has not reported the resolution (or an identical resolution) fifteen calendar days after its introduction, such Committee shall be discharged from further consideration of the resolution.

By Mrs. HAWKINS (for herself and Mr. GRASSLEY):

S.J. Res. 107. Joint resolution to designate the month of May, 1985 as "Older Americans Month"; to the Committee on the Judiciary.

By Mr. WARNER (for himself and Mr. NUNN):

S.J. Res. 108. Joint resolution authorizing the Secretary of Defense to provide to the Soviet Union, on a reimbursable basis, equipment and services necessary for an improved United States/Soviet Direct Communication Link for crisis control; to the Committee on Armed Services.

SUBMISSION OF CONCURRENT AND SENATE RESOLUTIONS

The following concurrent resolutions and Senate resolutions were read, and referred (or acted upon), as indicated:

By Mr. HART (for himself and Mr. KERRY):

S. Res. 131. Resolution expressing the sense of the Senate with respect to proposals for mutual and verifiable moratoria on certain activities involving nuclear weapons, and for other purposes; to the Committee on Foreign Relations.

By Mr. DODD:

S. Con. Res. 39. Concurrent resolution expressing the support of the Congress for Costa Rica's neutrality and urging the President to support such neutrality; to the Committee on Foreign Relations.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. PROXMIRE:

S. 886. A bill entitled the "Hazardous Waste Reduction Act of 1985; to the Committee on Finance.

(The remarks of Mr. PROXMIRE and the text of the legislation appear earlier in today's RECORD.)

By Mr. DOLE:

S. 887. A bill to amend the Internal Revenue Code of 1954 to extend the deduction for expenses incurred in connection with the elimination of architectural and transportation barriers for the handicapped and elderly; to the Committee on Finance.

EXTENSION OF DEDUCTION FOR ELIMINATING ARCHITECTURAL BARRIERS

Mr. DOLE. Mr. President, today I introduce legislation to amend the Internal Revenue Code of 1954 to extend the deduction for expenses incurred in connection with the elimination of architectural and transportation barriers for the handicapped and elderly through 1989.

This provision of the Revenue Code (section 190) will expire this year. Since its creation in 1976, it has been renewed on three occasions.

Section 190 provides an option whereby business persons can deduct from taxable income those expenditures made for accessibility, instead of depreciating the capital improvements over a number of years. The maximum allowable income tax deduction is $35,000; thus the annual revenue cost of this proposal is slight.

Income tax incentives constitute an effective way for business and the Federal Government to work together for the voluntary removal of architectural barriers that prevent disabled and elderly citizens from gaining access to places of commerce, housing, recreation, and employment. Section 190 is the only fiscal inducement to private business operators to make their facilities accessible.

Individuals with disabilities must have access to and safe use of the human-made environment if they are to enjoy the same rights and opportunities as other people to participate fully in everyday living activities.

The limitations imposed on persons with disabilities by architectural barriers severely affect their efforts to secure education and gainful employment. It reduces their access to needed health care and presents a serious deterrent to their participation in community life.

Over the last several decades America has strengthened its commitment to full equality for all of its disabled citizens by expanding educational, health, and job opportunites and by passing and enforcing landmark civil rights legislation. Nevertheless, many handicapped persons continue to find themselves in situations where their rights are effectively, if inadvertently, denied due to architectural and design barriers.

If the Federal Government fails to provide an incentive such as an income tax deduction or credit, business operators may not be inclined to bear accessibility-related costs. Because accessibility is so important to America's handicapped and elderly citizens, I urge my colleagues to join me in supporting the extension of the beneficial provisions of section 190.

By Mr. SIMPSON (by request):

S. 889. A bill to amend the Atomic Energy Act of 1954, as amended, to eliminate duplicative Federal Register notices relating to the Commission's agreement State programs; to the

Committee on Environment and Public Works.

FEDERAL REGISTER NOTICES

Mr. SIMPSON. Mr. President, at the request of the Nuclear Regulatory Commission, I am introducing today a bill to eliminate duplicative Federal Register notices relating to the Commission's agreement State program. I ask unanimous consent that the text of this bill be printed in the CONGRESSIONAL RECORD following my remarks. In addition, I ask unanimous consent that a letter from the Nuclear Regulatory Commission to the Vice President of the United States, the Honorable GEORGE H. BUSH, transmitting this legislation, a section-by-section analysis, and a legislative analysis of this legislation appear in the RECORD immediately following the bill.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 889

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SEC. 2. (a) Section 274 of the Atomic Energy Act of 1954, as amended, is hereby amended by deleting the following language in subsection (e)(1): "once each week for four consecutive weeks."

U.S. NUCLEAR REGULATORY COMMISSION,
Washington, DC, March 12, 1985.

HON. GEORGE H. BUSH,
President of the Senate,
Washington, DC.

DEAR MR. PRESIDENT: Enclosed is a Nuclear Regulatory Commission legislative proposal in the form of a draft bill which would result in modest cost savings to the Commission by eliminating duplicative Federal Register notices regarding our Agreement State Program.

Under Section 274 of the Atomic Energy Act the Commission may enter into an agreement with a State under which the Commission relinquishes its authority to regulate certain nuclear materials. Before entering into an agreement, subsection 274(e)(1) of the Atomic Energy Act requires the Commission to publish the proposed agreement once each week for four consecutive weeks in the Federal Register. Under the proposed amendment only one Federal Register notice would be required.

A draft bill (Enclosure 1), an analysis of the proposal (Enclosure 2), a comparative text (Enclosure 3) and a memorandum explaining in greater detail the need for the proposal (Enclosure 4) are provided.

Sincerely,

NUNZIO J. PALLADINO.

SECTION ANALYSIS

Section 274 of the Atomic Energy Act authorizes the Commission to enter into an agreement with a State under which the Commission relinquishes its authority to regulate certain nuclear materials. Before entering into such an agreement, subsection 274(e)(1) requires the Commission to publish its terms once each week for four consecutive weeks in the Federal Register. The purpose of the proposed amendment is to eliminate the cost of duplicative notices by requiring only one publication of the proposed agreement in the Federal Register.

LEGISLATIVE MEMORANDUM IN SUPPORT OF PROPOSED BILL

Section 274 of the Atomic Energy Act authorizes the Commission to enter into an agreement with a State under which the Commission relinquishes authority to regulate certain nuclear materials. Before entering into such an agreement, subsection 274(e)(1) requires the Commission to publish the terms of the proposed agreement once each week for four consecutive weeks in the Federal Register.

Recently, the Commission entered into an agreement with the State of Utah. The cost of publishing the terms of the agreement four times in the Federal Register exceeded $18,000. A single notice would have cost less than $5,000. The Commission anticipates entering into two Agreements with States in 1985 and with other States in the future. The Commission believes that modest cost savings could be achieved if Section 274 is revised to require publication of the proposed agreement in the Federal Register only once. We do not believe that duplicative notice promotes the public interest. All other NRC proposals, such as Notices of Proposed Rulemaking, are only published in the Federal Register once.

By Mr. SIMPSON (by request):

S. 890. A bill to provide applicants for, or holders of a production facility license or a utilization facility license with access to certain Federal criminal history records; to the Committee on Environment and Public Works.

ACCESS TO CERTAIN CRIMINAL RECORDS

Mr. SIMPSON. Mr. President, at the request of the Nuclear Regulatory Commission, I am introducing today a bill to provide applicants for, or holders of, production or utilization facility licenses with access to certain Federal criminal history records. I ask unanimous consent that the text of this bill be printed in the CONGRESSIONAL RECORD following my remarks. In addition, I ask unanimous consent that a letter from the Nuclear Regulatory Commission to the Vice President of the United States, the Honorable GEORGE H. BUSH, transmitting this legislation, a section-by-section analysis, a legislative analysis, and a letter from the Department of Justice regarding this legislation appear in the RECORD immediately following the bill.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 890

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SEC. 2. (a) The Atomic Energy Act of 1954 (42 U.S.C. 2011 et seq.) is amended by adding at the end of Chapter 10 thereof a new section 112 as follows:

"FEDERAL CRIMINAL HISTORY RECORDS

"SEC. 112. The Commission may by rule require each applicant for, or holder of a production facility license or a utilization facility license pursuant to sections 103 or 104b, to develop and maintain a program whereby individuals to be allowed unescorted access to designated areas of the facility are fingerprinted and the fingerprints submitted to the Attorney General of the United States, through a person or persons designated by the Commission in consultation with the Attorney General, for identification and appropriate processing. The applicant for or holder of the license may receive from the Attorney General the results of such search except for arrest data more than one year old not accompanied by dispositions. The Commission may prescribe regulations to establish the conditions for use of the information received from the Attorney General and to limit its redissemination."

(b) The Table of Contents of the Atomic Energy Act of 1954, as amended, is amended by adding:

"Sec. 112. Federal Criminal History Records."

NUCLEAR REGULATORY COMMISSION,
Washington, DC, March 12, 1985.

HON. GEORGE BUSH,
President of the Senate,
Washington, DC,

DEAR MR. PRESIDENT: Enclosed is a Nuclear Regulatory Commission legislative proposal in the form of a draft bill to add Section 112 to the Atomic Energy Act of 1954, as amended. Its purpose is to lessen the threat of sabotage of a nuclear power plant by licensee employees.

The proposed legislation is intended to serve the following purposes:

(1) Authorize NRC nuclear power plant licensees or applicants for licenses to receive FBI criminal history records for the purpose of determining who will be granted unescorted access to protected areas and vital areas of nuclear power plants;

(2) Enable nuclear power plant licensees or applicants for licenses to conduct more rigorous criminal history checks of employees by providing them with national (as contrasted with local) criminal history data; and

(3) Help ensure the trustworthiness and reliability of individuals employed at nuclear power plants.

A background investigation conducted on individuals requiring unescorted access to protected and vital areas of nuclear power plants is an important element of the program for protection of these plants against sabotage committed by plant employees. The proposed bill would permit nuclear power plant licensees or applicants for licenses, in conducting such background investigations, to have access to the Federal Bureau of Investigation (FBI) criminal history files on the employees under consideration for unescorted access. Currently, licensees and applicants must rely on state and local government files, which may not include an individual's criminal record in other areas of the country. We consider this to be inadequate.

In addition, the kind of criminal history record information that is currently made available to licensees by state and local government varies greatly from state to state. The proposed legislation would promote uniformity by allowing nuclear reactor licensees or applicants for licenses direct access to the National Crime Information Center data on those they are investigating.

The Department of Justice has been consulted and endorses the proposed legislation.

A draft bill (Enclosure 1), an analysis of the draft (Enclosure 2), a memorandum explaining in greater detail the need for the

proposal (Enclosure 3), and the Department of Justice views (Enclosure 4) are provided.

Sincerely,

NUNZIO J. PALLADINO.

SECTION ANALYSIS

The addition of Section 112 to the Atomic Energy Act of 1954 allows the NRC to require production facility licensees (as defined at Section 11 v. of the Atomic Energy Act) or utilization facility licensees (as defined at Section 11 cc. of the Atomic Energy Act) or applicants for such licenses to fingerprint those persons to be allowed *unescorted* access to certain areas of the facility. The fingerprints will be submitted to the Federal Bureau of Investigation so that criminal history record checks can be made. The legislation allows the fingerprinting of only those employees who will be allowed unescorted access to certain areas of the facility designated by the Commission. The option of escorting an employee requiring facility access is available should a fingerprint check be delayed or inappropriate (such as for a short-term or temporary employee). For purposes of this section, the term "employee" includes licensees' or applicants' contractor personnel who will be allowed unescorted access to designated areas of facilities.

The portion of the bill which provides for submission of the fingerprint checks through "a person or persons designated by the Commission in consultation with the Attorney General," was included at the request of the FBI, as this provision would enable the FBI to work with one person rather than a large number of licensees.

Pursuant to statutes affecting other industries, the FBI currently is authorized to disseminate criminal history record information to private organizations. Implementing Department of Justice regulations and policies limit the dissemination of available data. For example, if information on disposition of the charges is not available at the time of a request, the criminal history record information provided will not reveal, in most circumstances, that the individual was arrested. The limitations on licensee access to certain arrest data in this bill is consistent with Department of Justice regulations and policies on dissemination of arrest data.

The final sentence permits the Commission to limit the licensee's use of the criminal history record information and its redissemination. The purpose of this provision is to minimize the intrusion into the person's privacy.

LEGISLATIVE MEMORANDUM IN SUPPORT OF PROPOSED BILL

The proposed bill would amend the Atomic Energy Act of 1954 by adding a new section which would grant production or utilization facility licensees and applicants for licenses, authorization for access to Federal Bureau of Investigation (FBI) criminal history record information (CHRI) on a specified category of employees. The information would be used, along with other pertinent information, for screening employees to determine whether they should be allowed unescorted access to certain areas of nuclear facilities.

An important element in protecting against sabotage of nuclear facilities by licensee employees is the background investigation conducted on individuals whose duties require them to have unescorted access to protected and vital areas of the facility. Currently, most background checks conducted by nuclear power reactor licensees are limited to a review of state or local CHRI files which may not include a summary of an individual's criminal record in others areas of the country. The proposed bill would allow nuclear power reactor licensees access to FBI criminal history files on employees under investigation for grant of unescorted access. This would permit licensees to obtain more complete criminal histories. Criminal history information can be a crucial factor in evaluating an employee's trustworthiness and reliability, important considerations in determining whether to grant or deny an individual unescorted access to vital and protected areas of the facility. We believe the licensee's determination should be based on the most complete and accurate information available. Because licensee access to the national criminal history files maintained by the FBI is presently precluded, the background investigations conducted by nuclear power reactor licensees are not as complete as they could be. In the FBI's view, legislation is required before private utilities can be given access to FBI criminal files.

The proposed legislation would also promote greater uniformity in industry-conducted personnel screening programs by assuring that all licensees would base their access determinations on the same kind of CHRI. As will be explained, there is wide diversity in the kind of CHRI that is available to licensees operating in different states.

At present, the only significant federal legislative requirements for state or local criminal history use or maintenance, including use and maintenance of information obtained from the FBI, are in the Crime Control Act of 1973, P.L. 93-83, 42 U.S.C. 3701, *et seq.*, and in regulations issued by the Law Enforcement Assistance Administration (LEAA), 28 C.F.R. Part 20, and now administered under the Justice Systems Improvement Act. The Crime Control Act directed the executive branch to assure that the privacy of all CHRI in state and local information systems is protected adequately and that such information "only be used for law enforcement and criminal justice and other lawful purposes." LEAA issued comprehensive implementing regulations which prohibit state and local dissemination of nonconviction data (including information on arrests older than a year without disposition) to non-criminal justice agencies such as private employers. The regulations, however, permit such dissemination if authorized by state or local law, executive order or court determination. The practical effect of the above exception is to vest in state and local governments the authority to establish their own CHRI dissemination policies. States and localities can set more liberal or restrictive standards and have done so. As a result, the availability to NRC licensees of CHRI is entirely dependent on state and local law and may vary even between the political subdivisions of a particular state.

For example, states have different practices regarding access to conviction information. On criterion for release of such information is how long ago the conviction occurred. Some states will only provide information on convictions that have occurred within a relatively recent period of time. As a general rule, the time periods range between three to five years for misdemeanors and felonies not involving violence, and between six and ten years for other felonies.

Variations also exist with respect to the types of crimes subject to access restrictions. Finally, some states permit access to all conviction data only in circumstances of especially sensitive employment responsibilities. There is a lack of uniformity with respect to the occupations deemed to warrant such access.

The effect of differences in state practices is that information on convictions available to nuclear reactor licensees will vary from the total unavailability of information concerning arrests to the exclusion of information regarding certain felony convictions. This lack of uniformity can be substantially remedied by legislation allowing nuclear reactor licensees direct access to National Crime Information Center data.

The proposed bill reflects coordination with the Department of Justice regarding its regulations and policies limiting dissemination of arrest records. The FBI is prohibited by regulation, in most circumstances, from releasing to private entities records of arrests without including information on the disposition of such arrests. If information on disposition is unavailable at the time of a request, the history released will not reveal the arrest. An exception to this general policy permits arrest records without dispositional data to be disseminated during the first year following the arrest or if the individual is a fugitive.

The bar against receipt of arrest data without dispositional information is to ensure that employment decisions are based on the most complete information available. Review of incomplete records could have an unjustifiably negative effect on a licensee's decision whether to permit an individual unescorted access to certain areas. For example, an incomplete record may not include entries favorable to the subject such as an acquittal. Moreover, many employers might not distinguish between an arrest and a conviction. Incomplete information could also lead to an erroneous decision to permit an employee access to certain areas of the facility. For example, the licenses could be unaware of prior felony convictions in another part of the country.

Finally, in the interest of minimizing the intrusiveness of CHRI checks and maintaining the confidentiality of the information, the proposed legislation provides explicit authority for the Commission to regulate the use and redissemination of CHRI by licensees.

OFFICE OF LEGISLATIVE AFFAIRS,
Washington, DC, August 31, 1983.

Hon. NUNZIO J. PALLADINO,
Chairman, Nuclear Regulatory Commission, Washington, DC.

DEAR MR. CHAIRMAN: This is in response to the request of the Commission for the views of the Department of Justice with respect to a proposed amendment to the Atomic Energy Act of 1954, 42 U.S.C. 2011 et seq., to provide for limited criminal history checks of persons allowed unescorted access to nuclear facilities.

As you know, we strongly support the efforts of the Commission to maintain high security standards at nuclear facilities and feel that this is a matter of utmost importance. Obviously, any security failure could have potentially devastating consequences for public safety, the environment and our energy-production capacity. We appreciate the steps you have taken to enhance security at nuclear plants and are pleased to have been able to work with security officers of the Commission to develop new proposed legislation, a copy of which is enclosed.

In summary, this proposal would require the fingerprinting of persons allowed unre-

stricted access to nuclear facilities. Fingerprints so obtained would then be submitted to the Department of Justice for comparison with the Criminal File of the Identification Division of the Federal Bureau of Investigation. Such a comparison provides a highly reliable means of identifying persons with criminal records. With access to such criminal history data, the Commission will be in a better position to make informed decisions regarding security clearances. We believe this can significantly enhance security at nuclear facilities.

Providing agencies with access to FBI records, of course, is not a novel concept. The statute authorizing maintenance of criminal history files, 28 U.S.C. 534, expressly contemplates exchange of FBI criminal history information with other agencies. Under Sec. 14(f) of Public Law 94-29 (15 U.S.C. 78(f)) securities brokers are required to fingerprint and secure records checks by the FBI in connection with partners, directors, officers and employees of brokerage houses. In fact, the enclosed draft bill is modeled upon this provision of existing law.

The Congress has also specifically authorized fingerprinting and criminal history checks with respect to certain bank employees (P.L. 92-544), certain persons involved in the trading of commodities futures (7 U.S.C. 12a) and certain farm labor contractors (29 U.S.C. 1812(4)). Without denigrating the importance of security in connection with these various fiduciary activities, the importance of security in connection with operation of nuclear power plants would appear much greater than with respect to the fiduciary activities already covered by law. We believe, therefore, that this proposal is eminently justifiable.

In closing, I should note that the enclosed draft bill was developed by Commission staff in consultation with the Department of Justice and is carefully drafted to accommodate the security needs of the Commission while minimizing (1) intrusions into the privacy of employees, and (2) burdens upon the resources of the FBI. As noted above, our search of criminal history files will be limited to a records search of the FBI's Criminal File and will thus not intrude upon the privacy of persons whose fingerprints are on file with the FBI by virtue of military service, government employment or other matters unrelated to criminal activity.

Based upon the considerations set out above, the Department of Justice strongly supports the enclosed draft bill. The Office of Management and Budget has advised this Department that there is no objection to the submission of this proposal from the standpoint of the Administration's program.

Sincerely,

ROBERT A. MCCONNELL,
Assistant Attorney General.

By Mr. SIMPSON (by request):

S. 891. A bill to amend the Energy Reorganization Act of 1974, as amended, to clarify notification requirements for noncompliance, and for other purposes; to the Committee on Environment and Public Works.

CLARIFICATION OF NOTIFICATION REQUIREMENTS FOR NONCOMPLIANCE

Mr. SIMPSON. Mr. President, at the request of the Nuclear Regulatory Commission, I am introducing today a bill to clarify notification requirements for noncompliance with the Atomic Energy Act of 1954. I ask unanimous consent that the text of this bill be printed in the CONGRESSIONAL RECORD following my remarks. In addition, I ask unanimous consent that a letter from the Nuclear Regulatory Commission to the Vice President of the United States, the Honorable GEORGE H. BUSH, transmitting this legislation, a section-by-section analysis, and a legislative analysis of the legislation appear in the RECORD immediately following the bill.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 891

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SEC. 2. (a) Section 206 of the Energy Reorganization Act of 1974, as amended, is amended to read as follows:

"NONCOMPLIANCE

"SEC. 206. (a) Any firm constructing, owning, operating, or supplying the components of any facility or activity which is licensed or otherwise regulated pursuant to the Atomic Energy Act of 1954, as amended, or pursuant to this Act, and any individual director or responsible officer of such a firm, obtaining information reasonably indicating that such facility or activity or basic components supplied to such facility or activity—

"(1) fails to comply with the Atomic Energy Act of 1954, as amended, or any applicable rule, regulation, order, or license of the Commission relating to substantial safety hazards, or

"(2) contains a defect which could create a substantial safety hazard, as defined by regulations which the Commission shall promulgate,

shall immediately notify the Commission of such failure to comply, or of such defeat, unless such firm or individual has actual knowledge that the Commission has been adequately informed of such defect or failure to comply.

"(b) The Commission is authorized to issue such regulations and orders as may be necessary to assure compliance with this section, including regulations and orders requiring any firm subject to this section to devise and implement procedures to identify, evaluate, and report defects.

"(c) Any firm which fails to provide the notice required by subsection (a) of this section or violates any regulation or order issued under subsection (b) of this section and any individual who knowingly and consciously fails to provide such notice shall be subject to a civil penalty in the same manner and amount as for violations subject to a civil penalty under section 234 of the Atomic Energy Act of 1954, as amended.

"(d) The requirements of this section shall be prominently posted on the premises of any firm subject to this section.

"(e) The Commission is authorized to conduct such reasonable inspections, investigations, and other enforcement activities as needed to ensure compliance with the provisions of this section and with any regulations and orders issued thereunder.

"(f) For purposes of this section, the term 'firm' shall have the meaning provided for the term 'person' in subsection 11 s. of the Atomic Energy Act of 1954, as amended, except that it shall include the Department of Energy to the extent that its facilities, materials, or activities are licensed by the Commission."

(b) The first of the two sections of the Energy Reorganization Act of 1974, as amended, that is numbered 210 (section 5850, Title 5, United States Code) is renumbered as section 209A.

(c) The Table of Contents of the Energy Reorganization Act of 1974, as amended, is amended by deleting

"Sec. 210. Unresolved Safety Issues Plan."

and substituting instead:

"Sec. 209A. Unresolved Safety Issues Plan."

UNITED STATES NUCLEAR REGULATORY COMMISSION,
Washington, DC, March 12, 1985.

Hon. GEORGE BUSH,
President of the Senate,
Washington, DC.

DEAR MR. PRESIDENT: Enclosed is a Nuclear Regulatory Commission legislative proposal in the form of a draft bill to amend section 206 of the Energy Reorganization Act of 1974, as amended. Its purpose is to extend the coverage of section 206 to assure that the Commission receives proper notice of defects or violations in nuclear power plants and other regulated activities which could create substantial safety hazards.

Section 206 of the Energy Reorganization Act requires directors and responsible officers of firms constructing, owning, operating, or supplying the components of any facility or activity which is licensed or otherwise regulated pursuant to that Act or the Atomic Energy Act of 1954, as amended to notify the Commission immediately when they have knowledge of any defect which could create a substantial safety hazard or of any failure to comply with any Commission regulation, order or license which relates to substantial safety hazards. Knowing and conscious failure to do so exposes an individual to a civil penalty.

The Commission's bill would make the firm itself also directly responsible for failure to notify the Commission. In implementing section 206 through Part 21 of its regulations, the Commission determined that compliance with section 206 could best be assured by requiring affected firms to adopt and implement procedures for the proper evaluation of information indicative of potential hazards within the scope of section 206 and for informing directors and responsible officers. The institutional resources of affected firms thus should be brought to bear to assure routine compliance. It is therefore appropriate that the statute be clear that the firm itself is directly responsible for compliance. A firm may be liable for any failure to notify the Commission of any defect or violation, regardless of its intent or degree of negligence, in accord with the standards the Commission has applied in assessing civil penalties under the Atomic Energy Act. The bill retains the present requirements that directors and responsible officers are required to notify the Commission of violations and defects, and that knowing and conscious failures to notify the Commission could lead to assessment of a civil penalty against an individual director or officer. Consistent with its current enforcement policy, the Commission would consider willfulness or lack of willfulness in determining the level of seriousness of any failure to notify by a firm.

The proposed bill also clarifies the Commission's authority under section 206 over non-licensees as well as licensees, to conduct enforcement activities, including investigations and assessement of civil penalties, necessary to assure compliance with the statute

or implementing regulations and orders. In addition, the proposed bill makes certain minor amendments set forth in the enclosed legislative memorandum and section analysis.

Finally, the proposed legislation renumbers a misnumbered section of the Energy Reorganization Act.

A draft bill (Enclosure 1), an analysis of the draft (Enclosure 2), comparative text (Enclosure 3), and a memorandum explaining in greater detail the need for the legislation (Enclosure 4) are provided.

Sincerely,

NUNZIO J. PALLADINO.

SECTION ANALYSIS

This bill amends section 206 of the Energy Reorganization Act of 1974, as amended.

Subsection (a) provides that firms constructing, owning, operating, or supplying the components of nuclear power plants and other facilities and activities regulated by the Nuclear Regulatory Commission, and individual directors and responsible officers of such firms, are directly responsible for notifying the Commission of violations or defects that could create substantial safety hazards.

Subsection (b) clarifies the Commission's authority to implement section 206 by regulation or order.

Subsection (c) clarifies that violations of such a regulation or order, in addition to violations of section 206 itself, may be grounds for a civil penalty, and requires that a failure to notify the Commission must be knowing and conscious before a civil penalty is imposed on an individual director or responsible officer. The "knowing and conscious" requirement is appropriate to protect individuals from an undue burden.

A firm, however, may be subject to sanctions for any failure to notify, regardless of its intent or degree of negligence in failing to comply with the Commission's regulations. This is in accord with standards the Commission has applied in assessing civil penalties under section 234 of the Atomic Energy Act.

Subsection (c) also clarifies that all the provisions of section 234 of the Atomic Energy Act of 1954, as amended, apply to the imposition of civil penalties under section 206.

Subsection (d) requires that the provisions of section 206 be posted on the premises of any firm subject to section 206, not just on the premises of firms licensed or regulated under the Atomic Energy Act.

Subsection (e) clarifies that the Commission may conduct inspections, investigations, and other enforcement activities to assure compliance with its regulations, as well as with the statute.

Subsection (f) provides that under section 206, "firm" shall have the same broad meaning as "person" under section 11 s. of the Atomic Energy Act of 1954, as amended, except that it also includes the Department of Energy, to the extent its facilities, materials, and activities are licensed by the Commission.

The bill also renumbers a misnumbered section of the Energy Reorganization Act.

LEGISLATIVE MEMORANDUM IN SUPPORT OF PROPOSED BILL

The proposed bill would amend section 206 of the Energy Reorganization Act of 1974, as amended, to modify and clarify the Commission's authority in several ways and to bring section 206 more in line with the general nature of the regulatory scheme established under the Atomic Energy Act. In particular, the proposed bill would clarify that any firm subject to section 206 is itself responsible for notifying the Commission as required by section 206 and would be liable for any failure to do so, regardless of its intent or degree of negligence. Individual directors and responsible officers would continue to be personally liable, as section 206 now provides when the failure to notify is "knowing and conscious."

The proposed bill would also clarify the Commission's authority to promulgate regulations and issue orders needed to assure compliance with section 206, to assess civil penalties for violations of those regulations and orders, and to conduct inspections, investigations, and other enforcement activities needed to assure compliance with these regulations as well as with the statute itself. Finally, the bill would subject the Department of Energy to the requirements of section 206 to the extent that the Department's activities, facilities, or materials are licensed by the Commission.

Section 206 of the Energy Reorganization Act of 1974 provides that "[a]ny individual director or responsible officer of a firm constructing, owning, operating, or supplying components of any facility or activity" licensed or regulated under the Atomic Energy Act or the Energy Reorganization Act must immediately notify the Commission of violations of the Atomic Energy Act "or any applicable rule, regulation, order, or license . . . relating to substantial safety hazards, or" of any "defect which could create a substantial safety hazard . . ." (subsection (a)). "Any person who knowingly and consciously fails to provide [this] notice" is subject to a civil penalty (subsection (b)).

The Commission promulgated Part 21 of its regulations to implement section 206. In so doing, the Commission determined that notification of safety hazards could best be assured by requiring affected firms to adopt and implement procedures for proper evaluation of information suggesting potential hazards within the scope of section 206 and for informing directors or responsible officers. The institutional resources of affected firms are thus brought to bear to assure routine compliance. In particular, the regulations require affected firms to establish procedures (1) to evaluate any deviations from technical requirements in order to determine whether there is a defect in a component, or to inform the purchaser so that it may evaluate the deviation or have it evaluated, and (2) to assure that a director or responsible officer is informed of violations and defects.

The regulations also require affected firms to maintain certain records, to permit necessary inspection, to conspicuously post section 206 and the regulations implementing it, and, when applicable, to inform suppliers that the regulations apply to them. The Commission has collected a civil penalty from one firm which violated the Commission's implementing regulations.

The Commission thus further determined that achieving compliance with section 206 requires holding the involved firm primarily responsible for compliance with the Commission regulations delineating the firm's responsibility. But the Commission's authority for these requirements under section 206 is not free from doubt and has been questioned by the affected firms. The proposed bill focuses on these points and would put the Commission's authority on a firm footing. It would also make the approach of section 206 more consistent with the regulatory scheme established under the Atomic Energy Act. Since the proposed bill adds a new subsection (b) to section 206, it reletters all the succeeding subsections.

The proposed bill would amend subsection (a) to provide that the affected firm is responsible, along with individual directors and responsible officers, for notifying the Commission. This assignment of responsibility would be more in accord with the general approach to regulation under the Atomic Energy Act, which imposes responsibility on the licensee for compliance with the Act and the Commission's regulations.

While subsection (c) of the bill retains the current provision that a civil penalty may be levied against individual directors and responsible officers only for a knowing and conscious failure to notify, the bill would subject a firm to sanctions for any failure to notify, regardless of its intent or degree of negligence in failing to comply with the Commission's regulations. This is in accord with section 234 of the Atomic Energy Act, which authorizes civil penalties for violations without regard to whether they are knowing and conscious.

The proposed bill also clarifies the Commission's authority to promulgate regulations and issue orders under section 206, to assess civil penalties for their violation, and to engage in inspection, investigation, and other enforcement activities to assure compliance. First, new subsection (b) clarifies the Commission's authority to promulgate rules and regulations and issue orders under section 206. This provision parallels the Commission's existing authority under the Atomic Energy Act to "prescribe such regulations or orders as it may deem necessary . . . (3) to govern any activity authorized pursuant to this Act . . . in order to protect health and to minimize danger to life or property" (section 161 i.(3)). The new subsection endorses the Commission's present regulations by expressly authorizing the Commission to issue regulations and orders requiring affected firms to "devise and implement procedures to identify, evaluate, and report defects."

Second, subsection (c) clarifies that a firm, whether it be a licensee or non-licensee, may be subject to a civil penalty for violating Commission regulations or orders issued under section 206, as well as for violations of section 206 itself. This would make a firm civilly liable for failing, in a particular case, to implement the procedures that the regulations require it to devise. As discussed above, the subsection would also make individual directors and responsible officers personally liable for a knowing and conscious failure to report required defects or violations to the Commission. In this circumstance, the "knowing and conscious" limitation avoids placing an undue burden on an individual. Subsection (c) also clarifies that all the provisions of section 234 of the Atomic Energy Act apply to the imposition of civil penalties under section 206.

Third, subsection (e) clarifies that the Commission may conduct investigations as well as inspections and other enforcement activities under section 206 and its implementing regulations. The firms and individuals currently investigated under section 206 are frequently unfamiliar with NRC's authority and often initially challenge an investigation. While the Commission believes that investigative authority under section 206 may reasonably be inferred from reading that section in conjunction with the

broad authority given to the Commission under the Atomic Energy Act, a more explicit statement of the Commission's authority would substantially reduce resources expended in resolving initial challenges to investigations. Subsection (e) also clarifies that the Commission may conduct enforcement activities needed to ensure compliance with Commission regulations and orders issued under section 206, as well as with section 206 itself. This authority is necessary to enable the Commission to assure compliance with the statute.

The proposed bill makes three additional minor amendments to section 206. Subsection (d) clarifies that the requirements of section 206 must be prominently posted on the premises of any firm affected by the section, and not simply at facilities licensed under the Atomic Energy Act. This would expand present subsection (c) to cover suppliers of components and other firms who are covered by section 206 but not regulated under the Atomic Energy Act.

The definition of "firm" in new subsection (f) reflects the broad coverage provided for the term "person" in section 11 s. of the Atomic Energy Act, except that it would also make the Department of Energy subject to section 206 to the extent that its activities, facilities, and materials are licensed by the Commission.

By Mr. GLENN:

S. 892. A bill to amend the Solid Waste Disposal Act to clarify the jurisdication of the Environmental Protection Agency over the regulation of solid waste mixed with radioactive materials at Department of Energy Atomic Energy Act facilities; to the Committee on Environment and Public Works.

MIXED HAZARDOUS WASTE AMENDMENT ACT

● Mr. GLENN. Mr. President, I am pleased to introduce the Mixed Hazardous Waste Amendment Act of 1985. The primary purpose of this legislation is to clarify the intent of Congress that the generation, transportation, treatment, and storage of solid waste mixed with radioactive materials is subject to the Solid Waste Disposal Act, and that the disposal of solid waste mixed with radioactive materials at Department of Energy Atomic Energy Act facilities, and at other facilities not licensed for the disposal of radioactive materials, is also subject to such act. This objective will be achieved through an amendment to section 1004(27) of the Solid Waste Disposal Act.

Mr. President, I wish to emphasize that by introducing this legislation, I do not imply that the present Solid Waste Disposal Act as amended cannot be read as already giving EPA regulatory jurisdiction over mixed hazardous waste at DOE Atomic Energy Act facilities. DOE's challenge of EPA jurisdiction of hazardous waste not containing radioactive materials at DOE sites has already been rejected by the courts, and it is possible that the courts will read the congressional intent in the RCRA amendments to the Solid Waste Disposal Act as giving EPA jurisdiction over all mixed hazardous waste at DOE facilities. The uncertainty of this outcome is the prime motivation for this legislation.

The need to clarify this regulatory authority has been graphically illustrated by the recent series of events at the Feed Materials Production Center in Fernald, OH. The Fernald plant which manufactures uranium billets—metal ingots—for our nuclear production reactions, was constructed in 1951 and became fully operational in 1954. Owned by DOE, the Fernald facility is operated by National Lead of Ohio [NLO]. It is one of a number of plants throughout the United States owned by the Government and operated under contract.

Documents released by NLO and DOE show that an estimated 5 million kilograms of uranium wastes have been stored on the Fernald plant property in large tanks and in rubber or clay lined pits on the 1,050 acre site. Although the lining of the pits is designed to prevent leakage, unusually high concentrations of uranium have been found in wells south of the plant. In addition to the storage pits, there are drums of hazardous waste on site. Some of the drums have leaked hazardous waste into a nearby storm sewer. While this situation has been corrected, no action was taken by DOE until EPA discovered the situation during a routine inspection under RCRA. More appalling still is the fact that DOE has been monitoring well-water off-site only since 1981.

Whether the situation at Fernald is representative of the status of the other DOE facilities will require additional investigation. However, in my judgment, DOE has a dubious record in the area of environmental protection, and control of radioactive waste is certainly not a matter to be left to chance. The problem of overlapping and fragmented regulatory jurisdiction on mixed waste would be eliminated by the legislation I am introducing today. I have consistently fought to promote effective radiation protection legislation during my years in the Senate, and with this legislation I am extending those efforts to the area of hazardous waste. In addition, this legislation will complement work by the attorney general in Ohio, who is negotiating with DOE to voluntarily turn over to EPA the jurisdiction in setting environmental standards for mixed waste at DOE sites in Ohio. Should such negotiations fail, the attorney general has given notice that a suit will be filed to bring about, through court action, the aim of this legislation.

I believe that this legislation will be a significant step forward in correcting a number of problems which currently exist in America's nuclear facilities—problems that developed both because we were not as sensitive as we should have been to the issue of health and safety—and because DOE was overzealous in encouraging nuclear production, and not zealous enough in demanding environmental protection. As a society we know better. Therefore, although plants like Fernald are essential to the security of our country, we must see to it that the cost of that security does not include the health of our people.●

By Mrs. HAWKINS:

S. 893. A bill to create the Florida Panther National Wildlife Refuge in the State of Florida; to the Committee on Environment and Public Works.

FLORIDA PANTHER NATIONAL WILDLIFE REFUGE

● Mrs. HAWKINS. Mr. President, I am today introducing legislation to establish the Florida Panther National Wildlife Refuge.

The Florida panther is one of the most endangered mammals in North America. It primarily occupies territory in and around the Everglades and Big Cyprus Swamp in southern Florida, although isolated panthers are found in other parts of the State. The official estimate of the panther population is 30 animals, although I am advised by virtually everyone living in the region that the actual numbers are considerably higher than that—reports I sincerely hope are accurate.

The panther recovery plan adopted by the Fish and Wildlife Service and the Florida Game and Freshwater Fish Commission identifies protection of habitat as the primary key to saving the panther. The plan identified a number of areas which were scientifically determined to be prime panther habitat, and priorities were established for a variety of studies aimed at further defining the best means of insuring the panther's survival.

The refuge proposed by this legislation represents the last area of important habitat identified to date that is not in public ownership. It encompasses approximately 32,000 acres to the north of Alligator Alley, with the majority to the west of State Route 29. The strip of land running between Route 29 and the eastern border of the Big Cyprus National Preserve, for a distance of approximately 6 miles to the north, is also included.

All of the land in question is owned by two corporations, who are willing to sell it for creation of the refuge. In addition, they are offering conservation easements on certain adjoining lands to further enhance the operation of the refuge. Both the Barron Collier Corp. and Collier Enterprises, the two companies in question, have demonstrated an outstanding commitment to the public interest throughout the negotiations for the creation of the refuge; and they deserve the thanks of all Americans concerned about the preservation of endangered species.

Mr. President, because of the nature of this refuge—willing sellers of all the land and the importance of the species in question—I hope the Environment and Public Works Committee will act promptly on this legislation. It has the full support of the Department of the Interior.

I ask unanimous consent that the text of the bill be inserted in the RECORD at this point.

S. 893

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in order to protect the habitat and enhance the preservation and recovery of the endangered Florida panther, the Secretary of Interior (hereinafter referred to as the "Secretary") is authorized to establish the Florida panther.

National Wildlife Refuge in the State of Florida. The refuge shall contain certain lands north of State Route 84 and Fakahatchee Strand State Preserve, and to the east and west of State Route 29, in Florida, comprising approximately thirty-two thousand acres as depicted on a map entitled "Florida Panther National Wildlife Refuge", dated April 2, 1985 and available for inspection in the office of the Secretary.

SEC. 2. Within the boundry of the refuge, the Secretary may acquire lands, waters, and interests therein by donation, purchase with donated or appropriated funds or exchange. When the Secretary determines that lands, waters and interests therein have been acquired sufficient to constitute an efficiently administrable unit for the purposes of this Act, he shall establish the refuge by publication of a notice to that effect in the Federal Register. Pending such establishment and thereafter, the Secretary shall administer all lands, waters, and interests therein acquired under this Act in accordance with the provisions of the National Wildlife Refuge System Administration Act of 1966 (16 U.S.C. 668dd-668ee), and may utilize such additional statutory authority as may be available to him for the conservation and development of the wildlife resources in general, and the Florida panther population in particular, within the refuge.

SEC. 3. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.●

By Mrs. HAWKINS:

S. 894. A bill to abolish parole as of the effective date of the Sentencing Reform Act of 1984; to the Committee on the Judiciary.

TRUTH IN SENTENCING ACT

Mrs. HAWKINS. Mr. President, today I am introducing legislation entitled the "Truth in Sentencing Act of 1985."

Mr. President, it would seem that a majority of my congressional colleagues share my desire to see truth and accuracy in the sentencing of convicted Federal criminals. In October 1984, the U.S. Congress enacted into law the Comprehensive Crime Control Act, which included a section calling for a gradual end to the U.S. parole system. This was an important part of a very necessary piece of legislation, and I generally supported its provisions in the last Congress. But this gradual dissolution of a parole system which too often allows the release of chronic offenders does not go far enough; it does not address the immediacy of the need to get these repeat offenders off the streets, where they are allowed to victimize innocent citizens again and again.

This situation is made painfully clear in the most recently released Federal crime statistics. In fiscal year 1984, for example, there were 6,539 bank robberies, 980 kidnapings, and 1,975 drug offenses committed within Federal jurisdiction. A simultaneously released study of violent crime in the United States, considered the definitive study of its kind, reports that of all the crimes committed by the members of the study, chronic offenders committed 61 percent of these crimes, including 76 percent of the rapes, 73 percent of the robberies, and 65 percent of the aggravated assaults. These statistics prove that the present parole system allows perpetrators of these violent crimes back out on the streets to commit their offenses repeatedly against innocent citizens.

While the recently enacted Comprehensive Crime Control Act recognizes that failure of the parole system to address this situation effectively, and recognizes as well the need for truth and accuracy in the sentencing of convicted Federal criminals, I feel it does not act expeditiously enough. This law calls for a 5-year, eventual, dissolution of the present parole system, and I feel very strongly that the American people should not be victimized and terrorized by these criminals even 1 day longer, much less 5 years.

For this reason, I am introducing this legislation, which would abolish the parole system as of the effective date of the Sentencing Reform Act of 1984, which would, in effect, do away with the 5-year waiting period. If enacted, the "Truth in Sentencing Act of 1985" would force Federal criminals to serve their full sentences almost immediately, and in so doing, begin to make our streets safe again.

Mr. President, I would like to urge my colleagues to join me in my effort to provide this necessary, immediate, protection for American citizens.

By Mr. SIMPSON (by request):

S. 895. A bill to authorize appropriations to the Nuclear Regulatory Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and section 305 of the Energy Reorganization Act of 1974, as amended, and for other purposes; to the Committee on Environment and Public Works.

NUCLEAR REGULATORY COMMISSION AUTHORIZATION

Mr. SIMPSON. Mr. President, I am introducing at the request of the U.S. Nuclear Regulatory Commission, legislation to authorize appropriations to the NRC for fiscal years 1986 and 1987. I ask unanimous consent that the text of the bill be printed in the CONGRESSIONAL RECORD, following my remarks. In addition, I ask unanimous consent that a section-by-section summary of the proposed legislation appear in the CONGRESSIONAL RECORD, following the bill.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 895

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I—AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEARS 1986 AND 1987

SEC. 101. There are hereby authorized to be appropriated to the Nuclear Regulatory Commission in accordance with the provisions of section 261 of the Atomic Energy Act of 1954 and section 305 of the Energy Reorganization Act of 1974, for the fiscal years 1986 and 1987 to remain available until expended, $429,000,000 for fiscal year 1986 and $460,000,000 for fiscal year 1987.

SEC. 102. (a) The sums authorized to be appropriated in this Act for fiscal years 1986 and 1987 shall be allocated as follows:

(1) not more than $88,930,000 for fiscal year 1986 and $95,470,000 for fiscal year 1987, may be used for "Nuclear Reactor Regulation";

(2) not more than $92,890,000 for fiscal year 1986 and $101,330,000 for fiscal year 1987, may be used for "Inspection and Enforcement";

(3) not more than $40,730,000 for fiscal year 1986 and $44,870,000 for fiscal year 1987, may be used for "Nuclear Material Safety and Safeguards";

(4) not more than $135,970,000 for fiscal year 1986 and $145,800,000 for fiscal year 1987, may be used for "Nuclear Regulatory Research";

(5) not more than $29,300,000 for fiscal year 1986 and $30,000,000 for fiscal year 1987, may be used for "Program Technical Support";

(6) not more than $41,180,000 for fiscal year 1986 and $42,530,000 for fiscal year 1987, may be used for "Program Direction and Administration";

(b) The Nuclear Regulatory Commission may use not more than 1 per centum of the amounts authorized to be appropriated under paragraph 102.(a)(4) to exercise its authority under section 31a. of the Atomic Energy Act of 1954 (42 U.S.C. 2051(a)) to enter into grants and cooperative agreements with universities pursuant to such paragraph. Grants made by the Commission shall be made in accordance with the Federal Grant and Cooperative Agreement Act of 1977 (41 U.S.C. 501 et seq.) and other applicable law.

(c) Any amount appropriated for a fiscal year to the Nuclear Regulatory Commission pursuant to any paragraph of subsection 102.(a) for purposes of the program referred to in such paragraph, may be reallocated by the Commission for use in a program referred to in any other paragraph of such subsection, or for use in any other activity within a program, except that the amount available from appropriations for such fiscal year for use in any program or specified activity may not, as a result of reallocations

made under this subsection, be increased or reduced by more than $500,000 unless a period of thirty calendar days (excluding any day in which either House of Congress is not in session because of an adjournment of more than three calendar days to a day certain or an adjournment sine die) passes after the receipt by the Committee on Energy and Commerce and the Committee on Interior and Insular Affairs of the House of Representatives and the Committee on Environment and Public Works of the Senate, of notice submitted by the Commission containing a full and complete statement of the reallocation proposed to be made and the facts and circumstances relied upon in support of such proposed reallocation.

SEC. 103. Moneys received by the Nuclear Regulatory Commission for the cooperative nuclear research program and the material access authorization program may be retained and used for salaries and expenses associated with such programs, notwithstanding the provisions of section 3617 of the Revised Statutes (31 U.S.C. 484), and shall remain available until expended.

SEC. 104. From amounts appropriated to the Nuclear Regulatory Commission pursuant to this title, the Commission may transfer to other agencies of the federal government sums for salaries and expenses for the performance by such agencies of activities for which such appropriations of the Commission are made. Any sums so transferred may be merged with the appropriation of the agency to which such sums are transferred.

SEC. 105. Notwithstanding any other provisions of this Act, no authority to make payments under this Act shall be effective except to such extent or in such amounts as are provided in advance in appropriation Acts.

SECTION-BY-SECTION SUMMARY

Title I—Sec. 101. The Nuclear Regulatory Commission is responsible for assuring that the possession, use and disposal of radioactive materials and the construction and operation of reactors and other nuclear facilities are conducted in a manner consistent with public health and safety and the common defense and security, with proper regard for environmental quality, and in conformance with antitrust statutes.

The Commission's program is comprised of nuclear facilities and materials licensing and related regulatory functions, inspection and enforcement, reactor safety research, nuclear materials safety and safeguards, rulemaking, and technical and administrative support activities.

The budget request for the Commission is stated in terms of obligational authority requested to carry out the responsibilities of the Commission.

Public Law 93-344, Congressional Budget and Impoundment Control Act of 1974, Title VI, Section 607, states that ". . . any request for the enactment of legislation authorizing the enactment of new budget authority to continue a program or activity for a fiscal year (beginning with the fiscal year commencing October 1, 1976) shall be submitted to the Congress not later than May 15 of the year preceding the year in which such fiscal year begins. . . ." Accordingly, this section also requires authorization of appropriations for FY 1987.

Sec. 102.(a). For fiscal year 1986, the requested total authorization for appropriation is $429,000,000 and for fiscal year 1987, $460,000,000 allocated as follows:

	Fiscal year	
	1986	1987
NRR	$88,930,000	$95,470,000
IE	92,890,000	101,330,000
NMSS	40,730,000	44,870,000
RES	135,970,000	145,800,000
PTS	29,300,000	30,000,000
PDA	41,180,000	42,530,000

Sec. 102.(b). This section provides authorization for moneys received by the Commission to be utilized for grants and cooperative agreements. Although the language of this section specifically addresses universities, other eligible recipients, such as state and local governments and not-for-profit institutions, may be included in the Commission's assistance program.

Sec. 102.(c). This section provides the Commission with the authority to reprogram funding among the program activities specified in Section 102.(a) with the following constraint:

Any reprogramming of an amount in excess of $500,000 will be reported to the appropriate Congressional committees.

Sec. 103. This section provides authorization for moneys received by the Commission for cooperative nuclear safety research programs and for costs of certain licensee security investigations to be used as salaries and expenses and for such moneys to remain available until expended notwithstanding the provisions of section 3617 of the revised statutes.

Funds are received from foreign governments which in turn will participate in NRC's reactor safety research experiments. These funds will be used to pay for any costs incidental to their participation. Funds are received in the form of fees from licensees for the cost of security investigations associated with access to formula quantities of special nuclear material (SNM). These funds will be used to pay the agency performing the security investigations.

Sec. 104. This section provides authorization for the transfer of amounts from the Commission's Salaries and Expenses appropriation to other agencies of the Government for the performance of the work or services rendered by such agencies on behalf of the Commission.

Sec. 105. This section provides language required by the Congressional Budget and Impoundment Control Act of 1974 (P.L. 93-344), Sec. 401(a).0

By Mr. GRASSLEY (for himself, Mr. ABDNOR, Mr. ANDREWS, Mr. BOREN, Mr. HEINZ, Mr. MITCHELL, Mr. PRYOR, Mr. SYMMS, and Mr. ZORINSKY):

S. 896. A bill to amend the Internal Revenue Code of 1954 to apply rural electric cooperative plans to the provisions relating to cash or deferred arrangements; to the Committee on Finance.

APPLYING RURAL ELECTRIC COOPERATIVE PLANS TO CASH OR DEFERRED ARRANGEMENT PROVISIONS

● Mr. GRASSLEY. Mr. President, today, I am joined by my colleagues, Mr. ABDNOR, Mr. ANDREWS, Mr. BOREN, Mr. HEINZ, Mr. MITCHELL, Mr. PRYOR, Mr. SYMMS, and Mr. ZORINSKY, in introducing a bill amending section 401(k) of the Internal Revenue Code, to permit employees of rural electric cooperatives to participate in deferred compensation plans.

In the Revenue Act of 1978, Congress added section 401(k) to the Internal Revenue Code authorizing profit sharing of stock bonus plans to incorporate a cash or deferred compensation arrangement for the benefit of its participants. These arrangements encourage employee savings by allowing a portion of their salary to be contributed to a plan on a before tax basis. Apparently by oversight, the Revenue Act of 1978 limited these features to profit sharing or stock bonus plans. Other forms of compensation are not eligible for deferred income treatment under section 401(k) of the Code. As a result, rural electric cooperatives are unable to take advantage of 401(k) plans because as cooperatives, they have no stock bonus plans. Furthermore, they are unable to adopt profit sharing plans because of questions under applicable State laws requiring surplus income to be returned to the patrons of the cooperative. Moreover, because rural electric cooperatives are nonprofit tax exempt organizations, they may be prohibited from establishing profit sharing plans.

Rural electric cooperatives compete with profitmaking utilities in 46 States for employees. Presently, their employees suffer from some competitive disadvantage because of their inability to provide their employees with the same deferred compensation benefits which figure heavily in retirement planning.

The legislation we introduce today would redress an inequity suffered by employees of rural electric cooperatives throughout the Nation, with a negligible revenue impact, according to the Joint Committee on Taxation's estimates.●

By Mr. GRASSLEY (for himself, Mr. HARKIN, Mr. DURENBERGER, and Mr. GLENN):

S. 899. A bill granting the consent of Congress to the Midwest interstate compact on low-level radioactive waste management; to the Committee on the Judiciary.

CONSENT OF CONGRESS TO MIDWEST INTERSTATE COMPACT ON LOW-LEVEL RADIOACTIVE WASTE MANAGEMENT

● Mr. GRASSLEY. Mr. President, on behalf of my State of Iowa and other States privy to this regional compact, I am pleased to introduce, by request, the Midwest interstate low-level radioactive waste compact. I am joined in introducing this bill by Senator HARKIN, Senator DURENBURGER, and Senator GLENN.

All of the States privy to this agreement—Iowa, Indiana, Michigan, Minnesota, Missouri, Ohio, and Wisconsin—have ratified the terms of this bill.

As mandated by the terms of the Low-Level Radioactive Waste Policy Act (P.L. 96-573), all regional compacts must receive prior congressional consent before enactment. Pursuant to the Senate rules, the Judiciary Committee had jurisdiction over interstate compacts generally. Currently four compacts, Northwest, Central, Southeast, and Rocky Mountain, have been referred to the Committee on the Judiciary. Hearings have been held by Chairman STROM THURMOND in connection with these four compacts.

I should note that Chairman THURMOND, one of the authors of the Low-Level Radioactive Waste Policy Act of 1980, has been very diligent in his efforts to move these compacts to full consideration by the Senate. He has been nevertheless willing to acknowledge concerns voiced by other members of the committee. It is a difficult balance to strike but one which the chairman has managed with his usual insight and finesse.

Not surprisingly, one of the concerns raised by States that do not have a disposal site within the boundaries of their compact, is the timetable mandated by the 1980 act. The act provides that as of January 1, 1986, those States with compacts ratified by Congress can bar waste from outside their regions. The concern then becomes, what happens to regional compacts like the Midwest compact, that have no access to depository sites? Because it takes from 3 to 5 years to develop a new waste facility it is already too late for these States to have disposal sites operational by the January 1, 1986, deadline. It is unlikely that Congress will ratify the compacts without some access provision for States that are making a good faith effort to comply with the terms of the act.

In addition to the issue of access to existing disposal sites after 1981, several other concerns have been raised that Congress must be alert to in its review of the various compacts. For example, we must develop a uniform definition of low-level waste. Additionally, we must examine provisions regarding types of generators, inspection programs, exportation prohibitions, identification and certification requirements, transportation requirements, and provisions dealing with shared liability provisions. While this is not an exhaustive list of issues that need to be resolved, I have highlighted some concerns that I have heard.

Hearings are being conducted on this compact and other compacts. That will be an opportune time to form a record on the issues listed above. I am hopeful that we can resolve these issues quickly so as to achieve Congress' Low-Level Radioactive Waste Policy Act objective and its effective system of disposal, as soon as possible.●

By Mrs. HAWKINS:

S. 900. A bill to protect the public investment in right-of-way lands of the Cross Florida Barge Canal; to the Committee on Environment and Public Works.

CROSS FLORIDA BARGE CANAL COMPROMISE

● Mrs. HAWKINS. Mr. President, the Cross Florida Barge Canal has been the focus of controversy for many years. There has been legislation pending to deauthorize the project for the past 4 years, and the House of Representatives narrowly defeated a deauthorization amendment last year. I have opposed the deauthorization legislation, for reasons I will explain shortly, and I continue to believe that my opposition is well-founded.

At the same time, I am strongly opposed to construction of the canal. It would clearly be an environmental disaster to Florida, threatening both the quality and the very availability of water in the northern portion of the State. Even if construction should be somehow determined to be economically viable, the environmental problems make the canal totally unacceptable to me and the majority of Floridians.

The canal project has developed valuable public recreation areas at both the eastern end, Lake Ocklawaha, and the western end, Lake Rousseau and the canal to the Gulf of Mexico, of the right-of-way. These areas, and possibly the beautiful Ocklawaha River Valley as well, are threatened by lawsuits.

The former owners of canal right-of-way lands are suing in State courts for return of the land, on the ground that Congress has effectively abandoned the canal project by not appropriating funds for construction. I have delayed the introduction of this legislation in the hope that the Florida Supreme Court would have ruled on the cases now pending before it, thus clarifying the legal situation, but this has not yet happened, and no one has any idea of when it might.

The possible loss of the public benefits from these areas makes some action by the Congress necessary. Since there are extensive costs and risks associated with deauthorization, I believe some alternative is needed.

I have introduced legislation which I hope will represent an acceptable alternative.

By way of background, I would point out that the Florida Legislature passed legislation in 1979 to provide for the disposition of the right-of-way in the event Congress deauthorized the canal. This provided that the land around Ocala National Forest would be sold to the Forest Service, that the State would decide whether to drain or retain Lake Ocklawaha and the Lake Rousseau/canal segment, and that the central portion of the right-of-way would be sold, with the funds going to reimburse those counties which had contributed to the canal project.

Legislation was introduced in Congress to deauthorize the canal in accordance with the State law. I objected to that because I was not convinced that either the State law or the pending bills provided adequate protection for the public recreational areas, in that they would not prevent substantial portions of the Lake Ocklawaha area from reverting to private ownership. I was also opposed to draining the lake.

I have conducted extensive correspondence with State officials on this matter, and never received what I considered to be a satisfactory response to my concerns. I accordingly was never prepared to support deauthorization.

My basic concern is that a significant portion of Lake Ocklawaha and the immediately surrounding area is held only by easement, not in fee simple title. The State law proposed to sell those easements to the Forest Service, along with land owned in fee simple, for recreational and conservation purposes. I did not believe this was legally possible.

Subsequent contact with the American Law Division of the Library of Congress confirmed my belief. By the basic tenets of property law, which in turn are derived from the constitutional right of property ownership and are thus not subject to legislative alteration, an easement is valid only for the purpose for which it is obtained. Thus, upon deauthorization of the canal, nearly 40 percent of Lake Ocklawaha and the surrounding lake frontage would automatically revert to private ownership, free of any public claim on the taxpayer-financed lake. I ask unanimous consent that a copy of the memorandum on the easement issue be inserted in the RECORD at this point.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

[Memorandum]

WASHINGTON, DC,
June 20, 1984.

To: Hon. Paula Hawkins.
From: American Law Division.
Subject: Selected Questions Regarding State-Owned Easements in the Cross-Florida Barge Canal Right-of-Way.

This memorandum runs through the salient points of our June 19 conversation with your staff, and provides authorities in support. Your concerns are understood to be prompted by a provision in S. 2728 making deauthorization of the Cross-Florida Barge Canal contingent on transfer to the United States of certain easements acquired by the State of Florida in connection with construction and operation of the canal.[1]

[1] S. 2728 § 4(4), as reprinted in 130 Cong. Rec. S. 6687 (daily ed. June 6, 1984).

Given the limited time, this memorandum seeks only to note some legal principles of potential application to the state-federal transfer. It does not purport to resolve concrete issues raised by S. 2728.

An easement is a right to use property owned by another for a specific purpose (affirmative easement) or to prevent its use for a specific purpose (negative easement).[2] Affirmative easements, involved here, are thus limited in scope and duration by the use for which the easement was granted. Once that use is abandoned or discontinued, the easement ceases to exist and the owner of the fee is relieved of the encumbrance:

"It is well settled that when an easement has been taken by eminent domain for the public use or has been acquired by purchase, prescription or dedication, as is usually the case when a location is established for a highway, railroad, or canal . . . if the public use is subsequently discontinued or abandoned, the public easement is extinguished, and the possession of the land reverts to the owner of the fee free from any rights in the public." [3]

A Florida court has recently applied the general rule above to easements held by the Canal Authority of the State of Florida for use in connection with the barge canal:

"The easements, by the very language of their creation, made their existence limited or conditioned upon use by the Canal Authority for the canal project, now abandoned.

"Where a condemning authority only has an easement, and its right to use the property has been lost or the public use has ended, the easement is extinguished, and all of its rights revert to the owner of the fee." [4]

Research reveals no other Florida state court decision speaking to this issue.

It follows as well from the definition of an easement that where an easement holder seeks to use the easement for purposes beyond its scope, the owner of the fee may recover damages for such unauthorized use or obtain injunctive relief against future violations.

You ask finally whether a state may by statutory enactment expand the range of permissible uses under an easement held by the state. Well-settled principles argue that such a legislatively decreed expansion would be unlawful in the absence of compensation to the fee holder pursuant to an exercise of the state's power of eminent domain. Under both the federal and Florida state constitutions, an easement is recognized as a property interest the taking of which triggers an obligation to pay just compensation.[5] That constitutionally required compensation is fixed by the value of the easement taken. To legislatively enlarge the scope of an easement without additional payment to the fee holder would thus fly in the face of the just compensation requirement in both state and federal [6] constitutions.

[2] See generally 2 Thompson, *Real Property* § 315 (1980); Cribbett, *Principles of the Law of Property* 335-346 (1975).

[3] 3 Sackman, *Nichols on Eminent Domain* § 9.36[1] (1981). The rule for easement holders is to be contrasted with that for holders of unconditioned title. In the latter case, discontinuance or abandonment of the purpose for which the land was obtained results in no reversion to the fee holder—whether title was obtained by eminent domain, purchase, or otherwise, *Id.* at § 9.36[4].

[4] Canal Authority v. Mainer, 440 So. 2d 1304, 1306 (Fla. Dist. Ct. App. 1983), reportedly on appeal to the Supreme Court of Florida.

[5] Kaiser Aetna v. United States, 444 U.S. 164, 180 (1979); cases collected in 5A Florida Digest, Eminent Domain § 85.

[6] The "taking clause" in the Fifth Amendment to the U.S. Constitution has been held applicable to the states as well as the federal government. Penn Central Trans. Co. v. New York City, 438 U.S. 104, 122 (1978).

Mrs. HAWKINS. Mr. President, in June of last year, apparently in recognition of the faults of the existing State law, the State passed a new law which extensively revised the deauthorization procedures. It authorizes the State to condemn the easement lands at Lake Ocklawaha, and to sell or trade them, along with the land in the area owned by the canal authority, to the Forest Service, at current market value.

This means, in essence, that the State—implicitly recognizing that it will lose control of the easement lands upon deauthorization—will condemn these lands, for which it would be required to pay current market value if successful, in order to turn around and sell them to the Federal Government, also at current market value.

This land has already been the subject of extensive litigation, and the Florida Supreme Court has already refused to grant the State fee simple title on it for canal purposes. I accordingly believe it cannot be taken for granted that the courts would approve condemnation for the sole purpose of selling the land to the Federal Government, particularly inasmuch as the Federal Government has power on its own to acquire the land if it so desires.

Deauthorization thus poses a considerable, and I believe unacceptable, risk of still losing a major portion of Lake Ocklawaha to private ownership.

Equally unacceptable, in my judgment, is that the taxpayers would be essentially required to pay for Lake Ocklawaha twice. The lake was created totally through Federal funds, provided by the taxpayers, and we are now being asked to turn around and buy it back again. Given that much, if not most, of the current market value of the land derives from the presence of the lake, we would be faced with an outrageous raid on the public treasury if the project were deauthorized and the State law were to work as intended.

I see absolutely no reason why the taxpayers should have to purchase Lake Ocklawaha when they paid for its creation in the first place. And I see no reason to take the risks involved with losing public control over the land and then attempting to recover it.

I would note that there are over 9,000 acres of easement lands at risk at Lake Ocklawaha, and over 18,000 acres at the lake altogether that would be acquired by the Federal Government under the deauthorization proposal.

I can assure my colleagues that the current fair market value of 18,000 acres of water and waterfront property in Florida will not be inconsequential. I know of one development on the St. John's River, which is linked to Lake Ocklawaha by one of the canal segments, where lots are selling for $15,000 per acre. I do not contend that any, or all, of the Lake Ocklawaha property would be worth that much; I simply do not know. But no one should be surprised if prices in that range have to be paid for some of the land.

In contrast, my bill declares that the Congress reserves to itself the decision as to whether to terminate the project, which will hopefully end the lawsuits contending that the courts should declare the project abandoned. It also declares that such abandonment would not be in the public interest at this time, for the reasons I have just discussed.

This is considerable scaling down from my proposal of last year, which would have had the Corps of Engineers acquire the right-of-way for management and legal purposes. Under current budgetary conditions, we cannot afford this sort of land shuffle when other means are available to accomplish the same objectives. The bill essentially freezes the status quo.

The bill directs the Corps of Engineers to manage the two existing lakes and canals for recreational and fish and wildlife management purposes. The bill also requires that in the very unlikely event that new construction funds would ever be appropriated, there would have to be a new environmental impact statement, and a finding of "no significant adverse impact" before the money could be spent.

Given this requirement, the fact that the State retains ownership of its right-of-way lands, and the firm opposition of both Florida Senators to any new construction, I believe that the bill offers no chance whatever of providing for construction of the canal.

What it does do is protect the public interest in Lake Ocklawaha, where there are over 400,000 visitations yearly, mostly for fishing, and in Lake Rousseau and its canal, which permits several thousand trips by boaters annually from the lake to the Gulf of Mexico. It does this without any environmental risks, and without the unnecessary expenditures of tax moneys, which we simply cannot afford at this time.

I hope that both the proponents and opponents of deauthorization will accept this in the spirit of compromise in which it is offered, and that we could proceed to a prompt resolution of the matter. I ask unanimous consent that the text of the bill be inserted in the RECORD at this point.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 900

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Congress finds and declares—

(1) that more than $70,000,000 has been expended to date on the Cross Florida Barge Canal project, authorized by the Act of July 23, 1942 (56 Stat. 703);

(2) that completed portions of the Canal project provide valuable public recreational benefits, and habitat for fish and wildlife, including endangered and threatened species;

(3) that significant amounts of land in and near the completed portions of the project are controlled only via easements for construction and operation of the canal, rather than owned in fee simple by the State or Federal government;

(4) that a declaration of abandoment or decision to terminate the canal project would result in the lapse of those easements, and the return of the easement land, with publicly-financed improvements, to the owners of the fee title of the lands;

(5) that retention of the public benefits noted in this section after a decision to terminate the canal project, or a decision that it was abandoned, would necessitate the further expenditure of public funds to purchase the title to these easement lands, whose value has substantially increased as a result of prior Federal expenditures for construction on the Canal project; and

(6) that although it is not currently desirable, in light of the present knowledge of the likely environmental impact of the project, and the present financial problems of the Federal government, to resume construction on the project, termination of the project, for the reasons noted in this section, is not in the public interest; and the Congress reserves to itself the authority to make any decision as to the status of the project.

SEC. 2. (a) The Secretary of the Army shall continue to operate the completed portions of the project, and the lands associated therewith, for recreational purposes and fish and wildlife management and enhancement.

(b) The Secretary of the Army shall not operate Eurika Dam and Lock in such a fashion as to flood any land not flooded on January 1, 1984.

SEC. 3. No funds thereinafter appropriated for resumption of construction of the Cross Florida Barge Canal may be obligated unless and until the Secretary of the Army completes an environmental impact statement, initiated after the date of such appropriation, which funds no significant adverse environmental impact likely to result from construction of the Canal.●

By Mr. MOYNIHAN (for himself and Mr. D'AMATO):

S. 901. A bill to prohibit the enforcement of certain interstate compacts which may be discriminatory in nature, and to which Congress has not granted consent; to the Committee on the Judiciary.

ENFORCEMENT OF CERTAIN INTERSTATE COMPACTS

● Mr. MOYNIHAN. Mr. President, I rise today to introduce legislation of great constitutional importance to Congress and the Nation.

Article I, section 10, clause 3 of the U.S. Constitution—the so-called compact clause—states that "No State shall, without the consent of Congress, enter into any agreement or compact with another State." Despite this explicit prohibition, several States, without the approval of Congress have created interstate banking compacts to allow banks from one State to establish branches in another. What is particularly troublesome about these compacts, even aside from their questionable constitutionality, is that they are discriminatory in nature. This is very much the case with the New England banking compact, which permits only New England banks to do business in their region, while excluding banks from the other 44 States.

This kind of interstate discrimination is exactly what motivated the framers of the Constitution to enact the compact and commerce clauses. The internecine commercial warfare that characterized the States under the Articles of Confederation—so similar to these discriminatory regional banking compacts—was precisely the issue that brought the Founding Fathers to Philadelphia in 1787. Interstate protectionism and discrimination had grown so severe in 1786 that six States sent delegates to Annapolis, MD, to seek an end to the embarrassments which characterise the present state of our national affairs.

My colleagues will recall that the Annapolis convention called upon the States to send delegates to Philadelphia to "render the Constitution of the Federal Government adequate to the exigencies of the Union." Thus, the Constitutional Convention was prompted by the resolution of six States frustrated by barriers to interstate trade. Such was the understanding of the distinguished Supreme Court Justice Robert H. Jackson:

The sole purpose for which Virginia initiated the movement which ultimately produced the Constitution was "to take into consideration the trade of the United States; to examine the relative situations and trade of said states; and to consider how far a uniform system in their commercial regulations may be necessary to their common interest and permanent harmony.

The framers went to Philadelphia knowing that something had to be done about interstate commercial discrimination. My own State of New York had been among the worst offenders, taxing firewood from Connecticut and vegetables from New Jersey, to protect local producers. The situation was so pervasive that James Madison scribbled in his notebook at the Constitutional Convention that "New Jersey, placed between Philadelphia and New York, was likened to a cask tapped at both ends." Tariffs, barriers to trade and exclusionary agreements between States had, in Madison's words, become a "national embarrassment."

The intention of the framers could not be more clear. The States were not to enter into agreements or compacts without the consent of Congress, lest they jeopardize the very existence of the Union. Alexander Hamilton, the prominent delegate to the Constitutional Convention from New York, stated the Founders' intentions directly in Federalist Paper No. 22:

The interfering and unneighborly regulations of some states, contrary to the true spirit of union, have, in different instances, given just cause for umbrage and complaint to others, and it is to be feared that examples of this nature, if not restrained by national control would be multiplied and extended till they became not less serious sources of animosity and discord than injurious impediments to the intercourse between the different parts of the Confederacy.

The Constitution wisely reserved for Congress the right to regulate interstate commerce, and especially the right to review all interstate agreements and compacts. The people of New York ratified the Constitution in 1788, and they continue to support it today, in part because it specifically guarantees the equal treatment of all States in interstate commerce. Daniel Webster put it well:

The commerce of the states was to be a union; and the system by which it was to exist and be governed, must necessarily be complete, entire, and uniform. Its character was to be described in the flag which waved over it, *E Pluribus Unum.*

Yet, Mr. President, we have a curious situation almost 200 years after the ratification of the Constitution. Regional banking compacts, meant to include some States and exclude others, have been enacted by numerous State legislatures. The regional compacts have, indeed, become working arrangements among several States. Yet, Congress has not expressly approved these compacts, as the Constitution demands.

This is absolutely unacceptable. The legislation I am introducing today states simply that no State or group of States, nor any Federal department or agency, shall give force to an interstate compact or agreement, unless the enacting State statutes are submitted to Congress for review and approval. Under this legislation, Congress would have an opportunity to review the circumstances in which compacts are constructed, and to prevent the kind of interstate commercial discrimination we are now experiencing for the first time in our Nation since the Confederation.

Another concern motivates this legislation, as well, Mr. President. And that is a very practical, rather than a constitutional matter. Regional banking compacts bad for consumers and bad for business. Like other forms of protectionism, regional banking compacts ultimately injure the American consumer, by denying him or her the lowest price for services or the highest

rates for deposits. By permitting consumers to have access to some banking services and denying access to others, the compacts limit the kind of services the consumer might choose and the rate of return he might earn if there were no barriers.

Further, regional banking compacts are anticompetitive. They permit banks within a region to merge or acquire one another, but bar banks outside the region from participating in the bidding. This limits the number of potential bids to acquire a bank, and denies the stockholders the best possible price for their stock. Additionally, increased competition in the marketplace can only lead to the development of new and better banking services.

Mr. President, there is more at stake here, however, than consumer rights and the competitive marketplace. The regional banking compacts which have been established without the direct assent of Congress are a threat to the role of the Congress in our constitutional framework. The Constitution could not be any more explicit. Interstate compacts and agreements are subject to congressional review and approval. The legislation I am introducing today would see that the clear intention of the Constitution is carried out. I urge my colleagues to support this measure and pass it swiftly.

Mr. President, I ask unanimous consent that a copy of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 901

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

FINDINGS

SECTION 1. The Congress finds that—

(1) article I, section 10, clause 3 of the Constitution provides that no State may enter into a compact with another State without the prior consent of Congress;

(2) a number of States have acted in concert to enact statutes permitting interstate banking on a limited regional basis;

(3) such statutes are interstate compacts that have not received the formal consent of the Congress;

(4) such statutes may be violative of the letter and spirit of the Commerce Clause and Federal antitrust laws; and

(5) the Congress should have the opportunity to review the nature and scope of each of these statutes to determine whether it shall grant its consent to such interstate arrangements pursuant to the Compact Clause.

PROHIBITION

SEC. 2. (a) No State or group of States, nor any Federal department or agency, may give force and effect nor may any transaction be consummated on the basis of any State statute authorizing an interstate compact, unless such State statute is submitted to Congress for its prior approval in compliance with article I, section 10, clause 3, of the Constitution. The Congress shall review each such statute to determine that it is not discriminatory or violative of the Commerce Clause or inconsistent with the pro-competitive requirements of Federal antitrust laws.

(b) For the purpose of this Act, legislation which authorizes acquisitions or mergers on a reciprocal basis without imposing any restrictions or other conditions against out-of-state bank holding companies by reference to their State or origin or size shall not be deemed an interstate compact.●

By Mr. DECONCINI:

S. 902. A bill to establish Federal standards and regulations for the conduct of gaming activities within Indian country, and for other purposes; to the Select Committee on Indian Affairs.

INDIAN GAMING CONTROL ACT

Mr. DECONCINI. Mr. President, today I am introducing legislation to establish Federal standards and regulations for the conduct of gaming activities within Indian country.

I am proposing this bill to serve as a discussion draft so that all interested parties may have the opportunity to share with Congress the concerns they have about the development of gaming enterprises on Indian reservations. Since Federal courts have found consistently that tribes, under certain circumstances, have the right to conduct, license, and regulate gambling activities on lands within their jurisdiction exclusive of any right of States to do so, I hope that these discussions will produce a bill which provides the protections needed to insure that gaming activities in Indian country are conducted in a healthy and honest fashion.

At the present time, tribes are relying primarily on these court decisions when they set up gambling operations as a way to generate revenues for tribal government functions and programs. Like many States who have in recent years turned to legalized commercial gambling for economic development to support a tax base, Indian tribes are expressing increasing interest in developing gaming enterprises as a part of their tribal economic development efforts. While I reserve my judgment on the use of gambling to raise governmental revenue, I can see why the Indian tribes have a particular interest in it as a way to develop a revenue source which could make them more independent of Federal funds. Generally speaking most tribes have little or no tax base with which to support tribal government operations and programs. Subsequently, Indian tribes depend to a great extent on Federal funds. Many tribes want to reduce this dependency and are looking at gaming as one of the ways they can generate tribal revenues locally.

A number of tribes have already shown that they can manage viable and well-protected gaming activities as part of the tribal economic development program. Proceeds from these Indian gambling operations have been used to fund construction of facilities like health clinics and day care centers on reservations. Other essential tribal government operation expenses have been paid for by tribal councils out of the money raised by gambling activities. It is clear that tribal governments, like State and other local governments, consider gaming enterprises a worthwhile way to generate government revenues.

In view of this, I want to make sure that Indian tribes have as much of an opportunity as other local governments may have to pursue gaming enterprises development. But I am also concerned that the inadequacy of existing Federal authority may hinder the tribal efforts by virtue of its uncertainty. The bill which I propose today expands this limited Federal authority by establishing a Federal regulatory framework within which gaming activities can take place on reservations. At the same time, the proposed bill provides specific standards which at a minimum must be met by any gambling operation in order to protect reservation-based gambling from the influences of organized crime and other undesirable elements of our society. My proposal offers ways in which the tribal right to engage in gambling can be protected while insuring that these particular activities are conducted in a legal and orderly fashion.

By Mrs. HAWKINS (for herself and Mr. GRASSLEY):

S.J. Res. 107. Joint resolution to designate the month of May 1985 as "Older Americans Month"; to the Committee on the Judiciary.

OLDER AMERICANS MONTH

● Mrs. HAWKINS. Mr. President, I rise to introduce a Senate joint resolution to designate the month of May as Older Americans Month.

In the past, we as a country have underestimated the value of older people and their ability. Many older people achieved their best after the age of 65, disproving common myths we have held—creativity declines with age, older people cannot work productively and have no place in the working sector, and a person's health automatically declines at age 65. The ideas are changing. Some outstanding people who defied "agism" were Margaret Mead, Michelangelo, and Benjamin Franklin; each of them remained creative and working until well over 70 years old. Additionally, Picasso painted until his death at 90, Frank Lloyd Wright designed his masterpieces "Falling Water" and the Guggenheim Museum after he was 65, and Goethe finished Faust at 82. However, we must realize the importance of every older American, not just those who stand out because of their feats.

Older Americans have contributed to society in the past, and they continue to give today. Consider the lifetimes of the people who are now between 60 and 90. They built a layer of history overflowing with innovation and progression. They have seen Alaska and Hawaii join the Union. They fought in World War II and lived through the times of Vietnam and Korea. They set the stage for the rise of computer technology as well as bringing America and the world into the space age. They have seen the gradual change from the isolation of the early 1900's to the extremely connected international world of 1985. Consider the changes in the areas of transportation, medicine, and communication. The older Americans of today made these changes of the past 60 years, and we should pay tribute to them for what they accomplished and for where they have led us. We must also appreciate them for their wisdom gained from their experiences of the last 60 years.

Senior citizens are the fastest growing segment of America's population. The aging baby boom generation combined with the reduced birth rate of those who follow that generation will double the proportions of those over 65 to those between 20 and 64. By the year 2030, the ratio will be 40 percent. Additionally, the life expectancy has increased to approximately 70 for men and 78 for women.

While these demographics change, so do other characteristics of older people. The majority of the elderly live healthy, active lives with fewer than 5 percent being bedridden or institutionalized. Their income levels have risen in the past 30 years, most are well-housed, and many older citizens participate fully in various programs. They contribute to such programs as ACTION, VISTA, SCORE, the Foster Grandparents Program, and others. The Peace Corps presently recruits senior citizens because of their unique values—patience and a practical understanding of problems in various countries due to 40 or more years of experience.

We have become increasingly more aware of our older citizens as assets to our country due to their experience and expertise. We must assure their well-being now by granting them the opportunity to lead full lives—an adequate income, affordable health care, independence, dignity, and respect. We must meet the current and changing needs of America and its older citizens by tapping into that vast resource which older people offer.

So this May as we meet to honor older Americans, we should pay tribute to their accomplishments of the past, their contributions to the present, and their possibilites for the future.●

● Mr. GRASSLEY. Mr. President, I am pleased to support my colleague from Florida, Senator HAWKINS, as the primary cosponsor of Senate Joint Resolution 107, a joint resolution which would authorize the President to proclaim May as Older Americans Month. In the House of Representatives, the Older Americans Month resolution, House Joint Resolution 195, today passed with 274 cosponsors.

The Congress first authorized the President to designate May as Older Americans Month in 1963, and, as best I can determine, every subsequent Congress and President have proclaimed May as Older Americans Month. President Reagan, I feel sure, will be pleased once again to issue the proclamation which will acknowledge and help celebrate the contribution which our older citizens are making to American life.

It is certainly appropriate that we take account and recognize each year the great contributions which older Americans have made, and are continuing to make, to communities all over our country. And I want to stress the words "continuing to make" here, Mr. President, because we often lose sight of the fact that older people are contributing in major ways to the enhancement of our economic, social and cultural life.

In my own State of Iowa, for example, Mary Nieghswander, now in her late seventies, has been a strong force in the cultural life of the Quad City area. She has been one of the people who have brought theater to a respectable level, and, indeed, made it a major institution in Davenport. She recently spearheaded the renovation of the nearly 60-year-old RKO-Orpheum Theater in Davenport. She has been a leader in the children's theater all her life, and has been an integral part of the broadway theater league which is responsible for bringing first-run broadway shows to the Quad City area. All of this she has done through voluntary, uncompensated effort.

Mr. President, the designation of May as Older Americans Month by the President will kick off activities all across the country which will honor, and call our attention to, the contributions older people like Mary Nieghswander are making in every American community, and it is for that reason that I give my wholehearted support to this measure.●

By Mr. WARNER (for himself and Mr. NUNN):

S.J. Res. 108. Joint resolution authorizing the Secretary of Defense to provide to the Soviet Union, on a reimbursable basis, equipment and services necessary for an improved United States/Soviet Direct Communication Link for crisis control; to the Committee on Armed Services.

UPGRADE TO US/SOVIET DIRECT COMMUNICATION LINK

Mr. WARNER. Mr. President, I rise today along with my distinguished colleague and good friend from Georgia, Senator SAM NUNN on a matter of great importance to this body in our continuing efforts to attain a more peaceful world.

It has been a distinct honor and a privilege for me to have joined Senator NUNN in purely bipartisan efforts the past several years to seek opportunities for confidence-building measures and the lessening of the possibilities of conflict between our country and the Soviet Union.

During these past several years, the Congress has been in the forefront of efforts to devise practical measures to strengthen controls over nuclear weapons and to reduce the risk that these weapons might ever be used as a result of accident or miscalculation.

Last July, with the full support of Congress, the United States and the Soviet Union took an important step in this direction when an agreement was signed to upgrade the United States/Soviet Direct Communications Link, known popularly as the hotline.

Today, Senator NUNN and I will ask you to support legislation that we intend to introduce that is needed to fully and expeditiously implement this agreement.

Under this upgrade, a facsimile capability will be added to the hotline, enabling each country for the first time to transmit and receive graphic materials.

In addition, the planned improvements will allow the United States and Soviet heads of government to exchange messages more rapidly than they now can with the existing teletype.

The increase in the speed of communication and the ability to send pictures and maps could be especially critical in some future crisis.

The July 1984 agreement specifies that the U.S. Government will sell to the Soviet Union at cost the equipment necessary to install and maintain the improved hotline.

This transaction, which is expected to cost less than $1 million, will include facsimile equipment, personal computer [PC] equipment, modem equipment, and microprocessor systems to ensure the privacy of these very sensitive communications.

The executive branch examined each component of the improved hotline in the context of applicable transfer of technology regulations. I have here a letter on this subject from Assistant Secretary of Defense Richard Perle, in which he states that the Defense Department has determined "that the sale of those components for this purpose is entirely consistent with

current U.S. law and policy regarding trade with the U.S.S.R."

I ask unanimous consent that the resolution and Mr. Perle's letter be introduced into the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S.J. RES. 108

Whereas section 1123(a) of the Department of Defense Authorization Act, 1983 (Public Law 97-252), directed the Secretary of Defense "to conduct a full and complete study and evaluation of possible initiatives for improving the containment and control of the use of nuclear weapons, particularly during crises";

Whereas the Congress directed that the same study should address several specific measures for building confidence between the United States and the Soviet Union, including an improved Direct Communications Link for crisis control;

Whereas the Secretary of Defense responded to that congressional mandate with a report entitled "Report to the Congress on Direct Communications Links and Other Measures to Enhance Stability" in which the Secretary proposed several improvements to existing United States-Soviet mechanisms for the prevention and resolution of crises, including the addition of a facsimile capability to the United States/Soviet Union Direct Communications Link;

Whereas the President of the United States presented the recommendations of the Secretary of Defense to the Government of the Soviet Union in May 1983;

Whereas the United States and the Soviet Union commenced negotiations on bilateral communications improvements in August 1983, and on July 17, 1984, concluded the Exchange of Notes Between the United States of America and the Union of Soviet Socialist Republics Concerning the Direct Communications Link Upgrade in which the two governments agreed to add a facsimile capability to the Direct Communications Link;

Whereas the Congress endorses that agreement and remains committed to all possible measures to facilitate the resolution of international crises and to limit the danger of conflict;

Whereas the Secretary of Defense is responsible for the installation, maintenance, and operation of the Direct Communications Link equipment for the United States; and

Whereas the Exchange of Notes Between the United States of America and the Union of Soviet Socialist Republics Concerning the Direct Communications Link Upgrade provides that the United States Government will provide to the Union of Soviet Socialist Republics, at cost, the equipment and services necessary for the Soviet Union part of the improved Direct Communications Link: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of Defense may provide to the Soviet Union, as provided in the Exchange of Notes Between the United States of America and the Union of Soviet Socialist Republics Concerning the Direct Communications Link Upgrade, concluded on July 17, 1984, such equipment and services as may be necessary to upgrade or maintain the Soviet Union part of the Direct Communications Link agreed to in the Memorandum of Understanding between the United States and the Soviet Union signed June 20, 1963. The Secretary shall provide such equipment and services to the Soviet Union at the cost thereof to the United States.

SEC. 2. (a) The Secretary of Defense may use any funds available to the Department of Defense for the procurement of the equipment and providing the services referred to in the first section.

(b) Funds received from the Soviet Union as payment for such equipment and services shall be credited to the appropriate account of Department the of Defense.

ASSISTANT SECRETARY OF DEFENSE,
Washington, DC, March 25, 1985.

[In reply refer to: I-85/07907]

Hon. JOHN WARNER,
U.S. Senate,
Washington, DC.

DEAR SENATOR WARNER: Thank you for your letter of March 22, 1985, requesting my comments on the legislation which you propose to introduce to facilitate the upgrade of the Direct Communications Link, which the United States and the Soviet Union agreed to undertake in an Exchange of Notes, dated July 17, 1984.

As President Reagan indicated at the time of signature of this agreement, the upgrade of the Hotline by the addition of a facsimile capability is a modest, but positive step toward enhancing international stability and reducing the risk that accident, miscalculation or misinterpretation could lead to confrontation or conflict between the United States and the Soviet Union. The success of this initiative is due in no small measure to your continued support and advice. Your efforts now, to ensure the smooth and efficient implementation of the agreement, are welcomed by all who believe that it is critical that our leaders be able to communicate rapidly and comprehensively in the event of crisis. I heartily endorse your proposed legislation for this purpose.

I want as well to assure you that the sale of the facsimile system to the Soviet Union is consistent with US technology transfer policies. Prior to the United States' proposing the configuration for the addition of a facsimile capability to the Direct Communications Link, the Department of Defense examined each component proposed for that system in the context of applicable transfer of technology regulations. We determined that the sale of those components for this purpose is entirely consistent with current U.S. law and policy regarding trade with the USSR. Sale of the quantity of equipment necessary to maintain the reliability of the Soviet part of the Hotline requires COCOM approval, which the U.S. will seek.

I want to underscore for the Congress that there is a great deal of difference between selling the USSR equipment for the specific purpose of improving the Direct Communications Link and allowing the Soviet Union unfettered access to U.S. and Allied high technology products. We will continue to ensure that sales to the Soviet Union are closely scrutinized and seek to ensure that only those which are consistent with our COCOM obligations and strategic trade controls are permitted to go forward.

RICHARD PERLE.

Mr. WARNER. Mr. President, I urge all my colleagues to support this legislation.

At this time, I yield to my colleague, Senator NUNN.

Mr. NUNN. Mr. President, it is a pleasure to join my good friend and highly respected colleague, Senator JOHN WARNER of Virginia in this legislation which we hope will reduce the potential for conflict between the United States and the Soviet Union.

The legislation that we intend to introduce will authorize the Secretary of Defense to provide the Soviet Union, in exchange for payment of costs, such equipment and services as are required by the July 17, 1984 agreement.

Most of this transaction will be completed in the initial sale of the specified equipment to the Soviet Union.

However, sales of services and additional equipment, including consumable items, will recur periodically throughout the life of the improved hotline.

This legislation provides that the Defense Department is to use available appropriations for all such transactions, and it shall be reimbursed by the amounts subsequently received from the Soviet Union.

Under the timetable envisioned by the two governments, the first pieces of equipment will be delivered to the Soviet Union no later than June 30.

Accordingly, it is imperative that the Congress act quickly on this legislation to ensure that there is no unnecessary delay in the implementation of this important agreement.

We are especially pleased that the Congress provided the impetus for this important addition to our Nation's crisis prevention capability.

In the 1983 Department of Defense Authorization Act, we directed the Secretary of Defense to conduct a full and complete study and evaluation of possible initiatives for improving the containment and control of the use of nuclear weapons, particularly during crisis.

We specifically directed that the report address, among other measures, an improved hotline for crisis control.

The concrete improvements to the United States/Soviet bilateral crisis prevention capabilities including the addition of a facsimile capability to the hotline, were proposed in the Secretary of Defense's April 1983 "Report to the Congress on Direct Communications Links and Other Measures to Enhance Stability."

These proposals consistent with our objective of encouraging both countries are to work together to reduce the risk of confrontation.

Furthermore, I believe these improvements provide the foundation for the establishment of the nuclear risk reduction centers which we in the Congress have so strongly supported.

We hope our colleagues agree that this body has no greater responsibility than to reduce the possibility of nuclear crisis. With timely passage of this bill, we can take a very positive step in that direction by enabling our President and the leader of the Soviet

Union to have these improvements available to them as soon as possible.

This action is especially appropriate right now, as the United States and the Soviet Union embark on one of the most critical tasks of this century—negotiations to reduce substantially the number of strategic and intermediate-range nuclear forces.

Broad sponsorship of this bill will demonstrate the strong congressional consensus of support for all possible measures to facilitate the resolution of crisis and limit the danger of conflict.

Senator WARNER and I hope that our colleagues will support this measure with the same bipartisan spirit and hope in which it is introduced.

ADDITIONAL COSPONSORS

S. 402

At the request of Mr. PRESSLER, the name of the Senator from Pennsylvania [Mr. HEINZ] was added as a cosponsor of S. 402, a bill to amend the Communications Act of 1934 to provide for specialized equipment for telephone service to certain disabled persons.

S. 452

At the request of Mr. BRADLEY, the name of the Senator from Colorado [Mr. HART] was added as a cosponsor of S. 452, a bill to enact the Gifted and Talented Children's Education Act.

S. 631

At the request of Mr. CHAFEE, the name of the Senator from South Dakota [Mr. ABDNOR] was added as a cosponsor of S. 631, a bill to amend the Securities Exchange Act of 1934.

S. 632

At the request of Mr. CHAFEE, the name of the Senator from South Dakota [Mr. ABDNOR] was added as a cosponsor of S. 632, a bill to amend the Internal Revenue Code of 1954 to require a mandatory section 338 election in hostile stock takeovers, and for other purposes.

S. 744

At the request of Mr. COCHRAN, the name of the Senator from North Dakota [Mr. ANDREWS] was added as a cosponsor of S. 744, a bill to amend the Agriculture and Food Act of 1981 to provide protection for agricultural purchasers of farm products.

SENATE JOINT RESOLUTION 59

At the request of Mr. HATCH, the names of the Senator from North Dakota [Mr. ANDREWS], the Senator from Kansas [Mr. DOLE], the Senator from New Mexico [Mr. DOMENICI], the Senator from Washington [Mr. GORTON], and the Senator from South Carolina [Mr. HOLLINGS] were added as cosponsors of Senate Joint Resolution 59, a joint resolution to designate "National Science Week."

SENATE JOINT RESOLUTION 74

At the request of Mr. THURMOND, the name of the Senator from Indiana [Mr. LUGAR] was added as a cosponsor of Senate Joint Resolution 74, a joint resolution to provide for the designation of the month of February 1986, as "National Black (Afro-American) History Month."

SENATE JOINT RESOLUTION 87

At the request of Mr. MURKOWSKI, the names of the Senator from Arizona [Mr. DECONCINI] and the Senator from Arkansas [Mr. PRYOR] were added as cosponsors of Senate Joint Resolution 87, a joint resolution to provide for the designation of July 19, 1985, as "National P.O.W./M.I.A. Recognition Day."

SENATE JOINT RESOLUTION 104

At the request of Mr. DENTON, the name of the Senator from Oklahoma [Mr. BOREN] was added as a cosponsor of Senate Joint Resolution 104, a joint resolution to proclaim October 23, 1985, as "A time of remembrance" for all victims of terrorism throughout the world.

SENATE RESOLUTION 112

At the request of Mr. COHEN, the name of the Senator from California [Mr. CRANSTON] was added as a cosponsor of Senate Resolution 112, a resolution relating to bilateral discussions between the United States and the Soviet Union to ban chemical weapons.

SENATE CONCURRENT RESOLUTION 39—RELATING TO COSTA RICAN NEUTRALITY

Mr. DODD submitted the following concurrent resolution, which was referred to the Committee on Foreign Relations:

S. CON. RES. 39

Whereas on November 17th, 1983, the Government of Costa Rica proclaimed that country's neutrality;

Whereas such neutrality enables Costa Rica to minimize its involvement in Central America's conflicts, thereby preserving domestic stability and democracy and enhancing its ability to address its severe economic problems;

Whereas such neutrality also enables Costa Rica to play an important role in attempts to achieve political settlements of Central America's conflicts; and

Whereas it is in the interest of the United States that Costa Rica maintain its neutral status: Now, therefore be it

Resolved by the Senate (the House of Representatives concurring), That the Congress supports Costa Rica's neutrality and urges the President to support such neutrality.

● Mr. DODD. Mr. President, I am submitting today a concurrent resolution in support of Costa Rica's announced policy of neutrality in Central America's conflicts. This concurrent resolution is identical to House Concurrent Resolution 33, which has been introduced in the House by Congressman BARNES.

Costa Rica announced its policy of neutrality on November 17, 1983. It has since reaffirmed this policy. The United States should support it.

Costa Rica is a nation unique in Central America. It has no army. It does not seek to protect itself with one. Rather, in the turbulence of contemporary Central America, Costa Rica seeks to protect its vital interests with wisdom, not warriors and weapons.

This is no easy task. There continues to be serious tension on the Costa Rica-Nicaragua border. The recent incident at the Costa Rican Embassy in Managua is well-known.

I take a back seat to no one in my support for Costa Rica, my sympathy for the delicacy of its situation and my desire to see Costa Rica continue as a secure and sovereign nation following its independent course in Central America. Therefore I, too, am concerned about tensions between Costa Rica and its neighbors.

But there are some in this country who are willing to let their concern for tensions between Costa Rica and Nicaragua override their perceptions of Costa Rica's position and intentions regarding Central America's conflicts. Costa Rica has announced it intends to be neutral. The United States should take Costa Rica at its word. The United States should support that small nation in this wise decision.●

SENATE RESOLUTION 131—WITH RESPECT TO PROPOSALS FOR MUTUAL AND VERIFIABLE MORATORIA ON CERTAIN ACTIVITIES INVOLVING NUCLEAR WEAPONS

Mr. HART (for himself and Mr. KERRY) submitted the following resolution; which was referred to the Committee on Foreign Relations.

S. RES. 131

Whereas the continuing nuclear arms race poses a grave threat to the survival of the human species;

Whereas the Government of the United States and the Government of the Soviet Union have agreed to resume negotiations on the control of nuclear weapons and weapons in space;

Whereas the Senate fully supports the efforts of the Reagan Administration to enter into negotiations with the Government of the Soviet Union with the objective of bringing a halt to the nuclear arms race;

Whereas the success of upcoming diplomatic efforts may depend on the willingness of both the Government of the United States and the Government of the Soviet Union to consider and implement bold and creative measures to facilitate the negotiations of arms control agreements;

Whereas President Kennedy in 1963 challenged the Soviet Union to a mutual moratorium on the testing of nuclear explosive devices in the atmosphere, setting the stage for the rapid completion of the Limited Nuclear Test Ban Treaty—the first major breakthrough in United States-Soviet arms control negotiations;

Whereas the United States is currently observing a moratorium on the testing of anti-satellite weapons against objects in space;

Whereas a temporary moratorium on weapons testing and deployment, agreed to by both the United States and the Soviet Union, would promote early progress in upcoming arms control negotiations and provide an atmosphere conducive to the conclusion of a mutually beneficial agreement; and

Whereas such mutual moratoria are entirely consistent with the national security objectives of the United States and would in no way jeopardize necessary modernization of American strategic nuclear forces: Now, therefore, be it

Resolved, That (a) in order to facilitate the upcoming negotiations for a comprehensive halt to the arms race, it is the sense of the Senate that the President should immediately propose to the Government of the Soviet Union a mutual and vertifiable moratorium, of limited duration, on the flight-testing and deployment of new strategic ballistic missiles, or on the detonation of nuclear explosive devices, or both.

(b) It is further the sense of the Senate that the President should continue to maintain the existing moratorium on the testing of anti-satellite weapons against objects in space unless and until—

(1) the Government of the Soviet Union resumes such testing of an anti-satellite weapon; or

(2) the Government of the Soviet Union refuses to proceed with further negotiations aimed at achieving a formal agreement on anti-satellite weapons.

SEC. 2. The Secretary of the Senate shall transmit a copy of this concurrent resolution to the President.

● Mr. HART. Mr. President; Senator KERRY and I join our colleagues in the Senate, and all Americans, in applauding the efforts of the Reagan administration to engage the Soviet Union in a negotiations to halt the nuclear arms race. We commend both the Reagan administration and the Government of the Soviet Union for agreeing to discussions on the entire range of arms control issues—including strategic and theater nuclear weapons, and weapons in space.

We know from experience, however, that negotiations carry with them no guarantee of an early success. Recent efforts at arms control—undertaken with the best of intentions—have failed to constrain significantly the growth of United States and Soviet strategic arsenals. If history is a guide, the road ahead will be long and difficult—especially given the extremely broad scope of the arms control talks.

We believe the success of the Geneva negotiations may well depend on the willingness of both sides to break with convention and undertake bolder and more creative initiatives—to demonstrate together and unparalleled commitment to ending the nuclear arms race.

We believe the resolution we are introducing today will dramatically improve the prospects for success in the negotiations in Geneva. Our resolution calls upon President Reagan to continue the existing moratorium on the testing of antisatellite weapons as long as the Soviet Union demonstrates equal restraint. It also proposes that the Soviet Government consider additional, mutual moratoria, of limited duration, on the testing and deployment of new strategic ballistic missiles, and on the testing of nuclear explosive devices.

These proposed moratoria are designed to provide impetus for early success at the arms control talks—without jeopardizing our national security. They are intended to create an atmosphere conducive to achieving a meaningful arms control accord, and to give the negotiators in Geneva an instrument they will desperately need to craft an agreement—additional time.

Our endeavors in the past have too often allowed technology to outpace diplomacy. In 1972, the United States and the Soviet Union failed to limit multiple warhead missiles—and while both sides talked on, the number of warheads grew by the thousands. We have talked for years about limiting cruise missiles, and how they are appearing by the thousands. If we continue with business as usual, there will be other new weapons to multiply by the thousands and outrun our ability to limit them.

To break this pattern, we need to provide negotiators—on both sides—time to agree on constraints on new weapons technologies before those technologies proliferate beyond our control. The moratoria we have proposed would give negotiators that time.

Moreover, we believe selected, limited moratoria can help create an atmosphere of confidence and hope. Moratoria can act as catalysts for success in this round of arms control talks.

Moratoria can work. They have before. In 1963, President Kennedy challenged the Soviet Union to a mutual halt to the testing of nuclear explosives in the atmosphere. The Soviet Union followed his lead and a cycle of confrontation and crisis was broken. Within months, our two nations had signed the Limited Test Ban Treaty—the first major breakthrough in United States-Soviet arms control efforts.

Like the moratorium in 1963, our proposals are intended as a prelude to—not a substitute for—a negotiated arms control agreement. We believe a commitment to mutual restraint coincident with the resumption of arms control talks will serve as a concrete demonstration of both sides' commitment to end the nuclear arms race, and will pave the way for a meaningful arms control accord.

Mr. President, these initiatives are entirely consistent with U.S. national security objectives. They are intended to be both mutual and verifiable, and contingent on positive Soviet action. The United States would not, and should not, continue to demonstrate restraint in the absense of an immediate Soviet response. The United States is strong enough to take the first step, but we are also realistic enough to continue only if the Soviets respond to our lead.

The moratoria we have proposed on nuclear testing and new ballistic missiles are intended to be of limited duration. They would in no way compromise the U.S. prerogative to modernize our strategic arsenal in the future, should we fail to achieve comprehensive reductions and limitations through formal negotiations.

Both the United States and the Soviet Union have at this time one new ICBM and one new SLBM that would be directly affected by a moratorium. Either side's efforts to proceed with flight-testing and deployment of these missiles would be constrained for the duration of the agreement.

Neither nation has yet to develop an antisatellite system which can credibly threaten the vital military and early warning satellites of the other side. Continuing the implicit moratorium on the testing of ASAT weapons would stabilize both sides at their present capabilities, and would allow negotiators time to complete a formal agreement to prevent an uncontrolled competition in ASAT capabilities.

If both nations agree to a limited halt on the testing of nuclear explosive devices, the development of new nuclear warheads would be forstalled in the short term—imposing a somewhat greater burden on the Soviet Union because of its more vigorous underground testing program.

In each of these areas the United States can enter into a mutual agreement with the Soviet Union without any unilateral concessions, and without jeopardizing national security interests.

Mr. President, the resumption of United States-Soviet arms control negotiations has brought a renewed sense of hope to this country and the world. But we must not confuse hope with results. If we are to break with the failures of the past, we will need truly courageous leadership—in both the United States and the Soviet Union.

We believe—in spite of the enormous growth in the nuclear arsenals of both the United States and the Soviet Union in the last two decades—that it is still within our power to take the initiative, to chart a different course, and to bring an end to the nuclear arms race.●

● Mr. KERRY. Mr. President, when President Kennedy asked the Soviet Union to agree to a mutual halt to nuclear weapons tests in the atmosphere in 1963, he made it possible for both nations to conclude a treaty which ended such tests. That act of political courage and creativity demonstrated

that it is possible to stop the nuclear arms race, if we have the will to break the relentless cycle of producing, testing and deploying weapons merely because we have the ability to do so, and not because it is in the long-term security interest of the United States.

Today, I join Senator HART in sponsoring a resolution by which the Senate declares its support for a temporary moratorium on the testing and deployment of new strategic ballistic missiles and of nuclear explosive devices, as well as continuing our current moratorium on the testing of antisatellite weapons against objects in space.

This resolution calls on the President to invite the Soviet Union to agree to such a moratorium as a prelude to concluding appropriate arms control agreements in Geneva.

A moratorium would contribute to each of the four goals which Secretary of State George Shultz has specified as our objects in the Geneva negotiations: The promotion of strategic stability, arms reductions, equality, and verifiability.

A mutual moratorium would accomplish strategic stability, because today neither side has an incentive to preempt or strike first in a crisis. As I think the administration would concede, we have parity today and the United States retains the ability to reduce the Soviet Union to rubble and ash should we be subjected to a surprise first strike of any kind. Both the Soviet Union and the United States have a new ICBM and SLBM that would be affected by a moratorium, and neither side would be left in a position of strategic inferiority by a mutual moratorium.

Secretary of State Shultz has said that U.S. arms control proposals represent a historic and systematic effort to reduce the levels of nuclear weapons substantially, rather than to merely legitimize their increase.

An obvious first step to making substantial reductions in the nuclear stockpile of both sides is to prevent new deployments that would add to the stockpile. A mutual moratorium would accomplish this. Secretary Shultz and our Geneva negotiators would be able to negotiate from a position of having a fixed level of nuclear weapons on both sides without having to worry about responding to planned increases. This would make it far easier for our negotiators to conclude a treaty leading to substantial reductions.

The third objective, of equality, is also served by a mutual moratorium. As Secretary Shultz has recently stated:

> Soviet strategic power is centered on its land-based missile force, American strategic power is spread over our triad of land-based missiles, submarines and bombers. A mutual moratorium will preserve the balance between these equivalent, if assymmetric, forces while negotiations on reductions continue.

Finally, a mutual moratorium will promote verifiability. As Secretary Shultz said:

> All our efforts to resolve the many complicated issues of stability, reductions and equality will come to naught in the absence of effective means of verification.

This moratorium will help preserve the mutual ability of both nations to verify any arms control agreements negotiated, because it will help preserve the invulnerability of our satellites.

Satellites are the foundation of our national technical means. Without them, I don't know how we could effectively verify our arms control agreements. For this reason, among others, it is extremely important that we conclude a treaty limiting ASAT's with the Soviet Union.

This legislation, calling on the President to engage in such a mutual moratorium, will help keep the door open to such an agreement.

In conclusion, Mr. President, the moratorium proposed by this legislation will promote each of the objectives described by Secretary Shultz as the goals of our arms talks in Geneva.

For that reason, I respectfully request that this Senate demonstrate its support for the arms control objectives set forth by Secretary Shultz by passing this sense of the Senate.●

NOTICES OF HEARINGS

SUBCOMMITTEE ON PUBLIC LANDS, RESERVED WATER, AND RESOURCE CONSERVATION

Mr. WALLOP. Mr. President, I would like to announce for the information of the Senate and the public, the scheduling of a public hearing before the Senate Subcommittee on Public Lands, Reserved Water and Resource Conservation on Monday, April 29, 1985, in Washington, DC. The subcommittee will receive testimony on the following bills:

S. 488 and H.R. 1185, to amend the act establishing the Petrified Forest National Park.

S. 543 and H.R. 1373, to designate the wilderness in the Point Reyes National Seashore in California as the Phillip Burton Wilderness.

S. 444, to amend the Alaska Native Claims Settlement Act.

The hearing will be held in room SD-366, Dirksen Senate Office Building, Washington, DC, at 10 a.m. Those wishing to testify should contact the Subcommittee on Public Lands, Reserved Water and Resource Conservation of the Committee on Energy and Natural Resources, room SD-308, Dirksen Senate Office Building, Washington, DC 20510, phone (202) 224-0613. Those wishing to testify should sign up no later than Thursday, April 25, 1985.

Because of the number of witnesses expected to testify, oral testimony will be limited to 5 minutes per witness. Written statements may be longer. Witnesses may be placed in panels, and are requested to submit 25 copies of their testimony 24 hours in advance of the hearing, and 50 copies on the day of the hearing.

For further information, please contact Mr. Tony Bevinetto of the subcommittee staff at (202) 224-5161.

AMENDMENTS SUBMITTED

SUPPLEMENTAL APPROPRIATIONS TO PROVIDE URGENT RELIEF TO ISRAEL

INOUYE AMENDMENT NO. 30

(Ordered to lie on the table.)

Mr. INOUYE submitted an amendment intended to be proposed by him to a measure to provide supplemental appropriations for urgent relief to Israel; as follows:

REDUCTION OF INTEREST RATES ON FMS LOANS TO ISRAEL

For payment to the Secretary of the Treasury such sums as may be necessary, but not more than $3,952,232,085, which sums shall be used to reimburse the Federal Financing Bank for the adjustment of interest rates charged on financing guaranteed under section 24 of the Arms Export Control Act for Israel pursuant to agreements entered into prior to the date of enactment of this section, notwithstanding section 10 of P.L. 91-672 or any other provision of law: *Provided*, That the Federal Financing Bank shall adjust the rate of interest on such financing to five percent per annum, notwithstanding any other provision of law.

● Mr. INOUYE. Mr. President, in keeping with current practices of the Senate, I wish to insert in the RECORD of today's proceedings the text of an amendment which I intend to introduce when the Senate moves to consideration of fiscal year 1985 supplemental appropriations to provide extraordinary assistance to Israel.

It is my understanding that the Senate no longer orders the printing of proposed amendments as separate documents; rather such proposed amendments are published in the CONGRESSIONAL RECORD.

I will, of course, offer a detailed explanation of my amendment when it is introduced. For the moment, I wish to assure Members that this amendment does not cancel or forgive the repayment of debt by Israel. Under my proposal, Israel will repay every penny of principal that it has borrowed from the United States in military loans.

What my proposal will do is to reduce the onerous future debt burden faced by Israel by reducing the interest rate on existing loans from the present weighted interest rate of 12 to 5 percent. That is the interest rate the United States now charges on military loans under the concessional FMS

Program to countries in economic difficulty.

It is my hope that over the next several weeks Members will become familiar with my amendment and raise any questions that they might have in order that I might, in turn, address these questions when I move to introduce this amendment.

What I wish to make clear today is that this amendment should not be regarded as increasing foreign aid totals. It simply requires that funds be appropriated to compensate the Secretary of the Treasury for foregone interest payments. Under the terms of the amendment, the Secretary of the Treasury would still collect $6.4 billion in interest on outstanding FMS loans to Israel. The Secretary would forego interest equivalent to the amount appropriated—that is, the amount required by existing law to "buy down" the current interest rate to the proposed 5-percent interest. It is currently estimated that the amount in foregone interest payments would be approximately $3.9 billion.●

ADDITIONAL STATEMENTS

THE APARTHEID RESOLUTION

● Mr. WALLOP. Mr. President, yesterday the Senate passed a resolution on apartheid that was pernicious because of its hypocrisy. It left Senators the sole choice of condemning one form of evil as if it were the only instance of its kind in the world. Clearly, it is not, and clearly some that are far worse exist, ignored by the fashionable ignorance or double standard of one for the Iron Curtain tyrannies, which is nonexistent, and one for allies which is total and persistent.

I regret that this resolution was not open to amendment. Had it been, I would have proposed an amendment to make it apply first and foremost to the Soviet Union.

This is not an argument that apartheid is good or that we ought to be anything but opposed to it. This is an argument against hypocrisy, double standards, preferring the worse to the better, and irresponsible posturing. Look at pages 1119 through 1135 of the State Department Annual Report on Human Rights Practices. These pages deal with the Soviet Union. Compare them with the similar pages on South Africa, and ask, in which country is the scope and quantity of abuses greater? There is no doubt that South Africa's unequal treatment of its black majority is not in the same league as the Soviet Union's uniformly totalitarian treatment of all its people.

Let us compare, category by category.

GENERAL FREEDOM OF MOVEMENT

Every Soviet citizen must carry an internal passport, no exceptions. South Africa is abolishing a very limited, and seldom enforced version of that practice.

GENERAL LEAVE OF FREEDOM

We know about the Soviet Gulag, the infamous slave labor camps. They dot that vast country like a cancer. Some 4 million people are in them. Where are the Gulags of South Africa?

BRUTALITY

We know about the routine use of Soviet psychiatric hospitals to drug and drive dissidents out of their minds. Where are they in South Africa? We know that the South African police have killed perhaps hundreds. I challenge Senator KENNEDY to compare this with the Soviet Union's starvation of the Ukraine, where perhaps millions died. The murder of whole ethnic groups, like the Chechens, and the Soviet Union's genocide, even as we speak, in Afghanistan.

LABOR UNIONS

South Africa has free labor unions. The Soviet Union does not. Why does Senator KENNEDY spend his time railing against South Africa?

RELIGION

We have recently received and honored in this country Bishop Tutu, a prominent cleric from South Africa who is an outspoken opponent of apartheid, and who, as such, has risen within his country's church hierarchy. Where is the Soviet Union's Bishop Tutu?

THE PRESS

The South African Government knows that everything it does will be scrutinized by its own free press. If we want to know the situation in South Africa, we need but get on the phone to one of their newspapers, or talk to our own correspondents, who live freely there. Where is the free press in the Soviet Union? Why does Senator KENNEDY spend his energies against South Africa rather than against the Soviet Union?

DEMOCRACY

If we wish to argue with South Africa, we can talk, people to people. But when we deal with the Soviet Union, we are dealing exclusively with lifelong enemies in the Politburo.

EMIGRATIONS

Black people are fighting to get into South Africa. But the Soviet Union has to emply a half million border guards, dogs, and mines to keep people in.

So why does Senator KENNEDY prefer the Soviet Union?

The Senator's amendment also provides an exemption for vehicles used for commuting if first, less than 25 percent is listed as personal use, and two, if the commuting vehicle is required by the employer for bonifide business purposes—a proposition that reduces funds to the Federal Treasury by $1 billion.

This not only adds to the deficit, but opens a new area for possible abuse.

Decisions such as this—that, if passed, create further deficit growth and settle the concerns of many—do not stop with questions of taxation.

I voted to provide continued, limited unemployment benefits for those currently covered under Federal supplemental compensation [FSC]. I could not support, however, other measures to provide even greater benefits, but at a cost of hundreds of millions of dollars.

It is not that I don't care deeply over the problems of our unemployed. But our first priority must be to reduce the deficit. A measure that can provide strong economic growth, long-term price stability, lowered interest rates, and strong employment growth—our ultimate goal.

Only after we do the best we can on reducing the deficit and measuring the benefits, should we turn to additional safety-net funds, such as new supplemental unemployment moneys.

When we focus on many of these issues alone, we tend to overlook the more important concern at hand—that of an overly complex Federal tax system and the demand this year for tax reform.

Do we continue to deal with issues on a piecemeal basis that create additional imbalances within our tax system? Or do we reform our tax system in a comprehensive reform that eliminates the need for a crazy quilt of tax exemptions and deductions?

I suggest the latter.●

ADEQUATE CONTEMPORANEOUS RECORDKEEPING REQUIREMENTS/FEDERAL SUPPLEMENTAL COMPENSATION

Mr. EVANS. Mr. President, as we work to find a responsible and fail solution to the overly burdensome adequate contemporaneous recordkeeping requirements for automobiles, trucks, and other listed property, we must continually keep in mind that these requirements were established to correct abuses.

With the many issues facing Congress, decisions are sometimes hastily made, with unintended mistakes following. While attempting to correct the abuses under business-use vehicles, we created unfair treatment to many we intended not to impact. After correcting these unintended mistakes, we must go back and more narrowly pursue those abuses we initially intended to correct. Further, we must continually remind ourselves of the continued growth of the Federal budget deficit.

With these thoughts in mind, I rise to support the recommendations submitted by the Finance Committee con-

cerning the repeal of adequate contemporaneous recordkeeping for mixed business/personal use automobiles.

Furthermore, I find the narrow exemptions worked out to exclude delivery trucks, buses, marked and unmarked police and fire vehicles, ambulances and hearses from recordkeeping requirements and taxable income for personal use an excellent solution.

The recommendations meet the tests of fairness, good public policy and restraint from those decisions that create new deficit pressures.

With these three critical tests in mind, I find the amendment offered by my respected colleague from Wyoming unacceptable. This amendment not only covers the important elements of the Finance Committee recommendations, but goes much further.

TURKEY'S HUMAN RIGHTS POLICIES

● Mr. SIMON. Mr. President, recently, Mayor Harold Washington, of Chicago, met with the Turkish Prime Minister. One of the topics the mayor raised with the Prime Minister was his concern, which many of us share, about some of Turkey's human rights policies. Following his meeting, the mayor released a thoughtful statement abut the effect of present U.S. policies toward Turkey. I ask that the mayor's statement be printed in the RECORD.

The statement follows:

STATEMENT OF MAYOR HAROLD WASHINGTON

I met this morning with the Turkish Prime Minister, Turgot Ozal, after consultation with leading Chicago citizens of Greek heritage, and took the opportunity to present the prime minister with a letter expressing our concern about human rights in his country.

I have a long-standing public record of opposition to military aid for Turkey and share the concern of many for the human rights abuses in that country.

In response to Amnesty International's campaign to abolish torture, I appealed to the Prime Minister to limit the incommunicado and extended nature of detention in those provinces still under martial law. And in response to our Greek constituency I requested that he use his good offices to bring about a just settlement in Cyprus, removing Turkish military personnel and allowing ethnic Greek refugees to return to their homes; that he prevent persecution of ethnic Greek citizens of his country and in particular protect the Greek Orthodox Patriarchate in Istanbul; and that he work for an improvement in relations between Turkey and Greece.

I am concerned that Turkey continues to refuse to indicate the whereabouts of the American citizens and the 1,600 Greek Cypriots who were taken by the Turkish army from Cyprus over 10 years ago.

Nearby, in Michigan for example, a mother and father would like to know if their son is languishing in a Turkish prison, or was this child executed with a gun and bullet provided by the American taxpayers?

I am concerned that the Turkish President recently called for Israel to withdraw from Jerusalem, accused Israel of massacring citizens in the Sabra and Satilla Palestinian camps, called upon other Arab nations for an "Islamic Strategy Against Israel" last year, and refused to allow American planes to overfly Turkey in support of Israel.

I am concerned that Turkey is alienating our life long allies, the people of Greece, by continuing its military occupation of the Republic of Cyprus, frequently violating Greek air space, threatening Greek islands by displaying American military aid opposite their coasts rather than the other side of the country opposite Russia for which the aid was intended, forcing Greece to withdraw from the NATO war games because of Turkish insistence that a Greek island, which Turkey said it wants, would be left out of the military exercises.

In particular, I am concerned that Turkey continues to practice torture and imprisonment for political beliefs. I am concerned that the Greek Orthodox Patriarchate in Istanbul—The Vatican of the major worldwide religion—has been forced by Turkish Law to degenerate into ruin. Turkish repression of Greeks living in Turkey has caused 120,000 Greeks living in Istanbul in 1955 to dwindle to 4,500 people today. This forcing out of Greek citizens coupled with a Turkish restriction that only Turkish born Greeks can attend the country's finest Greek Orthodox Theological Seminary caused a closing of that renowed institution.

I am concerned that Turkey spends $200 million a year to maintain Turkish troops occupying the Republic of Cyprus. We must ask ourselves as American Taxpayers, would the Turkish troops still be in Cyprus if hundreds of millions of American dollars were not going to Turkey each year?

I can assure you that if that $1 billion of aid were going to the city of Chicago, none of that money would be used to militarily occupy another country, or to violate the most basic human rights of our own people. I concur with my Greek friends that before Turkey is granted American aid, that nation must completely alter those policies that violate human rights, and above all bring about a just solution for Cyprus and cease its persecution of the ecumenical patriarchate.

There is no room in the 20th century for above mentioned practices. The American public and private sector does not want to be part of it.●

THE SUPPORT OF SMALL BUSINESS ADVISORY COUNCIL OF THE REPUBLICAN NATIONAL COMMITTEE FOR MAINTAINING THE SBA

● Mr. WEICKER. Mr. President, just this past week, Frank Fahrenkopf, chairman of the Republican National Committee, released the policy statement of the RNC small business advisory council in which the importance of the Small Business Administration and its programs to the Nation's 14 million small businesses is discussed.

Unlike the administration, the RNC small business advisory council has recommended maintaining the SBA as an independent agency, and, in its statement, recognizes the important financial assistance provided particularly through SBA's guaranteed lending programs. Many of its recommendations are similar to the legislation Senator BUMPERS and I have introduced, S. 408, which is now sponsored by 23 Members of this body.

I ask that Mr. Fahrenkopf's letter to the associate executives of the RNC and the position statement of the RNC small business advisory council be printed in the RECORD.

The materials follow:

REPUBLICAN NATIONAL COMMITTEE,
March 29, 1985.

DEAR ASSOCIATE EXECUTIVE: The Republican Party was established, and has flourished, based on its ability to investigate and act upon new ideas. In fact, the tradition of being open to new ideas and accommodating various points of view has increased our numbers over the past years.

In 1984, I appointed a Small Business Advisory Council (SBAC) with a number of goals in mind. Among them, was to provide expertise on small business matters to members of the Platform Committee of the 1984 Republican National Convention. Another, was to advise the Reagan Administration on issues of importance to this nation's 14 million independent business owners.

The SBAC's first goal was achieved. The submission of the Council's report to the Platform Committee aided in producing a small business plank which highlighted the important contributions made to our economy by small business owners, while at the same time recognizing that some barriers still exist to optimum productivity and profit.

The second goal, mentioned above, is actually a process which will continue through my tenure as Chairman of the Republican National Committee. Attached, for your review, is the SBAC's position statement concerning the proposed abolition of the U.S. Small Business Administration. While it is not a mirror image of the Administration's point of view, the position of the RNC Small Business Advisory Council calls for needed functions to continue and some costly and inefficient programs to end. More importantly, while the means may differ, the end result is the same; an important step toward reducing the federal deficit and a leaner bureaucracy which provides only needed services to small business owners.

Periodically, you will receive other RNC Small Business Advisory Council position statements. They will be insightful presentations concerning issues critical to the small business community. In a sense, they will be our contribution to the legislative dialogue which enriches our form of government.

Very truly yours,
FRANK J. FAHRENKOPF, Jr.

STATEMENT OF THE SMALL BUSINESS ADMINISTRATION

The Small Business Administration was established as an independent agency of the Federal Government in 1953 under the leadership of President Dwight Eisenhower and the Republican-controlled 83rd Congress. Through that action, President Eisenhower and the Congress specifically recognized the crucial role played in the American economy by independent business. At the same time, they took action to tackle the unique problems faced by the entrepreneur in an increasingly complex economy dominated by Big Government, Big Business, and Big Labor.

During the past 32 years, SBA has assumed an ever-larger role as the protector of the independent sector (and its contributions to the economy). Congress has saddled the Agency with more and more responsibilities, a number of them lying far outside SBA's natural territory. In a sense, it has been the victim of its own effectiveness. For example, SBA has been so efficient in expediting assistance to the victims of natural disasters that it has been directed to provide similar aid in cases of "economic" or man-made disasters, and has been told to assist agricultural enterprises. In the latter role, it has been forced to duplicate programs administered by the Department of Agriculture. (The Small Business Administration has correctly opposed this haphazard growth and programmatic duplication.)

On the others and, several innovative programs have been added to SBA's arsenal which render it far more effective in meeting its essential mandate.

Back in 1953, SBA could provide financial assistance only through direct loans analyzed, made, and monitored by SBA employees. Within a few years, this proved to be an expensive and labor-intensive program, so SBA began to make more and more of its loans in conjunction with banks through its loan guarantee authority. Today, the overwhelming majority of SBA loans are made through the guarantee mechanism, and SBA has made great strides in delegating lending authority to banks and other financial institutions through its certified and preferred lender programs. A recent Government study shows that 40% of all (long)-term loans to smaller firms were made with SBA help.

In 1958, Congress passed the Small Business Investment Act, and established the first institutional source of venture capital for new and growing businesses. This was a truly pioneering endeavor since it harnessed private sector capital and management to achieve a public policy goal. Congress gave SBA the authority to license and regulate these small business investment companies, as well as the power to make loans to SBICs to augment their private capital. Here again, SBA initially received appropriations to make direct loans to SBICs, but for the past 14 years, the assistance has been in the form of SBA guarantees.

In the late 1960s and early 1970s, a number of programs to encourage minority citizens to enter the mainstream of American business were established by Congress and the White House. SBA was given additional responsibilities in this critical arena.

The creation of the office of Chief Counsel for Advocacy in 1976 was a most significant step forward. The Advocate, nominated by the President and confirmed by the Senate, has the authority to represent the interests of small business in every Federal department and agency. He and the SBA Administrator fight to guarantee that smaller firms are not trampled when the leviathans gather to establish governmental policies. In less than eight short years, the Chief Counsel for Advocacy has become an active and effective champion for independent business.

For the past three years, James Sanders has been an effective and an innovative Administrator. (In line with Administration policies on cost-control, debt-collection, and maximum use of the private sector), he has studied every one of his Agency's programs. He has recommended scrapping those which are not efficient or cost-effective; he has revised others to make them more useful for small business; and he has refocused others to make the maximum utilization of the private sector, while minimizing the cost to the Federal Government and reducing the number of employees by 30% to just under 4,000 from 6,000 in 1980. We applaud his commitment, his imagination, and his achievements.

FINDINGS OF THE ADVISORY COUNCIL

After reviewing the record of the Small Business Administration and calculating the cost of its programs in this period of terrible Federal deficits, the Advisory Council makes these recommendations:

1. The Small Business Administration must remain as an independent agency in the Executive Branch of the Federal Government. The millions of small firms in our country provide about half of all jobs in the U.S., create almost all the new jobs, and account for most innovations. In spite of their numbers and their importance, the interest of small businesses are often overlooked by Federal officials when they establish economic policies. An independent SBA is essential in representing these views.

2. In the same vein, the role of the Chief Counsel for Advocacy must not only be preserved as an independent voice; it must also be strengthened and broadened.

3. SBA's direct loan program appears to be an outdated vestige of the Agency's youth. It is expensive in terms of manpower and dollars. On the other hand, the certified and preferred lenders programs bring the skills and the dollars of the private sector to bear on the financial needs of young and smaller companies. We urge termination of the direct loan programs and further expansion of the lower guarantee (in the range of 70–75%) to the banks and others making loans under Section 7(a), SBA can greatly leverage its scarce resources, maximize private sector participation and improve the quality of its loans.

4. The Council also calls for an end to SBA's involvement in agricultural disaster loans. Its present program duplicates the vastly greater manpower and resources of the Department of Agriculture and SBA lacks the expertise necessary for this specialized field of lending.

5. A number of SBA's minority business programs duplicate, or are poorly coordinated with, similar operations directed by the Department of Commerce. We recommend that SBA's activities in the field of procurement and management assistance for minority businesses be continued and increased by transferring those similar activities in the Department of Commerce to the SBA.

6. SBIC program itself is a unique Government-private sector partnership. Over the past 26 years, this program has demonstrated its tremendous effectiveness in assisting in the birth and growth of thousands of America's most successful businesses. The industry has now matured to a point where the SBIC and MESBIC programs should be operated on a private business basis and and the Government's involvement minimized. The Council supports the proposal for the Corporation for Small Business Investment (COSBI) under which the responsibility for licensing, regulating, and providing leverage for SBICs would be transferred to the private sector.

CONCLUSION

We sincerely believe that the recommendations we have made will result in a leaner, meaner, and more effective SBA. We believe these steps will assure the vigor and growth of independent small business with resultant growth in employment and tax revenues. And, equally important, we believe our proposals will contribute substantially to the reduction of the Federal deficit. By eliminating direct loans, by placing more responsibility on the private sector in the 7(a) loan program and the SBIC investment program, by eliminating SBA programs which duplicate those performed by Commerce and Agriculture, by selling the SBIC loan portfolio (presently about $1 billion) now held by the Federal Financing Bank to COSBI, we will save several billion dollars over the next three years.

The Republican Party has traditionally been the party of the independent business owner and the entrepreneur. It cannot abdicate its role in promoting economic growth. We call for a new commitment by the G.O.P. to American small business.●

THE OLMSTED HERITAGE LANDSCAPES ACT OF 1985

● Mr. MOYNIHAN. Mr. President, I wish to draw my colleagues' attention to an article appearing in the style section of the March 30, 1985 Washington Post. The article, by Benjamin Forgey, is entitled "In Congress, a Crusade for the Olmsted Legacy." It concerns legislation Representative JOHN SEIBERLING and I introduced in the 98th Congress and again this year to identify, commemorate, and preserve the historic legacy of landscapes designed by Frederick Law Olmsted, Sr., his associates, and professional descendants.

Olmsted, who lived from 1822 to 1903, is properly considered the father of landscape architecture in this country—indeed, he coined the term. His achievements are staggering. They include New York's Central Park—with Calvert Vaux in 1858, the Capitol grounds here, 1874, the World's Columbian Exposition in Chicago, 1893, and premier parks, parkways, college campuses, and residential communities across the Nation.

Sadly, many of Olmsted's landscapes have been destroyed, altered, or developed. Most are in a sorry state of disrepair due to deteriorating infrastructure, inadequate maintenance, and overuse.

The legislation Representative SEIBERLING and I have introduced (S. 194 and H.R. 37) is a modest attempt to involve the Federal Government in the burgeoning State, local, and private efforts to locate, inventory, and preserve the myriad Olmsted landscapes. Surely we must raise public awareness of the man who has done more, perhaps, than any other to preserve the beauty of nature amidst the distressing gray and black of our ever-expanding cities.

The Washington Post article highlights JOHN SEIBERLING's efforts to promote the Olmsted legislation. This is well and good, for few have championed conservation and historic preservation causes better than he. I have had the pleasure to work with him on

several occasions, most recently to commemorate the centennial of Eleanor Roosevelt's birth. And we have worked together for nearly 4 years now to establish an American Conservation Corps. I have no doubt he will prove to be as successful a steward of H.R. 37 as he has been with so many other bills.

Mr. President, I ask that the text of the March 30, 1985 Washington Post article by Benjamin Forgey be printed in the CONGRESSIONAL RECORD.

The article follows:

IN CONGRESS, A CRUSADE FOR THE OLMSTED LEGACY

(By Benjamin Forgey)

Frederick Law Olmsted Sr., the genius landscape architect who did more than any other person to humanize America's rapidly growing cities during the 19th century, today has a friend indeed in Rep. John F. Seiberling, the conservationist congressman from Ohio.

Seiberling, in alliance with New York Sen. Daniel Patrick Moynihan on the opposite side of the Hill, has taken the lead in pushing for adoption of the Olmsted Heritage Landscapes Act, a straightforward bill with a simple purpose: to study the vast Olmsted legacy and, with the all-important aid of state and local governments and private groups and individuals, to begin to put it in order.

It was touching and, in a way, depressing to witness Seiberling's lonely performance last Tuesday as he conducted a hearing on the Olmsted bill. During MX week in the House (Democrat Seiberling predictably voted on the losing side twice), with such astronomical financial stakes ($1.5 billion for 21 missiles, or more than $71 million each), here was a congressman passionately prodding an oddly recalcitrant Interior Department to accept a mere $2.5 million, to be spent over the course of 10 years, just go give some long overdue attention to one of the nation's preeminent cultural treasures.

The performance was inspired. From time to time other subcommittee members would drop in, but the show, like the bill, clearly belonged to Chairman Seiberling.

He told of his privileged boyhood at Stan Hywet Hall, the Akron estate whose beautiful grounds were designed by an Olmsted associate. He recounted his long (and successful) "one-man crusade" to save the grounds from destruction by the private foundation to which he and his family had donated the estate. He told how driving by the old Hillandale grounds in Northwest Washington, today cut into condos, makes him feel "a little bit sick, and certainly sad," because he remembers well "how those rolling hills looked in the springtime." He quoted poets (Gerard Manley Hopkins, A.E. Housman, Robert Frost) during his frequent, spirited interchanges with the mostly favorable witnesses who formed his responsive audience. He said, "Every time we lose a thing of beauty made by nature and man together, we lose a little bit of our civilization." More than once his voice cracked and tears welled in his eyes, and more than once the hearing room was filled with spontaneous applause.

Seiberling's cause is just: Olmsted was a giant. His works stretched almost literally from sea to sea. Though best known as the designer (with Calvert Vaux) of Central Park in New York, he spread his talents far and wide, from Boston to Baltimore to Washington (the splendid U.S. Capitol grounds are his) to Chicago to Yosemite Valley in California, and to hundreds of places in between. And as extensive as are the parks, estates, campuses, suburbs and government grounds that he and his partners designed directly, it might be argued that an even greater legacy was the tremendous extent of the Olmsted influence. Not idly is he known as the "father of American landscape architecture."

Even if limited to works of his direct descendants—his stepson John Charles, his son Frederick Law Olmsted Jr. and others who carried on the work of the firm well into the 20th century—the numbers are impressive. According to Charles E. Beveridge of American University, editor of the voluminous Olmsted papers deposited at the Library of Congress, the firm accounted for some 3,000 projects after Olmsted Sr. retired in 1895, including 650 parks, parkways and playgrounds designed for public use, 150 education campuses and 150 residential communities.

Many of the Olmsted sites have not fared well over the years. Some have been destroyed altogether. Others have been altered unfortunately by simple ignorance of the methods and intentions of their designers. (The views Olmsted so sympathetically laid out on the Capitol grounds, for instance, are being obliterated by ill-conceived plantings.) Other sites have been changed for the worse by being partially or wholly converted to more active recreational uses with cavalier disregard for their overall structure.

Today many more are endangered, or on their way out. In Atlanta, trees in a string of parks in the Olmsted-designed suburb of Druid Hills will be cut to make way for a highway serving the proposed Carter Presidential Library. A hilly, privately owned 228-acre Olmsted site in White Plains, N.Y., is to be converted into a multiuse commercial and residential development. Many and perhaps most others according to witnesses at the Seiberling hearing are being very poorly maintained.

So what is this bill that the Interior Department finds onerous? Basically it requires but an inventory of a great national heritage—a simple listing of locations, dates and so on, an examination of the original designs and their execution, and a report on current conditions. In this procedure the federal government's role would be crucial but rather minimal: It would set standards and make recommendations for preserving such "historic designed landscapes" (an important provision because parks have received much less attention than buildings in preservation processes), provide technical assistance to those in state and local governments and private groups who would be doing most of the actual work, and serve as a sort of clearinghouse for the results thus obtained.

As a young man, in 1850, Olmsted visited a new park in Birkenhead, England, across the Mersey River from crowded Liverpool. "Five minutes of admiration and a few more spent in studying the manner in which art had been employed to obtain from nature so much beauty," he wrote, "and I was ready to admit that in democratic America there was nothing to be thought of as comparable with this People's Garden.

From the beginning of Central Park in 1857 until 1895, when he retired from the fray with a sadly added bram. Olmsted did more than his share to redress the balance. But if from Olmsted's time onward parks have been popular in democratic America, their maintenance has been something else again. Olmsted himself learned this lesson well during his titanic struggles with the Tweed ring and other New York politicos during the decades it took to build Central Park. Today, development pressures, budget crunches and plain ignorance make this as true as, perhaps truer than, ever.

Would it not be a wonder if, by paying some close respect to the places that Olmsted and his followers designed and built, people in hundreds of cities, suburbs and towns could be inspired again by his great vision? This is at least a possibility opened up by a modest piece of legislation about which John Seiberling said, with Olmstedian spunk. "If they [opponents in the administration] don't ask for it, maybe we will give it to them, anyway."●

COERCING ABORTIONS: WERNER FORNOS, THE IPPF, THE UNFPA, CHINA, AND AID

● Mr. DENTON. Mr. President, the abortion lobby is making an all-out assault against President Reagan's policy regarding indirect U.S. funding of abortion overseas. I am sure my colleagues and all readers of the CONGRESSIONAL RECORD, particularly in the executive branch, will benefit if we make public the activities that are designed to tie the President's hands in foreign policy, for the direct monetary benefit of certain organization and the Government of the People's Republic of China.

Of particular interest in this enterprise is the role of the tax exempt Population Institute, whose president, Werner Fornos, has been a leader of the lobbying effort. His self-serving relationship with the Government of the People's Republic of China demands scrutiny and raises serious ethical questions.

But let us start this story at its beginning, with Mr. Reagan's admirable declaration of Mexico City, as it is sometimes called. In that policy statement, preparatory to the U.S. Conference on World Population last August, the President erected an international pro-life standard: The United States will not be a party to abortion. Whatever the policies of other governments, it is this government's stated policy not to fund abortions directly—which has been illegal since enactment of the Helms amendment in 1973—or indirectly, through contributions to organizations which engage in abortion, abortion research, abortion advocacy or lobbying activity.

In the Senate, an attempt was made to overturn the President's policy. On August 8, 1984, during consideration of the Second Supplemental Appropriations Act, legislation was proposed to repudiate Mr. Reagan's denial of funds to the organizations that comprise the international abortion lobby. At this point, an amendment in the second degree was offered, as follows:

The President is to be commended for his outstanding leadership in condemning abortion at home and abroad as a grave injustice against unborn human beings and that, consistent with law, the President should be encouraged to continue to modify the domestic and foreign policies of the U.S. Government to protect unborn human beings from the violence of abortion.

When a move to table that language failed, the original amendment was withdrawn.

But the abortion lobby was not yet finished. Even though all the population grantees funded by the Agency for International Development, except one, have agreed to the President's conditions, the International Planned Parenthood Federation remains defiant. As Werner Fornos himself put it in remarks to the population control lobby in Madison, WI, on March 12, 1985:

So we've now got IPPF de-funded, because IPPE had the courage to say to the Reagan Administration. "Take your money and shove it. Our principles are more important".

It is, of course, the right of IPPF and any other private organizations to refuse U.S. money. But IPPF wants to have our tax dollars and thumb its nose at President Reagan, too. It is hardly accidential that, a few weeks after IPPF began an intensive campaign to force the U.S. Government to give it $17 million—yes, $17 million, for these people have large appetites—a subcommittee of the House Foreign Affairs Committee put language in the foreign assistance authorization bill intended to tie the President's hands:

The President—

(A) shall not deny funds for population planning purposes under this part to a foreign country, an international organization, or a nongovernmental organization, and

(B) shall not deny funds (or goods or services financed with such funds) to any direct or indirect recipient of funds, goods, or services from a foreign country, an international organization, or a nongovernmental organization which receives those funds under this part for population planning purposes, because of the types of voluntary and noncoercive family planning programs which it carries out or promotes, or for which it provides funds, goods, or services (directly or through another entity), so long as it does so entirely with funds other than the funds made available by the United States under this part.

That language is designed to bail out IPPF, but it is also clearly intended to help out another group currently in danger of losing U.S. funding for population control programs. That is the U.N. Fund for Population Activities and its subgrantee, the government of Communist China. And here the plot really thickens. According to Julian Simon, in his masterful book, "The Ultimate Resource":

The UNFPA also funnels money back to U.S. groups that work for fertility reduction, including The Population Institute, Population Crisis Committee, The Institute of Society, Ethics, and Life Sciences in Hastings-on-Hudson, and the Worldwatch Institute." (See page 303.)

Let us get this straight. The tax-exempt Population Institute gets AID money channeled through the UNFPA. So no one should be surprised when the institute's president, Werner Fornos, complains about President Reagan's policies. As the President put it in his policy statement last year:

With regard to the United Nations Fund for Population Activities (UNFPA), the U.S. will insist that no part of its contribution be used for abortion. The U.S. will also call for concrete assurances that the UNFPA is not engaged in, or does not provide funding for, abortion or coercive family planning programs; if such assurances are not forthcoming, the U.S. will redirect the amount of its contribution to other, non-UNFPA family planning programs.

No U.S. money can be laundered through the UNFPA to any "coercive family planning programs." That is, we will not pay to round up pregnant women, drag them into abortuaries, and kill their babies. But beyond that, we will not contribute a dime to any family planning program that is based on coercion.

Who on Earth could complain about that? Werner Fornos, president of the tax-exempt Population Institute, the one that gets tax dollars through the UNFPA and the government officials of Communist China, of course, whose program of forced abortion has shocked the world. One of those officials, Zhang Wenjin, Ambassador of the People's Republic of China to the United States, wrote to Secretary of State George Shultz on March 9, 1985, to protest the delay in our giving $38 million to the UNFPA. These people want their money. Ambassador Zhang Wenjin insists:

The departments concerned of the Chinese Government have declared on a number of occasions that not a single dollar contributed by the UNFPA has been used by China in support of abortions. The UNFPA has also pledged not to use any of its funds to support abortions. Under such circumstances, it is obviously unjustifiable for the U.S. to withhold its contributions to the UNFPA on the ground of allegations of abortions.

Ambassador Zhang's letter is a masterpiece of misinformation. The issue is not whether the UNFPA funds abortion. It is whether the UNFPA funds, in any way, family planning programs that are coercive. That question has been emphatically answered by objective press investigations, most of them conducted under the auspices of newspapers not ordinarily sympathetic to the prolife position.

What is most remarkable about the Ambassador's letter to the Secretary of State is not that it fails to tell the truth about China's barbaric forced abortion policy. What is most remarkable is that, at the bottom of the last page, there is a note about carbon copies. Two of the copies were to go to other State Department officials. Fair enough. And the third went to—guess who?—Werner Fornos, president of the tax-exempt Population Institute, who has been crusading around the country—including an appearance on publicly funded television in Wisconsin—to demand immediate funding of the UNFPA, IPPF and the rest.

This relationship between China's Ambassador to the United States and Mr. Fornos should be no surprise. For the latter is an honorary professor of international relations at Sichuan University. When he received that honor, he was hailed by, among others, Dr. Qian Xinzhong, China's minister for family planning. This is the same Dr. Qian who received $12,500 as a special award from the UNFPA in 1983 for his leadership of China's brutal birth control program. It is no wonder Qian wants the U.S. taxpayers to continue to support the UNFPA.

So this is the company Werner Fornos keeps in his campaign to overturn President Reagan's ban on AID grants to the abortion lobby and his ban on any funding, direct or indirect, of coercion: Ambassador Zhang, Dr. Qian, and the like-minded individuals who met with Mr. Fornos during his recent visit to Madison, WI. These included Dan Weintraub, vice president for international affairs of the Planned Parenthood Federation. Let us let Mr. Weintraub speak for himself, for his words are their own best indictment:

Now, I know that there are some people in our own country—and I know who they are, they've talked to me—who sincerely believe that we should compromise, we should accept the Administration's policy. And the argument goes that, after all, abortion in our international programs is only a small percentage of our entire program. Strategically we would be better off to try to save family planning by giving up abortion.

Well, I tell you that these people are wrong. All of you sitting here in this room know in your hearts that you simply are not associated with a social service agency or a medical service agency. You're part of a movement, a cause. And causes have principles. And one of the principles of the Planned Parenthood Federation of America is that reproductive freedom is indivisible. You either have it or you don't have it. Either everyone has it, or nobody has it. It's as simple as that. It really is as simple as that * * *.

This is not the last compromise the Administration is going to ask us to make. This is simply the beginning. It's like, you know, the "slippery slope" argument—give in now and it's easy to give in later.

But it is not just the President's policy that these groups have to cope with. It is the law. Specifically, the Kemp amendment to the Foreign Operations Appropriation Act of 1985, which was folded into the continuing resolution late in the 98th Congress. The Kemp amendment, for which I compliment the distinguished Member of the House from New York, reads as follows:

Provided further, That none of the funds appropriated under this paragraph may be available to any country which includes as part of its population planning programs involuntary abortion: *Provided further,* That none of the funds appropriated under this paragraph may be available to any organization which includes as a part of its population planning programs involuntary abortion.

Note that, like the President's own policy, the Kemp amendment forbids not only the direct funding of abortion, but the indirect funding of coercive abortions. It really does not matter whether the UNFPA uses U.S. dollars only for computers in Peking and billboards in Shanghai. As long as China's program involves compulsion—and I would call arresting women and dragging them off to be aborted an unmistakable sign of compulsion—then AID must not give, and must not allow the UNFPA to give, any money to China.

Let us be very clear what is at stake in this controversy. Again, I will let Mr. Fornos speak for himself, through his candid remarks to the Fourth Annual Conference on Reproductive Health Legislation on March 12, 1985:

What we miss, as advocates on this issue, is that we need to separate the abortion issue from the family planning issue, when we're dealing with our legislators.

Two years from now, I may stand here and advocate something different, and the reality of our times may dictate that. Certainly, if we ever have enough votes, we ought to desperately seek a repeal of the Helms amendment. But at the moment, I don't think that's in the cards.

What Mr. Fornos referred to as the Helms amendment has been law since 1973. It is the statutory prohibition against AID funding fo abortion. It was widely evaded for many years, under both Republican and Democratic administrations. But at least, under President Reagan, it has been given full effect.

That is the cause of this controversy. It is not family planning that is at stake. It is the ability of the international abortion industry to thrive off of U.S. funds. It is their arrogant presumption that they are entitled to tax dollars, year after year, to sustain their operations. It is their audacity in defending China's totalitarian program of compulsory abortion. It is their unremitting opposition to the right to life of unborn children, here in the United States or in Latin America or in Africa or in the Orient.

Those fanatics are on the losing side of history, and they are panicking. They thought they would have their way with the U.N. Conference in Mexico City last year, but it blew up in their faces. One of their supporters, Robert McNamara, predicted that the U.S. delegation would be laughed out of the Conference because of President Reagan's prolife position. But Mr. Reagan had the last laugh.

Here is what really happened in Mexico City. The original draft presented to the delegates called upon all governments to protect women from illegal abortion. This is a coded way of calling for legalization of abortion.

But the delegations from all over the world rejected that language. Instead, they urged governments "to take appropriate steps to help women avoid abortion, which in no case should be promoted as a method of family planning, and whenever possible, to provide for the humane treatment and counseling of women who have had recourse to abortion."

Underscoring the setback this represented to the international abortion lobby, the Swedish delegation objected to the change in wording. They went on record in opposition to it, insisting that abortion should be legalized.

This triumph in Mexico City is why the abortion advocates have come back to the Congress to see if we will overturn for them President Reagan's policy. Repudiated by the U.N. Conference last year, faced with a Presidential ultimatum to get out of the abortion business, they have nowhere else to go except to sympathetic Members of Congress.

Less sympathetic Members of Congress, however, will want to keep a sharp eye on the machinations of the abortion lobby, both within the committee system and in such lobbying operations as Werner Fornos, of the tax-exempt Population Institute, has been launching. And for the information of all interested parties, I ask that the following documentation be printed in the RECORD:

First. "Forced Abortions in China," a compilation of press reports and academic studies about coercion in the People's Republic of China from National Right to Life Factsheet revised March 13, 1985.

Second. "China Steps Up Sterilization as Population Control," from the newsletter of the Population Reference Bureau of May/June 1983.

Third. "Paying for Abortions," from the Wall Street Journal of April 9, 1984.

Fourth. "One Couple, One Child," from the Washington Post of January 10, 1985.

Fifth. "Peking's Family Policy" by Nick Eberstadt, fellow at Harvard University's Center for Population Studies, from the New York Times of April 22, 1984.

Sixth. "More from the Beautiful People at AID," from the Washington Times of March 23, 1985.

Seventh. "Institute President Honored in China," concerning Mr. Fornos' "honorary professorship" at Sichuan University, from Popline of December 1984.

Eighth. "Pro-life, AID Forces Clash on U.S. Aid to China's Population Control," an article from the Washington Times of March 18, 1985.

Ninth. "Population Prizes from U.N. Assailed," from the New York Times of July 24, 1983.

The material follows:

FORCED ABORTIONS IN CHINA

(Revised Mar. 13, 1985)

During the past several years, numerous credible sources have reported that forced abortions are an integral part of the population-control program of the People's Republic of China (PRC). Many of the same sources also have reported that Peking's "one child" campaign has resulted in widespread infanticide against infant girls.

There is no direct U.S. aid to China. However, the Agency for International Development (AID) provides over 30 percent of the total budget of the United Nations Fund for Population Activities (UNFPA). According to AID, the U.S. contributions are "co-mingled with those of other international donors for project use."

Over the past several years, UNFPA has built up the PRC's "one child" effort with a $50 million grant, and another $50 million grant is now set to begin. According to UNFPA, this money supports various components of the population-control program, including "assistance to strengthen the State [Family] Planning Commission," which directs the entire campaign.

UNFPA officials have vigorously defended the Chinese program, and even presented the Chinese population minister with a special award in 1983 for "the most outstanding contribution to the awareness of population questions".

Congress has earmarked $46 million for UNFPA in 1985. AID is withholding payment of the first installment of this allocation while it investigates UNFPA's relationship to human rights abuses such as those reported below.

(The following excerpts are taken from a series which appeared in The Washington Post on January 6-8, 1985. The series was written by Post correspondent Michael Weisskopf. Mr. Weisskopf had just completed a four-year assignment in China which spanned the implementation the "one-child" policy.)

China, to be sure, is curbing its population growth, but its success is rooted in widespread coercion, wanton abortion and intrusion by the state into the most intimate of human affairs.

The one-child policy was launched in 1979 as the centerpiece of an ambitious plan to contain China's population at 1.2 billion by the year 2000. Loosely enforced at first, the policy was tightened in 1982 after population growth rates began to climb.

What emerges from more than 200 interviews spaced over three years with officials, doctors, peasants and workers in almost two-thirds of China's 29 local jurisdictions is the story of an all-out government siege against ancient family traditions and the reproductive habits of a billion people.

The story offers a glimpse of China usually hidden from foreigners but painfully familiar to most Chinese—a world of government-sanctioned infanticide, of strongarm sterilizations and of abortions performed at a rate as high as 800,000 a year in a single province.

[In Guangdong Province] Any mother who becomes pregnant again without receiving official authorization after having one child is required to have an abortion, and

the incidence of such operations is stunning—53 million from 1979 to 1984, according to the Ministry of Public Health.

Nor is the timing of abortion usually a factor. Many are performed in the last trimester of pregnancy—100,000 in Guangdong last year, or 20 percent of the province's total abortions—and some as late as the ninth month. Officials say it often takes that long to get reluctant women to clinics.

Doctors normally terminate late-term pregnancies by injecting an herbal drug into the womb, killing the fetus and inducing labor—a kind of induced stillbirth. The dead fetus is usually expelled in 24 hours.

In the inner Mongolian capital of Hohhot, however, hospital doctors practice what amounts to infanticide by a different name, according to a Hohhot surgeon, who would not allow his name to be used for fear of reprisal. After inducing labor, he revealed, doctors routinely smash the baby's skull with forceps as it emerges from the womb.

In some cases, he added, newborns are killed by injecting formaldehyde into the soft spot of the head. "If you kill the baby while it's still partly in the womb, it's considered an abortion," explained the 33-year old surgeon. A doctor who ignores the regulation risks losing his job, he said, although no one objects. He estimated that hundreds of babies die this way in his hospital every year.

"You get used to it," said the surgeon, explaining how doctors react. Sitting in the corner of a coffee shop during the interview, he lifted a cup and said, "It's like drinking coffee. At first, it's bitter. But after a while you don't notice the taste. I've done it myself."

A medical student in Canton who worked in a hospital gynecology ward in 1982 told foreign visitors that pregnant women were required to present birth authorization cards before admission to the delivery room. He said doctors who were under orders to abort all unauthorized pregnancies often strangled or smothered newborns.

Sometimes, officials use collective coercion in operations like that in Dongguan, where thousands of pregnant women were picked up in trucks and Jeeps, taken to commune headquarters for lectures, then driven to abortion clinics, some reportedly under police escort, in what was later described by local eyewitnesses as a "slaughter movement."

Party chief Huang Zhigao of Double Bridge Village in the southwestern province of Sichuan acknowledged the practice of "helping" pregnant women to the clinic if they refuse to go on their own.

Many pregnant women hide in the mountains or flee to a relative's village to escape official harassment, practicing what is colloquially known as "childbirth on the run." So many runaways reached the remote, northwestern province of Gansu that a regulation was passed directing local officials to "terminate within a limited time all unplanned pregnancies of women not in their home residential area," according to an internal document.

Female infanticide is the most extreme form of resistance to the one-child controls, a desperate act by parents squeezed between official restrictions and the traditional preference for male offspring. Many Chinese think that if they can have only one child, better to give away, abandon, or even murder a baby girl and try again for a boy.

The authorities have refused requests for gender breakdowns of births in recent years. But Chinese population experts in Peking have revealed privately to western demographers that the national sex ratio of newborns rose to 1.09 in 1982 and 1.11 in 1983.

Application of those unofficial ratios to total births listed for those years indicates a loss of almost 300,000 baby girls in 1982 and 345,000 in 1983.

The Post summarized and commented on the Weisskopf series in an editorial published on January 10, 1985 [attached], which read in part:

[W]hile some of the means [employed by the Chinese government] are what you could call extremely rigorous—education, propaganda, economic leverage, social pressure—other methods fall into the realm of the openly coercive and brutal: mandatory abortion, induced stillbirth, the strangling of the newborn. That the state actively sanctions and sponsors these means underlines the dilemma. In the name of modernization, the state is seeing to the death of live human beings.

Similar reports have come from many other sources, of which we offer the following sampling:

In a further escalation of its population control program, China's government may have begun to require sterilization of couples with two or more children. A directive to this effect from the central government appears to have gone out to lower officials, probably during December 1982. The matter was mentioned in a central-government circular on propaganda published in February 1983. "Permanent birth control measures [i.e., sterilization] are to be carried out among those who already have two children. Remedial measures [i.e., abortion] are to be taken as quickly as possible among those who are pregnant without quota [permission].

UN officials contacted about the policy expressed grave misgivings about any forced sterilization policy to a Washington Post reporter, adding that the international organization could not assist a family planning program with an official coercive policy—the UN currently gives China about $50 million annually [sic] in population assistance. However, the UN has an "out" because important Chinese family planning pronouncements often never attain "official" status. So government spokespersons can say (as one told the Post) that sterilization is merely being "recommended" to couples with two or more children, and that coercion or force is not a part of the policy.—"China Steps Up Sterilization as Population Control," in May/June 1983 issue of Intercom, the newsletter of the Population Reference Bureau.

Each province sets guidelines for the desired number of children to be born during the year. These guidelines are often translated into rigid quotas at the unit level [such as factories and communes]. Women must apply for permission from their unit to have a child. Although contrary to announced central government policy, many of those becoming pregnant without permission are reportedly coerced into having abortions, even in the later stages of pregnancy.—U.S. State Department's "Country Reports on Human Rights Practices for 1984," February 1985, p. 737.

Mrs Tien [a "street committee" member] was frank about how her street committee administered the program. "We assign a person to keep track of each woman's menstrual cycle. If someone misses her period and isn't scheduled to have a baby, we tell her to have an abortion. There isn't room for liberalism on such an issue."—From "China': Alive in the Bitter Sea," by Fox Butterfield (Times Books, 1982). Butterfield was chief of the New York Times's Peking bureau from 1979-81.

In Dongguan County in eastern Guangdong, a reporter for Hong Kong's leftwing newspaper Zheng Ming Ribao, saw pregnant women herded into vehicles and taken to hospitals for abortions. "The vehicles were filled with wailing noises, and the scenes were really bitterly distressing," he reported. One woman already nine months pregnant arrived at the hospital, he wrote, and immediately received an injection. "Three hours later the baby was born—but then it stopped breathing," the reporter said. Some pregnant women reportedly were handcuffed, tied with ropes or placed in pig's baskets. . . .

Though doctors aren't supposed to perform abortions past the eighth month of pregnancy, they do, a Chinese source reports. "Every day hundreds of fetuses arrived at the morgue," he says. A woman with an unauthorized pregnancy is likely to receive an injection from hospital doctors before labor, resulting in a still born child or a baby so ill that it dies in a few days, the source adds.—"Abortion and Birth Control in Canton, China," by Michele Vink, correspondent for the Wall Street Journal, Nov. 30, 1981.

Two $12,500 awards given by a United Nations population agency to Prime Minister Indira Ganhi of India and to China's family planning chief [Qian Xinzhong] have been denounced as a travesty by a United States economist whom the agency enlisted as an advisor. The economist, Theodore W. Shultz of Chicago, said that the United Nations Fund for Population Activities had ignored the recommendations of private consultants and rewarded two nations that have used brutal methods to curb population growth. Mr. Shultz, a recipient of the Nobel Memorial Prize in Economic Science, told the agency to remove his name from any material involving the prize.—"Population Prizes From U.N. Assailed," by Bernard D. Nossiter, the New York Times, July 24, 1983.

So, increasingly, the population program turned to coercion. . . . In some areas, women with "unauthorized" pregnancies were rounded up and ordered to submit to injections of abortifacients. Official edicts warned that those "who attempt to defeat the fertility plan" would be considered "enemies of the people"—a threat that any adult who lived through the Cultural Revolution understood only too well. Families that defied the "one child norm" were faced with monthly fines that often meant semi-starvation.

Almost a quarter of the United Nations Fund for Population Activities' $50 million bequest to Chinese population programs is American money. Failure to act against these grave and obvious human rights abuses would expose America to some very serious charges—and those charges would be right.—"Peking's Family Policy," by Nick Eberstadt, a visiting fellow at Harvard University's Center for Population Studies, in the New York Times, April 22, 1984.

Last July [1981] Zhengming, a Hong Kong publication sympathetic to the Peking Government, gave what it said were details of a "ruthless struggle" under way in Guangdong's Huiyang prefecture to cut the number of expected babies to 47,000. A reporter for Zhengming who visited eastern Guangdong reported how vigilantes abducted pregnant women on the streets and hauled them off, sometimes handcuffed or

trussed, to abortion clinics. Other women, he said, were locked in detention cells or hauled before mass rallies and harangued into consenting to abortions. The reporter referred to "aborted babies who were actually crying when they were born." Unofficial estimates indicate that abortions exceeded the number of live births. A Canadian physician told a foreigner of abortions being performed on the delivery table.—"Chinese Region Showing Resistance to National Goals for Birth Control," by Christopher S. Wren, in the New York Times, May 16, 1982.

From Sandhead Brigade [village] there were eighteen women, all from five to nine months pregnant, and many red-eyed from lack of sleep and crying. They sat listlessly on short plank benches arranged in a semicircle about the front of the room, where He Kaifeng [a top cadre and party member] explained the purpose of the meeting in no uncertain terms. "You are here because you have yet to 'think clear' about birth control, and you will remain here until you do.". . .

Looking coldly around the room, he said slowly and deliberately, "None of you has any choice in this matter. . . ." Then, visually calculating how far along the women in the room were, he went on to add, "The two of you who are eight or nine months pregnant will have a caesarian [abortion]; the rest of you will have a shot which will cause you to abort." Several of the women were crying by this point.—From "Broken Earth: The Rural Chinese," by Steven W. Mosher (Free Press/Macmillan, 1983), pp. 225-226.

In the meantime, a system of rewards and punishments is being brought to bear on the rural bureaucracy. Not too long ago, a prefecture in Kwangtung Province counted about 100,000 pregnant women who would be having their second or third babies. Then, during May and June, hundreds of local leaders began hunting around the countryside for pregnant women—and the figure suddenly dropped to 47,000. Even women nine months pregnant were forced to undergo abortions. The local bureaucrats apparently are determined to get rewards, not reprimands or punishment, from the Peking family-planning office.—"China's Policy on Births," by John Erik, engaged in research at Peking University, in the New York Times, Jan. 3, 1982.

There was a pregnant woman in Wazan factory. We persuaded her to have an abortion. We took her to the hospital. That night she changed her mind and escaped. The doctor didn't notice, and she escaped. She ran off to Shanghai. The Shanghai people helped us find her and we brought her back to the hospital for the abortion. We were all very busy finding her. Such things happen.—"Madame Chen," the official in change of Changzhou's "one-child" program, interviewed on 1984 PBS Nova documentary "China's Only Child."

The new birth control campaign had just begun and commune officials wanted to make an example of her. Finally, under intense pressure, the couple agreed to let the doctors induce early birth at seven months and let the baby die if it was a girl. But when a commune official standing by in the delivery room saw it was a boy, he reneged and insisted it not be saved. The husband and mother-in-law were on their knees at the delivery room door, pleading for reconsideration, but their child died because the nurses were not allowed to put it in an incubator. Some days later the mother-in-law saw the four-year-old old son of one of the officials playing by a lake. In a rage, she threw the child into the water, then jumped in herself, and both drowned. Compulsory sterilizations and abortions have become common.—From "One Billion: A China Chronicle," by Jay and Linda Mathews (Random House, 1983).

Not only are forced abortions being performed up to the time of birth, there are even cases of officially sanctioned infanticide. In one incident shortly after I left Guangdong Province, a young woman pregnant for the first time gave birth to twin boys. What should have been an occasion for rejoicing quickly turned tragic as the cadres present asked her which one she wanted. Both of them, she replied, but to no avail. One of the babies—she could not and would not choose which—was taken from her and put to death.—"Why Are Baby Girls Being Killed In China?," by Steven W. Mosher, in the Wall Street Journal, July 25, 1983.

[W]e also find it hard to believe that some of that money [which UNFPA gives to the Chinese population program] isn't going to pay for forced abortions. And even if the money goes only to Peking's birth-control bureaucracy, it still supports a policy that requires the chilling coercion that Mr. Mosher describes [see above]. In totalitarian China, policy flows from the state down, and political control is rigid enough to make sure it's enforced. China may believe that only coercion will work, but American taxpayers shouldn't have to subsidize it.—"Paying for Abortions." editorial, the Wall Street Journal, April 9, 1984.

[From Intercom, May/June 1983]

CHINA STEPS UP STERILIZATION AS POPULATION CONTROL

In a further escalation of its population control program, China's government may have begun to require sterilization of couples with two or more children.

A directive to this effect from the central government appears to have gone out to lower officials, probably during December 1982. The matter was mentioned in a central-government circular on propaganda published in February 1983; "Permanent birth control measures (i.e., sterilization) are to be carried out among those who already have two children. Remedial measures (ie., abortion) are to be taken as quickly as possible among those who are pregnant without quota (permission)."

Subsequently, provincial governments have published sterilization decrees, for example, the Hebei Daily's April pronouncement that "sterilizations will be carried out in 1983 in the province, and that the task will be basically completed during the next year for all couples of childbearing age who should undergo sterilization (i.e., couples who have had two or more children)."

UN officials contacted about the policy expressed grave misgivings about any forced sterilization policy to a Washington Post reporter, adding that the international organization could not assist a family planning program with an official coercive policy—the UN currently gives China about $50 million annually in population assistance. However, the UN has an "out" because important Chinese family planning pronouncements often never attain "official" status. So government spokespersons can say (as one told the Post) that sterilizations merely being "recommended" to couples with two or more children, and that coercion or force is not a part of the policy. However, he said that disincentives included fines or other economic penalties.

The new policy would seem to indicate that China's present one-child policy, inaugurated in 1979 and already the strictest population control policy of any nation in the world, is meeting resistance from the Chinese people. And that China's government leaders are feeling frustrated in their attempts to check their country's population growth and have seized on sterilization as the "easiest" form of fertility control.

To succeed in limiting China's population to "only" 1.2 billion by 2000 essentially requires precipitous declines in fertility. While rigorous family planning campaigns can persuade couples to begin using one contraceptive method or other, there is no way of ensuring that a couple will continue to use family planning, especially if they are ambivalent about the program. And in China, there are cultural and economic reasons to have more than one child (See INTERCOM. August 1981 and January/February 1983). With a contraceptive program, an individual must be continually persuaded, one way or other, but after an individual has been persuaded to undergo a sterilization operation, further persuasion is, needless to say, unnecessary.

The central government is serious. The actual implementation of this policy, however, is in the hands of officials lower down. And the real question is, will the bureaucracy follow through on this policy, which is bound to be controversial among the people affected by it?

[From the Wall Street Journal, Apr. 9, 1984]

PAYING FOR ABORTIONS

By now, the evidence about coercive birth control in China is overwhelming. Fox Butterfield, in his book "China: Alive in the Bitter Sea," described how neighborhood cadres monitor women's menstrual cycles. CBS's "60 Minutes" recently reported on involuntary abortions. And China scholar Steven Mosher, in his book "Broken Earth," described what he saw in one rural village:

"[The pregnant women] sat listlessly on short plank benches in a semicircle . . . where He Kaifeng [a top cadre and Communist Party member] explained the purpose of the meeting in no uncertain terms. 'You are here because you have yet to "think clear" about birth control, and you will remain here until you do. . . . None of you has any choice in this matter. . . .' Then, visually calculating how far along the women in the room were, he went on to add, 'The two of you who are eight or nine months pregnant will have a Caesarean; the rest of you will have a shot which will cause you to abort.' "

What is less well known, however, is that the U.S. government supports this "family planning." It does so by contributing to the United Nations Fund for Population Activities ($38 million this fiscal year), which in turn is giving $50 million over four years to China's birth-control program. The contribution is probably breaking U.S. law, which prohibits U.S. aid for forced sterilization or abortions.

The UNFPA naturally resists this conclusion. "This organization has never funded an abortion of any kind," says Rafael M. Salas, the agency's executive director. He says the UNFPA's agreement with China prohibits coercion. And while abuses may occur, Mr. Salas says, the UNFPA has no evidence that this has happened in China.

We respect Mr. Salas's protests, but we also find it hard to believe that some of that

money isn't going to pay for forced abortions. And even if the money goes only to Peking's birth-control bureaucracy, it still supports a policy that requires the chilling coercion that Mr. Mosher describes. In totalitarian China, policy flows from the state down, and political control is rigid enough to make sure it's enforced. Nor can the Chinese toss out the government if they don't like its policy, as the Indians did a few years back when they opposed Indira Gandhi's forced sterilizations.

The U.S. Agency for International Development is concerned enough to have begun investigating UNFPA's funding in China. Jay F. Morris, deputy administrator of AID, says "there's no denying what the Chinese are doing" with birth control. But he says that so far, AID hasn't any evidence that its money is subsidizing coercion. As for concern about indirectly subsidizing a policy, Mr. Morris says: "That's a much larger issue that we really don't deal with."

We realize that China's huge population presents a unique birth-control problem, but "poison shots" and "struggle sessions" aren't the solution. Countries with far higher population densities—such as Taiwan and South Korea—have prospered without such measures. They've recognized that the best birth-control policy is an economic policy that produces rapid growth. China may believe that only coercion will work, but American taxpayers shouldn't have to subsidize it.

[From the Washington Post, Jan. 10, 1985]

"ONE COUPLE, ONE CHILD"

The China series by Michael Weisskopf, the Post's correspondent in Peking for the last four years, illuminates the scope and type of measures the authorities there employ to limit their country's population. This is, for Westerners, a difficult subject. Many Americans, we would surmise, accept that the world's most populous nation must do something to cap and eventually trim the growth of a population already estimated at over 1 billion. But while some of the means are what you could call extremely rigorous—education, propaganda, economic leverage, social pressure—other methods fall into the realm of the openly coercive and brutal; mandatory abortion, induced stillbirth, the strangling of the newborn. That the state actively sanctions and sponsors these means underlines the dilemma.

Having favored first three children and then two children per couple earlier in the 1970s, an alarmed government went to "one couple, one child" in 1979. The difference between two and one, it calculated, was the difference between reaching 1.54 billion people in the year 2052 and peaking at 1.05 billion in 2004.

Many Chinese, especially tradition-oriented peasants, have gone to strenuous lengths of resistance and evasion to have more than one child. Even among those willing to stop at one, however, tradition and individual preference have led many to want a son. What happens when the one child officially permitted turns out to be a girl? The saddest fact of all those recounted by Mr. Weisskopf is the short count of healthy baby girls. It is measured in the hundreds of thousands each year. The explanation for it is the practice of infanticide, the horrible response of desperate parents to the official edict. The government decries it feebly.

It is sometimes suggested, in mitigation of reports like this one, that China can ill afford the ethical standards of more affluent societies and that its policy is not without its own considered and defensible moral basis: better that some suffer now so that a greater number will not suffer later. But it is not mere sentimentalism that produces a response of outrage to what is going on in China. A totalitarian state is using its immense resources to intervene crudely, often violently, in the most delicate personal choices of millions of human beings. In the name of modernization, the state is seeing to the death of live human beings. It is the kind of policy that puts a deep moral divide between the United States and the People's Republic, notwithstanding the cooperation they seek on more routine affairs.

[From the New York Times, Apr. 22, 1984]

PEKING'S FAMILY POLICY

(By Nick Eberstadt)

CAMBRIDGE, MA.—In 1982, President Reagan said, "Our goals are plain. Where families are threatened, we seek to lessen those threats." Next week, we will see these words put to the test. When the President lands in Peking, he will be conferring with a Government in the midst of the most systematic and relentless campaign against the family that the modern world has yet seen.

The campaign is officially known as the "population planning" program. That may sound like "family planning"—an unobjectionable idea accepted by most parents in both rich and poor nations. In reality, it is something radically different. It has already cost the lives of hundreds of thousands of women and children. It threatens to cast milions of families into state-enforced destitution and may deprive millions more of the opportunity to escape poverty.

In 1978, China's leaders decided that the nation's population was growing too rapidly for the state to meet the targets of its modernization drive. The Chinese planners' solution was the so-called "one child norm" for all families in the nation. At first, the program used exhortation and modest economic incentives, but many parents remained unmoved by these measures. (There was logic in the reluctance, especially in the countryside, where the household labor force is the key to economic security.) So, increasingly, the population program turned to coercion.

As early as 1980, birth quotas were strictly rationed among "eligible" mothers. In some areas, women with "unauthorized" pregnancies were rounded up and ordered to submit to injections of abortifacients. Official edicts warned that those "who attempt to defeat the fertility plan" would be considered "enemies of the people"—a threat that any adult who lived through the Cultural Revolution understood only too well. Families that defied the "one child norm" were faced with monthly fines that often meant semi-starvation.

Western family-planning programs, predicated on free choice, are supposed to improve the health of mothers and children. China's involuntary population control program has had the opposite effect. In a poor rural society, where children are expected to contribute to the income of the household, sons are typically valued more highly than daughters. By forcing China's families to settle for a single child, China's population policies have made this preference a deadly matter.

Results from the 1982 China census reveal an unexplained deficit of at least 200,000 baby girls for that year alone. By 1983, the Chinese press was noting with alarm that the ancient practice of infanticide had been revived in "some" rural areas: Little girls, they said, were being abandoned or killed outright by misguided parents. But the current population campaign seems to be threatening the lives of adults as well.

Analysts at the United States Census Bureau have concluded that the life expectancy of Chinese women may have dropped by several years since the population control campaign began. Infanticide alone does not appear to account for this striking reversal: Death rates appear to be up for women in the child-bearing ages. Census Bureau analysts have suggested a possible reason: Mothers seeking to circumvent the one child quota must now avoid all health care facilities, and are thus bereft of all medical assistance.

Chinese officials insist that "forceful" population measures are inevitable simply because of the difficulties in feeding and supporting their nation's enormous population. In reality, however, the principal force depressing living standards in China over the past generation has been bad Government policy, not population growth.

Between the early 1950's and the late 1970's, overall agricultural efficiency in China fell by 10 to 20 percent, while it rose measurably in virtually every non-Communist nation in Asia. Over those same years, overall industrial efficiency in China dropped even further—and rose even more dramatically in the rest of non-Communist Asia. And rather than liberalize or overhaul the system so that it might feed the people better, China's leaders appear content to cut back on the number of mouths in their country.

When the President arrives in China, he will have an opportunity to urge China's highest officials to desist in this terrible campaign against their own people. He also has an immediate avenue for backing his words with action: Almost a quarter of the United Nations Fund for Population Activities' $50 million bequest to Chinese population programs is American money. Failure to act against these grave and obvious human rights abuses would expose America to some very serious charges—and those charges would be right.

[From the Washington Times, Mar. 23, 1985]

MORE FROM THE BEAUTIFUL PEOPLE AT AID

The Agency for International Development's efforts to soothe pro-lifers as to the nature of its population programs has hit a bumpy road. According to reports, top AID officials have been helping the United Nations Fund for Population Activities whitewash China's forced abortion policies.

The "population community" appears to assign to the word "voluntary" a sort of talismanic value, such that the mere utterance of it in connection with a policy is enough to silence critics. Never mind that the policy is about as voluntary as a transfer of $5 on a New York subway.

The claims of voluntarism inserted in UNFPA's report on China (thanks to the intervention of AID's Kathy Piepmeyer) are belied by Steven Mosher, whose reports on the horrors of China's population control program touched off a controversy at Stanford some time back.

Not to worry, says AID. It will appoint a "blue-ribbon" commission to go to China and find out What's Really Happening. It will even put pro-lifers on it.

Even if the commission membership is entirely pro-life, it easily may be misled. Mr. Mosher, at home with the Chinese language

and culture, was a researcher who earned the grudging confidence of village authorities only after much time and effort. For him, village abortionists lowered their guard. Can a team of investigators from the U.S. government expect the same cooperation? It is unlikely.

The Kemp amendment to the current foreign aid appropriation prohibits U.S. aid to coercive population programs, but insiders say that AID now plans to define "program" as an actual coercive practice. Thus, taxpayers would continue to fund coercive population control as long as no American funds were directly traceable to the actual hauling away of kicking and screaming women.

AID is fulfilling neither the president's policy nor the intent of Congress. The administration should crack down.

INSTITUTE PRESIDENT HONORED IN CHINA

Sichuan University conferred upon Werner Fornos, president of the Population Institute, an honorary professorship in international relations in ceremonies held recently in Shengdu, China.

Fornos, visiting the People's Republic of China as a guest of that country's State Council on Family Planning, travelled more than 5,000 miles for a first-hand look at Chinese population and development programs.

Sichuan University's Vice President Peng Shegqi presented the award on behalf of the President's Council of the university. The citation emphasizes Fornos's "outstanding contribution in promoting global population programs and enhancing the friendship between the peoples of the United States and China."

Also speaking at the presentation ceremony was Hu Xiafong, director of the higher education department of Sichuan Province. He told more than 200 assembled guests the honor recognizes that "Mr. Fornos and the Population Institution, Washington, D.C., have been in the forefront in population information, education and communication program work . . . It represents the spirit of academic excellence which is the tradition of Sichuan University."

In his acceptance speech, Fornos pledged "a redoubling" of the Population Institute's efforts "so that we will truly be partners in improving the quality of life for all the world's people."

Fornos's visit to China took him from Beijing to Shaanxi, Sichuam, Zhejian and Jiangsu provinces as well as to Shanghai.

Interviewed upon his return to the United States, Fornos, who had visited China on two previous occasions, expressed his admiration for the "unequalled economic activity evidenced by the Chinese people as they work to improve themselves in every strata of their lives.

"Wherever we went, people were building, working in factories and fields with a vigor and commitment hardly matched any place today."

Fornos said that people "from all walks of life seemed to understand the need for slowing down the population growth rate in order for economic and social development to catch up."

He said he was most impressed by Sichuan Province, where "men have taken appropriate responsibility for sharing in family planning."

Fornos noted that "commitment to family planning was high" throughout mainland China "but when people choose voluntary sterilization as the method to end their fertility, it is virtually always the woman who undergoes the surgery.

"But in Sichuan the situation was reversed. In that province, 49.42 percent of the people control their fertility through sterilization and 37.94 percent are men."

Before leaving China, Fornos met in the Great Hall of the People with Huang Hue, vice chairman of the Standing Committee of the People's Republic of China.

Others present at the meeting included Hu Ke Shi, also a member of the Standing Committee; Minister Wang Wei of the State Council on Family Planning; Dr. Qian XinZhong, United Nations Population Award laureate; and Madame Hue, Vice Chair of the Asian Parliamentary Group on Population and Development.

[From the Washington Times, Mar. 18, 1985]

PRO-LIFE, AID FORCES CLASH ON U.S. AID TO CHINA'S POPULATION CONTROL

(By George Archibald)

Suspicion between pro-life and population control forces has deepened following the discovery that mid-level officials of the Agency for International Development and the State Department influenced the preparation of a U.N. paper that defended China's population control policies.

The paper emphasized the "voluntary" nature of China's one-child-per-family government policy and claimed that U.N. funds were used only for non-coercive projects such as population tracking, research and education of the populace.

AID requested the document to help it review China projects that are paid for by the U.N. Fund for Population Activities. The paper was reportedly drafted and then revised, with guidance from several U.S. government population planners, led by AID institutional policy chief Katherine Piepmeier.

Congressional anti-abortion leaders suspect the planners of wanting to help UNFPA get around the Reagan administration's strict new anti-abortion, anti-coercion requirements governing international family planning assistance.

The U.S. allotment of $46 million to UNFPA this year has been withheld by the administration until the agency could prove that none of its funds directly or indirectly supported abortion or coercive family planning programs.

More than one-fourth of UNFPA's funding comes from the United States, which contributed more than $105 million to the world agency between 1982 and 1984.

Over the past four years, UNFPA contributed $50 million to help implement China's program, which was reported by human rights organizations and western journalists to involve draconian coercion. Another $50 million UNFPA contribution to China is planned during the next four years.

In 1983, UNFPA awarded a $12,500 prize to Qian Xinzhong, China's family planning minister, who devised an elaborate system of punishment for couples having two or more children.

Mr. Qian was commended for the "most outstanding contribution to the awareness of population questions." Under his system, Chinese women who refuse to abort a second child can lose 20 percent of their pay and government housing and are subjected to official harassment and social ostracism.

Members of the Congressional Pro-Life Caucus—principally Sens. Jesse Helms, R-N.C., Gordon Humphrey, R-N.H., and Reps. Jack F. Kemp, R-N.Y., and Christopher H. Smith, R-N.J.—are reportedly monitoring AID's review of UNFPA-supported programs more closely since they obtained copies of the China briefing paper.

They are said to be unsatisfied with an AID plan to allow continued U.S. funding of UNFPA if the agency establishes a "segregated account" to ensure that U.S. funds do not help pay for government-sanctioned abortions or coercive population control methods in countries receiving UNFPA assistance.

UNFPA and some AID and State Department officials have claimed that no U.S. funds given to the world agency are used in China. But AID has acknowledged to Congress that U.S. funds are presently commingled with those of other UNFPA donors for worldwide population control projects.

Officially limiting the use of U.S. funds for acceptable projects would free other UNFPA funds for unacceptable ones, aides to pro-life lawmakers said, and for this reason would be no different from direct U.S. support for abortions and coercive population control methods in China and elsewhere.

These aides pointed out that AID Administrator M. Peter McPherson admitted during a recent House hearing that contributions to UNFPA are "fungible" or interchangeable.

In meetings and in correspondence with AID Assistant Administrator Richard A. Derham, the lawmakers and their aides have challenged the credibility of the UNFPA briefing document, which relies principally on a September 1980 letter from the Central Committee of China's Communist Party for its assertion that population control throughout the country is based "on the principle of voluntary acceptance."

The U.N. paper is dishonest, they concluded, since the Peking government sent a directive to leaders of China's 29 political subdivisions in February 1983, requiring sterilization of couples with two or more children.

"Permanent birth control methods [sterilization] are to be carried out among those who already have two children," the central government directive said.

"Remedial measures [abortion] are to be taken as quickly as possible among those who are pregnant without quota [permission]," the directive added.

Tens of millions of forced abortions and sterilizations of women and men have occurred since the Chinese program started in 1979, according to the State Department's latest human rights report. Wide-spread government-sanctioned infanticide has been prevalent in some provinces, Western journalists stationed in China have reported.

When Rep. Smith questioned AID Administrator McPherson at a Jan. 26 House Foreign Affairs Committee meeting, he cited U.S. news accounts of "abortion posses" that scoured the countryside for pregnant women—many in their third trimester of pregnancy—and herded them by the truckload in handcuffs to rural clinics for forced abortions.

"Yet, the Chinese government continued to insist as recently as this month, via the New China News Service, that there are no forced abortions in China and that the program is run on a voluntary basis," Rep. Smith said. "Either a lot of people, seasoned journalists and others, are fabricating these accounts or the Chinese government is not telling us the truth."

[From the New York Times, July 24, 1983]

POPULATION PRIZES FROM U.N. ASSAILED

(By Bernard D. Nossiter)

UNITED NATIONS, N.Y., July 23.—Two $12,500 awards given by a United Nations population agency to Prime Minister Indira Gandhi of India and to China's family planning chief have been denounced as a travesty by a United States economist whom the agency enlisted as an adviser.

The economist, Theodore W. Shultz of Chicago, said that the United Nations Fund for Population Activities had ignored the recommendations of private consultants and rewarded two nations that have used brutal methods to curb population growth. Mr. Shultz, a recipient of the Nobel Memorial Prize in Economic Science, told the agency to remove his name from any material involving the prize.

In a letter to Rafael M. Salas, the Fund's executive director, Mr. Shultz said the awards would damage family planning programs.

"The harm was done by awarding the prize to a public official in China where public policy is responsible for the appallingly high rate of female infanticide and a prize to the head of state of India despite her cruel mandated sterilization," Mr. Shultz wrote.

FORCED STERILIZATION

During the emergency rule she imposed on India from 1975 to 1977, Mrs. Gandhi's Government was accused of forcing men in villages to undergo sterilization. China, whose family planning minister, Qian Xinzhong, received the other award, uses a system of punishment for couples who have two or more children. Women carrying a second child who refuse an abortion can lose 20 percent of their pay.

Mr. Shultz, in a telephone interview, said this policy had caused "a large increase in female infanticide."

Mrs. Gandhi has said the charges against her were exaggerated, but they are among the reasons given for her defeat in elections in 1977. The Chinese Government has said female infanticide stems from a "feudal mentality" and that those who practice it would be punished.

Mr. Schultz said he was one of five advisers chosen by the United Nations Fund for Population Activities to help a committee of diplomats who chose the winners of the prize. He appeared at a meeting in New York last March after studying the files of about 80 nominees, he said. The diplomats, he said, announced they would only consider heads of state or high officials for the prize, which is given for "the most outstanding contribution to the awareness of population questions."

"None of the qualified nominees is a head of state or high public official," Mr. Schultz said in the interview. "The decision of the committee was totally self-serving. As state-appointed members, they decided to court the favor of those to whom they are beholden regardless of the excellent qualifications of other nominees."

U.N. DEFENDS AWARDS

Mr. Salas, the director of the United Nations Fund, defended the awards in a telephone conversation from Tokyo. He said female infanticide is outlawed in China and its "official policy is family planning." He said Mr. Schultz's charge that the harshness of this program encourages killing of female children "is an inference."

Mr. Salas acknowledged there "were such accusations" of forced sterilization in India under Mrs. Gandhi in the past, but added, "There is no such complaint in India today." Mr. Salas said his committee had limited its consideration for this year's awards to "public statesmen," but he denied the judges had engaged in self-promotion.

The chairman of the committee, Anwarul Karim Chowdhury of Bangladesh, declined to make any comment.

The other diplomats who served as judges came from Australia, Mexico, Yugoslavia, Japan, Egypt, Burundi, Colombia, China and Tunisia.●

CONGRESSIONAL CALL TO CONSCIENCE

● Mr. SIMON. Mr. President, I am pleased to join with my colleagues in the Congressional Call to Conscience. The situation for Jews living in the Soviet Union is worsening. Each day, I hear gruesome tales of brutalization, intolerance and blatant anti-Semitism. The Chernenko government not only sanctioned this activity, it perpetrated it.

With the passing of Mr. Chernenko, the Soviet Government has an opportunity to demonstrate its concern for human rights by reversing past policy. Recently, 38 of my distinguished colleagues in the Senate and 123 of the distinguished Members of the other body sent a letter to the new leader of the Soviet Union, Mr. Mikhail Gorbachev. The letter urged the new Secretary General to dramatically change past policy by granting permission to those who wish to emigrate. Additionally, the letter stressed the importance of peaceful and improved relations between our countries. Marked positive change in this area would demonstrate the Soviet Union's sincere desire for improved relations.

One of the refusenik cases that demands action is that of Col. Lev Ovsischer. Colonel Ovsischer served his Government during the Second World War by commanding a squadron of fighter bombers which was recognized by the Soviet Government for outstanding bravery and performance. The colonel was wounded and subsequently received 15 medals of honor.

A citizen such as Colonel Ovsischer deserves respect. Yet, he has been stripped of his decorations, deprived of his military pension and is ridiculed by the Government which he served. The reason for this treatment is that Col. Lev Ovsischer has committed the crime of applying for his freedom. Under Soviet law, emigration is illegal.

Colonel Ovsischer applied for his and his wife's visas in 1971. In the past 14 years, he has been arrested, put on trial, harassed, threatened, and denied year after year. Denial is based upon the claim that the colonel possessed military secrets. He has not served since going into the reserves 24 years ago. The Soviet Union has persecuted and oppressed Colonel Ovsischer for too many years. I urge the new Government to release Ovsischer and the many others whose only crime is wanting to be free. I have adopted the colonel as part of the effort to obtain his release.

We must not cease our efforts to preserve human rights. The Meiman family, Anatoly Scharansky, Simon Levin, Ida Nudel, Natasha Khassina, and the less publicized refuseniks need the free world's voices to speak for them, I will not silence my voice until every person who wishes to emigrate in granted the permission to do so.

At this Easter and Passover season, when hope and freedom are foremost in our minds, we cannot forget those who are prohibited from celebrating their freedom.●

BEVERLY DUNFORD

● Mr. HATCH. Mr President, as I was reading one of America's fine newspapers, the Provo (Utah) Daily Herald, a familiar face caught my eye—that of La Verl Christensen, editor emeritus of the paper.

Chris has been writing news that is truly fit to print for decades, and I always enjoy what he has to say, whether he is tackling the Federal budget or writing about the community in which he lives.

This time Chris has written about the latter, about Beverly Dunford, a woman from whom we all can learn about the true appreciation of the arts. We can also learn a valuable lesson about support the arts; and, for that reason, I place this article before my colleagues and ask that it be printed in the RECORD.

The article follows:

[From the Provo (Utah) Daily Herald, Mar. 27, 1985]

MRS. DUNFORD GOES 3D, 4TH MILE

(By N. La Verl)

She performs in the violin section of the Utah Valley sympathy . . . has done so since the late 50s.

But unless you're familiar with the workings of the orchestra, you may not be aware of the key role Beverly D. Dunford plays in operating the musical organization.

You see, she's been business manager most of the years of the Utah Valley Symphony's existence.

As the musical director and conductor (presently Dr. Ralph G. Laycock) looks after the quality of performance and music repertories, so the manager is responsible for the business and operational details in cooperation with the president and the board.

Beverly, wife of A. Rex Dunford, was treasurer for a time in the early years of the UVS (it was called the Centeral Utah Community Orchestra then).

She recalls that in a very early year the symphony owed $34 for music rentals. Officers wiped out the deficit by "passing the hat." The orchestra consistently has operated "in the black" since then, meanwhile expanding in size, stature and accomplishment.

Public support has grown through the years, and this has had a positive effect on

the musicians, says Beverly. "We're excited to play for capacity crowds."

Mrs. Dunford was elected the symphony's president in 1962. She must have made quite an impression—the board kept her at the helm for seven years. Then the position of business manager was created. She has held that post ever since.

Presidents, board members, conductors, concertmasters, etc., have changed from time to time, but the business manager has remained the same, providing continuity and stability in the operation.

Rex and Beverly's residence has been the "office" of the symphony and generally the meeting place of the board—as well as home for the seven Dunford children and studio for the piano lessons which "Bev" gives.

For the symphony business manager, motivation in music began in childhood.

"My parents (the E. J. Ducketts) wanted me to have the best in the arts . . . I recall how excited I was when my sister (Mrs. Ethel Killgore) would take me with her to interview visiting music celebrities when she was women's editor at the Daily Herald."

One of Mrs. Dunford's important duties is coordinating the efforts of all who work in behalf of the orchestra, including the Symphony Guild, which has been such a valuable organization in fund-raising and sponsoring social events.

By the way, you who annually sell symphony season tickets might be surprised to know that Bev sells up to 300 herself. (I think it was 287 last year.)

She builds friendships with her "clients" and takes personal interest in their lives. For example, she learned that the March 13 symphony concert helped Owen and Inez Cope Burgener of Orem to celebrate their 66th wedding anniversary.

Sometimes unexpected problems land in the business manager's lap, like when Henri Temianka, guest violinist, developed a throbbing toothache that required post-concert attention.

The solution was quite obvious in this case. Rex, who is most cooperative in his wife's symphony endeavors, joined Beverly to escort the virtuoso to the dental office of Dr. Willard V. Loveridge, the UVS president, for an emergency night-time appointment.

Bev has learned some rather interesting musician "tricks." She accommodated a woman piano soloist by bringing some wrapped newly-baked potatoes backstage to keep the artist's hands warm until performance time. She used the same performance time. She used the same device to help a harpist at a subsequent concert.

I sought the impressions of three present or past Utah Valley Symphony officers or board members about Beverly's role.

Carol Jean Gibson spoke of her leadership and "commitment for success." Helen Robinson mentioned her attention to detail—"the thousand and one little things that need to be done." Dean B. Farnsworth commented on her dedication to music and appreciation for people.

All three were impressed with her public relations efforts—the numerous letters and "thank you" notes she writes.

Helen suggests: "We ought to dedicate a concert to Beverly." An excellent idea.●

WE SHOULD REVITALIZE THE EXTENDED BENEFITS PROGRAM

(By request of Mr. CRANSTON, the following statement was ordered to be printer in the RECORD:)

● Mr. BYRD. Mr. President, the distinguished junior Senator from Michigan [Senator LEVIN], in his usual incisive way, has put his finger precisely on a major problem besetting our system of unemployment insurance. The amendment he has offered, if adopted, would take us a considerable distance toward resolving that problem.

Those who are familiar with our unemployment insurance system know that it consists of two permanent and one temporary tiers of benefits. The foundation, of course, is composed of the State basic UI programs, generally providing 26 weeks of benefits to the unemployed. Basic benefits are set by the States, and are funded from trust funds in the name of each State that derive their revenues from payroll taxes imposed by each State on the employers within its borders.

There also exists in Federal law the Extended Benefits, or EB Program. It is a Federal-State cooperative program that provides 13 additional weeks of benefits to the unemployed who exhaust basic benefits but still cannot find work. This program, whose benefits are funded on a 50-50 shared basis with the Federal Government paying half the cost and the States paying the other half, is available on a permanent, stand-by basis to any State any time its insured unemployment rate reaches certain trigger levels. This EB Program was intended by the Congress to be the second tier of benefits.

During times of severe national unemployment, the Congress has enacted a what is intended to be the third tier of benefits, on a temporary basis, the Federal Supplemental Compensation Program.

This all seems well and good, until one examines the situation a little more closely. Upon that closer examination, a rather startling revelation just jumps out: the EB Program has been so emasculated that it virtually has disappeared from the picture altogether.

The situation truly is ludicrous. At a time when national unemployment is over 7 percent—severe by all historical standards—and over one-third of the States have unemployment rates ranging from 8 percent all the way to the 16 percent in my own State of West Virginia—the EB Program, which was intended to provide benefits in States beset with moderate to severe unemployment, is providing benefits in exactly three States and Puerto Rico.

Plainly and simply, I think that is outrageous. If an unemployment rate of nearly 11½ percent—which is the rate in Alabama, Louisiana, and Mississippi—does not qualify as severe unemployment, I do not know what would. And yet, long-term jobless workers in none of these three States are eligible for extended benefits. A number of other States with unemployment rates in the 9- and 10-percent range are ineligible as well.

The amendment of the distinguished Senator from Michigan is quite simple. It partially—and only partially, I emphasize—reverses a change in the EB eligibility criteria made at President Reagan's behest in 1981. It drops by 1 percentage point the rate of insured unemployment a State must have to qualify for the EB Program.

Will this amendment break the bank? Is it a hopelessly extravagant amendment? Will all 50 States immediately qualify for extended benefits? No is the answer to all these questions.

The Congressional Budget Office has estimated that the amendment would cost $20 million for the remainder of this fiscal year and a little over $40 million for the entirety of fiscal year 1986. Based on current insured unemployment rates, five States would qualify for extended benefits in addition to the three now eligible. Whether other States would qualify at later dates, of course, would depend on the change in their insured unemployment rates.

By no means is this amendment a sufficient answer to the problems of the EB Program—and I know the Senator from Michigan does not believe it is or present it as though it is. But at least it is movement in the right direction—and it will make 13 additional weeks of benefits available to the long-term unemployed in several States.

I want to point out one additional matter that I believe may be of interest to my colleagues. This amendment does not immediately make the State of Michigan eligible for extended benefits—and there is no guarantee that Michigan will later become eligible if the change is made. My State of West Virginia already is eligible—it is one of the three currently eligible States, which should not be surprising since its unemployment rate of over 16 percent is the highest in the Nation—so the amendment will provide no immediate benefit to my State, although at a later point it may mean West Virginia will remain eligible when it otherwise might not be.

The Senator from Michigan has offered this amendment, and I am supporting this amendment, because it is a needed change in the EB Program. It will make the EB Program just slightly more responsive and beneficial—which is enough to justify our passing it. On a day when the Congress acknowledges that it is willing to accept the President's request that the FSC Program be allowed to expire, I believe this, truly, is the least we can do—but it is worth doing.

I commend the distinguished Senator from Michigan for his amendment, his thoughtfulness, and his concern for the long-term unemployed, not only in his State but throughout the

Nation. I am pleased to join him in supporting this amendment. I have added my name to the amendment as a cosponsor.●

NICARAGUA: A SAFE HAVEN FOR INTERNATIONAL TERRORISTS

● Mr. DENTON. Mr. President, the Marxist regime in Nicaragua is now established as a surf and sand club—a resort area for international terrorists from around the world. They apparently have an open arms policy for any group which has demonstrated its contempt for democracy. Mr. President, the National Forum Foundation recently heard testimony of Nicaraguan refugees, one of which was a 9-year-old girl, who barely escaped with their lives from that barbarous state. We also have irrefutable information that that government is involved with the trafficking of drugs into the United States. Now, we are shocked, but not surprised, that Nicaragua welcomes, protects, and even encourages terrroists who are fugitives from their own countries, terrorists come to support another repressive regime, terrorists in search of a meeting place with other despots.

The Nicaraguan regime not only welcomes its guests, it provides them with facilities, gives them training in terror, and extends police protection. In its hospitality, Nicaragua has become a safe haven for terrorists in this hemisphere.

Mr. President, I have two articles from the Miami Herald, provided to me by the American Israeli Public Affairs Committee, which makes direct reference to the nexus between Nicaragua and its terrorists guests. They are excellent and insightful articles, and I ask that these documents be included in the RECORD.

The articles follow:

[From the Miami Herald, Mar. 3, 1985]

WORLD'S LEFTISTS FIND A HAVEN IN NICARAGUA

(By Juan O. Tamayo)

MANAGUA, NICARAGUA.—Scores of left-wing militants from around the world—some of them wanted on terrorism charges in their home countries—have settled in revolutionary Nicaragua since the Sandinista triumph of 1979.

Some are treated by the Nicaraguan government as virtual diplomats, representing their organizations. Others are fugitive militants, granted jobs, identification papers and safe haven.

An overwhelming majority are simple political exiles or leftist sympathizers come to express solidarity with the Sandinista revolution and mingle with ideological brethren in a friendly environment.

Several Sandinista officials acknowledge, however, that a significant minority, mostly Latin Americans, are active guerrillas, plotting the overthrow of home governments. They hold strategy meetings and, sometimes, undergo military training here and in Cuba, the officials say.

The Reagan administration has used the presence of so many people with ties to left-wing groups as proof that Nicaragua has become a nest of international terrorism. U.S. officials say they will focus on these links in asking Congress to resume U.S. assistance to anti-Sandinista rebels. Anti-Sandinista leader Alfonso Robelo calls Nicaragua "the center of terrorism in Latin America today."

But several knowledgeable sources interviewed in Managua, elsewhere in Central America and in the United States argue that Nicaragua is less a terrorists' training ground than a tropical sand-and-surf watering hole for the international revolutionary set.

One leftist intellectual close to both exile circles and the Sandinista leadership called Nicaragua "a winter barracks for over-repressed guerrillas." Training of foreign terrorists, he said, "is not government policy."

Whether they are guerrillas-at-ease or terrorists-in-waiting, it is clear that Nicaragua is attracting them by the droves.

On almost any day, Argentine and Uruguayan guerrillas gather at the Yerba Buena, a beatnik-style coffee shop-bookstore in the heart of Managua. Salvadoran rebels can often be found dining at the Los Gauchos restaurant. Italians and Germans gather for small house parties.

Some are indeed fugitives: Italians from the Red Brigades and Unita Combattente Comunisti; West Germans linked to the Baader-Meinhof Gang; members of Spain's Basque ETA separatist guerrillas; leaders of Honduras' cinchonero guerrillas; militants from Peru's Shining Path; Montoneros from Argentina; Tupamaros from Uruguay; and a hodgepodge of Salvadorans, Costa Ricans, Colombians, Chileans, Guatemalans, Paraguayans and Bolivians.

On Feb. 8, the Italian government handed the Sandinistas a list of 22 left-wing Italian extremists believed to be living in Nicaragua, some already sentenced in absentia to 22 years in prison, some wanted on arrest warrants, others described only as "subversives."

"CLEAN CONSCIENCE"

The Nicaraguan Foreign Ministry has denied any knowledge of the 22 Italians. Sandinista officials also say their "conscience is clear" regarding the Reagan administration allegations they consider most damaging to their image: Reputed links to Libyan strongman Moammar Khadafy, Iranian Moslem extremists and Colombian drug traffickers.

However, one ranking Sandinista official acknowledged that "we can't deny everything. . . . It is perfectly possible that on special occasions there would be [training] courses scheduled." The official, like almost every other knowledgeable source contacted, agreed to talk about the sensitive issue on promise of anonymity.

Some Nicaraguan officials, though not many, say they regard the aid to leftists as retaliation for U.S. support for anti-Sandinista guerrillas. And they say the European leftists are fighting NATO, "the symbol of American imperialism in Europe."

Conversations with a variety of sources indicate that the Sandinistas drew a careful distinction between guerrilla movements that have armies in the field and terrorist organizations that specialize in bombings, kidnappings and assassinations. Guerrillas, especially those from El Salvador and other Central American countries, can get training and guns. The others, mostly from Europe, are kept at arm's length.

HELP WAS DENIED

But on occasion the Sandinistas have even denied help to Latin American guerrillas. Leaders of Colombia's April 19 Movement have told friends they were denied permission to use Nicaragua as a staging base for their 1981 incursion into Colombia's Caqueta province. A Peruvian writer known to be close to Shining Path guerrillas was expelled from Nicaragua last year. And Salvadoran rebels said that the Sandinistas almost refused them permission to use the Managua airport as a stopover last month for 10 crippled guerrillas traveling from Costa Rica to Europe for medical treatment.

Despite these occasional rejections, Nicaraguan government officials said, the Sandinistas have built an extensive, intricate and highly discreet system for maintaining and cultivating contacts with the foreign leftists and funneling different kinds of assistance to them.

Many Sandinista officials acknowledge that in a sense they are repaying past favors. The Palestine Liberation Organization trained at least 150 Sandinistas in Lebanon during the 1960s and 1970s, said a former Israeli intelligence agent who used to live in Nicaragua. And Argentina's Montonero guerrillas sent 20 to 30 foot soldiers to fight in the revolution, said Eden Pastora, a one-time Sandinista turned opposition guerrilla leader, in a Miami interview.

CUBA RELATIONSHIP

The Sandinistas' relationship with Cuba dates back to 1961, when Interior Minister and Comandante Tomas Borge underwent guerrilla training there. Hundreds of Sandinista rebels eventually trained in Cuba. And in 1979, Havana sent several planeloads of guns and ammunition for the final offensive against President Anastasio Somoza.

Controlling today's aid system in Nicaragua is the Sandinista Front's Directorate for International Relations, supervised by Bayardo Arce, like Borge one of the nine commandantes who have ruled Nicaragua since 1979. Arce is regarded as one of the most radical of the nine, which also include Nicaraguan President Daniel Ortega.

The directorate, all of the sources agreed, manages the Sandinista party's "fraternal" relations with everbody from official ruling parties, to loyal oppositions, to broad front coalitions, leftist alliances, guerrilla groups and bands of terrorists.

"This includes groups battered by repression because of their active opposition to their governments," said one Nicaraguan official. "Many of these are underground groups."

And many of them are still virtually underground in Nicaragua, under Sandinista orders to stay out of public view. Long-time Sandinistas said this is the same wink-and-a-nod arrangement the Cubans imposed on them when they lived in exile in Havana in the 1960s and 1970s.

The sources said at least 30 of the clandestine groups have *delegados* in Managua who are officially recognized by the directorate. A *delegado* has three duties: maintain official contacts with the Sandinista Front; organize his group's meetings, publications and other political work; establish links with other foreign groups and potential sponsors.

PLO EMBASSY

The Palestine Liberation Organization has an embassy and diplomatic staff in Managua. Colombia's April 19 Movement has a political office. The Salvadoran guerrillas

have three news and propaganda offices, as well as a clandestine radio transmitter.

Once a *delegado* has established himself, his key job is to find work for down-and-out compatriots living in Nicaragua, Sandinista officials said. The directorate will not help here, but allows the *delegado* to exploit his personal contacts within the government.

One Latin American exile living in Managua said that Montoneros in 1980 offered to use some of their savings, amassed in dozens of ransom kidnappings, to build a Managua factory that would employ some of their guerrilla countrymen. There is no indication whether the project was carried out.

Several of the *delegados* have taken advantage of the Sandinistas' hospitality to summon followers abroad to strategy-setting sessions in Managua. Peru's Shining Path held a "spiritual retreat" last year to study Von Clausewitz's book *On War* and "the theory of betrayal" according to Shakespeare's Macbeth, said one person who attended.

Sandinista officials usually stay away from such revolutionary seminars, sources said, although they almost certainly know about them. "They are notoriously careful about who they let into the country, so it must be with their knowledge," one official said.

A former official of the Nicaraguan Interior Ministry who now lives in Costa Rica said the directorate also occasionally helps fugitive guerrillas and terrorists by arranging financial aid through labor unions and other Sandinista-run organizations. It also can provide safe houses, false passports, Nicaraguan identification cards and false license plates, he said.

The Interior Ministry's General Directorate for State Security and the Sandinista army, the source added, both have officers specially assigned to help any foreign leftist that gets into trouble—a car accident or a drunken brawl.

For the first four years of the revolution, the sources said, the Sandinistas provided a steady flow of aid and assistance to their leftist friends, especially the Salvadorans.

RIPE FOR REVOLUTION

"The Sandinista triumph brought a certain revolutionary euphoria," said one Sandinista official with close ties to the exiles. "We thought all Latin America was ripe for revolution, so there was a lot of assistance going out. Those people could count on support."

But by mid-1983, the official said, and especially after the U.S. invasion of Grenada in October of that year, the Sandinistas "began to realize that the tide of Latin American history was moving against us."

On Nov. 20, 1983, the Sandinistas gave the Salvadoran guerrillas two days to transfer some of their people out of Nicaragua and close down some safe houses. They moved some of their logistics operations, including a radio station, to more discreet locations on the outskirts of Managua, Salvadoran rebel officials said.

A year later, however, the Sandinistas moved in still another direction after noting that controversial U.S. policies—the Grenada invasion and deployment of U.S. cruise missiles in Europe—had gone forward without effective international opposition.

Seeing themselves as the next target for U.S. aggression, Nicaraguan officials said, the Sandinistas sought closer links with the radical European left, the failed antimissile movement, other Latin American leftists and even U.S. liberals.

Visitors from the United States, Europe and Latin America now return home, said one official, "sensitized to the Central America problem, and if they've spent any time at all here they have passionate sentimental links to Nicaragua."

Some of the visitors leave with more than passions. According to several of the sources, there is a second level of Sandinista assistance to Latin American leftist volunteers—one that includes military training.

Cuba's top military representative in Nicaragua, Gen. Arnaldo Ochoa, runs this program through two parallel chains of command, according to the former Interior Ministry official and two present Sandinista government officials.

"CUBAN FORCE"

One, the "Cuban Force," is made up entirely of Cuban officers. The other, the "International Force," has only Latin American exiles, many of them Argentines, Chileans and Uruguayans, who live in Cuba and hold officers' rank in the Cuban military. All foreign military advisers are issued Nicaraguan identification cards, the defector added.

Sources with access to the People's Sandinista Army's payroll records said about 700 Cuban military advisers and 555 International Force officers were in Nicaragua in 1980. The number tripled the following year, they added.

The pick of the Latin American volunteers go to Cuba for instruction in special camps in the western province of Pinar del Rio and an installation near Guanabo, close to Havana, known as "Base 00," the defector said. In 1983, he said, he saw Cuban military officers at the Managua airport escorting 10-12 Costa Rican volunteers aboard a plane for a flight to Havana.

Second-level prospects, the sources said, are trained in Nicaragua, either in groups from the same country or as individuals integrated into regular Sandinista army units. Several Honduran guerrillas captured in 1983 and 1984 described 2½ years of training in Cuba and Nicaragua, followed by several months of fighting with the Nicaraguan army against anti-Sandinista rebels.

Still, most foreign leftists living in Nicaragua did not come to hone military skills or hide out.

The majority are political exiles who fled right-wing governments, or they are militant leftists who moved to Nicaragua because of what one South American intellectual called a "moral imperative" to support the Sandinista revolution.

Many of the exiles, usually professionals and technicians who would have difficulties working in more developed countries, also came to Nicaragua because they can find jobs here, replacing a managerial class rapidly fleeing Sandinista rule.

And Nicaragua is a safe haven, a place where enemies cannot easily watch them, where they can gather in groups and perhaps persuade the government to grant them the kind of international solidarity that the Sandinistas enjoyed during their long struggle against Somoza.

"The Sandinistas received a lot of help when they were guerrillas," said a one-time high-ranking Sandinista security official now living in Costa Rica. "Now the others are collecting the debt."

SANDINISTAS ATTRACT A WHO'S WHO OF TERRORISTS

(By Juan O. Tamayo)

MANAGUA, NICARAGUA.—He is a 5-foot-11, gray-eyed surgeon, treating children in a Managua slum. She is a petite journalist, writing for a Paris magazine. Both are fugitives, wanted in their native Italy for leading left-wing guerrilla gangs.

Two West Germans linked to the Baader-Meinhof Gang are now officers in the People's Sandinista Army. One is in charge of a counterintelligence unit. The other commands an artillery battalion.

And an Argentine Montonero guerrilla, widow of the Argentine rebel who led the commando team that assassinated former Nicaraguan President Anastasio Somoza in Paraguay, is dating a ranking Nicaraguan official trained as a guerrilla by the PLO in Lebanon in the early 1970s.

These are but a few of the left-wing extremists from Europe and Latin America who came to Managua after the 1979 Sandinista revolution, seeking safe haven and a chance to prove their solidarity with the Nicaraguan government.

It is the same kind of revolutionary "networking"—leftist militants call it "internationalism"—that benefitted the Sandinistas during their long guerrilla struggle to topple Somoza.

In the late 1960s, the Sandinistas signed a pact with the Palestine Liberation Organization to train Nicaraguan guerrillas in Lebanon. Somoza was a steadfast supporter of Israel, and Nicaragua was one of the first nations to recognize the Israeli state in 1948.

A former Israeli intelligence agent once based in Nicaragua said at least 150 Sandinistas were trained in the 1970s in Lebanon camps run by the Popular Front for the Liberation of Palestine, the PLO faction most committed to terrorism in Europe and the Middle East.

Veteran Sandinistas say that it was at the PFLP camps that the Nicaraguans first met Europeans leftists—Germans from the Baader-Meinhof Gang and its spin-offs; Italians from the Red Brigades and other radical groups—and began establishing the close personal relationships that persist today.

"The European leftists believe that the Ho Chi Minh Trail and the Quebrada de Yuro run through their countries, too," said one Sandinista official, referring to a key guerrilla supply line in the Vietnam War and the Bolivian gully where famed guerrilla chief Ernesto "Che" Guevara was killed in 1967.

One PLO-trained Sandinista, Patricio Arguello, joined the PFLP's most notorious terrorist, Leila Khaled, in a botched attempt to hijack an Israeli jetliner from Amsterdam to New York on Sept. 6, 1970. Israeli security agents killed Arguello and captured Khaled, who was later exchanged for hostages seized by another group of PFLP hijackers. The Sandinistas have named a geothermal power plant after Arguello.

Another PLO-trained Nicaraguan was Communications Minister Enrique Schmidt, killed in combat with anti-Sandinista guerrillas last November. Schmidt's widow, a West German citizen born in the Basque region of Spain, now works for the Sandinista Front's Department of Political Education. Health Ministry workers say she lectured them last year on the ideology of the Basque Homeland and Liberty guerrilla group, known as ETA, fighting for independence from Spain.

Yet another Sandinista trained in Lebanon is Deputy Interior Minister Rene Vivas. He is now dating an Argentine Montonero guerrilla, the widow of Julio Alfredo Irurzun, head of the Montonero team that assassinated Somoza in Paraguay in Septem-

ber 1980, in what the killers called a show of "revolutionary solidarity" with Nicaragua.

The PLO now has a fully accredited embassy in Managua. And the Sandinista Front has "fraternal" relations with leftist groups from Italy, West Germany, Spain's Basque region, Argentina, Uruguay, Chile, Paraguay, Peru, Colombia, Libya, El Salvador, Honduras, Guatemala and Costa Rica.

The Italian government on Feb. 8 gave the Sandinistas a list of 22 Italian leftists believed to be living in Nicaragua—about half of them wanted fugitives, the rest described only as "extremists." The Foreign Ministry said it knew nothing about the Italians but would investigate.

Topping the list, obtained by The Herald, is Guglielmo Guglielmi, 39, a one-time Rome surgeon facing five arrest warrants for crimes between 1979 and 1983 ranging from kidnapping to illegal weapons possessions to "participation in armed gangs."

International terrorism records show that Guglielmi, now working at a government-run children's clinic in the Managua slum of Ciudad Sandino, was a top leader of the Unita Combattente Comunisti, a guerrilla band that spun off from the Red Brigades in the late 1970s. He was convicted in absentia last June of kidnapping and sentenced to 22 years in prison.

Also on the list is a 33-year-old Milan sociologist wanted on a warrant charging her with "organizing and leading armed gangs in Italy and abroad." An Italian woman with the same name as the fugitive is a journalist accredited in Managua as correspondent for a Paris-based magazine that specializes in Third World issues.

The fugitive is also described in the international records as a member of a group that helped Guglielmi and three other Italian fugitives move from Paris to Nicaragua after the Italian government accused France in 1983 of harboring more than 200 wanted Italian militants.

The woman journalist in Managua declined comment when two Italian journalists tried to interview her last month. "I am not who you think I am." she said. Her name is known but omitted here because of the absence of proof that the journalist and the fugitive are the same.

Roberto Sandalo, 27, a Red Brigades defector living in Kenya, told Italy's Oggi news magazine last month that five Brigadisti are now serving as officers in the Sandinista army. "That's a lie," Defense Minister Humberto Ortega said last week. "We do not require that type of support to defend our principles and our flags."

Sandinista government sources said two West Germans who have bragged of having been part of the Baader-Meinhof Gang are now serving in the army—one as a captain in an artillery unit stationed at the Montelimar base southwest of Managua and the other attached to a military counterintelligence unit.

A West German known only as "Fitz" has told friends there is a warrant for his arrest in Germany. "Fitz," described as an anarchist, fought in the Sandinista revolution and later worked as an administrator at the government-owned Julio Buitrago sugar mill.

Also living in Nicaragua is Peter Paul Zahl, a well-known West German writer with former links to Baader-Meinhof who spent four years in prison for the attempted murder of a policeman in Cologne, Germany. Friends said Zahl, who is not wanted for any other crimes, is in Bluefields setting up a theater group for the port's West Indian blacks.

Nicaraguan government officials said a handful of Basque ETA guerrillas also lived in Managua until 1983, when Spanish Prime Minister Felipe Gonzalez, a strong Sandinista sympathizer, protested to the Managua government. Several ETA members moved to neighboring Costa Rica and some went to Venezuela, the officials said.

Gregorio Jimenez, 32, an ETA militant wanted by the Spanish government on terrorism charges, was arrested in Costa Rica in September 1983 and charged with plotting to assassinate Eden Pastora, leader of an anti-Sandinista guerrilla group based in Costa Rica.

Costa Rican Justice Ministry officials say Jimenez, still awaiting trial, has confessed that a Managua-based group of ETA rebels planned Pastora's assassination, without authorization from the Sandinistas, but as a sign of "revolutionary solidarity."

Since the revolution triumphed, Nicaragua has also been visited for varying periods by a string of leftist militants from Europe and Latin America, many of them simple political exiles, some of them well-known guerilla leaders.

Mario Firmenich, head of Argentina's Montoneros, traveled legally through Nicaragua—once staying several days in the home of Interior Minister Tomas Borge—as well as Mexico and Costa Rica before the Buenos Aires government put out a warrant for his arrest. He was detained in Brazil last year and extradited to Argentina.

Two Baader-Meinhof gang members visited Nicaragua in 1980 to express their support for the Sandinistas and explain the reasons for their own struggle. They sought out three foreign journalists living in Managua and granted them interviews, one of the reporters said.

And Lauro Azzolini, 41, a Red Brigades founder sentenced in absentia to 30 years in prison for the 1978 kidnap-assassination of Italian Prime Minister Aldo Moro, visited Nicaragua in early 1980 and tried to hold a news conference to explain Moro's slaying. Journalists invited to the conference said the Sandinistas blocked it.

Azzolini, alleged to have been the man who killed Moro with a close range blast from a Czechoslovak-made Skorpion machine pistol, was later captured in Italy and is in prison.●

SOVIET TRADE: AN IMPORTANT ISSUE

● Mr. SIMON. Mr. President, international trade is crucial to the entire national economy, as well as the State of Illinois. I would like to share with you and my colleagues a column that I wrote this week about trade with the Soviet Union. I ask that this column be printed in full in the RECORD.

The column follows:

SOVIET TRADE: AN IMPORTANT ISSUE

While the focus of world attention is on the arms talks in Geneva, Secretary of Commerce Malcolm Baldrige will hold a meeting on trade in Moscow that has a much better chance than the Geneva talks to get somewhere—and should be watched with great interest.

We have been stumbling badly in world trade. The Japanese car decision by President Reagan is an example of doing the wrong thing on trade with Japan. Unfortunately, we also have been discouraging world trade with many other nations and the Soviet Union is one of them.

The Soviets are eager to trade more with us, and that is in our interest as well as theirs. Almost all the trade with the U.S.S.R. up to this point is in grains. That could be increased.

In 1983 the Soviets bought about $40 billion worth of manufactured goods from Western Europe and about $110 million from us.

One top U.S. industrial leader told me the other day that when his U.S. company—based in Illinois—does business with the Soviet Union he runs into all kinds of problems with the U.S. Government. There is clear resistance. When a firm he owns in West Germany wants to do business with the Soviet Union, West Germany does everything it can to encourage trade. Where does the business go? The answer is obvious.

And that is just one of a host of illustrations.

We require that Soviet ships, coming here to pick up grain and manufactured goods, give our ports 14 days' notice. Ships from other countries are required to give only 3 days' notice. If the same Soviet ships dock in Canada or Argentina or France they are given the same treatment accorded other nations. That encourages the Soviets to buy from other countries rather than the U.S.

We seem intent on placing as many barriers as possible in the way of more sensible relations between our two countries.

Another example: We have banned seven different types of furs from the Soviet Union.

The result is that the furs are sent to other countries—like Canada—and the coats and hats and other products are manufactured in their countries and then the final product is shipped into the United States. We have banned Soviet furs—and also American jobs in the process.

When the Soviets wanted to build a pipeline, we sanctimoniously issued an order that our suppliers could not provide the earth-moving machinery and pipes for the pipeline. The Soviets simply bought from France and Japan—and finished their pipeline project ahead of time. Who was hurt? Not the Soviet Union, other than perhaps their pride a little. Those hurt were employees of the Caterpillar company and other Americans who lost their jobs.

Our trade deficit right now is causing the loss of approximately three million U.S. jobs. That has to be turned around, on a country by country basis.

One of the nations that is most important is the Soviet Union, not because they are a huge trading partner, but because the more we can have normal relations in trade and student exchanges and the arts with them, the more we improve the atmosphere which could make possible success in arms control. The real problems in the arms control talks are not the technical problems with Pershing II's and SS-20's and the weapons that we argue about, but the atmosphere, the mood of distrust. That is not going to turn around overnight but it can gradually be improved through things like trade.

The meeting between Secretary of Commerce Malcolm Baldrige and Soviet Deputy Trade Minister Vladimir N. Sushkov is one of those meetings that will not provide headlines. But it is a meeting that can improve our economy by providing more American jobs, and it can help to avoid grim arms headlines in the future.

Secretary Baldrige is on an important assignment and I wish him well.●

PRESENTATION OF THE TORAH TO THE JEWISH COMMUNITY OF KONA, HI

● Mr. INOUYE. Mr. President, as many of my colleagues know, the islands of Hawaii, which I am privileged to represent in this body, are not only beautiful, they are filled with a deep spirituality. Native Hawaiian traditions are filled with the deep and abiding faith in powers higher and deeper than even the geography of my great State.

During this past week unusual events have taken place which will add to the sense of belief and the wonder of diversity which are the soul and strength of Hawaii.

A Torah, a parchment scroll on which is inscribed the Five Books of Moses, which had belonged to the once-thriving community of Polna, in Czechoslovakia, was formally presented to the now-thriving synagogue, Beth Shalom, in Kailua, Kona, on the big island of Hawaii.

Polna found its origins in the early 15th century in Bohemia. It thrived, building its community buildings so that by the 16th century, it had its own synagogue, community center, butchers guild, and school.

It flourished until a terrible blood libel was leveled against it at the beginning of the 20th century. Prof. Thomas Masyryk stepped forward and publicly defended this small but vibrant community against defamation. Masyryk, as we know, was to become the first head of the newly formed State of Czechoslovakia in 1918.

In 1940, as the country fell under the boots of the Nazis, Polna's Jewish community was deported to the concentration camps never to return.

Their beloved Torah, the Holy Scriptures, was sent to Prague with the other communal possessions, to become part of the 150,000 objects, manuscripts, and books. The Torah was part of what was to have become what the Nazis were to have called a Museum of the Extinct Race to be established after the success of their final solution.

After extensive negotiations, a major selection of 350 objects was selected by Mark Talisman and a team of curators. The exhibition now known as the Precious Legacy, is currently touring the United States under the sponsorship of the Smithsonian Traveling Exhibition Service and the Philip Morris Corp. It is now being viewed at the Detroit Institute of Art, where it was opened by Mr. Talisman and my colleague Senator CARL LEVIN. Thus far millions of Americans have seen this extraordinary exhibition.

Although such a museum was never formed, the vast collections were preserved, ultimately to become the State Jewish Museums of Czechoslovakia. Over 1,560 Torahs were ultimately sent to the Westminster Synagogue in London where Mrs. Ruth Shaffer currently presides, caring lovingly for each of them.

After a visit several months ago as scholar in residence, Mark Talisman, director of the Washington Office of the Council of Jewish Federations and vice chairman of the United States Holocaust Memorial Council, found that a Torah was needed on the big island of Hawaii where there was none.

Congregation Beth Shalom, which was founded nearly 5 years ago in Kailua, Kona, was formed with a few families and has now grown and was very interested in receiving a Torah from which they could pray.

Barry Shain, the executive director of the Jewish Federation of Hawaii, and Jacob Tzur, its president, made extensive arrangements with Mr. Talisman, and the Polna Torah was secured from London with the help of Mrs. Shaffer.

United Airlines became involved and provided the respectful care required to transport this precious document, which had been hand inscribed in the 16th century, from Washington, DC, to Honolulu, where it was lovingly delivered to the congregation.

This past Saturday, March 30, 1985, the Torah was officially presented to the Jewish community of Hawaii and of Kona at a moving ceremony attended by hundreds of people including representatives of other major religious groups in the State.

It is my intention to go to Congregation Beth Shalom in the very near future to see the Torah and join in the celebration.

Having the Polna Torah in our midst, in Hawaii, in the loving care not only of the growing congregation of Beth Shalom, but among all of us, serves to allow us to remember the horrors of the past which allowed Polna's Jewish community to be destroyed completely, but allows each of us to remember that loss, so as to never allow such cruelty to happen to anyone ever again. From those ashes has arisen in Kona the hope and prayers of a bright and creative future filled with peace which now emanates from our remembrances of those who have perished.

I wish to join the citizens of Hawaii in sending my best wishes to Dr. Stuart Spielman, president of Beth Shalom, Mr. Lewis, one of its founders, the Jewish Federation of Hawaii and its leaders, Jacob Tzur, president and Barry Shain, executive director and all of the board who worked so hard to make this wonderful event possible. Rabbi Arnold Magid, who conducted the service, is to be commended for his contributions as well.

Mr. President, I wish to insert at this point in the RECORD the newspaper articles which appeared in the past week in various newspapers throughout the State of Hawaii. They are as follows:

KONA-BOUND TORAH SURVIVED THE HOLOCAUST

(By Anne Harpham)

A Torah from Polna, Czechoslovakia, that in 1939 was tagged by the Nazis to be in a museum of an "extinct" faith this week completes a journey to a new Jewish congregation in Kona.

The Torah is a handwritten parchment scroll containing the Pentateuch or the first five books of the Bible. Readings from the Torah are an important part of Jewish liturgy and passages are read each week in a cycle that begins with the book of Genesis and ends with Deuteronomy.

None of the Jews of Polna survived the Holocaust, but their Torah survived, as did hundreds of thousands of other objects of Czech Jewish life, from the religious to the mundane. The Nazis systematically collected and catalogued those items, all intended for a Museum to an Extinct Race.

After the war, Torahs were returned to their congregations where possible. But in Polna there was none remaining and its Torah became one of 1,564 gathered from the grim Nazi collection and sent to London for preservation. Since then, about half of the sacred scrolls have been given—on long-term loans—to congregations needing Torahs.

Mark Talisman, director of the Washington office of the Council of Jewish Federations and vice chairman of the U.S. Holocaust Memorial Council, negotiated the loan of the Polna Torah to Kona Beth Shalom, a congregation of about 60 families.

The Torah, which has traveled with Talisman from London to New York to Honolulu, was used on Saturday at Temple Emanu-El in Honolulu, the first time it has been used since 1939. It will be accepted by its new congregation in ceremonies Saturday morning at the Keauhou Beach Hotel.

"Those who were killed can be remembered because their Torah will be in a new community," said Talisman at a press conference yesterday. "The cycle is now complete and the Torah is now alive again."

Billy Lowenberg, survivor of eight Nazi concentration camps and a member of the U.S. Holocaust Memorial Council, said completion of the cycle for the Polna Torah "is one of the most significant events in my Jewish life."

In the camps, Lowenberg said "we had accepted the fear of death, there was never a moment we believed we could get out of that hell. (But) we were afraid there would be no one who could tell the story—that's what we talked about."

The Polna Torah is believed to be about 200 years old. The printing on it could never be replicated today, Talisman said.

The Polna Torah still has written on it the catalogue number used by the Nazis—13845.

A 200-YEAR-OLD TORAH FINDS A NEW HOME WITH KONA BETH SHALOM

A 200-year-old parchment scroll containing the first five books of the Bible, handwritten in Hebrew, arrives tomorrow, March 30, in Kona.

The scroll, or Torah, is the Holy Book of the Jewish faith, and comes from Polna, Czechoslovakia, where it was used by the Jewish community there.

Taken by the Nazis in 1939, the Torah was stored in a warehouse and was to be part of

a Museum to an Extinct Race. The museum never came about, and with the defeat of Germany many of the objects gathered for the museum were returned. But the Torah from Polna did not go home. No citizen of Polna remained. They had all been exterminated during the Holocaust.

The Torah was transferred to Westminster Chapel in London, England, along with other Jewish artifacts. Then in 1968, while on a visit to Czechoslovakia, Mark Talisman, director of the Council of Jewish Federations' Washington Office, learned of the Polna Torah and other items that had been meant for the museum. He arranged for a tour of 500 of the artifacts throughout the U.S.

In the meantime, a Jewish congregation on the Island of Hawaii was in search of a Torah, a search which often lasts for years.

Jewish Federation of Hawaii executive director Barry Shain negotiated to have the Polna Torah brought to Hawaii, where it would be used by Kona Beth Shalom, a Jewish congregation of some 60 families.

Rabbi Arnold Maggid, rabbi of Temple Emanu-El, will conduct services tomorrow, March 30, 10 a.m., at the Keauhou Beach Hotel, at which time the Torah will be rededicated.

Dr. Stuart Spielman, president of the Kona Beth Shalom congregation, said, "The people who loved and revered this Torah, who carried it and read from it are all part of it and now part of Kona Beth Shalom as well. We are pleased and proud to be able to put this Torah into use once more, to reestablish it in a Jewish congregation, to give it a loving and fitting home in its rightful position as the Holy Book of a flourishing Jewish Community."

A 200-YEAR-OLD TORAH AT KONA CONGREGATION

(By Murry Engle)

The U.S. Census of Jews is now 6 million, according to Mark Talisman, vice chairman of the U.S. Holocaust Memorial Council, "the same number of Jews that the Nazis killed in Europe during the World War II holocaust."

Talisman was to see some vindication for those 6 million victims this morning, when a 200-year-old Torah that he brought from a Prague collection of Jewish artifacts went on loan to the new Beth Shalom congregation in Kona.

That congregation is just about the same size as the congregation in the Bohemian town of Polna in Czechoslovakia, the Torah's origin. No members of those 60 to 80 Jewish families—557 people—survive.

"I'm mystic enough to believe that they will be looking down and smiling," Talisman said in an interview this week.

"Tradition has it that if a Torah is burned, the words are sent to heaven," he said. "In this case, it's better."

The Torah is one of 800 placed of 4,400 that the Nazis stored, intending to use them along with other Jewish artifacts in a museum to mock an "extinct" Jewish race.

Some parts of the scroll are 300 years old, Talisman said. No part of it could be duplicated today, because no one is master of that calligraphy. Handprinting of one in more modern script today takes a year, he said.

Although Talisman, 43, was not alive when the holocaust swept Europe, the tragedy "has plagued me all my life," he said. He wants to be sure it never happens again, but it could "if we don't learn history. We can lose total sensitivity.

"It becomes too easy not to think of it," he said, when one reads about the killing of millions of Cambodians in our time or of the possibility of nuclear holocaust. "Nerve endings die," Talisman said. "We talk in language that is flippant. It's too easy to dismiss."

Even his parents were unable to explain how it could have happened. Not only were there the priorities of raising a family, he said, but "this overlay of disbelief. They could not comprehend that the rumors could possibly be true. If you can't comprehend, it becomes easy not to think about it.

"But you can't back away from it, can't make it recede. After you talk to survivors, it becomes more real. It could happen to any group."

In 1956, when Talisman was 15, he began to get answers. Then president of the International Junior Red Cross, he went to Geneva for its convention. He stayed at Chiemsee, near Berchtesgaden, Hitler's Eagle's Nest.

"I also went to Dachau, the first concentration camp," he said. "There's no memorial there. They left it just the way it was during the war.

"An ex-Nazi was my barber and he denied that it had happened. He told me that people in the town didn't know what was going on during the war. I knew damned well that they did. For anybody to have lived there—well, the very air they breathed was constantly filled with the smell of burning bodies. It was indicative to me of humans' infinite capacity to want to forget."

He doesn't hold the American government blameless, either.

"A lot of documents have been released in the last few months and the U.S. government knew a lot more than it was saying at the time; 20/20 hindsight is much better than they want to admit.

"Why didn't they, on the eve of the war, do something about it? If Americans had been more inventive instead of closing the gate to Jewish immigrants, a lot more would have lived. It makes me very bitter.

"I want to be sure our children know about it and never forget it," he said. He was able to do something about that for them and others, too, after visiting in 1968 the State Jewish Museums of Prague and learning that more than 145,000 pieces of Judaica existed—remains of Hitler's plunder for his intended Museum to an Extinct Race.

After three years' negotiations, Czechoslovak state authorities agreed to let him take 500 artifacts on a tour of the United States and a group from Hawaii saw the exhibit in San Diego.

When the Kona congregation formed, the Jewish Federation of Hawaii executive director, Barry Shain, contacted Talisman, who negotiated for the Polna Torah.

Erica Goldman, 13, isn't likely to forget that Torah. It was paraded joyfully in white velvet around the sanctuary at Temple Emanu-El in Honolulu last Saturday and then opened for religious purposes for the first time in 50 years for her Bat Mitzvah.

"She'd studied the language and read from it," Talisman said.

The joyfulness of that and today's ceremonies is appropriate, he said.

"The sacredness of life is the underpinning of Jewish life and so much of the ritual is based on that. If we didn't transcend horror, we could not stand to live."

To this portion of the Torah's epic journey—"just like a wonderful old story in the Bible"—and to those who once cherished it, Talisman said there's an ageless Hebrew toast that strangely suits: "L'Chaim!" "To Life."●

SENATE RESOLUTION 130

● Mr. WALLOP. Mr. President, I come forth today to express my extreme displeasure with the manner in which the administration has chosen to proceed with the new Sport Fishing and Boating Enhancement Fund, which is more commonly known as the Wallop-Breaux Trust Fund.

Under the terms of this law, which President Reagan signed into law last July, user fees are imposed on the Nation's boaters and fishermen in the form of Federal excise taxes on fishing equipment, Federal motorboat fuel taxes, and customs duties on imported watercraft and fishing tackle. These funds are required under the terms of the law to be returned automatically to the States for use in natural resource protection programs and for the enhancement of recreational opportunities in the States. The law and its user fees are overwhelmingly supported by recreationists and conservationists, both in business and in the private sector.

To my disappointment, and that of the recreationists and conservationists who support the trust fund, the administration's 1986 budget proposal abrogates the conditions established for the fund in the Deficit Reduction Act of 1984. Under the proposed budget, the administration would eliminate the guaranteed return of user fees and withhold two-thirds of the funds raised for use by the States. Such a situation abuses the trust of the sportsmen who sought to pay additional excise taxes in order to improve their sport and calls into question the administration's much publicized desire to shift increasingly to a policy of user fees. After an action of this nature, all user fees are suspect.

I now ask for the support of my colleagues for Senate Resolution 130, which calls upon the administration to honor its commitments under the law, and ask that Senate Resolution 130, with a list of cosponsors, be printed in the RECORD.

The resolution follows:

S. RES. 130

Whereas, in 1950 the Congress established the Dingell-Johnson Sport Fish Restoration Trust Fund to promote natural resource protection and enhanced recreational opportunities, and levied taxes on selected recreational equipment to fund this account beginning a 30-year success story of a user fee program;

Whereas, in 1984, because of the efforts of recreationists and conservationists the above said trust fund was enhanced by additional recreational related taxes as part of the Deficit Reduction Act of 1984 and was renamed Wallop-Breaux Trust Fund;

Whereas, the law passed by Congress in 1950, as enhanced in 1984, requires that the funds within the Sport Fish Restoration Trust Fund be automatically appropriated for return to the several states annually (less limited overhead costs);

Whereas, the 1984 Act also authorizes funds for a Boating Safety Account in the Trust Fund to be returned to the states for boating safety purposes;

Whereas, the funds proportionately returned to the several states are earmarked by law to be used for specific uses of natural resource protection and enhancement of recreational activities;

Whereas, severe demands on federal financial resources have threatened many recreational and environmental programs and have thus prompted calls by the administration for increased reliance on user fees;

Whereas, The President and other administration officials publicly applauded the 1984 amendment and the willingness of recreationists to tax themselves to pay for desired programs;

Whereas, the Administration's 1986 budget proposal threatens to: (1) eliminate the guaranteed return of user fees, and (2) withhold ⅔rds of the ear-marked user fees; and

Whereas, the Administration has not addressed this matter in a fashion deemed acceptable, which action is causing the erosion of any justification or public support for user fees; Now, therefore, be it

Resolved by the Senate, That it is the sense of the Senate that:

1. the administration should honor and comply with the automatic appropriation and ear-marking provisions of the Wallop/Breaux Sport Fish Restoration Trust Fund as required by law; and support adequate appropriation for the Boating Safety Account in this Trust Fund; and

2. funds due and owed under the terms of the Trust Fund to the states should neither be withheld nor delayed by the Administration.●

REFERRAL OF SENATE JOINT RESOLUTION 106

Mr. SIMPSON. Mr. President, on behalf of Senator DOLE and Senator STEVENS, I send a resolution to the desk and ask for its appropriate referral.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred.

Mr. CRANSTON. Is that the joint resolution on Nicaragua?

Mr. SIMPSON. I respond to the Senator from California, the minority whip, that it is the resolution on Nicaragua.

UNANIMOUS CONSENT AGREEMENT—TUESDAY, APRIL 23, 1985

Mr. SIMPSON. Mr. President, I then submit a unanimous-consent request.

I ask unanimous consent that when the Senate completes its business on Monday, April 22, it stand in recess until 8 a.m. on Tuesday, April 23, 1985.

I also ask unanimous consent that following the recognition of the two leaders under the standing order, there be a special order in favor of the Senator from Wisconsin [Mr. PROXMIRE] for not to exceed 15 minutes.

I further ask unanimous consent that following the Proxmire special order, there be a period for the transaction of routine morning business not to extend beyond 9 a.m., with statements limited therein to 5 minutes each.

I ask unanimous consent that at 9 a.m. on Tuesday, April 23, and not before, the Senate turn to the consideration of Senate Joint Resolution 106, supporting military or paramilitary operations in Nicaragua, and that the time between 9 a.m. and 12 noon be equally divided between the opponents and proponents of the joint resolution.

I further ask unanimous consent that the Senate stand in recess between the hours of 12 noon and 2 p.m. on Tuesday, April 23, 1985.

I also ask unanimous consent that when the Senate reconvenes at 2 p.m. on Tuesday, April 23, the Senate resume further consideration of Senate Joint Resolution 106, and that all time for consideration be equally divided.

Finally, I ask unanimous consent that a vote occur on final disposition of Senate Joint Resolution 106 prior to close of business on Tuesday, April 23, and that paragraph 4 of rule XII be waived.

The PRESIDING OFFICER. Is there objection?

Mr. CRANSTON. Mr. President, I reserve the right to object, although I will not object.

First, I thank the leadership on the majority side for their cooperation in regard to this matter. The majority leader [Mr. DOLE] was about to introduce this resolution earlier today, and I asked him to wait until we could consider it on our side and discuss the procedures with him. He graciously refrained at that time from proceeding.

Senator INOUYE and I then met with him and discussed our needs for a maximum amount of time to consider this matter before it was brought to a vote in the Senate, taking into account the fact that we are about to recess for more than a week and that the time would be running, in accordance with the calendar days that pass during that time, cutting down the time when the Senate will be here for active consideration in the Appropriations Committee and then on the floor.

The majority has its own reasons for wishing to proceed expeditiously, among them wanting do dispose of this matter before we come to grips with the budget, and those reasons are understandable. Our needs have been taken into account to a considerable degree in this unanimous-consent request, and I believe it is satisfactory to Senators on our side. I thank the majority for taking into account our requests.

At this time, I know that the Senator from Vermont wishes to speak about this matter and I yield the floor.

Mr. LEAHY. Mr. President, reserving the right to object—and I shall not—I, too, thank the majority leader for this. They could have gone forward with this today and started the clock running.

I also congratulate the Senator from California [Mr. CRANSTON] and the Senator from Hawaii [Mr. INOUYE] for working with the majority leader to hold back the time.

The White House, in a meeting called on about 20 minutes' notice this morning, notified us that this was going to be here, in the hope that it would be filed today and the clock could start running, and we could have a dialog with the White House under the original plan of a 15-day time limit. For about 10 days of that dialog time, the President would be vacationing in California, and Members of Congress on both sides of the aisle would be on recess, with full schedules, back in their home States—effectively precluding a dialog.

The leadership has ensured that there is more time for a dialog by doing this, and they should be complimented for that. The unanimous-consent request gives the amount of time necessary.

For the Intelligence Committee, I would say only that I hope our committee would be able to present to the Senate the results of inquiries it has made regarding such issues as allegations of Contra atrocities and others—and each Senator is free to vote whichever way he or she wishes—so that Senators would know precisely what they vote on, so that we will not have a repetition of last year, when, in 1 week, we voted for the Contras, and then, upon finding out that they were doing a number of things that the Senate objected to, something that most of us could not have known about in advance, voted against it.

So that I note for my colleagues that at some point within this debate there will be information made available from the Intelligence Committee, which committee will not take a position, as I understand it, on this matter, one way or the other, as a committee; but information will be made available to the Senate with regard to Contra activity.

I also strongly recommend to Senators that between now and then they may want to go to the Senate Intelligence Committee and read information, at least the partial answers that have been returned, responding to the questions raised by the chairman and myself on behalf of the committee.

With that, Mr. President, I note that I have no objection.

The PRESIDING OFFICER. Without objection, the unanimous-consent

request of the Senator from Wyoming is agreed to.

The text of the agreement follows:

Ordered, That at 9 a.m. on Tuesday, April 23, 1985, and not before that time, the Senate proceed to the consideration of S.J. Res. 106, supporting military or paramilitary operations in Nicaragua, with the time between 9 a.m. and 12 noon to be equally divided and controlled by the opponents and proponents of the Joint Resolution.

Ordered further, That the Senate stand in recess between the hours of 12 noon and 2 p.m. on Tuesday, April 23, 1985.

Ordered further, That on Tuesday, April 23, 1985, the hour of 2 p.m. having arrived, the Senate resume consideration of S.J. Res. 106, with all time for consideration to be equally divided and controlled by the opponents and proponents of the joint resolution.

Ordered further, That a vote on final disposition of S.J. Res. 106 occur prior to the close of business on Tuesday, April 23, 1985.

Mr. SIMPSON. Mr. President, I thank the Senators.

I thank the Senator from Vermont [Mr. LEAHY]. I appreciate the caution he gives us, because I remember the turmoil with regard to the issue before. I appreciate the forceful way he pursues things in the Intelligence Committee, and I have enjoyed my relationship with him.

I want to particularly thank Senator CRANSTON again. We work together here, as he is my counterpart on that side of the aisle, as the minority whip. We have worked together as chairman and ranking minority member of the Veterans' Affairs Committee, and it is a special relationship that I enjoy greatly. He is pleasant to work with.

We have actually produced many items of legislation together. I hope that our relationship will be a harbinger of things yet to come in the coming session in which I hope we will begin to turn the course. I pledge to work more closely with those on the other side of the aisle—as we have, I believe, completed or will soon complete our grappling with regard to the budget deficit which will be a grisly process for all of us to go through right here on this floor.

I appreciate his sincerity and cordiality throughout.

Mr. CRANSTON. I thank the Senator from Wyoming and his warm feeling are fully reciprocated.

NOMINATIONS

Mr. SIMPSON. Mr. President, as in executive session, I ask unanimous consent that the Senate turn to the nomination of Gen. James Doolittle and Gen. Ira Eaker received from the White House today, and I ask unanimous consent that they be considered en bloc and confirmed en bloc.

Mr. CRANSTON. Mr. President, we are pleased on this side to proceed with those nominations.

There being no objection, the Senate proceeded to consider the nominations as in executive session.

The PRESIDING OFFICER. The nominations will be stated.

U.S. AIR FORCE

The legislative clerk read the nominations of Lt. Gen. Ira C. Eaker and Lt. Gen. James H. Doolittle to be generals.

Mr. SIMPSON. Mr. President, I simply add my congratulations and respect to General Doolittle, who is a delightful friend with whom I have fished and visited. I enjoy his company greatly. He is a great American, perhaps one of the last of the real heroes in this country.

The PRESIDING OFFICER. Without objection, the nominations are considered and confirmed en bloc.

Mr. SIMPSON. Mr. President, I move to reconsider the vote by which the nominations were confirmed.

Mr. CRANSTON. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. SIMPSON. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. SIMPSON. Mr. President, I ask unanimous consent that the Senate return to consideration of legislative business.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT UNTIL MONDAY, APRIL 15, 1985

Mr. SIMPSON. Mr. President, I move, in accordance with the provisions of Senate Concurrent Resolution 38, that the Senate stand in adjournment until 12 o'clock noon on Monday, April 15, 1985.

The motion was agreed to; and, at 2:29 p.m., the Senate adjourned until Monday, April 15, 1985, at 12 o'clock noon.

NOMINATIONS

Executive nominations received by the Senate April 4, 1985:

NATIONAL COUNCIL ON EDUCATIONAL RESEARCH

Onalee McGraw, of Virginia, to be a member of the National Council on Educational Research for a term expiring September 30, 1987, reappointment.

NATIONAL COUNCIL ON THE HANDICAPPED

Marian North Koonce, of California, to be a member of the National Council on the Handicapped for a term expiring September 23, 1987, reappointment.

OCCUPATIONAL SAFETY AND HEALTH REVIEW COMMISSION

Robert E. Rader, Jr., of Texas, to be a member of the Occupational Safety and Health Review Commission for the term expiring April 27, 1991, vice Timothy F. Cleary, term expiring.

IN THE NAVY

The following-named officer, under the provisions of title 10, United States Code, section 5064 to be Director of Budget and Reports in the Department of the Navy.

Rear Adm. William D. Smith, xxx-xx-... /1120, U.S. Navy.

IN THE AIR FORCE

The following Air National Guard of the United States officers for promotion in the Reserve of the Air Force under the provisions of section 593(a) Title 10 of the United States Code, as amended:

LINE OF THE AIR FORCE

To be lieutenant colonel

Maj. Richard G. Broberg, xxx-xx-xxxx
Maj. William M. Campenni, xxx-xx-xxxx
Maj. Thomas G. Cutler, xxx-xx-xxxx
Maj. Howard W. Dixon, xxx-xx-xxxx
Maj. Preston T. Duke, xxx-xx-xxxx
Maj. Jerry L. Dunne, xxx-xx-xxxx
Maj. Russell L. Durham, xxx-xx-xxxx
Maj. Maurice C. Eldredge, xxx-xx-xxxx
Maj. Joe D. Elms, xxx-xx-xx...
Maj. Richard D. Gardner, xxx-xx-xx...
Maj. Terry J. Hart, xxx-xx-xxxx
Maj. Hugh M. Large, xxx-xx-xxxx
Maj. Wallace M. Moody, xxx-xx-xxxx
Maj. Kourtney C. Nieboer, xxx-xx-xxxx
Maj. Wylie E. Nolen, xxx-xx-xxxx
Maj. Robert L. Privett, xxx-xx-xxxx
Maj. Lynn K. Robinson, xxx-xx-xx...
Maj. David L. Scobey, xxx-xx-xxxx
Maj. Richard H. Smith, xxx-xx-xxxx
Maj. Sam P. Sox, Jr., xxx-xx-xxxx

MEDICAL CORPS

Maj. Wilburn A. Smith, Jr., xxx-xx-xxxx

DENTAL CORPS

Maj. John T. Aumiller, xxx-xx-xxxx

IN THE AIR FORCE

The following-named officers for advancement to the grade of general on the retired list pursuant to the provisions of article II, section 2, clause 2 of the Constitution of the United States:

Lt. Gen. Ira C. Eaker, 449–46–1060FR, U.S. Air Force, retired.

Lt. Gen. James H. Doolittle, xxx-xx-... FV, U.S. Air Force, retired.

IN THE NAVY

The following-named officer to be placed on the retired list in the grade indicated under the provisions of title 10, United States Code, section 1370.

To be vice admiral

Vice Adm. "M" Staser Holcomb, xxx-xx-... /1310, U.S. Navy.

IN THE MARINE CORPS

The following-named officer, under the provisions of title 10, United States Code, section 601, to be assigned to a position of importance and responsibility designated by the President under title 10, United States Code, section 601:

To be lieutenant general

Lt. Gen. D'Wayne Gray, xxx-xx-xxxx U.S. Marine Corps.

CONFIRMATIONS

Executive nominations confirmed by the Senate April 4, 1985:

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Donald Ian MacDonald, of Florida, to be Administrator of the Alcohol, Drug Abuse, and Mental Health Administration.

NATIONAL LABOR RELATIONS BOARD

Rosemary M. Collyer, of Colorado, to be General Counsel of the National Labor Relations Board for a term of 4 years.

The above nominations were approved subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.

IN THE AIR FORCE

The following-named officers for advancement to the grade of general on the retired list pursuant to the provisions of article II, section 2, clause 2 of the Constitution of the United States:

Lt. Gen. Ira C. Eaker, xxx-xx-xxxx FR, U.S. Air Force, retired.

Lt. Gen. James H. Doolittle, xxx-xx-... FV, U.S. Air Force, retired.

EXTENSIONS OF REMARKS

H.R. 890

HON. DON RITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. RITTER. Mr. Speaker, Congress yesterday passed legislation to extend the Federal Supplemental Compensation Program until April 6, this Saturday, to allow those currently eligible to finish out the remainder of their FSC benefits.

I had cosponsored H.R. 890, legislation to extend the FSC Program for 18 months. The bill which passed tonight was reluctantly supported by many of us who strongly supported and preferred the 18-month extension, including the author of the 18-month extension. However, what we passed tonight is better than just cutting benefits off arbitrarily as of March 31 as would have happened if we had not passed this bill. Unfortunately, it does nothing for those who will become unemployed in the future.

I feel strongly that Government has a responsibility to those workers in the Lehigh Valley who are struggling through long periods of unemployment, some of which may have come as a result of policies made at the national level. We need to recognize that, in heavy industrial and manufacturing areas such as the Lehigh Valley, the local economy often lags in recovery and subsequent increases in jobs just as it lags going into a recession.

My constituents know that the Nation must pursue long-term solutions to our employment and trade problems. Unemployment insurance which can go for retraining is one solution. Toughness on trade equal to that of our trading adversaries is essential. However, we all know that these will not put food on the table or pay the rent or mortgage today for our Lehigh Valley citizens who are currently unemployed. We have a strong, hardworking labor force in the Lehigh Valley and, for those who are currently denied reentry into that labor force, we should have extended the vital FSC Program for 18 months.●

THE AMERICAN FOOTWEAR INDUSTRY RECOVERY ACT OF 1985

HON. SHERWOOD L. BOEHLERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. BOEHLERT. Mr. Speaker, I would like to urge my colleagues to join me in cosponsoring legislation to give one of America's most hard-pressed industries a fighting chance at surviving an onslaught of subsidized imports.

The industry I'm referring to is the footwear industry—in particular, the shoe industry. And the bill I am talking about is the American Footwear Industry Recovery Act of 1985.

U.S. shoe manufacturers are awash in a flood of imports that seems to be rising faster and faster. Import's share of the U.S. market has climbed well beyond the 70-percent mark and shows no sign of stopping.

The result? A veritable epidemic of plant closings and job layoffs. In 1984 alone, 105 factories shut down and 11,000 American workers lost their jobs. Firms like Norwich Shoe Co. and Little Falls Footwear in my New York State congressional district know this grim story all too well.

The American Footwear Industry Recovery Act would simply hold annual shoe imports to 450 million pairs—about half the market—for 8 years. That would give our shoe manufacturers a needed, valuable chance to modernize and adjust to the subsidized products and trade barriers of other nations.

Mr. Speaker, when I cosponsored this bill in the last Congress, import injury to American shoe makers was already severe. But Congress failed to act on it. Now the problem is even worse—a lot worse. Let's act now to save the American shoe industry—to give it a fighting chance—while there's still an industry left to save.●

YES ON MX

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. LAGOMARSINO. Mr. Speaker, the following editorial from the Lompoc Record—Lompoc, CA, Sunday, March 10, 1985—I believe succinctly and effectively expresses the various points in favor of a decision by the Congress to continue funding for the production of additional MX—Peacekeeper—ICBM's. The arguments the Lompoc Record provides in support of continued MX funding I find particularly persuasive. The editorial follows:

YES ON MX

Advanced testing of the MX missile at Vandenberg Air Force Base has shown it to be highly accurate, convincingly reliable ICBM.

These same tests demonstrate, however, that MX is not some revolutionary, destabilizing weapon system. The silo-based missile nearing deployment is properly regarded as a logical, modern compliment to the aging Minuteman force that builds on more than 20 years of experience.

During the past 14 years the MX has progressed along a rocky path to the point where it can now finally do us some good.

Here are three good reasons not to send it to the scrap heap.

1. The United States has not added a single new, land-based, intercontinental missile to its nuclear deterrent since 1975.

2. The number of deployed American ICBMs has not increased since 1967.

These are the two best reasons why Congress should keep the MX missile program alive by granting the Reagan administration's request for $1.5 billion to build another 21 of the large, 10-warhead ICBMs.

These 21, together with a first batch of 21 now being built, would fulfill almost half of the Air Force's planned deployment of 100 MXs. When fully deployed by about 1987, this force would at least partly counter the Soviet Union's nuclear Sunday punch—608 super-heavy missiles (SS-18s with up to 10 warheads each and SS-19s with up to six warheads).

Without the MX, or with only a token force of 21, the United States would have conceded the Soviet Union a virtual monopoly in heavy, land-based ICBMs. Reliability, speed, multiple warheads and extreme accuracy make heavy ICBMs the most decisive, and politically exploitable, of all nuclear weapons. That will remain so until someone begins deploying effective defenses against ballistic missiles. With such defenses still years if not a decade or so away, a permanent Soviet monopoly in heavy ICBMs would pose unacceptable risks for the United States.

Having said this, it must also be acknowledged that the military rationale for the MX would be stronger had the Reagan administration found ways to make the new missiles less vulnerable to a surprise Soviet attack. The MX was originally envisioned a decade ago and as recently as 1981 as a mobile missile, the answer to the perceived vulnerability of America's 1,000 Minuteman ICBMs in their fixed, underground launching silos.

A host of difficulties defeated this original objective. Domestic politics, budgetary constraints, technical complexities and the perverse effects of an arms control process that encouraged big (therefore countable) missiles all conspired against a mobile MX. One result is that some in Congress who support Reagan's defense buildup nonetheless have doubts about the value of producing MXs

only to put them into already vulnerable Minuteman silos.

Granted that a mobile MX would be preferable to a stationary one. But a stationary one, housed in a Minuteman silo strengthened with added steel and concrete, is certainly preferable to no MX at all. One hundred MXs carrying a total of 1,000 highly accurate, independently targetable warheads provides 1,000 more reasons for the Soviets never to contemplate a nuclear attack upon the United States. And, although no one should want the nuclear hair trigger of a launch-on-warning policy, Soviet planners could never be certain that many MXs would not be fired before the attacking Russian warheads arrived. This is the sort of uncertainty that strengthens deterrence.

What all of this amounts to is a compelling military justification for proceeding with the MX program. There is also an additional rationale, one frankly political but no less valid.

3. The design of Soviet nuclear forces shows clearly that the Kremlin regards land-based, heavy missiles as decisive weapons and vital indices of national power. During the 18 years since America's ICBM force reached its peak of 1,054 deployed missiles, the Soviets have produced and fielded five new types of land-based ICBMS. The throw-weight, or payload capacity, of the Soviet Union's land-based intercontinental missiles is at least four times that of the American ICBM force.

Since the 1979 SALT II treaty, the Soviets have almost doubled—from about 5,000 to more than 9,000—the numbers of strategic nuclear warheads targeted on the United States. The Soviets are now producing 150 to 300 ICBMs each year with increasingly accurate warheads. Indeed, the Soviets are now deploying more new warheads every year capable of destroying hardened targets than are planned for the entire MX program. While Congress vacillates, the Soviets build, build, and build.

Given these numbers and the trends they reflect, the Soviets will have little enough incentive to negotiate arms reductions at the Geneva negotiations scheduled to begin this week. In fact, without the prod of Reagan's prospective "Star Wars" defense system, the Soviets may not have bothered returning to Geneva at all.

But they are returning, prepared as always to shape their position in part on their perception of America's resolve and constancy of purpose. What will that perception be if Congress now cancels the centerpiece of President Reagan's strategic modernization program? And what constancy of purpose, or even common sense, will the Soviets detect if Congress scraps unilaterally such a major strategic system developed during more than a decade by three successive administrations of both political parties? ●

OUR NATION CAN NOW ENJOY THE SPLENDOR OF THE ST. PETERSBURG FESTIVAL OF STATES PARADE

HON. C.W. BILL YOUNG

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. YOUNG of Florida. Mr. Speaker, for the first time ever, people throughout our Nation will be able to enjoy the splendor, beauty, and pageantry of the annual St. Petersburg Festival of States Parade. The parade, which I participated in last Saturday, was taped by CBS so that highlights can be broadcast nationally this Sunday afternoon between noon and 1 p.m.

The parade is the highlight of 2 weeks of activities during the Festival of States, which brings marching bands from around our Nation to Pinellas County, FL to march and perform. This celebration of springtime in St. Petersburg has been sponsored since 1958 by the Suncoasters, a unique organization of civic leaders who generously give of their time to organize this special event. Tom Gregory, president of the Suncoasters, and Al Catronovo, director of the Festival of States, coordinated this year's program.

The Festival of States mixes Florida's natural beauty with the excitement of marching bands, music, flower decorated floats, clowns, balloons, and thousands of wide eyed children. I'm happy that people from all around our great Nation will have an opportunity to share the natural beauty of Florida as the parade marches down the palm-tree-lined streets of St. Petersburg next to the blue water and beautiful boats out on Tampa Bay.

Hopefully watching the sunshine and excitement of the Festival of States parade Sunday will spread some warmth to the many parts of the United States that have not yet thawed out from winter.●

HONORING MRS. GERALDINE MARTSON, PRESIDENT OF THE AUXILIARY OF THE DEPARTMENT OF PENNSYLVANIA OF THE AMERICAN LEGION

HON. GEORGE W. GEKAS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. GEKAS. Mr. Speaker, I would like to bring to the attention of Congress the achievements of one very community-oriented individual in my district. She is Mrs. Geraldine K. Martson, presently president of the Auxiliary of the Department of Pennsylvania of the American Legion. As the time draws near once again for auxiliary elections, I wish to congratulate her on her many years of dedicated service.

Gerry has been a member of the auxiliary since 1946 when she joined the William H. Nauss Unit No. 143. Her eligibility in the American Legion Auxiliary is the result of her late husband's service in the Army during the Second World War and the Korean conflict.

Gerry has served not only as her own unit president, but also as a president of the unit's Past President Parley and also as a former president of the Cumberland, Dauphin, Lebanon County Council. In addition, she has served a 2-year term as district president.

Her committee work within the auxiliary has included work as the central (section) vice chairman of communications, membership and the Americanism committees. While she served as department chairman of the Children and Youth Committee she was honored with two national awards. She has also been a member of the department finance committee and was its chairman in her final year.

During the past couple of years, previous to her present positions, she held positions of ever increasing responsibility. During the 1982-83 year she was elected to the office of central vice president and last year as department membership chairman. She also has been certified as an instructor in the leadership development course sponsored by the American Legion Auxiliary.

Finally, Gerry has chosen as her presidential project a "Cavalcade of Memories." It will consist of a collection of auxiliary memorabilia in a room at the department headquarters in Wormleysburg, PA. The financial goal for the project is $20,000 and is being supervised by the chairman of the department of Pennsylvania.

Once again, I wish to extend my congratulations to Mrs. Geraldine K. Martson with the backing of the entire Congress concerning her remarkable efforts for the community and her cherished auxiliary for so many years. Thank you, Gerry, for many jobs well done.●

OPPOSES INCREASED FUNDING OF NASA

HON. JIM ROSS LIGHTFOOT

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. LIGHTFOOT. Mr. Speaker, I would like to take this opportunity to express my support and appreciation for the role of the United States as a leader in space flight and exploration. Over the past few decades we have realized tremendous benefits in science and technology through the programs of the National Aeronautics and Space Administration [NASA]. In addition to these benefits, the U.S. accomplishments in space flight and exploration have inspired a genuine boost in American pride and morale, especially in regard to the space shuttle missions of recent years.

However, we as a nation are currently faced with terrific problems directly

related to the enormous Federal deficit. Rural America and the Nation's farmers are suffering from the worst economic conditions in decades. When it comes to federal spending, we have all had to tighten our belts in order to realize the long-term benefits from a significant reduction in the Federal deficit. In pursuing this goal of deficit reduction in formulating the fiscal year 1986 budget, no program should escape careful scrutiny, including those of NASA.

As a result of these efforts to reduce the deficit, funding for many valuable programs is being eliminated, drastically reduced, or frozen at current levels. Nevertheless, the bill being considered today, H.R. 1714, proposes an increase of nearly $325 million over fiscal year 1985 levels for NASA.

Moreover, at a time when efforts are being made to shift government services over to private sector initiatives, the current level of government domination of the space industry merely discourages the private sector from investing its own resources in pursuit of the very same goals.

For all of these reasons, I find it very difficult to support the levels of funding authorized for NASA in H.R. 1714.●

WLVT CELEBRATES 25 YEARS OF PUBLIC BROADCASTING EXCELLENCE

HON. DON RITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. RITTER. Mr. Speaker, my congratulations to WLVT on their 25th anniversary on April 22. As the representative of all citizens of the Lehigh Valley, I want to express their and my appreciation for a job well done.

This hallmark occasion marks more than just a company being in business for 25 years. It marks 25 years of quality educational programming, 25 years of serious journalistic endeavor, 25 years of televised public service to the entire Lehigh Valley community.

The influence of the broadcast media overall in our society has been increasing and public television likewise plays an increasingly powerful role in enhancing social, economic, political, and cultural awareness of the American people. No where is this more true than in the high quality programming provided by WLVT.

WLVT has brought us programs that range from Lehigh Valley football, wrestling and scholastic scrimmages to political debates and issue-based productions, to works of Somerset Maugham and John Le Carre to epic productions about Winston Churchill, Reilly Ace of Spies, and India at the conclusion of Empire. WLVT has won the admiration of its viewers from children to adults.

WLVT entertains, it informs, it inspires, it can galvanize the attention and touch the conscience of a people. WLVT of the Lehigh Valley has been doing its work in the superlative for 25 years now. I'm delighted to see the community honor them on this important occasion in their history, and I wish them many continued years of broadcasting success.●

HOPE FOR AMERICA'S MISSING

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. LAGOMARSINO. Mr. Speaker, as a long-time active member of the House Task Force on Prisoners and Missing in Southeast Asia, I have closely followed efforts of the Reagan administration to obtain a full and complete accounting of American servicemen and civilians listed as POW-MIA in Southeast Asia. A satisfactory resolution of this humanitarian issue is sought by this Government, the families who must bear the greatest suffering, and so many others. Yet, the Vietnamese Government has refused thus far to provide detailed information about the over 2,400 Americans still unaccounted for.

Yet, there is always hope. The Congress has shown a keen interest in finding a resolution to the issue, and with the strong direction from the President and his National Security Council staff, the Vietnamese have recently signaled perhaps a slight lessening of intransigence, and a faint increase in their willingness to work with the U.S. Government on the issue. On this topic, I would like to bring to my colleagues attention the following editorial from the Oxnard Press-Courier, dated Saturday, March 16, 1985, entitled "Hope for America's Missing."

HOPE FOR AMERICA'S MISSING

The Vietnamese War left many wounds that have yet to heal. None seem so cruel as that inflicted by Hanoi's calculating policy of withholding information about the fate of 2,483 Americans still unaccounted for.

It has been 12 years now since the last American soldiers left Vietnam. 12 years since the Paris Peace Accords were signed, and nearly 10 years since the betrayal of that agreement resulted in Saigon's fall to the North Vietnamese army. And still, Americans wait for an accounting of sons, brothers, husbands and fathers who never came home and whose fate remains uncertain.

Yet, there is reason to hope. There are indications, faint perhaps but there nonetheless, that Hanoi's intransigence on this matter may be coming to an end.

It is not that the members of Vietnam's ruling politburo are suffering pangs of bourgeois conscience after all these years. Far from it. The Vietnamese have sought all along to extort political and economic concessions from the United States in exchange for the remains of some missing Americans and information about the fate of others whose bodies have not been recovered.

There is even reason to suspect that some Americans are still being held as prisoners of war more than a decade after Hanoi said that all had been released.

Since 1975, The Department of Defense has amassed more than 3,000 reports, mostly from refugees, concerning American servicemen in Southeast Asia.

Of this total, 716 reports were of first-hand, live sightings: Which is to say, living Americans in communist hands in Vietnam, Laos or Cambodia after all American prisoners of war were supposedly released in 1975.

The Defense Intelligence Agency says it has carefully investigated each of these leads. Many witnesses have been given polygraph tests. Reports have been painstakingly checked with information provided by other refugees or obtained from various intelligence sources. This exhaustive sifting process, which has gone on for a decade and continues today, has left 176 reports of first-hand, live sighting "unresolved."

Put another way, the United States government has 176 apparent eye-witness accounts that could conceivably involve Americans still being held prisoner in Communist Indochina. Significantly, the Reagan administration's official position is that it cannot rule out the possibility that some Americans may still be prisoners.

In any case, it could hardly be more apparent that the cold-eyed communists who rule in Hanoi possess no humanitarian instincts at all. What might produce a breakthrough is Hanoi's recognition that the Reagan administration, now in office for another four years, will never consider any concessions to Vietnam until the Vietnamese cooperate fully in resolving the status of every last missing American.

Hanoi's latest action was the return of five more missing Americans. The Vietnamese also hint that further cooperation might be forthcoming on a much expanded scale.

As for any Americans still held prisoner, Assistant Secretary of Defense Richard Armitage said that if and when the administration obtains precise intelligence, "decisive action would be taken."

Hanoi knows that could include the use of whatever armed force was necessary to liberate any American POWs.

The Carter administration, which wanted to normalize relations with Hanoi, paid little heed to the POW/MIA issue. President Reagan made it a matter of "highest priority" immediately upon taking office. That and the necessary firmness may at last be producing results.●

PVT. ROBERT E. BARTLETT II IS AN INSPIRATION TO US ALL

HON. C.W. BILL YOUNG

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. YOUNG of Florida. Mr. Speaker, Pvt. Robert E. Bartlett II, a constituent of mine from Treasure Island, FL, who died last year in a tragic accident while on duty in the Middle East, has been honored by the Army for his dedicated service to our great Nation.

The newly constructed Florida Army National Guard airfield at Camp Blanding near Jacksonville, has been named the Anderson-Bartlett Flight Landing Strip in memory of Private Bartlett. The Army also posthumously awarded a commendation medal to Private Bartlett who was promoted to the rank of specialist 4th class.

Private Bartlett volunteered to join the army in 1982 following his graduation from Boca Ciega High School. He was stationed at Fort Brag, NC, as an electrician with the 27th Engineer Battalion, paratroopers of the 82d Airborne Division and later volunteered for duty in Egypt with the Multinational Force Observers. He was killed there in an accident March 29 of last year.

I'm pleased that the Army has recognized the service of Private Bartlett because his is symbolic of the men and woman of our military who have volunteered to defend our Nation around the world. Perhaps the Army, in awarding the commendation medal, best summed up Private Bartlett's devotion to serving our country by saying, "Private Bartlett's enthusiasm and dedication to duty greatly inspired all who came in contact with him."

Each of us owes Private Bartlett a debt of gratitude for making the ultimate sacrifice to preserve our freedom.●

ON THE DEATH OF POOR BABIES

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. MILLER of California. Mr. Speaker, I would like to call to the attention of my colleagues an editorial, "On the Death of Poor Babies," which appeared in the New York Times, Friday, March 15. It describes the fundamental inconsistency between the administration's stated desire to reduce the high infant mortality rates and low birthweight rates among American infants, while at the same time removing the prenatal and infant health care services which are so necessary to healthy outcomes.

It is not enough to say that their approach does not work; the fact is that the administration's policy of reducing support for prenatal and infant health programs is having tragic consequences.

Recent data show that, for the first time in 20 years, progress in reducing the infant mortality rate has stalled. We still rank 12th in the world among developed nations.

Is it knowledge we lack, or technical capacity, or medical personnel, or medical facilities? No; we lack only the will to invest in these mothers and their infants.

These findings come as no surprise to the members of the Select Committee on Children, Youth, and Families. During our hearings held in cities across the country, we saw the early warning signs of this growing tragedy. We also were repeatedly shown how quality prenatal care, adequate nutrition, and the avoidance of alcohol and tobacco are effective in helping mothers have healthy babies. The cost-effectiveness of these preventive approaches has been confirmed again and again, and is described well in the editorial.

We should be proud of our past progress in saving the lives of and assuring the healthy development of infants and young children. We have the knowledge and the means, through preventive care, to save more lives and assure more families a healthy start in life. We should not accept anything less.

[From the New York Times, March 19, 1985]

ON THE DEATH OF POOR BABIES

Dr. Edward N. Brandt Jr., until recently the Assistant Secretary of Health and Human Services, finds some new public health data "disquieting." He had thought America's declining infant mortality rate would reach 9 deaths for each 1,000 births, almost as low as that of Japan and six European countries. "My prediction was wrong," he says, "flat wrong." The rate seems to be leveling off at 11 deaths per 1,000.

That may come as a surprise to Dr. Brandt, but not to many health professionals aware of the Reagan Administration's continuing approach to basic health services: Cut them. What elevates the infant mortality rate? Figures like these: 21 of every 1,000 babies born in the Bronx's Morrisania section will die before their first birthday (compared with 6.2 in Astoria, Queens). So will 17 of those born in New Haven; 22 in Trenton; 55 in the Avalon Park section of Chicago. What these places have in common is poverty.

Three-fourths of all neonatal deaths are related to low birth weight—and that is in turn related to poor maternal nutrition and prenatal care. And the incidence of low-birth-weight babies remains high. More are living beyond their first month, thanks to special hospital neonatal units, but dying before their first birthday. Such deaths, the Public Health Service says, are a serious concern because they're "most susceptible to preventive efforts." Now consider some other figures. The Administration folded maternal and child health programs into a block grant in 1982 and cut spending 18 percent. It cut spending for community health centers 13 percent. The WIC [Women-Infant-Children] program provides diet supplements and checkups for poor pregnant and nursing women and their children—but it has only enough money to reach a third of those eligible. The Administration now proposes more—a limit on Federal Medicaid grants to the states, and a cut that would drop a million participants from WIC by 1986.

These are cruel and foolish economies. A Federal advisory panel estimates that each dollar spent on prenatal care for women at risk of bearing low-birth-weight babies will save as much as $3.38 in specialized care later. Low-birth-weight babies are more likely to suffer cerebral palsy, retardation, seizures and vision problems, and to require public funds for treatment. What kind of way is that to save money?●

OVERTIME COMPENSATION FOR CERTAIN TRAVEL PERIODS OUTSIDE OF REGULAR WORKWEEK

HON. MARY ROSE OAKAR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Ms. OAKAR. Mr. Speaker, I am introducing legislation today to provide that Federal workers would be eligible for overtime compensation for certain travel periods outside of their regularly scheduled administrative workweek.

Under current law, Federal employees who must work at their duty stations on a weekend or holiday are eligible for overtime compensation. However, if the same employee is required to travel en route to a training site or a temporary work location on a weekend or holiday, that individual is not entitled to overtime compensation. It seems to me that simple fairness dictates that both employees be treated equally and that they be eligible for overtime compensation for working on their weekends or holidays.

As chair of the Subcommittee on Compensation and Employee Benefits of the House Post Office and Civil Service Committee for the past 4 years, I am thoroughly familiar with the torrent of rhetoric from the current administration charging that Federal employees are overpaid. Such statements, however, do not portray an accurate picture of Federal compensation practices.

As a matter of fact, a recent study performed by the prestigious consulting firm of Hay Associates for the Post Office and Civil Service Committee demonstrates that Federal compensation lags 10.3 percent behind the private sector, rising to more than 50 percent for senior executives. When benefits are included, Federal employees trail the private sector by 7.2 percent as a percentage of payroll. In virtually every category of benefits, Federal workers are behind their coworkers in private industry.

Such data is extremely important in creating a true picture of employment practices in the Federal Government, as compared to other sectors of the economy. As chair of the Subcommittee on Compensation and Employee Benefits, it is my intention, during the course of this Congress, to review the compensation and benefit structure for employees of the Federal Government and to attempt to create a system that more closely parallels the compensation and benefits package in private industry.

The bill I am introducing today is a beginning in creating a sound compensation and benefits program that will enhance productivity and morale in the Federal Government. It is time for all of us in Congress to look behind the anti-Federal worker propaganda espoused by the current administration and to focus on creating an equitable personnel structure for employees who spend their working lives implementing the programs that are so important to our country.

I urge my colleagues on both sides of the aisle to join me in supporting this bill and in seeking expeditious enactment of the legislation.●

HARRY HERMAN: A MAN OF COURAGE, JUDGMENT, INTEGRITY, AND DEDICATION

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. KEMP. Mr. Speaker, I rise today to pay tribute to the memory of my dear friend, Harry Herman, who passed away in February 1984. Harry was truly a man of courage, judgment, integrity and dedication—and much more. His intelligence and foresight made him a leader in the area of labor-management relations, and his work is being carried on today by his son, Clark. His kindness, his wisdom, and his patriotism will not be forgotten, and I consider it a privilege to have been his friend.

Each year, Harry held a labor-management luncheon in Bal Harbour, FL, during the meeting of the AFL–CIO. I had the honor of speaking before the distinguished group Harry assembled in 1981. This year, the luncheon was held without Harry's physical presence, but I'm sure his spirit was with the group as they paid tribute to him.

I share the remarks of Pete Bommarito of the United Rubber Workers in praise of Harry Herman with my colleagues today. He devoted his life to family, country and bringing labor and capital together and we all are the beneficiaries of his legacy.

HARRY HERMAN: A MAN OF COURAGE, JUDGMENT, INTEGRITY, AND DEDICATION

It is appropriate that this Annual Labor-Management Luncheon honors the memory of Harry C. Herman, a man of courage, judgment, integrity, and dedication . . . a man that we were all proud to know and call friend.

Under Harry's direction, labor leaders and their corporate counterparts gathered in various meetings to establish, renew, or perpetuate relationships based on trust and friendship. He knew, better than most, that the essence of the labor-management relationship was trust between individuals and that this trust was a precondition to industrial peace and cooperation.

Harry believed in organized labor as one of the great and essential institutions of America. Working on the assembly line himself, and living through a depression and World War II, Harry recognized the need of working men and women for a collective voice at the workplace—a way they could communicate their desires, hopes, fears, and aspirations to management. At the same time, he knew that enlightened management, working cooperatively with leaders of organized labor, could create work environments mutually beneficial for all concerned.

Harry Herman's character, integrity, and beliefs were largely formulated during his World War II experiences. As a Lt. Col. in the North African Scilian and French Campaigns, he recieved the Silver Star, two Purple Hearts, and five Battlefield Citations. Due to his service in the French Foreign Legion in North Africa, he received the distinguished French Military Cross. One of his final wartime assignments was to escort Rudolf Hess to America for interrogation. In giving service in defense of his country, his appreciation for being an American grew.

If one were to summarize Harry's professional beliefs, and practices, it would be stated that he genuinely believed in and stimulated the ideal of labor-management cooperation, long before this term became a cliche. This principle of teamwork underlies today's meeting, as well as the many positive relationships that exist throughout the country because of Harry's work. We will long remember Harry's commitment to high ideals and his salient service.

Those of us who knew Harry Herman will agree he was a great man. Some people whose lives touch ours leave a major impact. Harry was such an unforgettable person.

This loving husband and father was my friend and colleague through the many years our work brought us in contact. It was my privilege to know him through the years he worked as a consultant in many labor-management agreements.

Harry and I worked together in solving some difficult problems. I still recal our first contact during December 1968, when we helped to negotiate a contract for Samsonite. Harry's sense of honesty and his keen insight into the complicated problems surrounding contract negotiations led to an amicable agreement that was fair for both sides. Because of Harry's efforts, over 2500 people were able to enjoy that holiday season. In fact, Harry's negotiations became a model for continuing successful labor-management relations that have kept Samsonite strike free since his initial work with the company.

This is only one example of the hundreds of difficult situations Harry resolved through the years, to benefit millions. His ability to clearly assess issues from an unbiased stance and then identify a fair agreement for all were his trademarks. He worked with companies and unions in a positive way that helped everyone involved.

It is especially fitting that we pay tribute to Harry at this time, because it was just one year ago that we experienced his sudden, untimely death, while the AFL–CIO meeting was in session.

Dr. Ron Harris and I had accompanied Harry to the hospital. After his death, we assisted in making arrangements for his burial with full military honors in Arlington National Cemetery—the most appropriate resting site for this hero, who had given invaluable service to his country, as well as to mankind. I still remember the day, cold and drizzly. But as we started the somber drive through the cemetery, I knew I had to walk that last mile with Harry. Clark and Robert Herman, his sons, and Dr. Harris joined me as I followed the horse-drawn caisson bearing his casket, in tribute to Harry.

We miss his physical presence today, but his spirit will not be forgotten. Harry Herman was a giant . . . truly a man of great courage, sound judgment, highest integrity, and loyal dedication.—Pete Bommarito●

THE SELF-EMPLOYMENT OPPORTUNITY ACT OF 1985

HON. RICHARD A. GEPHARDT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. GEPHARDT. Mr. Speaker, economic conditions are changing in America. The unemployment rate stubbornly remains above 7 percent 2 years after we supposedly ended a recession and entered a period of economic growth. Increasing plant closings and relocations are simultaneously laying off large numbers of people and depriving communities of their major source of jobs.

We are witnessing increasing structural unemployment, at least in certain sectors of the economy and certain regions of the country. It is too easy to say today that unemployment is primarily voluntary; there is too much evidence to the contrary.

Regardless of the debate surrounding acceptable levels of full employment-unemployment, I believe it remains a basic tenet of the American dream that everyone who can work and wants to work, should be able to work. We in Congress cannot accept structural unemployment at a rate of 7 percent, or even anything close.

Our Unemployment Insurance Program does nothing to address the problems of structural unemployment. Unemployment insurance was originally intended as a temporary source of income maintenance for people temporarily unemployed.

The program was designed to provide limited funds on a weekly basis, while the recipient was looking for work and holding himself ready for work—work which could reasonably be expected to become available in a relatively short period of time.

Today, however, more than 8 million people are looking for jobs—jobs that might no longer be there for them. Perhaps it is time to change our Unemployment Insurance Program to respond to our changing economic conditions.

My colleagues RON WYDEN, CHARLES SCHUMER, and I believe that we must try, and that is why on March 21, 1985, we introduced H.R. 1690, the Self-Employment Opportunity Act of 1985.

This legislation would enable a limited number of States, if they so choose,

to select a limited number of unemployment insurance recipients and allow them to use their benefits to attempt to go into business for themselves. Current law prohibits such use of unemployment insurance benefits.

Each participating State would design and run its own program. The programs would be evaluated after 3 years. Information from these evaluations would help us determine whether this program should be continued and become part of our ongoing efforts to enable individuals to find and create their own opportunities for participating in our economic system.

It is my hope that designing such an experimental self-employment program would encourage States to think about other measures, on the State and local levels, to support individuals in their attempt to become part of the work force. Such measures are surely needed, and the States are in a better position than the Federal Government to evaluate local needs and exigencies and design flexible and responsive programs.

Supporters of this bill believe that it is time to try a new way of helping the unemployed become self-sufficient and productive. We believe that it is time to ask: Should people lose their unemployment insurance eligibility if they attempt to go into business for themselves?

No one would be required to participate in the program, but in States with pilot programs, the unemployed would have a choice in solving their employment problem—a choice they are denied under current law.

Our current Unemployment Insurance Program does nothing to reduce unemployment; it was not intended to. But today American citizens are being caught up and damaged by economic change. Change is inevitable. We need to be creative and flexible enough to change our legislation to prevent people from being hurt by it.

We need to acknowledge the possibility that in these changing times some people in our economy might not have a job unless they create one for themselves, and we need to enable them to try to do so.

And we must not prejudge, explicitly or implicitly, who among us are capable of creating jobs for themselves. There is no reason to assume that the unemployed are less qualified to start their own businesses than anyone else.

There certainly are criteria which should help us identify those more likely to succeed in a self-employment venture. Under our act, it would be up to the respective States to define these criteria and apply them in their evaluation of applicants to the program.

The point is, simply being the recipient of unemployment insurance should not disqualify a person from the opportunity to start his or her own business.

Some of these self-employment ventures will fail. Many of these recipients would not have found employment under the traditional unemployment insurance program anyway, and all of them will have had the valuable experience of planning and starting up a business—experience that might well make them more employable.

But let us consider those that succeed. Not only will these indviduals be on their way toward self-sufficiency and productive participation in economic growth; there is a good chance that they will help others in the process.

In our country, 90 percent of new jobs created each year are created by new business ventures. In Europe, unemployment insurance-financed self-employment ventures have created an average of 1.7 new jobs per unemployment insurance recipient in the program, within the first 3 years. Imagine enabling a person to stop accepting unemployment checks from the Government and start issuing paychecks to his employees.

Self-employment is not for everyone, and using unemployment insurance to set up self-employment ventures is not the only solution to our unemployment problem. But it might well be part of the solution, and for some people it might be the first step on the road to self-sufficiency.

Let us let them take that first step. Let us give the States the flexibility in their unemployment insurance programs to enable unemployment insurance recipients to do more with their benefits than wait for a job that might never materialize: let us enable them to try to make a place for themselves in our economy.

Let us empower a few more people to pursue the American dream.●

MY PLEDGE TO AMERICA

HON. JUDD GREGG

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. GREGG. Mr. Speaker, I am proud to share with my colleagues the winning entry from New Hampshire in the annual Voice of Democracy scriptwriting contest. This contest is conducted by the Veterans of Foreign Wars of the United States, and its ladies auxiliary. More than 300,000 secondary school students participated nationwide this year, competing for the six scholarships which constitute the top prizes. The contest theme was "My Pledge to America."

The winning contestant from New Hampshire is Elise Millen, of Littleton:

MY PLEDGE TO AMERICA

(By Elise Millen of Littleton, NH)

One of the daily routines of my childhood school days was to say "The Pledge of Allegiance". Then, what I was saying had no more meaning than any other daily routine, such as brushing my teeth after every meal. I just did as I was told, as a good child should.

I do not say "The Pledge of Allegiance" very often now, but the words live on in my memory, and the pledge I made as a child takes on a whole new meaning. My pledge to my country is like the marriage vows made between husband and wife at a marriage ceremony. It involves responsibilities, on my part, and on the part of my country.

What my country has pledged to me and every other citizen is written for the whole world to read in our Constitution. Through this document, the founding fathers placed the control of the government in the hands of the people, not just a select few. Their faith in the common man is what caused them to entrust us with the greatest document ever written in the U.S. Constitution, the very document that insures our rights. That is America's pledge to all of us. Whether we crush its high ideals or mold and shape them with the changing of the times, it is all up to us.

While America pledged to me the rights it was my good fortune to be born to, my pledge to America is to protect these rights.

Devotion to one's country is more easily shown in times of peace. In times of war, a country will soon find how devoted its citizens really are to its principles. Many have died a heroic death to make sure these principles lived on for me to enjoy. Because I believe in these ideals, I would fight for their survivial, even if my sacrifice was my own life. To pledge one's life is not something to be done lightly, but by doing so, I would be fulfilling my pledge to protect the Constitution by defending it against outside forces, but not only do forces from the outside have the power to crush the Constitution. The one single force more powerful than all the armies of the world is apathy. The rights given to us were meant to be used.

Many Americans never feel the need to exercise their rights, even if they have provication, whether, as they say, for lack of time, or just plain lack of inclination. The one thing that has kept the Constitution a moving force in our society for so long is the active participation citizens have taken in using their rights. I wonder if they would feel the inclination if it became apparent that, one day, they would lose these rights?

Because I do not want that day to come, I pledge my support and confidence to America by fully exercising my rights once I reach legal age. Such simple things as voting and writing my congressman will not only be my contribution to help my government function, but is my show of confidence in a system of government that has lasted for over two hundred years.

I pledge to make use of all my freedoms. Every American, not just the elected official, has the right to disagree, not only themselves, but openly. This, I believe, is America's greatest freedom, for it is the instigator of all reform and change. I can protest anything, from last month's electric bill, to the invasion of Afghanistan. To protest, is a freedom I can enjoy at my present age. However, I shall also enjoy this right in the latter years of my life, even if that means bombarding the editor of my local newspaper with my letters.

The interests of my country coincide with my interests, since ours is a partnership not unlike that of a married couple. In order to help protect my country and myself, I pledge to stay informed about what happens in and around my country that might affect us. It would seem a little ridiculous to protest the invasion of Afghanistan if I did not know who the invaders were. Informing myself on past and current events will insure that I can carry out my duties with responsibility and knowledgeability.

I pledge to take full advantage of all the rights and freedoms my Constitution allows me, which leads to my last and most important pledge to my country.

Because I love America, I would not follow a government blindly, as the founding fathers would abhor. I pledge to protect and safeguard my country and everything it stands for, not just for my benefit, but for the benefit of all future generations to come. And, rather than being led, I, and every other citizen shall do the leading, into the year 2000 and beyond.●

A NEW DEBATE ON POVERTY

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington report for Wednesday, April 3, 1985 into the CONGRESSIONAL RECORD:

A NEW DEBATE ON POVERTY

In my talks with Hoosiers, I notice a curious reaction to the poor. Hoosiers respond generously to individual cases of hardship. They are quick to offer assistance in cases of personal need, such as a child needing medical assistance. But when asked how to relieve the distress of the poor in a methodical, continuous way, that sympathetic instinct is often lost in the concern that efforts to help will be overwhelmed by cheating and malingering.

Most of us agree that there is too much proverty in America. Despite recent economic growth, proverty is at its highest level in eighteen years. A family of four is considered poor if, in 1983, their annual cash income was less than $10,178. Over 35 million Americans now live below that level, six million more then in 1980. Almost 40 percent of these poor over 65 or under the age of 6. Even so, there does not seem to be a national push to alleviate the plight of the poor. Tnere is not much talk about the poor in Congress. The "war on poverty" has slipped from the national agenda.

During the 1970s most of us held the view that in a healthy economy, public investment could be focused on basic needs—foods, shelter and warmth—for the poor. We expected education, training, nutrition, and health care to lift the disadvantaged from poverty. Those unable to cope, such as th old and disabled, would receive continuing assistance. But economic recession and a recognition of the complexity of the problem undermined this approach. Reports of welfare cheats who accumulated benefits from government programs worsened the situation. A problem that once seemed manageable now seems insoluble.

Today, critics argue that government anti-poverty efforts not only failed, they made matters worse. In this view, the anti-poverty programs of the 1960s encouraged the poor to think that it was not their fault that they were poor. Society was to blame, and society has the responsibility to cure poverty. In this view, as the chronic poor became more dependent on welfare, personal effort declined.

Social spending did increase rapidly over the past decade, but these increases were mostly in programs for the middle class. Federal spending on programs for the poor lagged behind inflation in recent years and continues to decline. The President's budget this year proposes more major cuts in health care, nutrition, job training, housing, and legal service for the poor. Overall, federal aid to the poor is less than 8.5% of total government expenditures.

My view is that many of these government programs, even with their faults, have helped reduce poverty. Major increases in social security benefits, and the creation of Medicare and Medicaid, dramatically reduced the number of older persons in poverty. Other social programs—job training, subsidized housing, nutrition programs—have created opportunities for the economically disadvantaged. Even these programs have not solved the poverty problem, however. They have helped to meet basic needs, and they sometimes provide a valuable "safety net" to alleviate severe hardship among the poorest, but they have not reduced crime, domestic violence, unemployment, or drug addiction. Focusing the poverty debate on budget cuts alone is misleading and unproductive. There is clearly some truth in the view that people will get out of poverty only if they take individual responsibility.

How we attack poverty in the 1980s and beyond presents a formidable challenge. Our past efforts to reduce it have produced mixed results. Congress might resist further deep cuts in current programs for the poor, but there is little support for costly federal initiatives. We need a new debate, similar to the great social debate twenty years ago on the eradication of poverty. Conservatives and liberals alike must reconsider the basic approaches to reducing poverty, and strive for consensus.

Everyone agrees that the best way to end poverty is through economic growth, which increases jobs, wages and living standards. Without economic growth, people at the bottom cannot get jobs to improve their standards of living. Even with strong growth in the last thirty months, however, unemployment remains high and poverty grows. With over 15% of all Americans struggling below the poverty line, it is clear that economic growth is not enough. We need a better approach.

In general, the emphasis of the debate is shifting from a discussion of funding levels to an examination of which approaches provide assistance to the poor most effectively and responsibly. Several suggestions merit closer examination. Changing the tax laws to increase the after-tax income of the working poor would be the simplest way to reduce poverty. Recent changes sharply increased the tax bite on the poorest Americans, who now pay in taxes a percentage of their income roughly equal to what the wealthiest pay. We must also train people and prepare them to take jobs. Genuine equality of opportunity must be at the heart of any anti-poverty strategy.

Another suggestion is to identify the needy better so that we use our resources more efficiently. The present fiscal climate makes it unlikely that Congress will approve new spending to help the poor, but efficient cash transfer programs directed at the neediest would help. Among the suggested reforms are proposals to tie various benefits to employment training programs, and to increase private sector involvement in projects for the poor. Regulatory changes—such as adjusting utilities' rate schedules to enable the poor to meet expenses—would help, as would efforts to prevent poverty through health care and education programs for children in poor families.

Government programs cannot replace individual motivation and effort. We have had only limited success in reducing poverty, but we cannot let disappointing results paralyze us. I keep hoping that one day we will have the wit and compassion to deal decently and fairly with the poor.●

CIVIL SERVICE RETIREMENT SPOUSE EQUITY AMENDMENTS OF 1985

HON. MARY ROSE OAKAR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Ms. OAKAR. Mr. Speaker, I am introducing today the Civil Service Retirement Spouse Equity Amendments of 1985. This bill sets forth a series of technical amendments to the Civil Service Spouse Equity Act of 1984.

As you may recall, the Congress enacted legislation last year to provide spouses and former spouses of Federal employees with important new rights under the civil service retirement system. This landmark legislation was signed into law on November 8, 1984, as Public Law 98-615.

Some of the provisions of Public Law 98-615 were effective upon enactment, and others were effective 180 days after enactment. Those provisions which did not become effective for 6 months were delayed because of the complexity of the legislation and the need to allow the Office of Personnel Management sufficient time to promulgate appropriate regulations.

Unfortunately, the OPM has yet to issue even proposed regulations. We are also concerned, based upon discussions with OPM, that it is taking a much narrower view of some of the provisions of Public Law 98-615 than was intended by the authors of the law.

For these reasons, I am introducing this series of technical amendments. I am also including in this bill a provision to allow all civil service annuitants a second opportunity to choose survivor benefits for their current spouses. Under Public Law 98-615, this option was provided under rather limited circumstances, for a 1-year period, beginning on the date of enactment. Since the OPM has not issued the regulations and nearly 6 months have transpired since the date of enactment, it is only fair that this time period be extended. In addition, by expanding the second election to all an-

nuitants, we will provide civil service retirees with the same right that Congress granted military retirees a few years ago and, in the process, there will be substantial short-term savings for the civil service retirement fund.

The technical amendments also would extend the same pension protections to spouses and former spouses of retirees as those that were created in last year's legislation for spouses and former spouses of employees. In drafting this provision, we have made certain that the existing financial arrangements between annuitants and current or former spouses will not be disturbed and that former spouses will simply have the same rights as if they were married to an active participant in the Federal work force.

It is my hope that Congress will move swiftly on this legislation. Last year, my Subcommittee on Compensation and Employee Benefits conducted extensive hearings on pension rights for spouses and former spouses of Federal workers and annuitants. I believe that the record is clear and that the need for this legislation is great. It is certainly my intention to schedule this legislation for consideration by my subcommittee at the earliest possible date.

I urge my colleagues on both sides of the aisle to join me in supporting this bill and in seeking expeditious enactment of the legislation.●

THE $50,000 GROUP TERM LIFE INSURANCE EXCLUSION SHOULD BE INCREASED

HON. MATTHEW J. RINALDO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. RINALDO. Mr. Speaker, today I am introducing legislation that would increase to $150,000 the group term life insurance exclusion by amending section 79 of the Internal Revenue Code. The current exclusion, $50,000, has remained in effect since it was originally adopted in 1964. The exclusion from Federal income taxation should be increased to $150,000 for four reasons.

First, since 1964, the base level of the consumer price index has increased by a factor of approximately 3.2.

Second, Federal tax legislation adopted in 1983 and 1984 amending section 79 of the Internal Revenue Code provides that key employees insured under discriminatory group term life insurance programs will lose the benefit of the exclusion and the uniform rate table (table 1) in determining their taxable imputed income. As a result, any increase in the exemption will only be available to employees who are insured under nondiscriminatory group term life insurance programs.

Third, when the $50,000 exclusion was originally proposed, it was intended to encourage the purchase of reasonable amounts of low-cost group life insurance. Today, the combination of an average salary close to $25,000 and group life insurance schedules which normally provide all employees with insurance double their annual compensation has increased the typical employee's taxation.

Finally, with the growing number of employees becoming subject to additional taxation, employers are feeling increased pressure to limit their programs to a maximum of $50,000 of coverage. Any additional amounts are being purchased on an individual-by-individual basis subject to evidence of insurability and employee payment of the full cost. It was never intended that the Tax Code would so severely restrict the purchase of adequate amounts of low-cost group term life insurance. The existing $50,000 coverage exclusion is a particularly low amount in connection with our uniformed public safety employees such as police and fire personnel.

For all these reasons, Mr. Speaker, I am today introducing this legislation, and I urge its support by our colleagues. For the benefit of our colleagues, I am including the the text of this legislation in the RECORD at this point.

H.R. 1968

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) paragraph (1) of section 79(a) of the Internal Revenue Code of 1954 (relating to group-term life insurance purchased for employees) is amended by striking out "$50,000" and inserting in lieu thereof "$150,000".

(b) The amendment made by subsection (a) shall apply to group-term life insurance provided after December 31, 1985, in taxable years ending after such date.●

HYDROELECTRIC FACILITY RELICENSING AMENDMENTS OF 1985

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. MILLER of California. Mr. Speaker, today I am introducing legislation which will affect the relicensing of hydroelectric powerplants throughout the country. Not only will this bill direct the Federal Energy Regulatory Commission [FERC] in its efforts to relicense operating plants but it also will serve the public's interest by assuring that only economically and environmentally sound plants are relicensed.

This issue concerns what is often referred to as the "preference clause." It dates back to the Federal Power Act of 1920 which gave municipally owned utilities a preference in the original licensing process. Because the law failed to address what criteria should be used when the license expired and the plant needed to be relicensed, the FERC has lacked direction and issued conflicting interpretations of the law.

My bill, the Hydroelectric Facility Relicensing Amendments of 1985, will correct the problem by directing the Federal Energy Regulatory Commission [FERC] to consider four factors when reviewing relicensing applications. They are:

First, the applicant's ability to efficiently use the waterway's power potential in a manner which provides public benefits including navigation, flood control, irrigation, and recreation;

Second, the applicant's capacity to protect and mitigate any adverse environmental impacts by enhancing fisheries, wildlife, natural, cultural and recreational resources in an economically sound manner,

Third, the applicant's ability to encourage or assist its consumers to cost effectively conserve electricity, and

Fourth, the costs which will be passed onto the consumer if the plant is relicensed to the applicant and if it is not.

These four principles are guidelines for the FERC to use when reviewing applications. They insure that only those applications which meet a public interest test, an environmental protection, mitigation and enhancement test, an energy conservation test and an honest test of economic impact on consumers will be granted licenses. In the event the applications of any two applicants equally meet the four tests, the bill provides that FERC would issue the permit to the existing licensee.

This bill will not preempt the authority granted in pending legislation such as H.R. 44 introduced by Congressman SHELBY which I cosponsored. This bill merely complements the Shelby bill which asks FERC to grant the existing licensee a new license unless it is determined that the existing licensee's project does not best utilize the waterway. The concept of my bill was included in legislation introduced in the last Congress by our retired colleague RICHARD OTTINGER, the chairman of the House Energy Subcommittee on Energy Conservation and Power.

I encourage my colleagues to join me in support of the Hydroelectric Facility Relicensing Amendments of 1985.●

BASHING JAPAN IS BASHING THE UNITED STATES

HON. NORMAN D. SHUMWAY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. SHUMWAY. Mr. Speaker, not very often do I find myself in agreement with the editorials published in the Los Angeles Times. However, on March 31, that newspaper featured an editorial entitled "Bashing Japan is Bashing the United States" which should have been required reading for every Member of this House prior to last night's unexpected, and unfortunate, vote to blame Japan for our trading ills. As one of the 19 Members who opposed the resolution, I was frankly appalled that Congress could be so hasty, so shortsighted, and so irresponsible.

The United States is the leader of the free world in the realm of trade and, despite the trade deficit, our exports were good for us and good for our allies last year. For example, we exported $38 billion worth of agricultural goods. I concede that it would be desirable for us to export more. I concede that Japan has been slow to open her markets to our imports, and that it would be appropriate for us to take meaningful action vis-a-vis any nation with policies which impede free trade. However, last night's resolution not only fell far short of the desired mark—it may well damage our own citizens and consumers.

Protectionist measures can only hurt Americans. In the words of the editorial I will share with my colleagues, "it is a truism as old as commerce itself that when trade is restricted, consumers suffer." We invite—indeed, encourage—retaliation on the part of our trading partners, and that retaliation will have a far more detrimental effect than what we are now experiencing.

The measure passed last night reflects a desperation among politicians who are eager to please their constituencies, but reluctant to vote for spending reductions. Ironically, Congress has at its disposal perhaps the most effective tool to enhance our trade position. Few dispute the fact that the strong dollar is a major cause of the trade problem. American goods cost more abroad; foreign goods are cheaper here. Congress should have the courage to reduce spending and the deficit, thereby easing interest rates which produce the overly strong dollar. Sadly, instead of facing its responsibilities and acting to correct the trade deficit, Congress chose to lash out at U.S. allies, hanging the blame for our dilemma around their necks. I believe that in so doing we perform a grave disservice to the United States and to her trading partners.

In addition to congressional action reducing Federal spending, there are other appropriate—and effective—steps for us to take. Renewed trade negotiations is an appropriate route to follow and, if violations or inequities are suspected, we should file appropriate actions with the GATT. If GATT itself is found wanting or inadequate, then steps should be taken to strengthen it.

There are several meaningful approaches for us to take, any of which would be far more fitting and responsible than the antagonistic action taken last night. Those approaches are well outlined in the editorial I will share with my colleagues at this point. As the article concludes, the retaliatory action Congress wants to adopt will hurt Americans most of all in the long run.

The article follows:

[From the Los Angeles Times, Mar. 31, 1985]

BASHING JAPAN IS BASHING UNITED STATES

Japan accounted for about one-third of the $123-billion trade deficit that the United States ran last year, but as far as Congress is concerned Japan accounts for virtually 100% of the worry and frustration prompted by the imbalance. The result is an increasingly angry and even ugly congressional mood that threatens not only to damage U.S.-Japan relations but to bring considerable harm to American consumers as well.

That mood was explosively demonstrated last week when the Senate, on a 92-0 vote, advised the President to take harsh measures if Japan doesn't quickly become more accommodating in its trade policies. In the House, at the same time, a powerful committee chairman was demanding that the United States start regarding Japan the same way it does the Soviet Union—as an antagonist. If the mood that these attitudes reflect is not entirely rational, least of all in urging punitive actions, neither is it entirely unprovoked. Japan has indeed stubbornly resisted the kind of liberalization of its import policies that could ease the trade imbalance. That resistance, though, hardly makes what Congress is threatening to do any more sensible or any more beneficial to Americans.

All nations, including the United States, shield some of their domestic producers against foreign competition. But no major trading nation more insistently maintains protective barriers against legitimate competition than does Japan. Congress, upset about the overall size of the trade deficit but unsure of what to do about it, has become especially agitated by Japan's posture in trade negotiations. But in its alarm Congress is cranking up to force measures that, while they would certainly harm Japan, would be unmistakably self-wounding to America.

One of those measures came out of the Senate Finance Committee the other day, in a resolution that labeled Japan an "unfair trader" and called on President Reagan to restrict Japanese imports unless more goods from the United States are quickly allowed into the Japanese market. The resolution calls for freezing the American trade deficit with Japan to last year's level. Since Japanese car imports are scheduled to rise this year, adding $2.5 billion or so to the deficit, that would require reducing other Japanese imports by a like amount. The resolution is non-binding. But the sentiment in Congress is such that a formal insistence for trade sanctions could soon be made.

Genuine trade grievances do exist with Japan, most notably right now over the issue of American access to the Japanese telecommunications market. But Congress should know that even if Japan removed all its trade barriers, the bilateral trade balance would remain very much in Japan's favor. The Treasury's own figures show that fully free market access would likely produce no more than $10 billion a year in additional American sales to Japan. That's certainly not peanuts, but neither is it the solution for closing the trade gap.

The fact is that Japan sells a lot of things that Americans want to buy, ought to be free to buy, and benefit from having, and so long as that remains true a trade deficit seems inevitable. That's not an excuse for Japan to hold fast to its protectionist policies; there is plenty that it can do to open its markets and reduce the deficit, and those things ought to be done. But it is an argument against the kind of vindictive and ineffective measures that Congress has in mind. It is a truism as old as commerce itself that when trade is restricted, consumers suffer. Four years of auto-import quotas that cost car buyers billions of dollars in overpayments has provided suffering enough.

The easing of auto quotas ought to bring car prices down before long. But the probable increase in imports from Japan, by as many as 450,000 cars a year, can also be expected to intensify congressional calls for a confrontational trade policy, all in the name of reducing the trade deficit. In fact, though, that deficit is likely to remain huge regardless of what Japan does or what Congress does to Japan.

The deficit has swollen to its current size mainly because the dollar is so strong. That strength makes American goods more expensive abroad and foreign goods cheaper here. Bashing Japan is clearly not an effective or responsible way to address this larger issue. The trouble is that in the present atmosphere responsibility may be forgotten, with grievous consequences for everyone involved. That's why Japan should treat what is happening in Congress now with the utmost seriousness. It is why Americans should be doing so as well, for in the end the retaliatory course that so many in Congress want to adopt would hurt them most of all.●

WELL DONE, CHAIRMAN GREEN

HON. BILL FRENZEL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. FRENZEL. Mr. Speaker, today the Journal of Commerce's lead editorial was a tribute to Federal Maritime Commission Chairman Alan "Punch" Green. Chairman Green has just resigned to return to private life in Oregon. According to the Journal he "left some very big shoes to fill."

The editorial praised his leadership in the passage and implementation of the Shipping Act of 1984, the primary goal of the FMC during the first

Reagan administration. It noted that he reduced the FMC staff by 30 percent through attrition, without a decrease in effectiveness.

These are only a few of the reasons that Senator BOB PACKWOOD's statement that Punch Green is the "finest Commissioner in FMC history" is being repeated throughout the maritime industry and the trade community.

America ought to be very grateful for the services of Punch Green, and many people like him who leave more comfortable, and much more remunerative, positions at home to serve their country.

Well done, Chairman Green. Your fellow citizens thank you for your unselfish, effective service for all of us. I wish you and Joanie health and happiness in whatever you do, and I wish you many pleasant trips to visit your grandchildren in Minnesota.●

JOIN THE BATTLE AGAINST DRUGS

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. RANGEL. Mr. Speaker, the New York Post of March 18, 1985, published a column by Jack Anderson, entitled "Join the Battle Against Drugs." Mr. Anderson provided an important public service by listing some concrete steps Americans can take in the battle against drugs. Mr. Anderson suggests that people choose whose side you're on, and demand that local police and school authorities crack down on drug trafficking. He urges people who know who drug pushers are report them to the Drug Enforcement Administration. He calls for a boycott against movies and records that glamorize drugs. Finally, he urges people to withdraw their money from banks that launder drug profits.

Too often the war against drugs is discussed only in terms of what governments can do to curtail drug trafficking and abuse. It is important to remember that people not governments use drugs, and that people can help improve the situation simply by refusing to use drugs. I commend Mr. Anderson for his column, and ask that it be inserted in the CONGRESSIONAL RECORD at this point.

The article follows:

[From the New York Post, March 18, 1985]

JOIN THE BATTLE AGAINST DRUGS

(By Jack Anderson)

The drug lords have declared war on the U.S. government.

They kidnapped and killed an agent of the Drug Enforcement Administration in Mexico. They paid a gunman $500,000 to murder U.S. Ambassador Edwin Corr in Bolivia. They exploded a bomb ouside the U.S. Embassy in Columbia. They killed 19 members of a U.S.-sponsored program to eradicate coca bushes in Peru.

They put a price on the head of ex-DEA chief Francis Mullen. They threatened to kill five Americans for every drug dealer extradited from Columbia to the U.S. They placed a $300,000 bounty on DEA agents, dead or alive. They dispatched hit teams to gun down drug enforcement officers.

This brazen challenge by the underworld, backed by billions in illicit drug profits, must be met before it destroys our country. Already there has been a breakdown of law and order in the U.S. This will be followed by chaos unless the drug gangs are smashed.

Cuba's Fidel Castro is betting the U.S. will lose the drug war. Intelligence reports say he is secretly encouraging and supporting the drug trade. The depravity of the "Yanquis," he has boasted, will bring down the U.S.

I think he's wrong, but emergency action is needed. Here's what I urge Americans who love their country to do.

Choose whose side you're on. Those who use cocaine and other "trendy" drugs are financing lawlessness in America. All it would take to defeat the drug lords is for their customers to stop using the stuff.

Demand that your local police and school authorities crack down on drug traffickers. Give no quarter to the street-corner and schoolyard pushers who are poisoning our children and ruining their lives. The drug dealers are cutting prices, my sources say, in order to hook more kids.

If you know who the drug pushers and peddlers are, send whatever evidence you have to the Drug Enforcement Administration, 1405 I Street, N.W., Washington, DC 20537.

Boycott movies and records that glamorize drugs. I urge an "X" rating on any movie that depicts drug abuse without showing the dreadful consequences that follow.

Withdraw your money from banks that launder drug profits. President Reagan has unleashed the desk-bound accountants of the Justice and Treasury departments to crack down on the money-laundries. Congressional investigators are also looking at money laundering.●

INTRODUCTION OF H.R. 1930, LEGISLATION PROVIDING FOR THE SALE OF CONRAIL

HON. DAN ROSTENKOWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. ROSTENKOWSKI. Mr. Speaker, today Congressman DUNCAN, the ranking minority member of the Committee on Ways and Means, and myself are introducing legislation which provides for the tax treatment of the transfer of ownership of the Consolidated Rail Corporation [Conrail] to the Norfolk Southern Corp. The bill also amends the Regional Rail Reorganization Act of 1973 to effect such transfer of ownership.

The fact that I have introduced this legislation does not indicate that I approve of the sale of Conrail. In fact, I have not taken any substantive position—either for or against—the sale.

This bill is not intended to modify those tax consequences which are contemplated by the Department of Transportation and Norfolk Southern, but rather attempts to implement the plan of the Secretary of Transportation to transfer Conrail as described in the memorandum of intent, signed by both parties.

Since the Secretary's proposal to sell Conrail clearly raises as many significant questions of Federal tax policy as it does transportation policy issues, Congressman DUNCAN and I have introduced this legislation so that these important policy issues could be clearly identified and properly referred under the House rules respecting committee jurisdictional responsibility and expertise.

I want to emphasize that this legislation is intended to provide to Norfolk Southern those same tax consequences which are provided under the Secretary's proposal. No attempt has been made to pass judgment on these tax consequences and no attempt has been made to make substantive alternations to these tax results.

Examples of tax-related issues which are raised by the Secretary's plan and this legislation include: First, the elimination of Conrail's tax attributes including the net operating losses and investment tax credit carryovers; second, the cancellation of certain Conrail debt and preferred stock; third, the treatment of Conrail's employee stock ownership plan; fourth, the treatment as dividends of future Norfolk Southern distributions; fifth, the treatment of Conrail's basis in its assets, including the potential for, and significance of, any built-in loss; and sixth, guarantees or warranties by the Federal Government of certain tax results.

In order to assist the Congress in determining if Conrail should be sold, as has been proposed by the Secretary of Transportation, I expect that the Committee on Ways and Means will commence its review of the tax-related aspects of the proposed sale in the near future. Upon conclusion of this review, everyone will be in a better position to determine the extent to which tax-related conditions of the sale are consistent with operation of current tax law and sound tax policy. Only then can the Congress address the question of whether the proposed sale of Conrail represents sound public policy.

REPEALING CONTEMPORANEOUS RECORDKEEPING REQUIREMENTS

HON. JOHN G. ROWLAND

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. ROWLAND of Connecticut. Mr. Speaker, I am pleased that the U.S. House of Representatives passed legislation to repeal the burdensome and costly contemporaneous recordkeeping requirements yesterday evening. As a strong opponent of the new regulations from the start of my term, I became an original cosponsor of H.R. 600 in January. This bill, the Taxpayer Relief Act of 1985, called for the outright repeal of the recordkeeping requirements.

During the first months of this session, I have received hundreds of letters from constituents expressing their resentment and outrage for the rules. Their complaints focused on the burdensome nature of the regulations and the labor costs inflicted on businesses. Of the scores of letters sent to me, not one of them favored keeping the requirements in place.

I am hopeful that the U.S. Senate will swiftly follow suit on this matter and that President Reagan will then sign a measure repealing the recordkeeping rules. It is my goal to continue my work on this issue until that objective is realized.●

INTRODUCTION OF LEGISLATION TO REQUIRE CARIBBEAN BASIN INITIATIVE COUNTRIES TO SHARE TAX INFORMATION

HON. FORTNEY H. (PETE) STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. STARK. Mr. Speaker, I am introducing today legislation to amend the CBI Act to require that a country may not be designated as a beneficiary unless it enters into an agreement with the United States to provide for the exchange of tax information.

This bill is the same one I introduced in the 98th Congress, H.R. 5558, and described in the RECORD of May 1, 1984, page H3243.

We need the cooperation of our Caribbean neighbors if we are ever to make a dent in the drug and organized crime activities in this country. Instead of cooperation, we all too often get the governments themselves sheltering criminal elements. The recent arrest of the head of state of the Turks and Caicos, the recent foot-dragging in the investigation of the murder of our DEA agent in Mexico, are examples of the kind of problems we face in law enforcement in the Caribbean area.

We should not be rewarding with trade gifts those countries who refuse to cooperate with us in tax information sharing. Tax information sharing is a key investigative tool in tracking organized crime and drug figures. The nations of the Caribbean which resist information sharing and hold themselves out as tax havens are actively seeking blood money. They are seeking the profits from drug trafficking. They are soliciting the loot of organized crime, and money from unpatriotic citizens cheating on their taxes.

My bill requiring information sharing in exchange for trade benefits is a reasonable condition to impose upon a process designed to invigorate the economy of the Caribbean community.

I hope that we can see enactment of this bill in the 99th Congress.●

ANTIOCH, CA, OPPOSES SAN LUIS DRAIN

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. MILLER of California. Mr. Speaker, many of the Members of the House are aware of the very serious agricultural wastewater problem in California which has recently received a great deal of attention.

Drain water from irrigated farmland in the Central Valley has been transported via a federally constructed canal, the San Luis Drain, to the Kesterson holding reservoir. In addition to serving as an evaporation facility, Kesterson is a wildlife refuge used by migratory birds along the Pacific flyway.

Two and one-half years ago, scientists found widespread bird mutations, and embryonic deformities among the coots, grebes, and other wildfowl nesting at Kesterson. The cause, it was found, was the naturally occurring selenium which was deposited, along with the drainage water, in the Kesterson reservoir.

For my constituents in Contra Costa County, the San Luis Drain is not an issue of recent vintage. For the 11 years I have served in this body, I have vigorously opposed the plans of irrigators and the Bureau of Reclamation to extend the drain northward and to discharge the tainted wastes into the fragile bay-delta system near the city of Antioch.

The recent revelations about the contamination at Kesterson confirms our longstanding opposition to that ill-conceived project. Last month, in fact, Secretary of the Interior Hodel announced plans to shut down Kesterson and the San Luis Drain.

As chairman of the Subcommittee on Water and Power and as a Californian vitally concerned with my State's economic and ecological future, I intend to work closely with my colleagues to solve the drainage problem while maintaining a vigorous agricultural economy in the Central Valley.

But the solution to the valley's drainage problem is assuredly not to transport its contaminated wastes to other regions of California. I am appreciative that my colleagues from California agree that the solution to the drainage crisis must be found in the Central Valley.

I would like to share with my colleagues a resolution recently passed by the city council of Antioch, where the drain's proponents would have it terminate. This resolution expresses that city's vigorous opposition to extension of the San Luis Drain to the Delta. And I want to congratulate Mayor Joel Keller and the members of the council for their vigorous statement on behalf of the people of Antioch.

RESOLUTION No. 85/40

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ANTIOCH DECLARING ITS OPPOSITON TO THE EXTENSION OF THE SAN LUIS DRAIN TO THE DELTA

Whereas, agricultural drainage water from the San Luis Drain service area contains high concentrations of chemicals, including selenium, various heavy metals, and agricultural pesticides and herbicides; and

Whereas, these chemicals include those which are subject to specific regulation and limitations on concentrations, due to adverse effects on the beneficial uses of water; and

Whereas, at the present time, the kind and concentration of the chemical constituents of the drainage water and their effect on human health and the environmentally sensitive Delta are not fully known; and

Whereas, the extension of the San Luis Drain, as has been proposed, to the Sacramento-San Joaquin Delta or to a water course tributary thereto could damage the environmentally sensitive Delta and adversely affect human health and the beneficial uses of Delta waters; and

Whereas, the effects of discharge of drain water to the Delta would be highly dependent on the future water project facilities and operations of the Federal Central Valley Project and State Water Project, which have not been defined; and

Whereas, among the probable adverse effects of extending the San Luis Drain as presently contemplated to the Delta would be the impairment of beneficial uses of water in the Delta including:

Creation of serious health hazards for a majority of the population of California whose present domestic water supply comes from the Delta;

Economic losses to industry and agriculture resulting from the degradation of Delta water;

Deterioration of the fragile ecosystem which supports the Delta's plant and animal life;

Diminishing the aesthetic and recreational values of the Delta; and

The rendering valueless of the Contra Costa Water District's important water supply from the Delta and the District's diversion works, pumping plant and facilities at Mallard Slough.

Now, therefore be it resolved by the City Council of the City of Antioch That this

Council hereby declares its vigorous opposition to the extension of the San Luis Drain to the Sacramento-San Joaquin Delta or its discharge in any fashion into any water course tributary to the Delta.

Be it further resolved That this City Council strongly supports the creation of an objective and independent state-wide task force which would investigate the alternatives available for the disposal of agricultural drainage water from the San Joaquin Valley in an environmentally safe manner.

* * * * *

I hereby certify that the foregoing resolution was passed and adopted by the City Council of the City of Antioch at a regular meeting thereof, held on the 12th day of March, 1985, by the following vote:

Ayes: Council Members Price, Fontana, Stone, Beatty, and Mayor Keller.

Noes: None.

Absent: None.

DOROTHY P. MARKS,
City Clerk of the city of Antioch.●

THE DISTINGUISHED CAREER OF MALCOLM BALDRIGE, SR.

HON. HAL DAUB

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. DAUB. Mr. Speaker, this past January, we lost one of America's most outstanding citizens and public servants. Malcolm Baldrige, Sr., passed away at the age of 90, but he left behind a legacy of dedication and commitment to this Nation that merits our appreciation and our admiration.

A veteran officer of both world wars, Mr. Baldrige's memorable career included service in both the U.S. Congress and the Nebraska State Legislature. In these positions he promoted the highest standards of public service and earned the deepest respect of not only his fellow Nebraskans but also those who had the privilege to work for him and with him.

Malcolm Baldrige, Sr.'s record of accomplishment will stand as a lasting tribute to this patriotic and distinguished American. I take this opportunity to share with my colleagues an editorial from the Omaha World Herald that highlights his life-long achievements and his selfless contributions to this Nation.

BALDRIGE'S MEMORABLE CAREER

Some younger Nebraskans might associate the name of H. Malcolm Baldrige with his son, Commerce Secretary Malcolm Baldrige Jr., or his daughter, Letitia Baldrige, a widely known columnist, author and former secretary to Jacqueline Kennedy.

But the senior Baldrige, who was born in Omaha, had a long, varied and distinguished career as a lawyer, politician, military officer and Washington lobbyist. He served as a Republican congressman from Nebraska's 2nd District in 1931 and 1932 and was chief fund-raiser for the Republicans in the 1936 presidential election.

Baldrige was an artillery captain in World War I. In World War II, as an Army Colonel, he spent 10 months in the Balkans directing the capture of Bulgarian Nazis and helping to rescue shot-down American airmen.

Baldrige was asked by Queen Johanna to deliver a small purple case to her brother, Prince Umberto of Italy. Baldrige did so—and was informed later that the case had contained Bulgaria's crown jewels.

Baldrige was a husky, 6-foot, 2-inch lineman on the Yale football team and was an Eastern intercollegiate wrestling champion for three years. He later coached football briefly at Creighton University.

His Nebraska record includes service in the Legislature, on the Metropolitan Utilities District board and as an assistant Douglas County attorney. He wound up his career as general counsel of the U.S. Cane Sugar Refiners Association in Washington.

Baldrige died Saturday in a Connecticut nursing home at the age of 90. He outlived many of his contemporaries and people with first-hand recollections of his achievements on the national scene. But he deserves to be remembered as one of Nebraska's outstanding citizens.●

MIKHAIL GORBACHEV

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. HAMILTON. Mr. Speaker, I would like to insert my Foreign Affairs Newsletter for March 1985 into the CONGRESSIONAL RECORD:

The newsletter follows:

MIKHAIL GORBACHEV

Less than four hours after the death of Soviet leader Konstantin Chernenko was announced to the Soviet people on March 11, Mikhail Gorbachev was named the new General Secretary of the Communist Party of the Soviet Union. With his ascent, the Soviet Union began its long-awaited shift to a new generation of leadership.

Who is Mikhail Gorbachev? At 54, he is the youngest Soviet leader since Stalin. He has the best formal education of any Politburo member, and is the first leader since Lenin to complete university training. He is quick-witted and articulate. During recent trips to Great Britain and Canada, his style and energy marked a sharp contrast to his gray and somber predecessors.

Gorbachev was born to a peasant family in good farming country in Stavropol, in southern Russia between the Black and Caspian seas. Too young to fight in World War II, he nonetheless saw the Nazis occupy his home town. After the war, he drove a tractor at age 15 and joined the Communist party at age 22, beginning a long association with both agriculture and party organizational work. In the early 1950s, he studied law at the prestigious Moscow State University.

His rise is associated with two powerful political patrons, both natives of the Stavropol area: Mikhail Suslov, a long-time Politburo member; and Yuri Andropov, KGB chief, and later General Secretary. Gorbachev became a member of the Supreme Soviet in 1970, and a member of the Party's Central Committee in 1971. He was appointed to the ten-member Secretariat of the Party in 1978, then named a candidate member of the Politburo in 1979. In 1980, he became its youngest full-voting member. By Soviet standards, his was a meteoric rise through the party ranks.

He must indeed have had powerful friends, since in the Secretariat his primary area of responsibility was agriculture, where he presided over several poor harvests. Bad weather was a factor, but it is noteworthy that these results did not slow Gorbachev's climb.

When Andropov succeeded Brezhnev in 1982, Gorbachev's responsibilities in economic affairs expanded. He was associated with Andropov's anti-corruption campaign, and with the promotion of younger and more technically-trained party members. Apparently, he was being groomed to succeed Andropov. However, when Andropov died in February, 1984, the old guard chose Chernenko instead. Many analysts believe that at the same time it was decided that Gorbachev would succeed Chernenko. The speed of his succession seems to confirm this. If he has strong opposition, it was not apparent in the smooth transition.

What can we expect from Gorbachev? He will certainly bring polish and vigor to the Kremlin. I would expect him to try to improve morale and energize the Soviet bureaucracy, and to crack down on corruption. But it would be a mistake to predict major changes in relations between the Soviet Union and the U.S. It is important to remember that, since Stalin—and because of Stalin's excesses—the Communist Party has ruled through collective leadership. The Soviet Union will try to portray Gorbachev as a strong leader, but he is only first among equals and still a part of the collective leadership.

Moreover, it usually takes a Soviet leader years to consolidate authority. Because Gorbachev is young and likely to last, his rivals—including his closest rival for the party leadership, Grigory Romanov—will probably challenge his attempts to promote allies. Gorbachev's impact on the party program at the 27th Party Congress, and the replacements for several empty Politburo seats will give clues to his success. He has a unique chance to strengthen his power base and put his stamp on Soviet policy.

Gorbachev seems unlikely to turn the Soviet Union upside down. A reformer within the system, he is not a reformer of the system. He supports the dominance of the Communist Party, a rising military budget and a special role for the secret police, the KGB. In foreign affairs, Gorbachev has shown skill at western-style diplomacy, but he is inexperienced and is likely to follow the lead of Foreign Minister Gromyko and the Politburo consensus, at least for a while. On human rights he has reflected Politburo intolerance for dissent, and his pronouncements on culture and ideology have followed standard Kremlin lines.

My feeling is that Gorbachev's greatest influence will be in economic affairs. His pragmatism on economic policy makes him a liberal by Soviet standards. Last December, he called for a transformation of the Soviet economy, and in his acceptance speech he talked of restructuring the base of production. He is believed to support monetary incentives, greater flexibility for managers, some market-oriented reforms, and other measures to improve economic efficiency. The Soviet bureaucracy has defeated such reforms before, however, and they are not as ambitious as those carried out in Hungary and China. There is no hint that he will advocate genuine diffusion of the monolithic political power concentrated in the Krem-

lin. No reforms will be undertaken that could undermine the political system.

Still, it is intriguing to consider what a young leader in Moscow might accomplish and what it would mean for the United States. We like the idea of an energetic reformer devoted to improving the lives of his people. We believe that such a leader would make his country more like ours, and that this change would improve relations. But we should have no illusions about Gorbachev or the U.S.S.R., a country with a vastly different political tradition and view of the world from ours. A more efficient and dynamic Soviet Union would be a formidable adversary and could represent a greater threat to western security than it does today.

We should recognize that, despite all that has been written, we do not know Gorbachev's views on most issues. We should be cautious in making predictions about him and the changes he is likely to bring.●

TRADE LAW MODERNIZATION ACT

HON. FRANK J. GUARINI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. GUARINI. Mr. Speaker, Representative JOHN DUNCAN and I are introducing today the Trade Law Modernization Act, a comprehensive measure to correct many of the problems confronting the United States in international trade. Senator HEINZ will introduce companion legislation in the Senate later this month.

The need for trade law modernization is clear. Almost 3 million American workers have lost their jobs from record-level import penetration. United States and international trade laws under the General Agreement on Tariffs and Trade [GATT] are outdated and inadequate. Our workers are competing against foreign targeting of our industries, foreign government subsidies, dumping practices, and many quasi-legal trading practices. And, American businessmen continue to find foreign markets closed to them.

This is especially the case with Japan. Nearly one-third of our growing $123 billion trade deficit is with this one country. We are blatantly excluded from their markets while they target our markets for increased export sales. This measure tells the Japanese that we are tired of playing on a field tilted heavily in their direction. We are capable of strongly responding to their practices, and this legislation is the vehicle for doing so.

This bipartisan legislation sets forth the objectives of U.S. trade policy and clearly defines our trade negotiating goals. It makes our trade remedy laws more responsive to American firms and workers that are injured by imports. Also, industrial targeting and the two-tier pricing of natural resources would be clearly defined as illegal trade practices.

This legislation provides a much needed improvement in our country's ability to implement a coherent and forward-looking trade policy. It not only modernizes our trade laws so that they are relevant to today's trade problems, but it also provides an overall framework within which those laws can be administered.

This measure significantly depoliticizes trade remedy determinations by putting policy decisions in the hands of the person designated by the President as the Nation's trade policy coordinator, someone like our special trade representative, who must respond to both the President and the Congress.

Our measures goes to the heart of the market access problems confronting U.S. producers. Straightforward language defines the negotiating authority and retaliatory powers of the administering authority. Special provisions relating to government procurement codes, such as in the telecommunications market, are included.

There is innovative language in this legislation establishing a business-labor-government-partnership to assist industries in staying competitive.

This bipartisan legislation is supported by the Labor-Industry Coalition on International Trade [LICIT], a coalition of major companies and unions representing the common interests of American firms and workers in increased, balanced and equitable trade.

The membership of LICIT includes AT&T; Bethlehem Steel; Amalgamated Clothing and Textile Workers Union; Communications Workers of America; Corning Glass Works; International Union of Electrical, Radio and Machine Workers; International Brotherhood of Electrical Workers; American Flint Glass Workers Union; the BF Goodrich Co.; Industrial Union Department, AFL-CIO; Ingersoll Rand Co.; International Ladies Garment Workers Union; International Association of Machinists and Aerospace Workers; United Paperworkers International Union; United Rubber Workers of America; the Signal Companies, Inc.; St. Joe Minerals Corp.; United Steelworkers of America; W.R. Grace & Co.; Westinghouse Electric Corp.

For further information a summary of the provisions of this important measure follows:

THE TRADE LAW MODERNIZATION ACT

SUMMARY OF PROVISIONS

This legislation establishes a national trade policy for the United States that gives the nation's performance in international trade appropriately greater importance in the formulation of government policy. The goals of United States trade policy are clearly stated and new negotiating objectives are defined.

Procedures for establishing our nation's trade agenda on an annual basis are provided in this legislation so that a regular and ongoing dialogue on trade matters between the general public and the government is ensured.

The chief American trade policy spokesperson is given expanded trade law responsibilities and powers so that United States trade policy interests can be better represented in discussions and negotiations with other countries.

U.S. trade laws are amended so that industrial targeting practices of other countries that cause harm to American firms and workers can now face swift and appropriate action by our government. Actions available to the government include more than just import restrictions, but extend to areas of domestic assistance and international negotiations.

Special negotiating authority is provided the government to achieve fair and equitable market opportunities for U.S. producers where such opportunities are unfairly denied them by foreign government practices. This authority extends to unfair and discriminatory state buying practices of other countries and to situations where American administrative or judicial decisions substantially alter access to our market without any corresponding opening in markets overseas.

The procedures for obtaining relief from imports that are causing economic harm to domestic firms and workers are modernized in two important ways. First, the standard for determining whether harm has occurred to domestic parties is made to conform to the international standard of the General Agreement on Tariffs and Trade (GATT), the international body that sets trade rules. This new standard is a less ambiguous and stringent standard than currently exists in U.S. law. Second, enhanced industry competitiveness is made a purpose of action under this trade law and an alternative procedure is set up to achieve such a result. This change is designed to make sure that any temporary import restrictions that the government may impose result in a positive benefit to the economy as a whole.

The laws that address unfair trade practices of other countries are updated to cover new forms of unfair competition, including the practice of underpricing government-owned or controlled natural resources to unfairly subsidized exports.

The legislation establishes a government data gathering and analytical capability to ensure that policy decisions are based on timely and accurate information.

The Presidential authority to respond to balance of payments problems is updated to correspond to today's more volatile foreign exchange markets.●

SUBMINIMUM WAGE IS SUBPOVERTY

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. MILLER of California. Mr. Speaker, once again the Reagan administration has proposed implementing a subminimum wage for youth as a means of reducing unemployment and of facilitating job training.

This proposal is a ruse which deserves vigorous opposition. As chairman of the Subcommittee on Labor

Standards during the past 4 years, I held several hearings on this plan. The evidence against a subpoverty wage is overwhelming.

The fact is that a minute fraction of employers today utilize programs which permit payment of a subminimum wage to students. Estimates of hundreds of thousands of new jobs resulting from the administration's initiative fail to explain why current law has failed to produce those jobs.

No; the subpoverty wage will not stimulate creation of new jobs. It will demean labor; it will set parent against child in the struggle for low-wage employment; and it will create havoc for business and Government because of costly and intrusive regulation and enforcement.

This Nation is committed to paying a decent wage to a man or woman for an hour's work. Let us not sanction wage discrimination based on age. Rather, let us commit ourselves to decent wages for all workers.

A subminimum wage, that would leave its earner well below the poverty line, is insulting to all labor—youth or adult. It is a fraudulent elixir which will not eliminate unemployment or train youth for the highly skilled and competitive jobs they need.

The following editorial from the New York Times eloquently challenges the administration's subpoverty plan. I commend it to all my colleagues.

WHY PAY LESS TO TEENAGERS?

Would a subminimum wage alleviate high unemployment among teen-agers? The Reagan Administration thinks so. It plans to resubmit legislation to establish a "youth employment opportunity" wage for summer workers aged 19 and under.

The Administration estimates that this youth wage, to be in effect for three years from each May 1 to Sept. 30, would create 400,000 new jobs annually. But no one knows for sure what its effect would be, which is one reason for proposing a three-year trial.

Perhaps it would stimulate businesses to hire unskilled, inexperienced youths, as the Administration claims. Or perhaps it will be the camel's nose under the tent that organized labor fears, eroding the minimum wage and making low-paying jobs for younger workers at the expense of slightly better-paying jobs for slightly older workers.

The proposed trial program could help answer such questions, and so warrants support—but only if fine-tuned by Congress to improve the chances of securing useful evidence.

The problem is obvious. Unemployment among whites aged 16 to 19 is 15 percent. Among blacks it is 43 percent. And that only counts those already in the labor force. Half the white teen-agers and three-quarters of the black teen-agers aren't. The sub-minimum wage is less obvious as a remedy, raising four serious questions.

Would employers simply replace older workers with eligible youths? This is the most disturbing potential consequence, and the Administration would make it a crime. But can the Labor Department's wage and hour division, which has suffered staff cutbacks, provide adequate enforcement?

Can the jobs be targeted to the minority and disadvantaged youths most in need? Since 1978, employers have been allowed to write off 85 percent of the salary, up to $3,000, paid to a disadvantaged youth for a summer job.

This targeted jobs tax credit helps those who need jobs most. With considerable support and effort, it has worked in New York. But the Administration wants to eliminate the credit because it depletes tax revenues and it hasn't had much impact on overall youth unemployment. If a tax credit, of greater benefit to employers, hasn't helped, why should the subminimum wage?

Third, the most effective youth employment programs offer some education or job training. Why is there no programmatic content in the Administration's proposal? Finally, would this proposal lead to wage reductions for other high-unemployment groups, such as female heads of households?

Questions like these make many people skeptical of this proposed "experiment." The Administration may be right that a free-market approach is a better solution to the intractable youth unemployment problem. If so, it should offer, or welcome, a program carefully designed to provide the evidence to prove that.●

COMMENTS BY THE HONORABLE HAROLD FORD, ROBERT GARCIA, AND BILL RICHARDSON ON SECTION 936 OF IRS CODE

HON. JAIME B. FUSTER

OF PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. FUSTER. Mr. Speaker, I request that the following comments of three of my distinguished colleagues, the Honorable HAROLD FORD, ROBERT GARCIA, and BILL RICHARDSON—the latter on behalf of the Hispanic Caucus—be printed in the RECORD. The support of such significant Members of the body is of great importance to the future of the 3.5 million American citizens of Puerto Rico who depend on the propitious manufacturing and investment climate the 936 U.S. tax provision creates for Puerto Rico.

At a recent conference held in the Nation's Capital, important colleagues such as Senator PATRICK MOYNIHAN, Congressman CARROLL HUBBARD, Congressman JACK KEMP, also expressed their support for the retention of section 936 of the IRS Code. However, the following comments are a good sampling of congressional sentiment on this important issue:

CONGRESSMAN HAROLD FORD'S REMARKS

Ladies and gentlemen, Representatives of the Government of Puerto Rico, Representatives of Banco Poppu-Lar de Puerto Rico and Puerto Rico Manufacturers Association, thank you for asking me to join you today.

I am here because I recognize the importance of the Commonwealth of Puerto Rico and because I care about the 3.2 million people of Puerto Rico who are United States Citizens. The section 936 program has become a major issue again. Section 936 was amended in 1982 when we passed the Tax Equity and Fiscal Responsibility Act (TEFRA). Many thought the issue would not be revisited for some time. However, that does not seem to be the case although we don't know for sure yet what the Reagan-Baker tax proposal will contai

I am interested in the outcome because I believe we have to be fair—fair to our citizens in Puerto Rico, fair to our citizens on the mainland and fair to our corporate citizens. It is that sense of fairness which has caused me to examine the pros and cons of the issue carefully.

My interest is strong and my examination goes on. I have had a brief opportunity to meet with some of those directly affected by the section 936 program. I look forward to additional direct contacts which help to lift the statistics and arguments off of the sterile pages.

Some argue that the section 936 program is driving investment choices while not producing "real economic activity." The Treasury Department charges that average tax benefit per employee is too high. Indeed, Treasury suggests that some companies are receiving tax benefits in excess of $100,000 per employee. There are still others, who argue privately, that the section 932 program competes with economic development efforts of States and they say that if States had a section 932 type incentive we would not have the high unemployment we have in certain States.

On the other hand, the arguments marshaled by my colleague, Mr. Fuster, and by Governor Colon have been not only cogent but they also have a moral imperative. They ask—would repeal of section 936 raise additional revenue? They ask—would repeal increase the deficit? They ask—is the proposed wage credit an adequate substitute for the section 932 program? These questions deserve to be answered thoroughly and those of us who are concerned with this problem appreciate the work you all are doing to raise the questions and to provide some of the answers.

In the coming weeks and months, as I consider these questions, I want you to know that we will be faced with many other similarly difficult decisions affecting important aspects of life in the United States. I have an open mind on this subject and a warm heart for the citizens of Puerto Rico. I hope that the resolution of this issue will occur in a way that will lead to continuation of what many now call the "economic miracle of the Carribean" and not in a way that will lead back to times like 30 years ago when the Commonwealth was called the "poor house of the Carribean." Whether this will be the continuation of section 936 as it is presently constituted I do not know; but, I do know that the people of Puerto Rico deserve the work you are devoting to this issue and they rightfully deserve the high degree of attention Members of Congress are giving the matter.

Thank you.

CONGRESSMAN ROBERT GARCIA'S REMARKS

To my friends from Banco Popular, the Puerto Rican Manufacturing Association, and others concerned with the future of Puerto Rico—Just think what we could be doing today throughout the Caribbean if only we could be assured of the survival of Section 936. Puerto Rico could truly become—as the Wall Street Journal has labeled it—"an important Caribbean defender of U.S. interests." The Governor's proposal—to use $700 million in 936 deposits in

Puerto Rican banks to finance projects throughout the Caribbean—could even get the attention it truly deserves. In fact, isn't it about time we stop playing in Washington and built Puerto Rico into the economic center of the Caribbean that it should be?

Unfortunately, we are at the same point today as we were in 1982—with a suspect and misunderstood program. What do we do?

You have heard or will hear from many experts today and I don't want to repeat or restate their thoughts. More than likely you know more about the Section 936 program than anyone else in Washington, certainly more than our friends over at the Treasury Department.

Rather, I would like to pose some questions to you today in the hope that they will stimulate some conversation among yourselves and maybe you can pose them to our more suspect friends, the non-believers, if you will.

First, What does the Treasury Proposal mean when it states that the Administration—"doesn't believe that a permanent possession tax subsidy is necessary"? What evidence does the Treasury Department have that the future of Puerto Rico's economy is so golden that it can forget about special incentives?

Second, the Treasury Department claims that total employment on the island has been flat. This may or may not be a fair statistic. But, isn't it more important to ask the question—what percentage of total employment on the island is due to Section 936 and has this been growing?

Third, Isn't it a contradiction to suggest that the repeal of Section 936 would save $3 billion by 1989—but if firms wanted to—they could reincorporate as Foreign Corporations headquartered on Puerto Rico to avoid taxes? Well, if they incorporate as foreign corporations, where will the $3 billion come from? Further, what other tax schemes might be employed by current 936 firms to avoid mainland taxes and what does this mean for federal revenue generation?

Fourth, Won't a general reduction in corporation income taxes or a flat tax lower the real usefulness of Secton 936 at any rate?

Fifth, If Treasury is to offer an employee tax credit as a substitute for Section 936, why is it limited to 60% of the minimum wage per employee rather than 60% of the total compensation per employee? Has anyone thought of whether or not this type of labor intensive tax credit will work within the industries on the Island?

Sixth, what will happen to the Island's employment base, its trained management corps and its secondary industries like housing?

Seventh, has anyone over at the Treasury Department talked to the folks at the State Department? Certainly any action with regard to Puerto Rico by Washington will be interpreted and reinterpreted by other Caribbean nations. Just what kind of signal do we want to send?

I suppose I can continue to ask questions for hours, just as many industries and corporations are doing as we sit here. But let's not lose site of one key fact—the financial lifeline of the Island is at stake.

The uncertainty created by the Treasury Department can only be surpassed by the chaos created in 1982 with the passage of that year's tax bill, TEFRA. Already, Governor Hernandez has heard from corporations fearful of increasing their investments on the Island. The sooner we settle this issue—hopefully with guarantees that 936 will be left alone—the better we will be.

Perhaps the most important job immediately before us is to build our case. Congressional hearings can help. To this end, I have asked the new chairman of the House Banking Committee's Oversight Committee, Rep. Hubbard, to hold hearings on the Island to explore the impact on the Island's economy, especially its financial structure.

Today is really the start of your efforts. The road ahead will be filled with Treasury Department potholes. Its best that we get started with a coherent and effective plan—and soon.

Thank you.

MARCH 26, 1985.

On behalf of the Congressional Hispanic Caucus, I would like to express our opposition to the proposed repeal of Section 936 of the Internal Revenue Code which provides domestic corporations with credits against U.S. taxes for income earned in Puerto Rico. The repeal of Section 936 would severely affect an already weakened Puerto Rico economy.

While the Puerto Rico economy has shown a great deal of improvement in the past four decades, it has not kept pace with that of the mainland. Per capita income is only 37% of that of the U.S. while 63% of the population is below the poverty line. The unemployment rate hovers around 20 to 25%.

Yet IRS Section 936 has provided an economic boost to the Commonwealth. The manufacturing sector in Puerto Rico accounts for almost 60% of the island's net income, most of which is provided by 936 companies as well as almost all of Puerto Rico's export income. The U.S. companies have directly provided over 100,000 jobs and indirectly hundreds of thousands more in other sectors of the economy. Without the Section 936 incentives, it is almost certain that U.S. manufacturing companies in Puerto Rico will relocate, not in the U.S., but in countries in the Caribbean, Latin America and Asia with more favorable labor and tax climates, i.e., those countries which do not have minimum wage, environmental, safety and social security laws and provisions. Any revenue increase anticipated by the Treasury Department will be more than offset by the loss of jobs and income and the resultant increased dependence on public assistance programs if the repeal is approved.

The repeal of Section 936 will deal a severe and potentially crippling blow to the economic development of the island, a democratic stronghold in the Caribbean. We urge you to retain Section 936. The Puerto Rican economy and the well being of 3.5 million U.S. citizens depends on it.

Sincerely,

BILL RICHARDSON, *Chairman,*
Congressional Hispanic Caucus.●

"WATSON, CAN YOU STILL HEAR ME?"

HON. STAN PARRIS

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. PARRIS. Mr. Speaker, I would like to submit to the RECORD the following study entitled "Watson, can you still hear me?" completed by 25 distributive education students from Mount Vernon High School in Alexandria, VA.:

In cooperation with AT&T, MCI and Sprint, representatives from each joined Mount Vernon DECA students to form an Advisory Committee. The Mount Vernon DECA students decided to explore the effects of the Bell System Divestiture through a nationwide telephone survey. The purpose of the survey was (1) To determine by phone survey the true feelings of long distance phone customers concerning the break up of Bell Systems by the United States Department of Justice, (2) To inform the public and long distance phone company executives of the influence of the break up on customer patronization of long distance phone companies, (3) To increase Marketing Research competencies through DECA member participation, and (4) To present the three long distance companies assisting us (AT&T, MCI, and Sprint) with accurate survey results and information beneficial to the Marketing Researchers.

On Monday, January 28, 1985, from 7:00 until 9:00 p.m. the 25 students from Mount Vernon High School made approximately 1,000 phone calls from the Reston AT&T Building. The calls were made in equal access in the following cities: Anniston, AL; Mobile, AL; Little Rock, AR; Alameda, CA; Oakland, CA; Salinas, CA; Denver, CO; Washington, DC; Wilmington DE; Gainesville, FL; Jacksonville, FL; Atlanta, GA; Chicago, IL; Indianapolis, IN; Wichita, KS; Monroe, LA: Holyoke, MA; Natick, MA; Baltimore, MD; Columbia, MD; Detroit, MI; Minneapolis, MN; Clifton, NJ; Hackensack, NJ; Carson City, NV; Las Vegas, NV; Buffalo, NY; New York, NY; Dayton, OH; Cleveland, OH; Columbus, OH; Portland, OR; Philadelphia, PA; Providence, RI; Memphis, TN; Houston, TX; Salt Lake City, UT; Seattle, WA; Appleton, WI; Eau Claire, WI; Madison, WI; Milwaukee, WI; and Charleston, WV.

There were 200 surveys completed. We asked for the persons paying the phone bills and of the 200 billpayers, 40% of them were male and 60% of them were female. There was a surprising split of 50-50 between the under 35 years age bracket and the over 35 years age bracket.

Of the individuals under 35 years old, 56% agreed with the United States Department of Justice on their decision to break up the Bell System, leaving 44% to disagree. Of those persons over 35 years old, 48% agreed with the decision and 52% disagreed.

Ninety percent of the people surveyed make at least five long distance phone calls per month. On an average, 38% of these people spend $10-$20 per month on long distance phone bills, 24% spend $51 and over, 19% spend $21-$30, 10% spend $41-$50, and 9% spend $31-$40 on their monthly long distance bills.

Over one half of the people surveyed are spending the same amount of money on monthly long distance phone bills as they did before the break up. One third of the people are spending more and about one fifth of the people are not spending as much.

Directly related to the amount of money spent on long distance is the number of long distance phone calls made. An 85% majority are making the same number of long distance calls, while only 15% are either making more or less phone calls than before the break up.

Since January 1, 1984, the break up of the Bell System, 83% of those persons surveyed have remained with AT&T for long distance service, 10% chose to switch to MCI for long distance, 4% chose Sprint and 3% chose another long distance phone company.

In rating the long distance companies, the overall most acceptable trait is the quality of the call with 94% responding that the quality of their long distance phone calls is acceptable. Coming in second is the customer service with 85% agreeing that it is acceptable. Next in acceptability is the billing with 74% agreement and lastly is price with 66% agreeing on its acceptability.

The overall most unacceptable trait is the price of long distance phone calls with 34% of the people agreeing on its unacceptability. Next comes the billing system with 26% agreement, 15% agreed on the customer service's unacceptability and only 6% agreed on the unacceptability of the quality of the call.

The individual company breakdown on acceptability/unacceptability are as follows:

	Percent—	
	Acceptable	Unacceptable
AT&T:		
A. Customer service	86	14
B. Price	63	37
C. Quality of the call	97	3
D. Billing	70	30
E. Overall	85	15
MCI:		
A. Customer service	82	18
B. Price	81	19
C. Quality of the call	81	19
D. Billing	94	6
E. Overall	94	6
Sprint:		
A. Customer service	83	17
B. Price	83	17
C. Quality of the call	67	33
D. Billing	100	0
E. Overall	83	17●

TO EXTEND THE MEDICARE PROSPECTIVE PAYMENT SYSTEM'S TRANSITION

HON. ROBERT T. MATSUI

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. MATSUI. Mr. Speaker, I am pleased to introduce today legislation which will improve the Medicare prospective payment system [PPS].

As my colleagues are undoubtedly aware, we are halfway through the scheduled 3-year transition from payments reflecting hospital-specific circumstances to rates based almost entirely on a national average. However, as we progress through this transition period, it is becoming more and more apparent that the present PPS is seriously flawed. Hospitals' costs vary significantly because of many factors including the severity of illness of patients in the same diagnostic category, the unique situation of hospitals treating a disproportionate share of Medicare or low-income patients, the extent of medical education programs, regional variations in the cost of goods and services which hospitals must purchase on their local economies, and a hospital's labor costs. These factors are, in some instances, completely ignored under the current PPS or adjusted for in ways that are imprecise and inappropriate.

The currently designed payment system with these major problem areas will arbitrarily distort the distribution of available Medicare funds—essentially taking dollars from "losing" hospitals and giving them to other hospitals with little, if any, reason other than their geographic location. In fact, it has been projected that if, as proposed by the adminstration, Medicare's payment rates are frozen and the allowance for the cost of indirect medical education is halved during fiscal year 1986, hospitals will lose over $2.7 billion in payments for treating Medicare beneficiaries.

Continuation of the transition to payment rates based on the national averages in light of these flaws and distortions will deeply and unfairly penalize and in some cases, threaten the financial viability of many of our community hospitals. Therefore, I am introducing legislation today to interrupt the transition to national payment rates in order to provide all of us—the Congress, the administration, and the hospital community—more time to evalute the effects of the prospective payment system. My bill would simply pause the transition to national payment rates by extending the second phase, which is comprised of 50 percent hospital specific and 50 percent Federal—a blend of 75 percent regional average and 25 percent national average—for at least 12 months or for as long as the Medicare impatient rates are frozen. I believe that only within this period of stability and payment predictability will Congress and the administration be allowed to thoroughly evaluate problem areas and take corrective action.

I wish to make it absolutely clear that this bill does not represent any slacking in my commitment to the new prospective payment system. Indeed, it is precisely because of my commitment to making the system work, and work properly, that I want to take the time to study it carefully and to take any corrective action necessary to assure ourselves that it is achieving our stated objectives. This pause in the transition period will have no absolutely no effect on the amount of total impatient payments nor will it adversely affect Congress' efforts to reduce the budget deficit. Rather, this cautionary approach will provide for a fair evaluation and will help ensure an equitable prospective payment system—which I believe all of my colleagues desire.

Mr. Speaker, I urge my colleagues to join me in this effort and reaffirm our goal of moving steadily toward full implementation of a fair and equitable prospective payment system.●

ED PINCKNEY AND VILLANOVA—AN INSPIRATION TO US ALL

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. BIAGGI. Mr. Speaker, I want to extend my congratulations to Villanova University for their outstanding and, indeed, inspiring performance Monday night in winning college basketball's national championship. Not since the Olympics, has a sporting event had such a positive influence on an entire Nation.

Monday night's game was truly a class affair, with two great teams going head to head and Villanova proving that no matter what the odds, hard work and a belief in yourself can make the difference—for us all.

Each of the Villanova Wildcats performed magnificently, but as one who comes from the Bronx, one name stands above all others—Ed Pinckney. He grew up on White Plains Road in the South Bronx, and not only was this 6-9 center Villanova's most valuable player in the tournament he also epitomized Villanova's struggle to the championship.

When he entered Villanova 4 years ago, after leading Adlai Stevenson High School in the Bronx to the city basketball championship, he was immediately overshadowed by two other newcomers to the Big East Conference—Patrick Ewing of Georgetown, and Chris Mullin of St. John's. But, while he may have lacked the public attention during his 4 years at Villanova, he did not lack talent, and his achievements reflected that fact.

Consider, for example, that during his career, Villanova has won 91 out of 129 games; they have gone to four NCAA tournaments, making it to the regional finals three times; and they have won two regular-season Big East titles. Add to all of this the national championship and his NCAA Tournament MVP Award, and—in a classic understatement—we could say that Ed Pinckney has done his Bronx community proud.

At 6 feet, 9 inches tall, Ed Pinckney is far from the tallest collegiate center to play the game, but none works harder and none enjoys it more.

Perhaps the fact that Ed was suffering from the effects of a stomach virus throughout the Final Four tournament and, yet, was still able to turn in the MVP performance says as much as anything else about this courageous and talented young man from the Bronx. And, after all, doesn't this tell they story, too, of Villanova's own struggle against overwhelming odds to reach the top. During the postgame interviews, Villanova players and coaches gave much of the credit to

hard work. We could all stand to gain from such a simple winning philosophy.

Mr. Speaker, the experts tell us that Ed Pinckney will be moving on to a promising professional basketball career. It is likely that some of his teammates may join him and I want to wish them all the very best. But, above all else, I want to congratulate them and their talented and likeable coach, Rollie Massimino, for a championship won the old fashioned way—they earned it.●

THE FEDERAL AGENCY DIET ACT OF 1985

HON. FORTNEY H. (PETE) STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. STARK. Mr. Speaker, I am today reintroducing legislation to limit the amount of money that Federal agencies can spend at the end of the fiscal year. This is nearly identical to legislation (H.R. 4687) I introduced on January 30, 1984, and which is described in detail in the CONGRESSIONAL RECORD of that date, page E168 (daily ed.).

My bill would allow agencies to spend not more than 20 percent of their appropriated budget in the last 2 months of the fiscal year, thereby reducing some of the wasteful expenditures that occur in September as agencies scramble to unload excess funds before the fiscal clock runs out on them. The bill affects fiscal years 1986, 1987, and 1988. If successful, it can be made permanent.

Mr. Speaker, on the last day of fiscal year 1983, I was surprised to receive six grant announcements worth $23.5 million for my Ninth Congressional District. While I am sure that those were all wise and good decisions, I was a little worried that that level of activity, multiplied by 435 congressional districts would produce some mistakes. I did some research on the situation, and I must say I was shocked at the scope of this last-minute grantsmanship.

The General Accounting Office report of July 18, 1980, entitled, "Government Agencies Need Effective Planning To Curb Unnecessary Year-End Spending" detailed the level of so-called September surges in spending for selected agencies in 1978 and 1979. They found that in September 1978, HUD spent 956 percent of their average monthly outlay for that year—9½ times their normal monthly expenditures for the first 11 months. The EPA shelled out 436 percent of their average monthly spending in the final fiscal month and the Department of the Interior had a September surge of 214 percent. In 1979, the three leading September surgers were the EPA at 526 percent, the Department of State at 510 percent and HUD at 317 percent.

The yearend spending frenzy leads to many forms of waste as planners hustle to get their contracts in on time. There are shortcuts taken in the regulatory process, inadequate negotiation of cost, and quality levels and a rash of noncompetitive contract awards. All this haste opens the Government to fantastic overcharging, intentional, or not, by the private sector, needlessly wasting revenue and overburdening the American taxpayer.

Mr. Speaker, the legislation is not a new idea. There have been other, similar, bills in the past but they have all quickly died from legislative inertia. I believe, though, that there has never been a more pressing time for Congress to act to reduce waste and mismanagement in the Government. My bill is obviously not a miracle cure that will evaporate the deficit overnight, but it is not snake oil either. It is a step toward improving the allocation of Federal funds, toward lightening the tax burden on our citizens and toward reducing the enourmous pressure placed on our economy by the ever-increasing Federal debt. I urge all my colleagues interested in fiscal responsibility to support this bill's passage.●

WHERE IS DR. JOSEF MENGELE, NAZI WAR CRIMINAL?

HON. JAMES J. FLORIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. FLORIO. Mr. Speaker, I wish to bring to the attention of our colleagues an outstanding injustice—an injustice that denies the existence of human morality and the ideal of justice. We, as a legislative body and as representatives of this great democratic nation, pride ourselves on our Constitution, a binding and lawful document that embodies both the practice of human morality and the practice of ethical justice.

According to one renowned English philosopher, John Locke, human laws are measures in respect of men whose actions they must direct. They stand as a testimony to the society and to the civilization which enacts them. For these reasons, we, as a body of witnesses must direct our efforts to the rectification of all injustice for which we will be historically accountable.

It is all too easy in this postwar period to overlook the heinous acts and crimes against humanity committed by Dr. Josef Mengele, the most sadistic and notorious Nazi war criminal still at large. During World War II, the Nazis mercilessly executed more than 10 million innocent people. This senseless massacre of human life must be considered one of the most grievous chapters in the history of mankind. The Holocaust was a tragedy that affected not only the Jewish people, but all of humanity. As a Member of Congress concerned about the horrors of the Holocaust, I am disturbed by recent reports that Dr. Josef Mengele, the SS physician better known as the "Angel of Death" of the Auschwitz concentration camp, has been living in freedom for the past 40 years.

To the 2.5 million or more who perished at the Auschwitz death camp, Mengele personified the insane, systematic brutality of Hitler's Third Reich. In an effort to create Hitler's "master Aryan race," Mengele sent millions to the gas chambers and killed thousands more in mad genetic experiments. As prisoners arrived by rail at Auschwitz, Mengele, attired in a dress SS uniform, was the first person they saw. Positioning himself between the rows of incoming prisoners, Mengele determined with a flick of the wrist who would die outright in the gas chambers and who would be "spared" to die a slow death of torment and mutilation in his laboratory. Most of the prisoners would survive for only a few more weeks. He would use the ones he "spared" as human guinea pigs in ghoulish experiments.

Dr. Mengele is notorious for his experiments on Jewish women and children, especially twins and young children. If one of the twins died during the experiment, the other would then be killed since Mengele would have no further use for the child. Many of those who survived his genetic experiments were maimed for life. He tried to change the eye color of children from brown to blue by painfully injecting them with chemical dye. He tossed live babies into ovens and wired victims with electrodes to test their threshold for electric shock. If his victims fainted during the experiments, they would be eliminated. He once promised a special milk porridge to expectant mothers who were gassed once they had been gathered together. He was known to have sent 700 Gypsies to the gas chambers simply because of a report that their barracks was infected by lice. Hundreds of thousands of the camp's other inmates were sentenced to death at his discretion.

Many of the survivors of Mengele's atrocities are living today with their memories of hell and horror. We, as the legislators and delegates of a nation founded upon morality and justice, owe it to the victims of the Holocaust to investigate the whereabouts and activities of Dr. Josef Mengele, with the intent to apprehend him. We do not seek vengeance; we seek justice.

Several times over the years, attempts have been made to capture him. As the Soviet armies neared

Auschwitz in late 1944, Mengele disappeared. His crimes were prominently mentioned at the International Military Tribunal in Nuremberg. Meanwhile, Mengele was living under his own name in the Bavarian town of Gunzberg, where his family owned the town's only industry, a farm-equipment plant. In 1949, West German legal authorities were informed of Mengele's whereabouts. He eluded them, using the secret escape routes established by ODESSA (an acronym in German for the Organization of Former Members of the SS).

The search for Mengele has been hampered in the past by a lack of cooperation between U.S. agencies and foreign governments in their efforts to apprehend him. There is evidence that he was in the custody of the United States during the 1940's, only to be set free. Although Paraguayan authorities deny it, a declassified report of the Central Intelligence Agency indicates that Mengele may recently have been living in Paraguay under the protection of its President, Alfredo Stroessner, and participating in illegal drug trafficking.

For this reason, on March 7, 1985, I introduced House Concurrent Resolution 82, to express the sense of the Congress that the United States should do everything in its power to find Mengele and ensure that he is brought to justice.

On February 6, 1985, the U.S. Attorney General announced the commencement of a full investigation into Mengele and his activities that will be prosecuted by the Office of Special Investigations of the Department of Justice. My resolution puts the Congress on record for supporting such an investigation. The resolution has gained the support of 83 of our colleagues.

The United States, as a defender of human rights and justice for people throughout the world, is morally obligated to preserve the memory of the tragedy of the Holocaust and to ensure that a similar tragedy never occurs. It is vital that we communicate to the international community our intent to bring to justice those responsible for the Holocaust and encourage other governments to join us in this effort.

My sense of the Congress resolution calls for the establishment of an international task force, that will include the Governments of Israel and the Federal Republic of Germany, to supplement the efforts of our Office of Special Investigations [OSI]. This would enable a concentrated effort to find Mengele and bring him to justice. It directs our Government to formally request that the Governments of Paraguay, Brazil, Argentina, Uruguay, and Bolivia join in our investigation and share their archives in the interest of justice and human rights. The cooperation of these nations is vital to this effort. Furthermore, this resolution requests that all the appropriate U.S. agencies cooperate fully with each other and share their files.

House Concurrent Resolution 82 praises the investigation recently launched by the OSI and requests progress reports to the Congress by OSI through the Department of Justice.

In the interest of justice and human rights, we must continue our efforts into this investigation with renewed fervor. We owe it to the victims of the Holocaust and to those who still endure its horrors. By prosecuting Josef Mengele and by rectifying this injustice, we can hope to ensure that such a calamity will never again be repeated in the history of mankind. Only when we begin to study, to analyze, to question and to remember, can we honestly say, "Never Again!"●

NATIONAL VETERANS SERVICE OFFICE PROGRAM

HON. LEON E. PANETTA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. PANETTA. Mr. Speaker, I rise today to introduce legislation to assist our Nation's veterans in obtaining their rightful benefits. My bill would establish a grant program to assist State governments in providing veterans with advice and assistance concerning State and Federal veterans programs and benefits.

As Members of this body know only too well, congressional offices shoulder an awesome responsibility in assisting constituents in their day-to-day dealings with the agencies of the Federal Government. We are all too familiar with lost social security checks and relatives seeking entrance visas. The same applies to veterans and their dependents applying for benefits or enrolling in programs administered by the Veterans' Administration.

Such constituent services have become a vital function of every congressional office and have greatly improved the popular perception of Government in general. At the same time, considerable expertise is required to advise veterans on the complexities of VA programs and to offer counsel in preparing or appealing claims. One is left with the impression that there are literally hundreds, if not thousands, of veterans in every congressional district who are altogether unaware of services and benefits they may have earned, based upon their military service.

In discussions with veterans' officials in my home district, it was stated time and time again that benefits are continually denied because of poorly prepared claims. Outreach efforts by the Veterans' Administration to alert veterans to regulations changes or new programs are simply too limited to satisfy the present need. For example, in the case of the recent agent orange class action suit, literally thousands of Vietnam veterans eligible to file a claim against the agent orange trust fund were unaware of their eligibility for possible compensation or the filing deadlines for such a claim. It should also be kept in mind that the average age of veterans continues to increase, greater numbers of veterans will become eligible for nonservice benefits such as the VA disability pension program.

My home State of California is one of but a handful of States to offer veterans, through a nework of county veterans service offices, advice and assistance concerning veternans programs. County offices around the State are open to advise veterans of benefits for which they may be eligible and to assist in preparing or appealing claims. Serving as as advocacy agency, county veterans service offices offer hope to veterans in approaching the formidable bureaucracy of the Veterans' Administration which has discouraged many legitimate claims.

Despite recent reductions in State funds, the results of California's program have been dramatic: veterans long disenchanted with the Veterans' Administration, have found new hope in seeking medical care and other services they have rightly earned. Moreover, county offices work closely with local veterans service organizations in providing a broad range of services—including job information and counseling—outside those sponsored by the Veterans' Administration.

Mr. Speaker, it is time that we expand upon the example of my home State and pool all available resources in counseling veterans concerning the myriad of ever-changing laws and regulations affecting their lives.

Accordingly, I am today introducing legislation which would provide a 3-year authorization for matching Federal funds to assist States in providing these needed services. Under my plan, matching funds would begin with an 80-20—Federal-State—contribution decreasing to a 50-50 match after 3 years. The higher Federal contribution in the early years would encourage those States presently lacking veterans service programs to initiate such services while assisting the other States in strengthening existing programs.

To be eligible for matching funds under the program I propose, State governments would be required to submit a grant request to the Veterans' Administration. Such a request would have to include a detailed description of services to be offered and plans for coordinating efforts with

local veterans' service organizations. The actual delivery of services to veterans under the programs would be managed at the local level, tailored to local needs and resources.

Mr. Speaker, we as a nation owe a special debt of gratitude to the men and women who served in our defense. The many veterans programs enacted by Congress underscore this unique commitment. It is time that we act to ensure that veterans are receiving all the benefits to which they are entitled by law, and which they so justly deserve; 42 of my colleagues joined me in sponsoring this legislation in the last Congress and I would like to urge all my colleagues to join with me in supporting this timely legislation.

The text of my bill is as follows:

H.R. 1967

A bill to amend title 38, United States Code, to establish a grant program to provide assistance to States in providing veterans with advice and assistance concerning veterans' benefits.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) chapter 3 of title 38, United States Code, is amended by adding at the end thereof the following new section:

"§ 247. Assistance to States in providing veterans information and assistance services

"(a) The Administrator shall establish a program to provide assistance to State governments in providing funding for programs of veterans' services established by a State (or by units of local self-government of the State) for the purpose of advising and assisting veterans in matters concerning veterans' benefits.

"(b)(1) Assistance under this section shall be provided by grants made after submission to the Administrator of an application for such a grant. Any such application shall describe the State's existing program of veterans' services (or describe the State's proposal for a program of veterans' services) for which the grant assistance is requested, shall specify the amount of grant assistance requested, and shall be in such form and contain such additional information as the Administrator may require. The application shall also include a plan for coordination of the State veterans' services assistance program with the activities and programs of local veterans' service organizations.

"(2) The State plan included in the application must show to the satisfaction of the Administrator—

"(A) that the actual delivery of services to veterans under the program will be managed at the local level;

"(B) that local authorities will determine the details of the advice and assistance to be provided to veterans under the State program; and

"(C) that local authorities will assume a portion of the costs of the administration of the program.

"(c) A condition of approval of a grant under this section shall be that—

"(1) during the first fiscal year for which funds are available for grants under this section, the State to which the grant is made shall match the grant by an amount equal to one-fourth of the grant;

"(2) during the second fiscal year for which funds are available for grants under this section, the State to which the grant is made shall match the grant by an amount equal to one-half of the grant; and

"(3) during the third and subsequent fiscal years for which funds are available for grants under this section, the State to which the grant is made shall match the grant by an amount equal to the amount of the grant.

"(d) The Administrator shall prescribe regulations to be used in evaluating applications for grants under this section and to be used in the administration of the program established by this section.

"(e) There is authorized to be appropriated to the Veterans' Administration for grants under this section the sum of $10,000,000 for fiscal year 1986, $8,000,000 for fiscal year 1987, and $6,000,000 for fiscal year 1988.".

(b) The table of sections at the beginning of such chapter is amended by adding at the end thereof the following new item:

"247. Assistance to States in providing veterans information and assistance services.".●

AFRICAN HUNGER AND THE INTERNATIONAL FUND FOR AGRICULTURAL DEVELOPMENT

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. RANGEL. Mr. Speaker, I rise today to express my full support for the Africa famine relief bill, and to advise my colleagues that my absence during yesterday's vote was because of an important narcotics meeting. My colleague BEN GILMAN and I met with Attorney General Edwin Meese concerning an effort to obtain a stronger Federal commitment of resources to the law enforcement effort against narcotics abuse. Had I been present, my vote would have been a strong "aye."

I ask my colleagues to turn their attention to a successful United Nations famine relief agency: the International Fund for Agricultural Development [IFAD].

According to three independent studies conducted by Canada, West Germany, and USAID, IFAD has been a significant factor in improving the conditions of poor farmers in the Third World. IFAD's mission is to increase the productivity of the poor in developing countries. In this way, it is hoped that farmers will become more self-sufficient and better able to feed their countrymen.

Unfortunately, bickering among the U.N. sponsor nations threatens to negate the effectiveness of IFAD. The controversy turns on what percentage of IFAD's operating budget each sponsor will pay. Such a debate circumscribes the true mission of IFAD, and endangers a singularly efficient relief agency.

Mr. Speaker, I ask that we put aside administrative conflicts, and devote our energies to solving the terrible catastrophy afflicting much of the world. I would like to submit the following article for inclusion in the CONGRESSIONAL RECORD.

[From the Wall Street Journal, Feb. 28, 1985]

SHORTCHANGING A FOOD PROGRAM THAT WORKS

(By Ann Crittenden)

When money is tight, you have to be smarter and more analytical about how you spend it. A good test is whether the dollars are invested in the future: in value-creating enterprises or in human and material resources that will contribute to greater productivity down the road. Yet that is exactly the kind of investment that is being sacrificed by budget-cutters all over the world, as the sad story of a little-known United Nations agency illustrates.

It is generally agreed that the only long-term solution to the persistent problem of hunger in the world is increasing the productivity and incomes of those whose lives are most directly involved—the small farmers and the landless poor of the developing world.

Since these luckless millions usually have been bypassed by the established aid agencies, participants at the U.N. World Food Conference back in 1974 recommended that a new fund be set up. At the suggestion of the Organization of Petroleum Exporting Countries, which was feeling flush at the time, and with strong leadership by the U.S., the International Fund for Agricultural Development was established in 1977.

IFAD has been operating now for seven years, and three separate evaluations in 1984, by Canada and West Germany and by the U.S. Agency for International Development, concluded that the agency is doing the job. The recently released AID report states that "IFAD is making an important contribution to improving the economic conditions of the rural poor in developing countries."

Among its most notable innovations, the agency has enabled low-income groups in several countries to obtain credit for the first time. In Bangladesh, IFAD has provided the Gameen Bank with money for non-collateral loans to the landless rural poor. The borrowers form small groups that jointly guarantee the loans, and the bank's recovery rate is 99%, compared with a national average of 50% to 60%. The incomes of borrowers, who may use their $10 or $20 loans to buy livestock or start a food-processing enterprise, have increased at a rate 10 times the national average.

Similarly, in Pakistan an IFAD project encouraged the national agricultural bank to lend to smaller farmers, by lowering collateral requirements and instituting "mobile credit officers" who get out to the villages on motorcycles and bicycles to whip up new business. Loans to small farmers are now 70% of the bank's business, up from 40% at one time, and a recent sample of borrowers' incomes showed twice the rate of increase as a sample of nonborrowers.

In hurricane-ravaged Dominica, in the Caribbean, the supply of pork, poultry and vegetables has increased as a result of IFAD activities, according to AID. Yields from the second rice crop produced in a Gambia project are estimated at seven metric tons per hectare, compared with yields of one metric ton per hectare prior to the project. (A metric ton equals 2,204.62 pounds; a hec-

tare is 2.47 acres.) in sum, the AID team found that "substantial production increases are likely to occur in nearly all" of the 19 projects visited.

IFAD's own estimate is that by the time of their completion, IFAD projects will produce 20 million tons of wheat equivalent annually, representing about one-sixth of the total food import shortfall of developing countries. The institution figures that the lives of 8.6 million families have been improved as a result of its activities.

These results have been achieved with only 160 "concessionary loans" (many virtually grants) valued at less than $2 billion. The IFAD staff, including only 80 professionals, has been kept pencil-slim. One reason the money and the personnel stretch so far is that 70% of IFAD loans are co-financed by other donors, and many of its projects are initiated by others, such as the World Bank and the Inter-American Development Bank. IFAD's policies also hew closely to those of such donors as AID, in that they frequently urge recipient countries to adopt more free-market agricultural policies, such as eliminating artificial pricing and subsidies that stifle food production. A new loan to the agricultural credit bank of China, for example, mandates that the money will go to agricultural cooperatives and to individuals (the latter for the first time in the bank's history) and not to state farms, where productivity is lower.

Despite its promise, IFAD is facing—at best—a halving of the real resources originally available to it.

IFAD initially was capitalized at about $1 billion for three years, consisting of $570 million from the OECD countries and $435 million from OPEC—a 57-to-43 ratio. A first replenishment, for 1981–83, raised an additional $1.07 billion, with the Organization for Economic Cooperation and Development providing 58% and OPEC 42% of the total.

For the past 1½ years, negotiations on a second replenishment have been deadlocked. The oil producers have insisted that their contribution to IFAD had to be reduced in light of the sharp drop in oil revenues, and the sidelining of Iran because of the long-drawn-out war with Iraq. Net oil revenues to OPEC have fallen about 40 pecent since 1981, throwing the oil producers' budget into a chaos that makes Washington look like the land of milk and honey. The income of the United Arab Emirates, for example, has fallen by more than half, and during a recent visit IFAD president Idriss Jazairy was told that government officials had not been paid for two months while the state budget was being recalculated.

The oil producers have said that they would try to provide a target amount of $295 million, and indications are that at the next negotiating session, beginning today in Rome, they will come up with some kind of firm financial commitment. Which brings up another problem. The OECD countries, led by the U.S. have refused to make up the difference, so that IFAD can emerge with a full $1 billion replenishment. The U.S. insists that virtually the exact 58-to-42 ration must be maintained, which would mean at best a replenishment of $710 million for the next three years. The U.S. share of that would come to $120 million, compared with $200 million in 1978 and $180 million in 1981. Even if the U.S. compromises, and agrees to allow the OPEC contribution to drop to 40 percent (at an added cost to the U.S. of $5.4 million over three years), IFAD will still only receive $737.5 million, less than half, in real terms, of its initial capitalization.

A bipartisan group of congressmen, led by Sen. Mark Hatfield and Rep. Silvio Conte, has urged Secretary of State George Shultz to accept such a compromise, (The administration has responded with such indifference that as of this week it still hadn't decided whom to send to the negotiations.) But why don't we stop nickel and diming the poorest people in the world and kick in enough for IFAD to continue operations at its original level? Why is a greater OECD contribution so unthinkable? We would be talking about roughly $400 million more from the U.S. over three years.

The money can be found right in the foreign-aid budget. The administration is asking for fiscal 1986 for a $50 million increase in military assistance to sub-Saharan Africa, for a total of $220 million. Does anyone really believe that is a good investment? And there is the $213 million in concessionary food sales to Egypt. It is generally agreed these have a negative effect on food production in that country.

But then, those are the kinds of foreign aid that never seem to get cut. It is the programs that build for the future that are in trouble.●

A FRESH LOOK AT THE UNITED NATIONS

HON. STEPHEN J. SOLARZ

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. SOLARZ. Mr. Speaker, former Ambassador and Assistant Secretary of State for International Organizations, Richard N. Gardner who is currently at Columbia University where he remains an astute observer of the United Nations, recently sent a thoughtful prescription for renewed American activity there to incoming Ambassador Vernon A. Walters. I am including Ambassador Gardner's piece from the New York Times for the RECORD because it clearly elucidates the issues at stake and outlines remedies that the United States seriously ought to consider in revising its approach to that institution. Without diminishing the excellent work accomplished by Ambassador Kirkpatrick during her tenure, I wholeheartedly join Ambassador Gardner in hoping that the administration will seize the opportunity offered by a change of ambassadors to pursue new directions at the United Nations that will further enhance national foreign policy objectives.

[From the New York Times, Mar. 8. 1985]

A MEMORANDUM: U.N. DIPLOMACY

(By Richard N. Gardner)

To Lieut Gen. Vernon A. Walters:

Soon you are expected to take up your assignment as America's chief delegate to the United Nations. Here are suggestions from scmeone who has worked closely with or observed your 12 predecessors for 25 years.

First, our ambassador's central task is to make the best possible use of the United Nations and its agencies in support of three primary interests of the United States that are reflected in the Charter: peace, human rights, economic development. Part of the job, of course, is to defend American values in debate against the enemies of freedom, as your predecessor, Jeane J. Kirkpatrick, has ably done. But the United Nations is more than a debating society. It can also be used for the avoidance, containment and resolution of conflict. For example, if our delegation had proposed a United Nations force in Beirut in the summer of 1982, we could have spared the lives of 253 marines.

Second, clean up past mistakes. In the last four years, our ideological zeal in the United Nations system has often displaced our national self-interest. We missed clear opportunities to put the Law of the Sea Treaty in a form that merited Senate approval. We opposed needed increases in the resources of international financial institutions. We needlessly interfered with multilateral efforts to help third world countries check uncontrolled population growth. We refused to abide by the World Court's ruling that we should argue the legal merits of our controversy with Nicaragua. You can promote needed rethinking in all of these areas.

Third, shake up your staff. You inherit the weakest supporting team a chief delegate has ever had in New York and in the State Department. Our interests will continue to suffer unless we replace unqualified political appointees with professionals knowledgeable in substantive issues and in United Nations procedures.

Fourth, I know you won't let ego get between you and your job. The American people pay our delegation to influence the policies of other nations, not to play to domestic galleries. This means spending more time in the delegates' lounge than on TV talk shows. This also requires that the mission should forgo putting a personal or "made in U.S.A." label on every bright idea it has. To build majorities for cooperative action, it will often be necessary to let other countries and their delegates get the credit or take the lead.

Fifth, avoid unnecessary partisanship. Of course, your job is to be the spokesman for President Reagan's foreign policy. But please remember that you represent the nation as a whole, not just one political party. Your predecessor forfeited the confidence of many Americans when she asserted at the Republican National Convention—contrary to fact—that the Democrats had adopted an isolationist platform, weak in the defense of freedom and American security. You could start out on a different footing by forming a bipartisan advisory council of eminent Americans.

Sixth, take positive initiatives. Damage limitation is not a policy. Your skill in 10 languages will not get you far unless your instructions from Washington permit you to communicate something other delegates want to hear. Try to persuade the State Department, Treasury and White House to adjust at least some policies (for example, on multilateral aid and trade, South Africa and Central America) that will harmonize our legitimate interests with those of third world moderates and our allies.

Seventh, develop a long-term strategy. Of the $5 billion a year the United Nations system spends—on, for example, peacekeeping as well as combating hunger, disease and poverty—America puts up $1 billion. Our influence is not proportionate to our contributions, partly because the relevant Government agencies have no agreed strategy for using the multilateral system in pursuit of

our foreign policy goals. Someone is needed at the center of the policy process to figure out how we might reform and strengthen international institutions in ways that yield long-term dividends for our nation. If you don't perform that role, no one else will.●

DEPARTMENT OF DEFENSE TO BE REQUIRED TO REPORT MILITARY AIR ACCIDENTS

HON. CONNIE MACK

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. MACK. Mr. Speaker, today I am introducing a bill requiring the Secretary of Defense to report to Congress each year on military air accidents.

In my State of Florida alone, there have been nearly 30 military air incidents during the past 3 years. Thirty-five lives have been lost and we have been extremely fortunate that more catastrophic accidents have not occurred. Just 2 months ago, a 25 pound practice bomb fell from a Navy A-7 attack jet into a common playground area inside a Jacksonville mobile home park. Only luck prevented the death of children.

I spoke with Secretary Weinberger in early March about this issue and requested that he investigate the problem of military air incidents in Florida. Earlier this week, I received an interim response from DOD: The Department could not tell me how the problem in Florida compares to the rest of the Nation. Statistics are not routinely maintained on a State-by-State basis.

While the individual services within DOD do maintain national accident rate data, there is no centralized coordination of information on these incidents. Although it is true nationally that accident rates are declining, and the Department should be commended for this achievement, it is also true that the problem in Florida is severe. Accordingly, national statistics are disguising the dramatic increase in accidents that has taken place in recent years in my State.

I believe that we must encourage DOD to monitor military air accidents by State so that national trends do not hide developing problems at the regional or State levels. The bill I am introducing today will raise the Department's sensitivity to this problem by requiring the Secretary to report annually on the number of air related accidents occurring in each State and the resultant loss of life and property.

Mr. Speaker, to illustrate the severity of this problem in my State of Florida, I would ask that you include for the RECORD a chronology of the military air incidents that have occurred since April 1983:

A CHRONOLOGY OF MILITARY AIR ACCIDENTS IN FLORIDA SINCE APRIL 1983

February 20, 1985.—A Navy A-7 attack jet crashes into a swampy area in the Ocala National Forest after the pilot ejects safely.

February 13, 1985.—A Navy training jet crashes between two houses two miles north of the Pensacola Naval Air Station. The pilot parachutes to safety. No one is injured on the ground.

February 12, 1985.—A 25-pound practice bomb falls from a Navy A-7 attack jet and lands in a mobile home park south of Jacksonville. No one is injured by the unarmed bomb, which bounces across a street and comes to rest in a wooded area.

December 18, 1984.—Two Marine crewmen are killed when their A-6 attack jet crashes while practice bombing at the Avon Park bombing range in Central Florida.

December 11, 1984.—The pilot of a Navy A-7 attack jet is killed when his plane crashes into the Gulf 45 miles southwest of Pensacola. The Jacksonville-based pilot was flying a radar-tracking mission.

December 6, 1984.—An off-target, unarmed missile fired from a Marine helicopter skids along the ground outside the boundary of the Pinecastle range, passing within 100 yards of where a timber crew is working.

November 29, 1984.—The pilot ejects to safety as his Navy TA-7 jet crashes into a lake while practicing at the Pinecastle range.

October 5, 1984.—An Air Force F-4 jet fighter crashes into the Gulf 60 miles south of Fort Walton Beach in the Panhandle while flying a test mission. The pilot and crew member eject unhurt.

May 1984.—Fire burns some 2,000 acres of Ocala National Forest north of the Navy's Pinecastle Electronic Warfare bombing range after a dud rocket lands with fire spewing from its tail.

April 7, 1984.—Five crewmen die and three are rescued when an Air Force helicopter crashes into the ocean off Port Canaveral on a secret mission to launch a Trident missile from a nuclear submarine.

March 22, 1984.—Fifty golfers at the Live Oak Golf and Country Club in Fruitland watch as what they thought was a bomb falls from a Navy A-7 attack plane and lands in the third fairway. The object turns out to be a piece of electronic equipment.

December 6, 1983.—The pilot of an A-7 Navy jet is killed when his plane crashes at the Pinecastle range while practicing dive-bombing.

November 10, 1983.—A Navy TA-7 jet crashes at the Pinecastle range, killing the pilot.

August 30, 1983.—A live bomb drops from a Navy A-7 attack jet and lands a half-mile north of its target in the Ocala National Forest, digging a three-foot crater into a road just as a dump truck is passing. The truck drives into the crater, but the driver is not hurt.

July 25, 1983.—Two Air Force pilots parachute to safety as their F-16 jet crashes into the Gulf about 15 miles southwest of Venice.

July 5, 1983.—Two Air Force pilots die when their F-4D training fighter crashes in the Atlantic Ocean 35 miles southwest of Marathon.

May 15, 1983.—A Spanish naval student dies when his Navy T-2C training jet crashes during touch-and-go landing practice near Pensacola.

May 5, 1983.—A student pilot and his instructor are killed when their Navy T-34 trainer collides in midair with another Navy plane, which makes a successful emergency landing at Saufley field near Pensacola.

May 3, 1983.—An A-4 attack jet flies over Duval County with no one at the controls for 13 miles after the Marine pilot hits a bird while approaching the runway at the Navy's Cecil Field and is forced to eject. The plane passes over several houses before crashing into a wooded field.

April 30, 1983.—Fourteen Navy passengers are killed when a C-131 transport crashes into the St. Johns River in Jacksonville and bursts into flames. One passenger survives.●

IT'S THE GOVERNMENT'S JOB TO HELP ALL THE PEOPLE—NOT JUST THE RICH

HON. EDWARD J. MARKEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. MARKEY. Mr. Speaker, I would like to share with my colleagues the following article from the Boston Globe which I think provides a clear analysis of President Reagan's budget proposals. During these times of increased spending and deficit growth, it is necessary to address our concerns toward President Reagan's Government expenditures. I think that this article honestly describes the apparent dilemma in the President's inconsistent Government budget proposals. I believe that this persuasive article states well the true nature of the President's budget.

IT'S THE GOVERNMENT'S JOB TO HELP ALL THE PEOPLE—NOT JUST THE RICH

(By William V. Shannon)

President Reagan's campaign against the budget deficit is a bold cover operation to conceal his plan to undo the social progress of the last half-century. Having created these enormous deficits by his unnecessary and unjustifiable tax cut in 1981, Reagan is now using them as the pretext to shrink government's responsibilities. If the deficits were much smaller than they are or did not exist at all, Reagan would still be pushing to abolish government programs.

Governments are instituted among men, to borrow Thomas Jefferson's phrase, to help them cope with the dangers and complexities of life which are as various as catastrophic illness in old age or unsettled grain prices in world markets. Reagan's philosophy, however, is that government's only functions are to defend the country militarily and to deliver the mail.

Reagan is the little brother of the rich and their political agent. The rich to not need the government to protect their interests because they are quite capable of taking care of themselves. Reagan's philosophy boils down to telling everyone else to go out in the marketplace and get rich. It is heartless and irrelevant advice to the 95 percent of people who are not going to be big winners in the lottery of life.

As part of his ideological war, Reagan is busily promoting two fraudulent ideas. One is a constitutional amendment to require the federal government to balance its budget. If this idea had any merit, Reagan could submit a balanced budget now and ask

Congress to pass it. He fails to do so because he knows that if all his recommendations for eliminating and reducing programs were adopted, the budget would still be deeply in deficit.

There is no way he or anyone else could balance the budget without increasing taxes. To ask for a tax increase would expose the emptiness of his whole performance.

Reagan's second fraudulent idea is to give the President the line item veto, enabling him to kill specific parts of an appropriation bill without having to veto the whole bill. This idea which sounds so plausible is a fraud because it could not be applied to major categories of the federal budget. Social Security payments, veterans' pensions, and interest on the national debt are set by law. They could not be changed without repudiating the good faith of the government.

The item veto makes sense at the state level because states do not have these huge obligations.

The balanced budget amendment and the line item veto are only sound and fury, signifying nothing. If Congress adopts the Reagan budget or any close approximation of it, the nation will need decades to repair the damage.

Some damage will be invisible and some irreparable. How to calculate the opportunities to save lives and improve health that will be lost it Congress accepts the Reagan proposal to cut funds for basic research in biology, chemistry and the health sciences by six percent?

If Amtrak is abolished, the nation in the future would find it enormously expensive to recreate a passenger railroad system. Thousands of family farmers who were denied refinancing of their debts by Reagan's farm bill veto will never return to farming. If the Reagan limit of $4,000 on federal aid to college students is accepted, many students from working class families will withdraw from college and may never return to their studies.

The President goes on attacking farmers, students, small businessmen, transit system passengers and other Americans as selfish special interests. Recently he asked: "Why, for instance, should the federal government be forcing taxpayers in, say, Colorado to subsidize subway fares in New York?"

The answer is simple. People in Colorado help subsidize subway fares in New York for the same reason that New Yorkers subsidized the building of the Hoover Dam and other dams on the Colorado River and help pay for national parks and irrigation projects in Colorado. We are one people. What helps one of us helps all of us. What is to be gained from having a President who tries to play off one region against another?

Those students and subway straphangers and farmers are not special interests, Mr. President. They are your fellow citizens who thought the government was there to help all of us.●

COAL LEASING AMENDMENTS

HON. DICK CHENEY

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. CHENEY. Mr. Speaker, I have today introduced a bill to revise some of the coal leasing provisions of the Mineral Lands Leasing Act of 1920—in particular, the so-called section 3 provision which would cause the imposition in 1986 of very severe penalties on companies not producing coal in commercial quantities on certain leases.

Most people who are familiar with the legislative history and potential impact of section 3 are in agreement that the provision needs to be revised. In 1976 when section 3 was enacted as a part of the Federal Coal Leasing Amendments Act, it was represented by its proponents as a means to prevent coal leases from being held indefinitely without development for speculative purposes. Yet, paradoxically, the effect of the provision will be to punish bona fide developers of Federal minerals with proven reputations for responsible operation on the public domain, while speculators who may be holding old leases with no intention of developing them or of acquiring other leases are not affected. Moreover, the penalty imposed by section 3 is harsh beyond reason and commonsense.

The bill I have introduced would repeal section 3. It also would make the following additional revisions in the coal leasing provisions of existing law:

First, for leases acquired after the 1976 enactment of the Federal Coal Leasing Amendments Act, my bill would give lessees who do not meet the 10th-year diligent development requirements the option of paying advance royalties at an escalating rate in order to extend a lease past the 10th year. Given the "softness" of the coal market and the length of time required to define reserves, find buyers and negotiate contracts, it is unrealistic to expect lessees to be producing in commercial quantities within 10 years of lease issuance. The advance royalty option provides a way to separate serious lessees from those with no intention of developing a lease. A speculator is less likely to pay an escalating fee on a lease simply to hold on to it.

Second, section 6 of the Federal Coal Leasing Amendments Act would be revised to eliminate the requirement that operation and reclamation plans be submitted within 3 years of lease issuance. Lessees frequently do not know enough about the reserves and future operating plans within the first 3 years to adequately prepare such plans. Further, other planning requirements, such as those in the Surface Mining Control and Reclamation Act, make this provision unnecessary.

Third, my bill would delete the requirement that all lands within a logical mining unit [LMU] be contiguous. There are instances where the physical separation of leases, such as by roads, easements, or geological features, should not preclude the assembly of a unit.

Fourth, the bill also would delete a provision in the Federal Coal Leasing Amendments Act which requires that coal reserves be mined out within 40 years of lease issuance. The law requires that a lease be produced not only in commercial quantities, but also that it remain in continuous operation over its economic life, defined by regulation as an amount equal to a 3-year rolling average of previous production. The 40-year mine-out provision is therefore not only unnecessary, but also could impose economically unsound and wasteful mining practices on the Federal reserve.

Fifth, finally, the bill would authorize the Secretary of the Interior to negotiate the sale of bypass and maintenance tracts.

It is my hope, Mr. Speaker, that this legislation will provide a starting point for hearings and legislative action this year in the House of Representatives. I look forward to working with my colleagues on the House Interior Committee on this important issue.●

ILL-ADVISED PUBLIC DISCLOSURE

HON. CARROLL HUBBARD, JR.

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. HUBBARD. Mr. Speaker, I received a copy of a February 27 letter to Mr. Hoyle L. Robinson, Executive Secretary of the Federal Deposit Insurance Corporation, from my good friend and fellow Kentuckian, C. Beach, Jr., president of Peoples Exchange Bank in Beattyville, KY.

I would like to share Charlie Beach's comments with my colleagues at this time. I believe many people will certainly agree with his concerns about the adverse consequences to our financial institutions if the proposed public disclosure of troubled banks goes forward.

Indeed, the attention given to financial institutions by the media is certainly questionable. I agree with the concerns that we must ensure growing confidence in our Nation's financial institutions and not promote policies that might cause an erosion of this public confidence. The letter from Charlie Beach follows:

PEOPLE EXCHANGE BANK,
Beattyville, KY, February 27, 1985.

Mr. HOYLE L. ROBINSON,
FDIC Executive Secretary,
Washington, DC.

DEAR MR. ROBINSON: We wish to express our opposition to public disclosure proposed by FDIC. It will not increase the safety and soundness of banks, and I think that you will agree that the media has never taken factual information and fairly disseminated the facts to the public. It is always distorted to accommodate sensationalism.

It is our considered opinion that the FDIC presently has sufficient powers and tools to correct deficient situations that take place

within individual banks. In this turbulent time of deregulation, the public confidence in the banking industry has been seriously eroded; and recent surveys indicate that a banker's image has fallen from one of the highest respect to that level equal to a used-car salesman.

We further feel that this proposed action is gross discrimination against commercial banks; whereas, our competitors, the credit unions, and Federal Savings & Loan Associations are able to continue without any public disclosure as to their deficiencies. It is imperative that a level playing field be created. In all businesses there is a degree of confidentiality as to problems. Sensationalism and publicizing ones deficiencies can destroy an industry and an individual business quickly.

We desperately need full support and patient understanding of our problems which will ultimately contribute to an objective and supportive relationship between the financial institutions and the regulators.

Your consideration of our position will be greatly appreciated.

Sincerely,

C. BEACH, JR., *President.*●

MX MISSILE

HON. MAJOR R. OWENS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. OWENS. Mr. Speaker, although more than 100 congressional districts are suffering from desperate structural unemployment we have almost closed the door on any discussion of new initiatives to create jobs. We are told that in order to create jobs we must first take care of the deficit.

Last week this House debated whether to spend $1.5 billion for the next installment of the MX missile. This worthless missile, which should more accurately be called the waste-maker or the budget buster, does not add significantly to the defense of our country. The only argument in support of the MX missile is that the President wants it.

While I understand that the MX is the President's pet weapon at the moment, I do not think that this is a valid reason to waste another $1.5 billion. How can we expect the American people to believe that we are serious about improving the economy and reducing the deficit if our budget contains funds for a weapon which the experts agree is useless for defense?

Many of our people have not been touched by the so-called recovery. How can we explain that the programs which serve them must be put on the chopping block while $1.5 billion is wasted? Seven human services programs have been eliminated or cut to pay the $1.5 billion price of the MX missiles. The cut in section 202 housing funds for the elderly and the handicapped is equal to three missiles. The Job Corps, which has provided training for jobs for low-income young people, is to be terminated for a savings approximately equal to the cost of two-thirds of an MX. The Small Business Administration's Business Loan Investment Fund, which helps small businesses to get established and to expand, is scheduled for termination. The savings will pay for six MX missiles. Community services block grants, which provide core funding for many grassroots groups, are to be phased out. Savings this year will be slightly more than the cost of three MX missiles.

The Legal Services Corporation earned President Reagan's animosity when he was Governor of California. It is again slated for termination which would save enough to buy more than four MX missiles. The elimination of the Economic Development Administration would yield savings to purchase another missile.

There was much at stake in the MX vote. It was not a vote on whether or not we will have a strong national defense, since the MX does not contribute to that defense. It was not a vote to get the Russians to the bargaining table, because they are already there. It was a vote that indicates whether or not we are serious about the budget process. It was also a vote which shows whether or not we can be convinced to do something which is completely illogical.

I voted against the first 21 MX missiles and we lost that vote. Within a few months we will again be considering a vote on MX missiles. this time the request is for 48 missiles. I will again vote no and I urge all of my colleagues to vote no.●

DR. HARRY MALISOFF AND HIS WORK IN UNEMPLOYMENT COMPENSATION THEORY

HON. BILL CHAPPELL, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. CHAPPELL. Mr. Speaker, I rise today to honor the memory of Dr. Harry Malisoff, an economist whose writings on the issue of unemployment compensation over the years merit recognition by this body.

Dr. Malisoff, who did his undergraduate work at New York University, earned his M.A. degree in Mathematics at Columbia University and, subsequently, received his Ph.D. in economics in 1940 from Columbia. Prior to World War II, he served as a consultant to the New York State Department of Labor on methods of financing unemployment benefits. In 1939 and 1940, Dr. Malisoff's four-part series. "The Emergence of Unemployment Compensation," was published in Political Science Quarterly. He later wrote a number of other articles on this subject, including "Welfare and Social Insurance in a Great Society," which was published in 1966 in the Journal of Risk and Insurance. From 1951 until his retirement in 1977, Dr. Malisoff served as a professor of economics at the City University of New York.

In this, the 50th year since passage of the Social Security Act, which established the Federal-State unemployment compensation system, I believe it is particularly timely to read the writings of Dr. Malisoff, who passed away in 1982. While his articles are far too lengthy to be inserted in the CONGRESSIONAL RECORD, given current budgetary constraints, I would like to take this opportunity to inform the Members of the House that I have copies of the above mentioned works in my office for those of you who would like to study them.

In closing, Mr. Speaker, Dr. Harry Malisoff's contributions to our understanding of unemployment compensation are worthy of reflection, and I commend his writings to my colleagues.●

A CONGRESSIONAL SALUTE TO THE CAPITOL BANK OF COMMERCE CENTER

HON. ROBERT T. MATSUI

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. MATSUI. Mr. Speaker, RJB III and Commerce Realty, Inc., are conducting opening ceremonies today for the new Capitol Bank of Commerce Center in Sacramento—a very proud day for a great number of people.

This building, Mr. Speaker, is a symbol of the special relationship between Sacramento's business leaders and city officials. Everyone concerned in this 2-year venture did an extraordinary job and, because of their efforts, the city of Sacramento is much better off.

The 19-story Capitol Bank of Commerce Center is a beautiful building with a curved front of blue-green glass and terraced sides. There is extensive landscaping, and a prominent sculptured fountain enhances the building without detracting from the beauty of the nearby State Capitol. The $52 million project came in under budget, and 40 percent of the building has already been leased.

In short, this a very worthwhile addition for Sacramento, and to those responsible I offer my sincere thanks and congratulations.●

VOICE OF DEMOCRACY SCRIPTWRITING CONTEST

HON. MARJORIE S. HOLT

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mrs. HOLT. Mr. Speaker, the winning script from the State of Maryland, as delivered by Miss Cathleen M. Gillen of Fort Washington, MD, a student at Crossland High School, as a result of the Voice of Democracy Scholarship Program sponsored by the Veterans of Foreign Wars of the United States and their Ladies Auxiliary. This year, Miss Gillen was one of the more than one-quarter million participants and I am very proud of her.

MY PLEDGE TO AMERICA

It is early morning, and from my place on the scaffold, I watch the sun rise from behind Miss Liberty's shoulder. A construction worker, I am helping to refurbish the Statue of Liberty, to restore the glow to her copper skin. Here, so close to her, I see clearly the tell-tale lines of weariness and age etched on her face. Yet in my mind's eye I see the drama of when America was but an infant and the statue an unformulated idea in an unborn mind. And I see vividly the colonists who came to America, poor and tired, fleeing from religious intolerance and economic oppression, planting in America the first seeds of freedom and democracy. I recall their brave thoughts and deeds as they fight to obtain and secure a government of the people, by the people, for the people. And I see how, through their commitments to freedom and democracy, they begin to mold our great nation.

The heat of the afternoon sun beating down on my neck interrupts my musings for a moment. I left my eyes to Miss Liberty and am overwhelmed by intense pride, for, I feel that, beneath the scaffolding, the compassion and honor in her eyes shines true. Intent, I follow her gaze to the open harbor and travel back in history to the beginning of her reign as gatekeeper to America. I see her face in its youth and hear her give voice to democracy exclaiming proudly to the world: "Give me your tired, your poor, your huddled masses yearning to breath free * * *." My mind's eye visualizes the rush of ships, heavily laden with the wretched masses eagerly accepting her invitation. I see the immigrants as they surge forth into the open arms of every growing America. I am with them as they suffer and toil to build the great dams and railroads, the arteries of this nation, and am humbled when they call this toil sweet. I see in them the fervent commitment to uphold the new American ideals of equality and opportunity. And by their strong, eager hands, this nation is shaped.

The day wears on, the shadows deepen, the gentle Lady's arm thrusts the torch into a lowering sky. I pause a moment to rest my arms and to dwell on the eloquence of this statute's stance. Embodied in her is the very heart, the very essence of America—hope, freedom, equality, and opportunity. Looking at her, I am reminded of the efforts of those who came before me, clearing a path for democracy and the American way of life. I remember the words and actions of those who stood fast against social injustice—of those who fought to secure the rights of women and minorities, and of those who gave their lives in foreign lands that democracy might survive. When I think of their devotion and commitment to America, my heart swells, for I know that they did all of this that my world might be a better place. Now the responsibility of fulfilling this honorable pledge lies in the hands of my generation.

As the early evening shadows deepen, the setting sun casts a purple golden light on Liberty's features. I lay down my tools and look beyond her shoulder at the vast expanse that is my native land, and I think, yes, America, I hear the echo of generations past and I will obey the call to duty that resounds around me. I promise you, fair America, that I will rise up, joining ranks with my generation, to carry on the torch, to refuel and rekindle the flame of democracy and freedom that it may grow in intensity and warm future generations with its golden heat. I resolve to uphold and honor your life's blood, the Constitution. I will keep our democratic form of government alive by actively exercising my rights. I will stand fast at your side in the event of crisis and will be ever ready to defend you against all enemies. I will carry on the commitment to democracy, equality and freedom. This, America, is my solemn pledge to you.

As the day closes I turn, and my eyes are drawn once again to that emblematic face. I pause to whisper, ah, Lady Liberty, your eyes will shine with new light, your weariness ebb, as you witness the efforts and accomplishments of my generation.●

THE COMPREHENSIVE FEDERAL INTRUSION ACT OF 1985

HON. RICHARD ARMEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. ARMEY. Mr. Speaker, the most interesting thing I've learned as a freshman Member of Congress is that one can pass a bad bill simply by affixing a good name to it. For example, there is an unwritten commandment—carved not in stone but in the minds of politicians—that "Thou shalt not vote against any bill that contains the words 'civil rights' or the media shall punish thee."

To cast such a vote would be blasphemous, and certain interest groups could label you a heretic or a racist. In this era of 10 second television news stories, headlines at a glance, and encapsulated newspaper summaries, most Congressmen are too afraid for their political hides to oppose an alleged civil rights bill. It amounts to "buzzword blackmail."

I refuse to let my conscience be extorted. I am not the only representative who knows that the Civil Rights Restoration Act of 1985 (H.R. 700) is one of the worst things to come down the legislative pike in a long, long time. It is as potentially dangerous to small businesses as any bill ever enacted by Congress. It is an unnecessary bill whose real impact would be to expand costly governmental intrusion into nearly every aspect of our society while igonoring the real problems minorities and the underprivileged face in today's society.

Those real problems are not civil in nature; they're economic. Discrimination on the basis of race or sex or religion is illegal, and H.R. 700 will not protect anyone who is not already protected under the laws of this country. What it will do is pick the last remaining locks on individual freedom still not touched by the Federal bureaucracy. The bill is so vague it's frightening. Many of its sponsors are not even sure of its effects. H.R. 700 could literally require "mom and pop" grocery stores to comply with racial hiring quotas and subject themselves to onsite government inspection; require family farms and ranches to install ramps, sidewalks, and elevators; and require any company that uses municipal water systems to comply with affirmative action and handicap modification guidelines.

The bill ignores the problems of unemployment, inadequate educational opportunities, urban blight, and insufficient job skills. Any bill designed to bring about equal opportunity, which is the ultimate civil right, would address these problems, and the Civil Rights Restoration Act of 1985 does not. The bill would more accurately be called the "Comprehensive Government Intrusion Act of 1985."

Those advocating the passage of this so-called civil rights bill have made careers of promoting pervasive government intrusion over individual initiative. The more they can do so, the more they can justify their existence. But if you look closely, you'll see that the advocates of this bill have little in common with the original civil rights movement. Instead, they have become a special interest group, pushing for the selective rights of a few over the real civil rights of all.

Many legislators recognize these facts and would prefer an alternative to H.R. 700 but, like the kids in the Life cereal commercial, they're afraid to try it.

I am proposing the Minority Opportunity Restoration Act of 1985. It is a bill to allow people to prosper as a result of the civil rights they have attained after years of struggle and injustice. My bill contains the following provisions:

Enterprise zones to develop economic growth in distressed areas of America's inner cities and rural towns through a broad range of economic incentives to business.

Youth opportunity wage to allow employers to offer subminimum wages to teenagers during the summer months. This would open up job opportunities and provide vital work experience to our young people, especially black teens whose unemployment rate is a staggering 44 percent.

Education vouchers to encourage the use of neighborhood based independent schools which provide quality education to inner-city students. The current illiteracy rate among minorities may be as high as 40 percent.

Privatization of public housing to allow residents of certain federally subsidized low-income housing to own and manage their own units. In the six cities where this idea has been tried, crime, teenage pregnancy, vacancies, and evictions have all declined while employment and rent collection rose.

All these provisions enjoy widespread support. They attack the real problems of minorities today. It may seem paradoxical that doing what's best for minorities requires voting against a bill with the words "civil rights" in its title, but it's time to begin thinking of the next generation instead of the next election.●

GENERAL REVENUE SHARING

HON. JAMES A. TRAFICANT, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. TRAFICANT. Mr. Speaker, when the Congress approved and the President signed the reauthorization of the general revenue sharing [GRS] program in 1983, we stated, in effect, that local governments could count on the program's funding through September 30, 1986. However, the President's 1986 budget proposal would override that reauthorization and eliminate revenue sharing as of September 30, 1985.

For some in Congress who are thinking of budget constraints, this may be a quick way of saving $4.6 billion. As the Congressman from the 17th District of Ohio, I look to the residents of those communities who will be affected by the end of public health and safety programs and services. These include:

Fire protection;

Police protection;

Social services for the elderly, youth and poor;

Public transportation;

Health care;

Rescue services; and

Parks and recreation facilities and services.

Fifty-seven local governments in the 17th district stand to lose $112,179,326. Below is a breakdown provided by the Office of Revenue Sharing, U.S. Department of Treasury, listing local governments' current entitlements under revenue sharing.

Clearly, cutting these services—these general revenue sharing funds—will cause severe economic consequences. This is something my congressional district cannot afford to endure.

I urge my fellow colleagues to join me in opposing this elimination of the crucial General Revenue Sharing Program.

THE INTRODUCTION OF A BILL REDUCING THE CAPITAL GAINS RATE FOR SECURITIES HELD FOR MORE THAN 2 YEARS

HON. ROBERT T. MATSUI

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. MATSUI. Mr. Speaker, today I have introduced legislation to encourage investment and economic growth by reducing the tax on capital gains for individuals.

The bill introduced today would lower the capital gains rate from a maximum of 20 percent to 10 percent for those stocks that are held for more than 2 years.

Under present law, the maximum ordinary income tax rate for individuals is 50 percent, which is applied to assets held for less than 6 months. A capital gains rate is available for qualifying assets held for more than 6 months. This capital gains rate allows the taxpayer to exclude 60 percent of the gain from the sale of these qualified assets and to recognize only 40 percent of the gain. The 40 percent is taxed at the taxpayers ordinary income tax rates.

Under this legislative proposal, the exclusion would be at the 80 percent level for qualified securities, yielding a maximum capital gains tax rate of 10 percent.

Thus, my legislation would cut in half the current capital gains tax rate for gains realized on the sale of securities held for more than 2 years. At the same time, the bill would not effect the capital gains rates for securities held for less than 2 years.

We need to create a stable pool of equity capital for emerging companies. That is essential if we are going to maintain economic growth in this Nation and keep our lead in technological innovation.

This legislation has been hailed by business and high tech industry leaders. The American Council for Capital Formation said this proposal "encourages entrepreneurship, continued growth, and job creation."

The National Venture Capital Association added, "Congressman MATSUI's bill would serve as a powerful stimulus to increase substantially the availability of high risk, 'patient' equity capital for American entrepreneurs."

Perhaps most significantly, this legislation maintains a special capital gains category or differential that is eliminated in the U.S. Treasury Department's much publicized tax proposal. Under the Treasury's proposal, capital gains would be taxed at the same rate as ordinary income, although indexed for inflation.

As a member of the House Ways and Means Committee, I feel that the 1978 and 1981 capital gains tax cuts were responsible for a burst of new venture capital, entrepreneurship, and job creation in the United States.

In addition, the Treasury Department's own figures indicate that lower capital gains rates will mean more—not less—revenue for the Federal Government. The Treasury's estimates refute the contention that reducing the capital gains rates will cost the Federal Government money. The fact is that taxes paid on capital gains have increased every year since the 1978 rate reduction.

Even after the 1978 rate reduction, the United States still taxes capital gains more severely than do most other industrialized nations.

For these reasons, I hope my colleagues on the Ways and Means Committee and the House of Representatives will join me in supporting this legislative initiative.●

PRIVATE SECTOR COUNCIL WORKS TO REDUCE GOVERNMENT WASTE

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. KEMP. Mr. Speaker, everyone laments the current state of government financial management systems, but one dedicated group, the Private Sector Council [PSC] is doing something about it.

In its first full year of operation, PSC has created a new sort of partnership between government and the private sector through cooperation and a sharing of expertise to solve problems.

Mr. David Packard, chairman of the board of Hewlett-Packard Co., accepted the chairmanship of the PSC National Advisory Board in early June 1984, and was joined by a blue ribbon panel that represents a cross section of American business and industry. Mr. Packard explains why he accepted the leadership role:

> Many of the recommendations of the Grace Commission are based on modernizing the Government management systems. The management expertise of the private sector must be shared with the public sector to implement those programs.

Over the past year, PSC has launched over 40 separate projects within four departments of the Government. For example, a pro bono program which loans executives to the Treasury Department has already resulted in tangible improvements in Government cash management.

The potential savings in Federal funds which can be achieved through these 40 Private Sector Council projects within Government are estimated in the $16 billion range.

This is little short of astonishing. Day in and day out we in Congress debate in which ways and with which group of citizens we are going to tax, tax, and tax again. PSC's approach is entirely different and this is the secret of its success.

We need to learn a lesson from the accomplishment of PSC. First, we must recognize that our obligation is to insure more efficient management of the structure which administers the State. Increased productivity within the public sector lessens the need for more taxation of people's labor.

Second, we must learn ways in which the public sector can better accommodate the expertise of individuals and companies—who come to them not in a spirit of adversity, but seeking to donate generously of their talents and management expertise.

There is something in the nature of Government that makes it less able to change. No doubt, this partly due to the fact that competition per se does not factor greatly into Government management decisions. Where vigorous competition may exist—for example, in the delivery of postal services—Government is forced to consider market conditions.

The potential for much greater savings exists, too. And remember—for each dollar saved through better Government management—a dollar is saved for the private sector—the only creator of the wealth that Government regulates and attempts to redistribute.

Mr. William Onsted, PSC president, cites another trenchant example, this time in the area of automated financial management systems. He states:

> While there are 17,000 computer systems in the Government and over 200 accounting systems, there is little vertical integration, let alone system to system communication. From a financial management point of view, the Federal Government is not just out of control. Controls were never established in the first place. We now face an acute crisis. In order to manage our Government more efficiently, we must modernize and reform its financial management system.

Just in the area of cash management, PSC intends to contribute 50 labor years of support to the Government by the end of 1986. Anticipated savings of $4.7 billion in interest payments, and deficit reductions of at least $28 billion are projected by PSC experts.

I would like to endorse PSC's objectives by announcing my support of the Private Sector Council "Statement of Policy". This document was presented to both major party platform committees during last summer's political conventions:

> The Federal Government has a pervasive influence in the American economy in areas such as credit management, durable goods manufacturing, hospital care, agriculture, and education. As a principal element in the effectiveness of these economic segments, the Government must conduct its affairs in a financially efficient manner.
>
> Currently, the Government does not have efficient or effective financial management systems to conduct its business. Therefore, it is urgent that the development and implementation of such financial management systems be accomplished as one of the highest priorities of Government.

Partnership and cooperation are hallmarks of the Private Sector Council's service to our country. We must thank the distinguished leaders of PSC for their invaluable work, and encourage expanded efforts on PSC's part.

Our Government must make an absolute commitment to financial management excellence. It is our duty, and obligation as public servants—not just an idealistic goal we can talk about and then leave to others to implement.

We honor the following individuals and organizations who, through their support of PSC and their contributions of financial management expertise to Government under the auspices of the Private Sector Council, are on the front line in the search for excellence in Government financial management:

PRIVATE SECTOR COUNCIL

William G. Onsted, President.

RESEARCH CENTER FOR GOVERNMENT FINANCIAL MANAGEMENT

Hartwell Morse, Executive Director.
Susumu Uyeda, Director of Research.

NATIONAL ADVISORY BOARD

Mr. David Packard, Chairman of the Board, Hewlett-Packard Company.

CHILDREN'S JUSTICE REFORM ACT

HON. GERRY SIKORSKI

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. SIKORSKI. Mr. Speaker, today I am introducing the Children's Justice Reform Act, the House companion bill to Senator HAWKINS' Child Justice Act. In addition, 17 of my colleagues have signed on as original cosponsors.

During the past year, greater national attention has increasingly focused on child sexual abuse. Over 123,000 cases of child sexual abuse were reported last year—a 35-percent increase over 1983. We heard from the judges and the lawyers, the parents and the media, but we have not heard from the one group who will bear the scars of their involvement for the rest of their lives—the children.

To fully understand the need for reform we need only imagine the experience of a 5- or 6- or 7-year-old victim of sexual abuse, who is caught up in the investigation and in the litigation process. Adults speaking adult language. Lawyers, judges, and psychologists acting like lawyers, judges, and psychologists in procedures and in scenery purposely made intimidating even to adults.

There is not better testimony to this trauma than the words of two Minnesota women who were sexually abused as children who recently shared an opinion piece in the Minneapolis Star and Tribune. They said:

Each of us was so traumatized that we blanked out all memory of those years. We have lived our lives depressed, suicidal, self-hating and filled with despair. We fear for the children. Will they too carry the effects of not only the abuse they've suffered but also of the callous treatment they have received from adults who are not willing to believe them? We have memories of trying to tell and of not being believed or of being punished. Did that help drive the events underground and cause the crippling effects in our lives? We have shared our stories in the hope that those who have never experienced the devastation of sexual abuse will understand that children do not lie about it.

Could we not have spared the trauma of a 6-year-old girl who was rendered mute while on the stand by the sight of a man who had brutally molested her? Later she said, "I saw him looking at me and I though he was going to come and get me and hurt me again." How can we justify the harassment of 16 days of grueling testimony required of a 10-year-old boy in Manhattan Beach, CA? Is our sense of justice so narrow, or our judicial procedures so rigid, that these innocent children must be victimized again and again?

Our legal system was designed by adults for the use of adults, and is ill-equipped to deal with the special and delicate needs of children. Studies have indicated that the extent of emotional damage to these children is as much dependent on what occurs after the abuse as from the actual incident itself. It is our responsibility—as parents, lawmakers and citizens—to stop it. Our legal procedures must be written to insure that while the rights of the accused are fairly protected, special boundaries and protections are applied to child sexual abuse victims.

As a member of the House Select Committee on Children, Youth, and Families, and a Congressman from the youngest congressional district in the United States, I recently held a hearing in my home State of Minnesota—"Protecting the Child in Sexual Abuse Legal Proceedings." We had experts in the judicial, legal, and psychological professions, and a victim herself, tell us about the overwhelming need for reforms.

Because of this hearing, I am introducing the Children's Justice Reform Act, legislation which encourages re-

forms that will reduce trauma to the child, enhance the chances of successful prosecution of child molesters, and protect and prevent children from further sexual abuse. Suggstions include limiting the number of times a child is interviewed by coordinating court proceedings, specialized training for law enforcement judicial, legal and child welfare personnel, modifying evidentiary restrictions, establishing videotaping procedures, and providing treatment programs for both the victim and the abuser.

This legislation does not mandate any particular reforms. Rather, it serves as an umbrella under which many types of reforms can and should be considered by the States. This gives States the incentive to creatively legislate reforms dealing with child sexual abuse on their own.

The 2 year cost is $12 million—minimal in light of possible benefits for the 1.5 million victims of child abuse this year. In fact, according to the GAO's review of the Grace Commission recommendations, almost $842 million could be saved by eliminating unnecessary telecommunications equipment and some multiline phone systems by the Federal Government. This is enough to fund the act for more than 40 years.

It is time for all of us to tackle the issue of child sexual abuse and not to shy away from it because it is too complex or too controversial. Our children are too important. As we talk about protecting our children in sexual abuse legal proceedings, we must not forget that we are dealing with children who have already been victimized once. When these cases are closed and the courtrooms quiet, the lawyers and reporters, judges, and spectators walk away. But the children bear scars for the rest of their lives. It is our duty to find the most judicious and expeditious way to treat the perpetrator, protect the innocent, and provide an environment that will shelter children from further hurt. That is what the Children's Justice Act attempts to do.●

GIVE THE WHISTLEBLOWER SOME INCENTIVE

HON. FORTNEY H. (PETE) STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. STARK. Mr. Speaker, while hardly a new phenomenon, fraudulent contracting at the expense of the American taxpayer is assuming levels that, in this era of severe spending constraints, both threatens the budget and weakens our Armed Forces. Daily we hear of inadequately tested or shoddy goods being foisted on the Government with virtual impunity. Currently, Government officials who expose such occurrences against the wishes of their superiors risk their careers and derive little benefit for their conscientiousness. Both the incentives to blow the whistle and the relatively risk-free environment for contract cheating must be reformed in order to correct this problem.

The False Claims Act of 1863 was intended to check these abuses. This act allows qui tam actions to be brought; that is, a civil action initiated by an individual for himself as well as for the U.S. Government. That person is entitled to a proportion of any damages awarded to the U.S. Government. The Department of Justice must decide within 60 days of notification of the action whether to assume full responsibility for the suit; if it does not, or if in the court's judgment it has failed to prosecute the case vigorously within 6 months, control of the case reverts to the individual.

While apparently a useful means of encouraging the revelation and prosecution of contract fraud, this law currently contains one great self-defeating flaw. A qui tam—private action will be dismissed if the information relevant to the false claim is in the possession of the Government. Thus Government employees cannot bring such a suit. Private individuals would also experience difficulty in successfully prosecuting a qui tam action because, in this era, the Government can claim to have possession of, or access to, almost all information.

The reform I propose allows citizens, including Government employees and miltiary officers, to proceed with a qui tam suit if, after bringing evidence of a contract abuse to the attention of the head of the appropriate agency, that agency fails to undertake proper corrective action within 6 months.

To prevent grossly excessive rewards for what is, after all, basic good citizenship, I also think we should lower the percentage of damages awarded to the individual bringing suit from the current law's 10 to 25 percent, to not less than 1 percent of the total but nor more than $1,000,000.

Conventional remedies have proved inadequate against these types of consensual procurement crimes due to a lack of both complaining witnesses and sufficient incentive to inform. I believe that the qui tam action could be a powerful ancillary method of law enforcement that would bring to book dishonest contractors, discourage others from the temptation to cheat the Government, and save our taxpayers billions of dollars every year.●

SINO-AMERICAN EARLY CHILDHOOD EDUCATIONAL EXCHANGE

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. HAWKINS. Mr. Speaker, on April 15 through May 10, 1985, the Sino-American child development educators' delegation to China will conduct its second early childhood educational exchange with its counterpart in the People's Republic of China.

This delegation has established an excellent educational exchange program which includes indepth presentations in the form of conferences and meetings from our child development educators to the People's Republic of China child development practitioners.

These planned educational conferences, research efforts and studies, are one of the most extensive and comprehensive child development program exchanges between our two countries. Such exchanges emphasizing quality learning and educational development should be highly commended.

Under the leadership of Dr. Alexander Yeh, three components will be presented by the experts in the following related fields: One, the human potential-brain and the multiple-intelligences; two, the California extended day care programs; and three, the California intergenerational programs. All these presentations will be videotaped and be made into a 30-minute film program for presentation to our educational institutions.

Educational exchanges such as these provide an invaluable service to both participating nations. By examining exemplary childhood educational programs we can offer the best possible services to our children. As many studies have proven, effective education at the early stages of a child's schooling is so critical to their development and academic achievement in later years.

Mr. Speaker, I invite all our colleagues to join together in extending our best wishes to our goodwill ambassadors to Asia and special regards to our friends of the All China Women's Federation in China for its continuous success.●

EMPLOYMENT AND TRAINING

HON. BARBARA B. KENNELLY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mrs. KENNELLY. Mr. Speaker, today I am introducing legislation to help the Nation's unemployed by expanding their opportunities to partici-

pate in skilled training programs, thus hastening their reabsorption in the labor market. This bill is a refinement and expansion of legislation I introduced last year. It embodies a concept endorsed by the northeast-midwest congressional coalition, and recommended in its testimony before the Public Assistance and Unemployment Compensation Subcommittee. I am very pleased that Representatives DON PEASE, BILL CLINGER, MARY ROSE OAKAR, and SHERWOOD BOEHLERT, who have been leaders in the coalition and in the Congress on employment and training issued, have agreed to cosponsor this bill.

Since 1970 unemployment insurance law has prevented the States from disqualifying UI claimants who are in State-approved training programs, essentially exempting these claimants from the standard UI eligibility criterion of being available and looking for work. While all States have adopted conforming legislation to this effect, they have not all put in place affirmative administrative procedures regarding approval of training programs and determinations whether any particular individual may actually participate in one. As a result, in fiscal year 1982, it has been estimated that only one-fourth of 1 percent of the year's 7 million unemployment insurance recipients actually were enrolled in job training programs.

Clearly, more of the Nation's unemployed would benefit from spending their period of unemployment retraining for occupations and skills for which there is or will be greater demand than for their previous occupations. This was a policy pursued in title III of the Job Training Partnership Act, and because of these incentives it may be assumed that more UI recipients have more training opportunities than was the case before JPTA. My bill would extend this policy further and also provide the information we need to evaluate what is being done now and what more needs to be done in the future.

Specifically, the bill I am introducing would give States an incentive to permit unemployed workers to upgrade their skills by allowing unemployment insurance [UI] payments made to persons in State-certified work preparation and skill training programs to count toward any interest on funds a State might have borrowed from the Federal Government to cover UI costs. The bill would clarify that actions taken by the States to promote training for individuals receiving UI benefits would not be considered an expansion of the State unemployment compensation system.

In addition, the bill directs the Secretary of Labor to develop model criteria that States can use in approving programs and in identifying individuals who would benefit from retraining. The Secretary would also be required to provide certain information to the Congress on what is being done in the States with respect to retraining unemployed workers. This would include a study which shall examine whether the combination of UI and retraining results in less time on unemployment and eventually a higher paying job for individuals, and lower administrative and general assistance costs for the States actively pursuing this strategy for unemployed workers.

Yesterday, the House of Representatives was forced to vote on a limited phaseout of Federal supplemental compensation [FSC] in the face of the Administration's threats to veto any extension of the program. This was a frustrating choice for those of us who believe more should be done to reform the unemployment insurance system and to provide mechanisms for encouraging retraining programs for unemployed workers. If one thing came out of this week's debate on FSC, it was the clear signal that the House of Representatives will soon address some of the serious underlying problems which remain in our economy affecting the long-term unemployed and the need for job training. As the Congress continues to explore comprehensive reform, I hope there will be a full discussion of this bill and other mechanisms to promote solutions to these problems.●

INTRODUCTION OF LEGISLATION TO EXTEND DAYLIGHT SAVING TIME

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. CONTE. Mr. Speaker, I am introducing legislation today to extend daylight saving time [DST] for 2 additional months, to begin on the first Sunday in March, rather than the last Sunday in April as under present law. Congress has considered similar legislation several times in past years.

Mr. Speaker, the history and development of daylight saving time has followed a complicated route in the Congress. Even before the concept of DST was conside. 1, it was not until 1883 that the United States had a concept of standard time within time zones. Prior to 1883, for example, when it was noon in Washington, it was 12:24 p.m. in Boston and 11:43 a.m. in Savannah.

In 1883, however, most railroads began to operate on standard railway time, reducing the number of time zones to four. Within 5 months, 80 of the 100 principal cities in the United States had adopted the railway time system. In the early 20th century, Congress made the first of many attempts to establish a uniform system of time for the United States—one which the entire Nation would be required to follow. Interestingly enough, this legislation also established the first daylight saving time.

The idea of DST first originated with a British astronomer, William Willett. In 1907, he began a campaign for the worldwide adoption of DST, using many arguments familiar to us to this day: additional time for recreation, less crime, and a reduction in the need for artificial light. The introduction of summer daylight saving time began in the next decade: First by Germany, in 1916, and soon afterward by a number of other European countries. World War I provided the impetus; the expected saving of electricity and coal through the adoption of daylight saving time was seen as an aid in the war effort.

In the United States, however, DST and standard time were introduced at the same time; both went into effect on March 31, 1918. Congress repealed DST after two summers, partly because the war was over, and partly because of public complaints. From 1920 to 1942, DST was a matter of local option, although it was only used widely in large regions of the eastern time zone. In 1942, however, Congress again enacted a daylight saving time proposal, ending at the end of September 1945. The following spring, various States and municipalities reinstituted DST.

As the years progressed, Mr. Speaker, the confusion became worse. In 1962, the transportation industry urged Congress to end the lack of uniformity through Federal legislation. The transportation industry cited several situations as part of their argument: A 35-mile bus trip from Steubenville, OH to Moundsville, WV required seven time changes. In a Government office building in Minneapolis-St. Paul, the time was different on every floor. And a statement by the Department of the Navy declared that in general, it is not possible to tell with certainty what time it is in a particular locality on a given date.

The confusion was in large part resolved in 1966, when Congress enacted the Uniform Time Act (Public Law 89-387). This legislation required a standard time policy in the United States and established DST to begin on the last Sunday of April and end the last Sunday of October. States were allowed to elect exemptions from DST in 1972. And in 1973, Congress provided for DST on a year-round basis for a 2-year trial period in an attempt to relieve severe energy shortages. Public concern resulted in an amendment to the act to provide for 4 months of standard time from November 1974 to February 1975. In general, there have been no additional changes in the past

10 years, although the House and Senate have both, in different Congresses, passed legislation to extend DST for greater periods of time.

Mr. Speaker, my legislation provides for an 8-month DST system. As required by Congress in the 1973 statute, the Transportation Department submitted a report to the Congress on the operation and effects of the Act. The report indicated that modest overall benefits might be realized by a shift from the historic 6-month DST system to an 8-month DST system in areas of energy conservation, overall traffic safety, and reduced violent crime. The DOT report pointed out that expanded daylight saving time could reduce electricity and heating demands by as much as 3 percent.

This is fully consistent with the concept of DST. During part of the year, the Sun rises before most people do. If the clock is advanced, sunrise by the clock will be later—as will sunset. This clock shift saves daylight in the sense that it reduces the number of daylight hours when people are normally asleep and increases the number when they are normally awake.

There is some concern that later sunrises might endanger children walking to school. However, my legislation provides that DST would begin on the first Sunday in March; sunrises would be no earlier than September and October. In addition, the Transportation Department found no statistically significant increase in fatalities or serious accidents in March or April 1974 or 1975, when DST was generally in effect on a year-round basis.

My legislation also deals with concerns of AM radio broadcasters, many of whom are unable to broadcast before sunrise. The legislation would allow the FCC to implement regulations with respect to hours of operation of daytime AM radio stations.

Mr. Speaker, daylight saving time extended from March to October will provide several benefits to the Nation: saving energy, reduced crime, reductions in the number of automobile accidents, and more time for recreation. I urge my colleagues to support the legislation and urge the Energy and Commerce Committee to move expeditiously to report the bill to the full House for consideration.●

MULTILATERAL DEVELOPMENT BANK AUTHORIZATIONS

HON. STAN LUNDINE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. LUNDINE. Mr. Speaker, I am today introducing legislation at the request of the administration which would authorize continued U.S. participation in the multilateral development banks. Specifically, the administration has requested congressional approval of U.S. subscriptions to a selective capital increase for the World Bank and a capital increase for the International Finance Corporation. In addition, the legislation introduced would enable a U.S. contribution to the fourth replenishment of resources of the African Development Fund.

SELECTIVE CAPITAL INCREASE

The bill authorizes the Secretary of the Treasury to subscribe to $1.5 billion worth of shares of the capital stock of the World Bank. It is important to point out that the actual budgetary cost to the U.S. of participation will actually be $131.4 million, payable over 2 years, as the paid-in portion of the total subscription. The remainder of the U.S. share will be in the form of callable capital. Purchase of these shares of stock by the United States would constitute 17.8 percent of the total capital increase of $8.4 billion. This capital increase would continue the practice of parallelism between the International Monetary Fund and the World Bank, that member countries share of the voting stock in each institution should be readjusted following an IMF quota increase. The U.S. share of the voting stock in both the IMF and the World Bank following enactment of the Selective Capital Increase will be about 20 percent. Maintenance of a 20-percent U.S. vote is important because it enables a U.S. veto of charter amendments which require an 85-percent vote of the capital stock for adoption.

INTERNATIONAL FINANCE CORPORATION

Section 3 of the bill would enable U.S. participation in a capital increase for the International Finance Corporation. If enacted, the Secretary of the Treasury would be authorized to subscribe to 175,162 additional shares of the corporation valued at $175 million and payable over a 5-year period commencing in fiscal year 1986. The total capital increase for the corporation, based on agreement with other participants, will be $650 million. The U.S. share of the total therefore will be 27 percent.

The IFC promotes private enterprises in the developing countries by providing risk capital and long-term loans, making direct equity investments in private companies. The IFC's investment is intended to act as a catalyst for additional foreign and domestic capital investment in a particular venture. The capital increase is necessary to permit expansion of the IFC's investment program in the next 5 years.

AFRICAN DEVELOPMENT FUND

Section 4 of the bill authorizes the Secretary of the Treasury to pay the African fund $225 million over 3 years as the U.S. contribution to the replenishment of its resources. The U.S. share of the $1.5 billion replenishment amounts to 15.4 percent of the total.

The AfDF is the concessional lending affiliate of the African Development Bank, making low interest loans to the world's poorest developing countries those of sub-Saharan Africa. More than 80 percent of in Fund is a critical provider of development resources and U.S. participation in this replenishment is an important contribution to the future of the African Continent.

These requests are the result of an extensive series of international negotiations which established the burden sharing among the donor member countries of the institutions. This burden sharing points out one of primary advantages of U.S. participation in the multilateral development banks; contributions from the United States are leveraged with those of other donor countries resulting in a much larger pool of resources which these banks then use to finance priority development initiatives in the developing countries. During a period when our budget faces unprecedented constraints these banks represent an extremely cost-effective means for disbursement of U.S. foreign economic assistance.●

THE QUALITY ASSURANCE REFORM ACT OF 1985

HON. EDWARD R. ROYBAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. ROYBAL. Mr. Speaker, today I am introducing the Quality Assurance Reform Act of 1985. For the past several years, the Medicare Program has been squeezing down on the cost of health care. Recent proposals by both the administration and the Senate Budget Committee would increase the pressure to contain health care costs. All this is being done without adequately shielding the elderly from quality of care problems.

We need to step back and look at what is happening to Medicare beneficiaries as a result of cost containment. We need to ask whether cost containment has really become care containment and whether the worst is yet to come.

In all our efforts to contain costs for the Federal Government, we have failed to protect the Medicare beneficiary. Having watched the development of the prospective payment system this past year and listened to testimony given at my committee's February 26 hearing on quality of care, I am firmly convinced that we need to change current law and place quality assurance on at least an equal footing with cost containment.

Medicare beneficiaries and their families are confused and feel alone and unprotected. This bill would establish a 24-hour hotline for beneficiaries and for health care providers to deal with quality problems. Further consumer protection is provided by setting up a consumer advisory board to oversee the operations of peer review organizations.

At the national level, I am proposing the establishment of a National Council on Quality Assurance to oversee the entire quality assurance program and to make recommendations to the administration and the Congress for upgrading quality assurance.

To ensure that Medicare is not care containment, I am proposing that at least one-half of the pros activity be focused on quality assurance and that quality assurance be extended to cover all services covered by Medicare.

This bill does the right thing in a time of cost containment. I urge my colleagues to help ensure quality health care for the Nation's aged and disabled by supporting the Quality Assurance Reform Act of 1985.●

KILDEE SUPPORTS MEASURE TO PROVIDE FURTHER RELIEF FOR THE LONG-TERM UNEMPLOYED

HON. DALE E. KILDEE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. KILDEE. Mr. Speaker, the Federal Supplemental Compensation [FSC] Program expired on March 31. More than 340,000 long-term unemployed Americans who would otherwise be eligible to receive additional weeks of these benefits will receive their last FSC check this weekend unless Congress and the President act expeditiously to provide phaseout relief. Today, the House Committee on Ways and Means has submitted legislation, H.R. 1866, to provide for continued FSC assistance for the 340,000 American unemployed workers who would otherwise face an abrupt loss of FSC benefits.

I urge my colleagues to support this measure because it will allow for the continuation of Federal supplemental compensation to unemployed workers now receiving the Federal assistance. However, I am disappointed that we only have this limited bill before us today. The Ways and Means Subcommittee on Public Assistance and Unemployment Compensation reported an excellent measure to the full committee. The subcommittee bill would have provided for a 3-month extension of the FSC program so that unemployed workers who exhaust their State benefits after March 31 would have still been eligible to receive FSC assistance. Unfortunately, because of the looming threat of a Presidential veto of the subcommittee legislation, the full committee reported out H.R. 1866 instead.

Mr. Speaker, the most recently available statistics show that there are more than 1,300 workers in the Flint area and more than 18,000 workers throughout the State of Michigan who are currently receiving assistance from the FSC program. H.R. 1866 will provide assistance to many of them.

However, the total unemployment rate in my home town of Flint, MI is 15.3 percent, more than double the national average of 7.3 percent. And the total statewide unemployment rate in Michigan still exceeds 10 percent. I am disappointed that we cannot do more at this time to help these people.

I hope that in the coming months, we go beyond our limited actions today and provide reforms in Federal unemployment programs so that we may offer more relief for unemployed workers in areas of the country with persistently high levels of unemployment.●

LEGISLATION TO REFORM THE ONSHORE OIL AND GAS LEASING PROGRAM

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. MILLER of California. Mr. Speaker, I am introducing legislation today to end the Department of the Interior's scandal-ridden noncompetitive onshore oil and gas leasing program.

Since I first introduced this legislation in 1979, the Department's noncompetitive oil and gas leasing program has been discredited repeatedly. The General Accounting Office, the Congressional Budget Office, and the Departments of the Interior and Justice have all in the last several years reported findings of fraudulent activities and substantial revenue loss due to continued use of noncompetitive leasing.

In 1980 and again in 1983, the Department of the Interior confirmed my charges of abuse by suspending the simultaneous leasing program. Just last week a House subcommittee discovered further scandals—and this after the Department had taken corrective measures. For example, the House study found that the Interior Department had sold 92 tracts for $4 million in filing fees, although the fair market value of these leases is estimated to be between $70 million and $90 million.

My legislation would eliminate the present noncompetitive system. Instead of a lottery system which confers millions of dollars worth of resource-rich lands on a lucky individual who files a $75 fee, this legislation would institute competitive bidding procedures that are currently in use for offshore leases and for land in known geologic areas onshore. The Congressional Budget Office has estimated that competitive leasing of onshore tracts would increase revenues to the Federal Treasury and the States by $700 million.

The noncompetitive oil and gas leasing program was developed in the 1950's, when the oil and gas market was vastly different than it is today. Tracts that were outside known geologic systems, were placed into a bimonthly lottery and made available for development to lucky winners at the mere cost of $10 filing fee. Bidders were not required to have any prior experience in natural resource development. Annual rents on the land were extraordinarily low. And leases were available for excessively long periods of time—10 years, compared to 5 for competitive leases—without any requirement that lessees develop the tracts diligently.

The system operated more like a glorified church raffle than a method for responsibly disposing of billions of dollars in federally owned energy resources.

Not surprisingly, this system is subject to enormous abuse. It cheats the taxpayers of this Nation out of billions of dollars of revenues which could be secured through competitive leasing and higher royalty rates. It permits individuals who lack any knowledge whatever about the production of oil and gas to secure title to vast quantities of valuable, public reserves, and to profit from the assignment of those leases to oil and gas companies.

The assignment of profitable tracts denies taxpayers a fair share of the value of the oil and gas that they own. We have heard of cases where individuals secured, through a $75 lottery entry fee, the rights to a tract which they immediately assigned, or resold, to major oil companies for as much as $200,000. The public received nothing from that assignment. If an oil producer was willing to pay $200,000 for that tract, should not the taxpayers of this country, who own the resources, receive the proceeds?

As early as 1968 and again in 1970, the General Accounting Office warned that taxpayers are not receiving the fair market value for oil and gas resources and questioned whether the program was sufficiently in tune with the real world.

A 1970 GAO study concluded that competitive leasing would insure that lands are leased at prices that more nearly approximate their fair market value. GAO noted:

The use of a competitive bidding system would eliminate the undersirable aspects of awarding leases of Federal lands on the basis of a drawing . . . The disposal of the nation's oil and gas resources under full and free competition would be more consistent with our free enterprise economy.

In 1981, the Congress adopted my proposal to raise the noncompetitive system's entry fee from $10, the rate established in 1950. In the first year at a $75 entry fee, revenues increased by $144 million, a 300-percent surge. But entry fees are provided merely to cover the program's administrative costs. They are not a source of revenue.

To increase the taxpayer's return for the use of Federal lands, the legislation I am introducing today, the Oil and Gas Leasing Reform Act of 1985, would replace the noncompetitive system with a competitive leasing program similar to that used offshore.

The Secretary would be authorized to utilize any of several bidding systems currently available for leasing of the Outer Continental Shelf. These options include royalty bidding, front-end bonuses, and net-profit sharing.

As with offshore leases, this legislation permits the Secretary to lease for small front-end bonuses in order to encourage exploration of marginal areas. This bill also allows the Secretary to reduce royalty or net profit payments in the latter phases of production to encourage enhanced recovery of oil and gas.

This bill eliminates the current 12½ percent ceiling on royalty rates and authorizes the Secretary of the Interior to set royalties at the 16⅔ percent rate common to offshore and competitive programs, or higher if appropriate. Outdated rental fees of $1 per acre, and $2 per acre for tracts where oil and gas has been discovered, would be doubled. My bill also shortens the initial lease term from 10 to 5 years and requires the diligent exploration, development, and production of tracts.

Finally, many of the scandals we have witnessed during the last few years result from inadequate monitoring of leases and a lack of information. This legislation authorizes the Secretary to collect information regarding the exploration and development of Federal lands.

In addition to increasing Federal and State revenues, competitive leasing will rid the onshore leasing program of fraudulent and unscrupulous participants and insure that Federal lands are explored and developed by interests with demonstrated experience and competence in the field.

Mr. Speaker, I believe it is time the Congress take action to reform this grossly outdated and economically inefficient onshore leasing program. I hope Members will join me in this effort to provide the taxpayers of the United States, the owners of these oil and gas resources, with the fair market value for exploration and development of our public lands.

The text of the legislation follows:

H.R. 1960

A bill to amend the Act of February 25, 1920, commonly known as the Mineral Leasing Act, to require competitive bidding for leases on Federal lands with oil or gas deposits, and to require diligent exploration for, and development and production of, such oil or gas deposits, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Oil and Gas Leasing Reform Act of 1985".

SEC. 2. MINERAL LEASING ACT AMENDMENTS.

(a) Subsections (a) through (d) of section 17 of the Act entitled "An Act to promote the mining of coal, phosphate, oil, oil shale, gas, and sodium on the public domain", approved February 25, 1920 (30 U.S.C. 226 (a) through (d)), are amended to read as follows:

"SEC. 17. (a) Except as otherwise provided in this Act, the Secretary is authorized to lease to the highest responsible qualified bidder by competitive bidding, under regulations promulgated in advance, any lands subject to disposition under this Act which may contain oil or gas deposits. The bidding shall be by sealed bid on the basis of those of the bidding systems set forth in section 8(a)(1) of the Outer Continental Shelf Lands Act which the Secretary determines would maximize competition and revenues to the United States. Such bidding shall be conducted in accordance with the procedures and requirements set forth in section 8(a) of such Act (other than paragraphs (5) and (9)(E) thereof).

"(b) A lease of land under this section shall—

"(1) be for an initial period of five years and as long after such initial period as gas or oil is produced in paying quantities from the area in compliance with diligence standards established by the Secretary with respect to exploration, development, and production, or as long as drilling or well reworking operations as approved by the Secretary are conducted thereon;

"(2) entitle the lessee to explore, develop, and produce the oil and gas contained within the lease area, conditioned upon compliance with diligence standards established by the Secretary with respect to exploration, development, and production; and

"(3) be conditioned upon payment by the lessee of a rental of not less than $2 per each acre of the lease, to be paid in advance each year.

"(c) A minimum royalty of $4 per acre in lieu of rental shall be payable at the expiration of each lease year beginning on or after a discovery of oil or gas in paying quantities on lands leased under this section.

"(d) Any lessee conducting exploration for, or development of production of, oil or gas pursuant to this Act shall provide the Secretary access to all data and information obtained from such activity which the Secretary may request.".

(b) Section 17(e) of the Act amended by subsection (a) of this section (30 U.S.C. 226(e)) is repealed.

SEC. 3. TECHNICAL AMENDMENTS.

(a) Section 30(a) of the Act of February 25, 1920 (30 U.S.C. 187a) is amended by striking out "30. (a)" and inserting in lieu thereof "30A.".

(b) Section 30(b) of such act is amended by striking out "30. (b)" and inserting in lieu thereof "30B.".●

MURDER OF MAJ. ARTHUR NICHOLSON

HON. MEL LEVINE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. LEVINE of California. Mr. Speaker, I am both saddened and outraged by the recent murder of Maj. Arthur Nicholson. This is yet another example of the Soviet Union's shoot-first mentality which was so graphically demonstrated less than 2 years ago when Russian pilots shot down Korean Airlines flight 007.

There is no question that Major Nicholson was engaged in intelligence-gathering information. Also, there is no question that the Soviet Union would have been well within its rights to detain and question Major Nicholson regarding his activities.

No such action were taken, however. Instead, a Russian soldier opened fire on Major Nicholson with no advance warning. One of the Russian soldier's shots hit Major Nicholson in the chest. The Russians then chose to make a bad situtation worse, by preventing Major Nicholson's companion from administering the medical care which could have saved his life.

Nothing Major Nicholson did in any way justified his shooting. Although the rules governing intelligence gathering are sometimes murky and confusing, Major Nicholson was playing within those rules when he was gunned down.

It is just as inconceivable to me that an American soldier would have shot and then denied medical care to a Russian soldier under similar circumstances, as it is that the United States would shoot down a Soviet airliner under circumstances similar to those which lead to the destruction of KAL 007.

Mr. Speaker, the recent actions of the Soviet military are despicable and beyond justification. They owe an apology to the people of the United States, and especially to Major Nicholson's wife and 8-year-old daughter.

It is my hope and expectation that the Reagan administration will convey to the Soviet Union that such an incident is not to happen again and take appropriate condemnatory action. There can be no excuse for this reprehensible act and we should find a clear and unmistakable way to make our outrage known to the Soviets.●

PURSUANT TO CONSIDERATION OF H.R. 1866 ON APRIL 2, 1985

HON. NICK JOE RAHALL II

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. RAHALL. Mr. Speaker, I am pleased that H.R. 1866, which amends the Federal Supplemental Compensation Program, was passed by the House yesterday and I would like to commend Chairman ROSTENKOWSKI and the members of the Ways and Means Committee for their efforts in bringing this legislation before the House for consideration. Unfortunately, it is my understanding that the committee was not able to fully reauthorize the Federal Supplemental Compensation Program due to threats of a veto by President Reagan.

The legislation passed yesterday will allow individuals who are currently on the FSC program, that is, individuals who claim FSC benefits for the week of March 31-April 6, 1985, to collect the remainder of their FSC benefits. No new claimants will be granted benefits after April 6, 1985. Previously, there was no provision for "phasing out" recipients and benefits would have ceased after the week ending April 6, 1985, regardless of the number of weeks an individual had collected his or her original entitlement.

I have introduced a bill, H.R. 982, that would extend the FSC program for an additional 2 years. While it is true that the national unemployment rate has been on the decline as the economic recovery continues, certain States still suffer from extremely high levels of joblessness. The unemployment rate in my State of West Virginia still hovers at 15 percent. For States such as West Virginia, Alabama, Mississippi, and Michigan, additional Federal unemployment benefits are essential to the livelihood of laid-off workers and their families as they continue to search for employment. These families will have no option but welfare once the FSC program is phased out. It is my hope that Congress will continue to consider extending the Federal Supplemental Compensation Program as we struggle to deal with the still serious unemployment situation facing many areas of the Nation.●

PURCELL-MARIAN EXCELS FROM UNDERDOG TO 1985 OHIO BASKETBALL CHAMPS

HON. THOMAS A. LUKEN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. LUKEN. Mr. Speaker, I would like to call to your attention a basketball team that has achieved shocking upsets and grabbed the coveted championship title for 1985. No, I am not referring to the Villanova Wildcats, NCAA basketball champions, but a team of equal excellence and success in its league—the Cavaliers of Purcell-Marian High School of Cincinnati. OH.

The Purcell-Marian High School's class AAA State championship is a victory against the odds. Starting with a freshman coach this year who at 25 is the youngest high school basketball coach in Cincinnati, Purcell was unanimously selected to finish last this season. But the new coach, Jim Stoll, defied the prophets, and led his team from a level of high school basketball obscurity to State champions, for the first time in Purcell-Marian history. Along the way, the Cavaliers also stacked up sectional, district, and regional titles for the first time in 16 years.

One cannot help but regard the Purcell-Marian team with awe, knowing that the team has played among the best league in the city, the Greater Cincinnati League, and rose to fantastic heights in one season. To commend this wonder team, Mayor Charles Luken has presented Purcell-Marian with the key to the city of Cincinnati, and declared March 31, 1985, as Cavalier Day. An alumnus of Purcell-Marian, I am proud to congratulate Coach Stoll and the Cavaliers for mature sportsmanship, raw enthusiasm, and an unwavering determination to excel. Purcell, 24 and 3 and winner of 14 straight games, has gone from the classic underdog to the best basketball team in the State of Ohio. I lend my admiration and wishes for continued success to Purcell-Marian High School and Coach Jim Stoll, for conquering insurmountable challenge with outstanding victory.●

A TRIBUTE TO JOSEPH "REDS" VERNON

HON. STENY H. HOYER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. HOYER. Mr. Speaker, at the end of last year, Joseph "Reds" Vernon retired as executive director of the sports office of the Maryland-National Capital Park and Planning Commission. Reds Vernon has devoted his life to improving sports programs for the youth of Prince Georges County and the Washington metropolitan area.

Reds Vernon had quite a successful amateur boxing career. He won national titles as a Golden Glover and AAU champion. During service in the Army Air Corps in World War II, he won the welterweight boxing championship for the South Pacific.

Upon his return from the service, Reds Vernon began to work with the Metropolitan Police Boy's Clubs in Washington, DC. In 1959 he became executive director of the Prince Georges Boy's Clubs. That group merged with the Maryland-National Capital Park and Planning Commission Sports Office in 1970 and Mr. Vernon became executive director, the job he retained until his retirement.

We all know the difference that participation in sports can make in young lives. Teamwork and training teach the qualities of discipline and self-confidence which are needed to succeed in many other endeavors. Thousands of Prince Georges County youth have benefited from the sports programs of the boy's clubs and the M-NCPPC. That they have done so is a tribute to Reds Vernon's lifetime of work. It is also a tribute to the contribution of Reds' wife, Dorothy, who was instrumental in opening the sports programs to girls as well. For their years of service, the citizens of Prince Georges County owe the Vernons a debt of gratitude.

Mr. Speaker, I hope the Members of the House will join me in wishing Reds Vernon well in retirement. I must note, however, that retirement will not sever his relationship with my county's youth sports programs. Reds Vernon has already said he intends to continue to be involved, as a volunteer.●

THE SMOKING, MEDICARE/MEDICAID, AND ALTERNATIVE REVENUE TAX ACT OF 1985 (SMART)

HON. EDWARD R. ROYBAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. ROYBAL. Mr. Speaker, I am introducing the Smoking, Medicare and Medicaid, and Alternative Revenue Tax Act of 1985 [SMART]. As all of us in the Congress recognize, this Nation has a great need to reduce the Federal deficit, to decrease cigarette smoking and its adverse health consequences, and to shore up the financially troubled Medicare and Medicaid Programs. This bill takes a critical step toward addressing these needs.

In this bill, I am proposing to increase the Federal cigarette excise tax to 32 cents per pack as of October 1, 1985. Under normal conditions, I would not support increasing a regressive tax such as this. However, these are difficult times requiring difficult decisions.

The increased revenues from these higher cigarette taxes are earmarked specifically for those Federal and State health programs—Medicare and Medicaid—serving the poor, the elder-

ly, and the disabled. Keeping in mind that these programs are currently part of the Federal budget, the added tax revenues will make a significant contribution toward reducing the Federal deficit as well.

We should also not lose sight of the importance of reducing cigarette smoking and the health problems it causes. These are health problems which most heavily strike our low- and middle-income citizens and greatly burden our already overburdened Medicare and Medicaid Programs.

This SMART bill raises the cigarette tax to 32 cents and indexes future increases to the Consumer Price Index. Over the next 5 years, this bill will provide additional revenues totaling over $25 billion. One-quarter of these added revenues are earmarked for Medicare part A and one-quarter for Medicare part B. As for Medicaid, one-quarter of the added revenues will go to the States to be used in their Medicaid programs. Similarly, one-quarter will go to the Federal portion of Medicaid.

Enactment of the SMART bill will obviate the need for the Congress to raise the costs to Medicare beneficiaries or to cutback on Medicaid benefits and eligibility. In the interest of improving the health of this Nation's citizens and reducing the Federal deficit problem, I ask my colleagues to support the Smoking, Medicare and Medicaid, and Alternative Revenue Tax Act of 1985.●

IN HONOR OF JIM VAN HORN

HON. ESTEBAN EDWARD TORRES

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. TORRES. Mr. Speaker, I wish to congratulate Mr. Jim Van Horn for his excellent service to the California Contract Cities Association. As the president of the association for the past year, Jim brought with him the creativity, persistence and patience that has always served him well as a public official.

I know Jim Van Horn best from his work as a mayor and councilman from the city of Artesia. He has helped make that small city a community with many excellent community services, streets, and businesses. He understands how a city works. He knows that an elected official must always listen and respond to the needs of constituents. And, Jim knows that a well-run city requires a unified city council and a competent city manager.

Jim brought his understanding of government to his position as president of the California Contract Cities Association. It was not an easy task. The association represents 58 California communities that contract for municipal services. These cities range in population from as small as 90 to as large as 92,000. Jim was able to unite the varied interests of these local governments. I can tell you as one Member of Congress that the views of the Association of California Contract Cities have been well represented in Washington.

While the association will be losing Jim as its president, I am pleased to know that he will continue serving as the mayor of Artesia. In a time when tough decisions must be made about public spending and taxing, I believe we are fortunate to have Jim Van Horn serving the people. I also know that the California Contract Cities Association will find few to match Jim's talent and commitment.●

CENTRAL CATHOLIC HIGH SCHOOL WINS BASKETBALL CHAMPIONSHIP

HON. GUS YATRON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. YATRON. Mr. Speaker, I rise today to pay special tribute to the Central Catholic High School Class A basketball team who won their first PIAA State championship on March 30 with a 55–47 overtime win against the Midland Leopards. I know that my colleagues will join me in congratulating Coach Reggie Weiss and the entire team on this outstanding achievement.

The Central Catholic Cardinals trailed six points with 1:12 left in regulation of the PIAA Class A championship game. The Cards scored the final six points of regulation and defeated Midland in overtime. This PIAA championship is the first for a Berks County Boys Basketball team since Mount Penn won the class A title in 1972. The Cards record for the year was 27–2.●

NARCOTICS IMPORTATION, MANUFACTURE AND CONTROL ACT

HON. DUNCAN HUNTER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. HUNTER. Mr. Speaker, last week I hosted a conference in my district to discuss, with my constituents and area law enforcement officials, steps that could be taken to increase our fight against drug traffickers. Many worthwhile suggestions were made by the participants and today I am introducing legislation to establish mandatory sentences for importation and manufacturing offenses.

In 1984, 10 tons of heroin, 85 tons of cocaine and about 15,000 tons of marijuana were smuggled into the United States. In addition, the domestic production of illicit drugs continues to rise. While there are many ongoing efforts to address these problems, I believe individuals continue to engage in these illegal practices because the criminal penalties do not provide a sufficient deterrent.

This legislation, the Narcotics Importation, Manufacture and Control Act, would establish a 20-year mandatory sentence for the importation of large quantities of an opiate, cocaine, PCP, or LSD; 15-year mandatory sentence for the importation of any amount of a controlled substance in schedule I and II; 5-year mandatory sentence for the importation of certain quantities of marijuana, hashish, and hashish oil; and mandatory sentences for the illegal manufacture of a controlled substance. In addition, individuals convicted of these offenses would not be eligible for parole or probation.

I firmly believe that the establishment of these mandatory sentences will send a clear signal to those in the illegal drug business that the United States will not tolerate drug smuggling across its borders or manufacturing of illegal drugs within its boundaries. I urge my colleagues to join me in sending this signal.●

SELECT COMMITTEE ON CHILDREN, YOUTH, AND FAMILIES

HON. BRUCE A. MORRISON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. MORRISON of Connecticut. Mr. Speaker, I am pleased to place into the RECORD the text of the 1985 Bodenheimer Lecture, delivered by the Honorable GEORGE MILLER, at the University of California, Davis, School of Law, on March 11, 1985. It is fitting that Congressman MILLER was chosen to deliver this lecture, for his leadership in Congress to strengthen family law has been exemplary.

I have had the privilege of serving on the Select Committee on Children, Youth, and Families, under Mr. MILLER's leadership, since I came to the House in 1983, and have worked closely with him on issues of mutual concern. The committee's work has had strong support in the Third District of Connecticut which I represent. I look forward to continuing to work with Mr. MILLER, who has now been duly recognized by his alma mater, as we search for solutions to the myriad of issues confronting families attempting to raise healthy children in our complex society.

The text of the lecture follows:

BODENHEIMER LECTURE

It is an honor to be here tonight as a graduate of Davis and to present the Bodenheimer Lecture this year.

This isn't just the first law school lecture I've ever given. There are a good number of people in the audience tonight who think this is possibly the first law school lecture I've ever attended from beginning to end.

While I was waiting for this speech to begin, I looked at the lectern and I felt a little like Hubert Humphrey when he became the first sitting Senator to address a joint session of the Congress. You know, Humphrey ran three times for the Presidency, but he never quite made it. So when he stood up at that podium in the House of Representatives, where the President stands when delivering the State of the Union Message, he said, "Boy, you don't know how long I've waited to get here!"

I didn't study with Professor Bodenheimer, but I remember clearly her giving us very practical advice. We married students used to have to explain to our spouses and kids that law school was very demanding, and that we had to stay late at school and study. Then we ended up spending a lot of time hanging around the lounge drinking coffee. Professor Bodenheimer knew all about this behavior, and she used to come by the lounge, during one of our serious "study" sessions, and suggest that we go on home and take care of the family. It was good advice.

Let me take you back, for a moment to the late 60's and early 70's, when I was a law student at Davis. I came from a family where "public service" and social justice were fundamental.

My father served for 23 years in the State legislature, and I worked there myself for George Moscone for 5 years.

I once even dropped out of law school to run for the State senate. But there was an overwhelming public mandate from the voters that I return to school and finish my law degree. So I did.

I was one of a generation summoned to public service by John F. Kennedy, whose vision released a spirit that ignited the hopes and dreams of millions of Americans, especially the young.

We were inspired by Martin Luther King, who forced us all to confront the troubled underside of America.

And we were inspired by Robert Kennedy, who asked us to dream how, through our own energies, the world could change.

The '60s was far more than a decade of dreams.

It was a decade of activism. Cities were on fire; years of social injustice were being challenged. And the economic disparities which had existed were no longer to be tolerated.

It was also a decade of disallusionment, beginning with the assassination in Dallas. Soon, the Vietnam war tore our country apart; Martin Luther King and Robert Kennedy were cut down in the prime of life.

In the early '70s, our faith in our institutions was itself shattered by those in the highest positions of public trust who cynically perverted the political process and provoked a constitutional crisis.

My class came to study law just as America was reeling. The American people were deeply divided. Many were distrustful of government; many doubted real change could come effectively through the political process or peacefully through the law. In fact, at one point after the Kent State Massacre, we even shut down King Hall.

So many of us were so excited to go forward to help the poor, to work in clinical programs, and to give up our classwork, that we had to be admonished by Dean Dan Dykstra that "The last thing the poor needed was a poor attorney."

That is why we invested so much of ourselves and our dreams in an optimistic notion: By training as problem-solvers for those trapped or ignored by the legal complexities of modern life, we prepared ourselves for a dynamic career, and for a chance to shape a changing and dynamic public agenda.

One of the delights of returning to Davis is to say "thank you" to those who helped me on the way. Another is to report on a legal career spent in the public sector—a career which has reinforced my commitment to assuring the rule of law for all our citizens—especially for families and children.

Politicians are again paying close attention to family issues. This concern by liberals and conservatives alike has been heard before. But it often doesn't result in very much, or even last very long.

This underlying ambivalence of policymakers over involvement in children and family policy has been a consistent part of our history.

It was written into the first charter of the Federal Children's Bureau in 1912. Government should gather information, according to the law, but never delegate anyone to enter the home of an individual family.

The Sheppard-Towner Act of 1921, one of the very first maternity and infancy grant programs failed as the political climate shifted.

In 1937 the Fair Labor Standards Act passed prohibiting child labor, but only after a constitutional amendment languished unratified.

Even the Social Security Act of 1935, the cornerstone of support for economically stricken children and families, contained only modest programs of assistance, like those for crippled children.

These efforts kept children and family issues alive in the minds of policymakers. But serious action to alleviate their crises virtually disappeared from political debate at the national level until the late 1960's and 1970's.

For many years, despite our rhetorical displays, the commitment of the Federal Government to children's policies has been minimal. For most of the post-war era, there was less discussion in Congress of incest, adolescent pregnancy, family violence and child abuse than in this year's T.V. guide.

That's the main reason that I wanted to create a Select Committee on Children, Youth and Families in the House of Representatives—a committee that would have no other responsibilities or agenda than children and families. I wanted a committee that would do what the Banking Committee does for bankers, or the Ways and Means Committee does for tax attorneys. But we would focus exclusively on kids.

The formation of our Select Committee on Children, Youth and Families in 1983 does not mean we have forever overcome the ambivalence and ignorance which have historically impeded the development of a comprehensive family and children's policy.

But the record which it has written clearlay demonstrates that we are now at a point where government's indifference is simply intolerable.

For once we have discovered that the remedy is available, that there are workable answers, then it is incumbent upon us to use the same energy that we expended during the '60s and '70s, in highlighting the problems, to now solving them.

The problems are common to every area of the country, and every community is struggling with ways to find solutions—whether in the inner city, the suburbs, or on the farm.

What we are finding is that children and families live today under circumstances profoundly different than those of past generations.

More than 50 percent of all children grow up in families where both parents, or the only resident parent, works. This year, 50 percent of women with infants under one will be in the workforce.

One out three white children, and three out of four black children, can expect to spend some of their childhood in a single parent household.

Finally, a substantial number of children spend at least a portion of their formative years in poverty. During the last recession alone, American families lost $319-billion in income, more than $3,800 per family. More than two million children fell into poverty, reversing twenty-five years of progress.

And the recovery has not yet reached millions of stricken households.

At the same time, programs that provide essential services to the poor, the sick, the elderly, the disabled and other high risk people have been reduced far more severely than any other part of the budget—a total of more than 60 billion dollars in cutbacks since 1981. And now, the administration proposes $65-billion in deeper cuts for human service programs.

As a member of the Budget Committee, I often ask: Why are we supposed to cut these programs for nutrition, for medical services, for early childhood education?

The proponents of the cuts do not argue, for example, that prenatal programs are unsuccessful. I have an annual debate with David Stockman on this issue, and frankly, I think I am winning. I think Dave ought to have gone to law school before he got into a debate with somebody trained at Davis.

Stockman doesn't argue there is waste, fraud and abuse. In fact, he admits the women, infants and children's program, for example, reduces low birthweight, the number one cause of infant mortality.

He knows that W.I.C. saves 3 dollars for every dollar it costs. And he knows that this wonderfully successful program serves just one-third of the eligible, high-risk population.

He and his colleagues in the Reagan administration dispute none of the facts. They just want to cut spending, no matter what the cost.

But their foolish pennypinching will cost the taxpayers billions in future expenses. Denying W.I.C. to a high-risk woman increases the risk of a low birthweight baby. And that baby has 40 times the chance of a normal infant of dying within the first month of life. The newborn's hospital bills could cost $1,000 a day for weeks of care. And these are the children we see over and over again—with physical disabilities, with learning disorders, and with costly medical complications that affect a child for life.

WIC is just one program. The same argument can be made for a score of highly successful, severely underfunded programs: Headstart; Preschool Education; Foster Care Services; and Education for the Handicapped. In each case, we have the evidence

that we can intervene early and save lives and money, too.

In each case, we are serving only a fraction of the needy population. And in each case, the administration orders us to cut back still further.

As attorneys, we cannot deny the facts that these programs work; but as policymakers, unfortunately, we choose to ignore them.

It can no longer be said that a decision by Government to withdraw these services is made without full knowledge of the adverse impact of that decision on many thousands of children each year.

But I probably sound more pessimistic than I am. In fact, efforts to cut children's programs have not been as drastic as the administration desired, thanks to a coalition of ideologically diverse Members of the Congress.

It was this same bipartisan coalition which was responsible for some of the landmark legislation of the 1970's that brought the power of government behind the effort to safeguard the rights of the disabled, the abused and the hungry.

In 1974, Congress passed the "Child Abuse Prevention and Treatment Act," to improve systems for reporting cases of child abuse. Up to that point, there was no way for anyone to know the extent of child abuse in the country.

In 1975, Congress passed "The Education For All Handicapped Children Act," giving parents of handicapped children the right to insist on an equal education for their child in the least restrictive educational environment possible, instead of being packed away in an institution or a cellar.

In 1980, Congress passed "The Child Welfare and Adoption Assistance Act." That law, which I wrote, promotes adopted of "hard-to-place" children and requires the review of foster care placements on a regular basis. As a result, studies show, fewer children now languish for months and years, and families are more frequently reunited.

Each of these measures did more than just throw money at social programs. Each expanded the rights of those whom our political and judicial system had either ignored or abused. In each case, the law was rewritten to recognize the rights of the poorest, the weakest, and the voiceless.

And we are a better society for those changes. These are some of the achievements I think of when I hear the rhetoric about the "failures" of social and political activists.

They prove we can have a cost-effective social conscience.

Sure, there are still problems, even in these very recent efforts. We still don't provide adequate services to victims of abuse. Handicapped children and their parents still confront obstinate bureaucracies which believe that a ramp constitutes "mainstream education."

But the lives of millions of vulnerable children and families have been enhanced beyond the capacity of most of us to appreciate fully. And regardless of our political ideology, we can all be proud of it.

It is my hope that my select committee can help to create the same record of accomplishment and progress in the 1980's. For despite all the cynicism about politicians, I generally have found that once the facts are established, the importance of ideologies diminishes.

The debate becomes not whether we do the job, but how to do it right. And if there is that common ground, much good can be accomplished.

Where will public concern take children and family policy in the 1980's? What issue will be to this decade what foster care, handicapped and child abuse issues were to the 1970's?

Concern with family violence and child abuse, teen pregnancy, substance abuse and suicide, in developmental and nutritional handicaps will continue in the forefront.

The debate will extend to new areas not generally thought of as "child and family" issues.

Tax law, job training programs, pension reform will be analyzed in light of the needs of dual working parents, single parents, and working mothers.

Child care, on which the select committee has been focusing, is no longer viewed as a pseudo-welfare program for relatively few low-income, single mothers. As I noted earlier, one-half of all American women with infants under one are now working, most out of economic necessity. The fastest growing sub-group of mothers entering the workforce are women from intact, two-couple middle-class families.

Up to now, our child care system has been a patchwork, with Government playing a minor role, and a diminishing one at that. Now, there are extraordinary pressures on Government at all levels to provide more child care slots, to license and safeguard programs against abuse, and to help to ensure a setting where quality care is possible.

Child care has rapidly become a national priority. During our examination in 1984, our committee traveled throughout the country, talking to parents, corporate leaders, children, and child development specialists to identify the barriers to improved care. By focusing on the real needs of families, instead of pointless ideological haggling about what families "should" look like, we have forged a consensus.

Our recommendations were endorsed by every member of the committee, Democratic and Republican.

Why? Because we were able to demonstrate that child care is a tool by which we can make social policy in many areas:

We can reduce incidence of child abuse through good child care programs.

We can help improve the futures of pregnant teenagers through education and job training if they have child care for their kids.

For parents of handicapped children, child care can provide respite.

For the welfare recipient, child care offers the opportunity of getting training and being taken off the A.F.D.C. rolls. We heard of a Massachusetts experiment, for example, where a combination of child care and medical services promoted massive interest in finding a job.

Our committee report, which we issued late last year, provides the basis for the serious national debate on child care which now must begin.

The question of that debate will not be, "do we need child care?", but "how can all levels of government, working together with the private sector, charities and religious organizations, and families themselves, provide the highest quality care?".

Some in the child advocacy field are discouraged by the many defeats that have been suffered, and by the rhetoric that disguises the indifference. But I am not discouraged. In fact, I am optimistic.

I believe we are at a moment of opportunity. Science, technology, medicine, nutrition—all have come together in the 1980's to provide us the capability to make good on our Fourth of July rhetoric about "caring for children".

We have the scientific data. We have the test results. We have the factual basis for proving to the Congress and to the Nation that these policies are effective.

And we have the opportunity to create laws that use that evidence to save children, to rehabilitate them, and help families in crisis.

And let me add that it isn't just the government that needs to be involved. At hearings throughout this country over the last two years, my select committee has heard from foundations, academics, and corporate leaders who are committed to private sector involvement in the designing and operation of child care programs, health screening and family services.

For attorneys, too, the distinction between public and private sector is not important if we are really committed to families and children. I count among my friends many attorneys who have prospered in the corporate world, but who have retained their commitment and their concern for improving the lives of children.

Time and again, these attorneys have taken up the fight for the child locked away in an institution, the disabled child denied a seat in the classroom, the victim of abuse and neglect. They share their talents in the creation of legal rights, and the defense of those rights.

So the decision to enter the private sector is no excuse for abandoning public concerns; our training, and the ethics of our profession, compel us to use our knowledge and commitment to justice regardless of where we practice the law.

For the most basic responsibility of our profession is the upholding of justice for all. No matter how flawed in practice the principle of fairness may become, it is a love of justice that is parhaps our most widely shared belief as Americans. Everyone wants for their family and their children only an equal chance to flourish.

That is what advocacy for children and families is all about: Using the talents and the training we have been given to create and preserve the legal and human rights of generations to come.

For this advocacy to succeed in the decades to come, those of us who make public policy must carry with us the understanding expressed in the writings of Brigette Bodenheimer:

Each family is unique in its personality and its environment, and must be treated as such.

If we understand this truth, we can develop policies based on the real needs of American families and our children.

Again, many thanks for honoring me with this invitation.●

CLIFFORD J. SCOTT HIGH SCHOOL MARCHING BAND TO PLAY FOR CHERRY BLOSSOM PARADE

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. RODINO. Mr. Speaker, Washington's cherry blossoms are in full

bloom, and we are approaching the annual National Cherry Blossom Festival, which will take place here on April 13. It is with great pride that I take this opportunity to recognize one of the 25 marching bands selected to participate in this prestigious parade—the Clifford J. Scott High School marching band from East Orange, NJ.

I am extremely proud of these young people and their teachers who have worked so hard to reach this goal. This is not the first time that the band has received significant attention—they have appeared at Walt Disney World in Orlando, FL, four times; at Hershey Park, PA, twice; in Williamsburg, VA; and in front of the U.S. Capitol, in addition to several appearances in the New York and New Jersey areas.

The band has won numerous awards, placing first among 29 bands at the Salute to Israel Day Parade last year and receiving the highest score in New Jersey at last year's Garden State Arts Festival.

Under the direction of Vincent Potuto and Assistant Director James Turkvan, along with the assistance of Principal Irene Nichols, the Clifford J. Scott High School Marching Band has brought you to thousands of listeners and provided a tremendous opportunity for the young people who participate in the band. I want to welcome them back to our Nation's Capital and thank them for helping to make Washington's Cherry Blossom Festival even more memorable.●

BORROWING TO SAVE: AN ABSURDITY IN THE I.R.A. PROGRAM

HON. FORTNEY H. (PETE) STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. STARK. Mr. Speaker, by providing enormous tax incentives, Congress established the Individual Retirement Account [IRA] Program to give people an extra way to save for their retirement and, indirectly, to increase the national savings rate so that there would be more money for investment and future growth.

IRA's are indeed popular and millions are using them to increase their retirement years' income. But the national savings rate has not changed noticeably since the program was started, and there is some evidence that IRA's merely shift savings from nontax favored accounts to tax-deductible IRA tax-free accumulation accounts.

Yesterday I got in the mail an advertisement from the Washington area First American Bank that points out the absurdity in the IRA Program when combined with the tax deductibility of interest provisions of the law. It was an ad encouraging people to borrow $2,000 to set up a $2,000 IRA account, and it pointed out how the tax laws made this a good deal—even though the bank would charge 15 to 18 percent on the loan and only give 11 percent on the IRA.

Borrow to save!

And the tax laws make this apparently nonsensical slogan sensible!

If we really want to encourage savings in this country, maybe we should get rid of the subsidy for borrowing.

If we really want to make sense of the economy, maybe we should adopt massive tax reform that eliminates all these special incentive programs and so lowers the tax rates that everyone can save without worring about the tax level.

This is just one example of the innumerable ways in which the tax code has provisions which work at cross purposes.

Following is some data quoted from the First American ad which points out why we should not count on IRA's to increase the national savings rate. It also reveals—if anyone needs more proof—how much better an IRA is for a richer, high tax-bracket person than for a lower bracket person. Why this is fair, I don't know.

BORROWING TO FUND YOUR IRA

Marginal tax bracket (percent):	Total IRA interest (A)	Net loan interest (B)	Net IRA interest (A–B)
25	$220	$133.14	$86.86
50	220	88.76	131.24

Assumptions: $2,000 is invested in IRA at beginning of year at 11 percent simple interest to yield $220 at end of year. $2,000 is borrowed for IRA deposit at beginning of year at 16 percent annual percentage rate and repaid in full at end of year for total of $177.52 in paid interest [i.e., it is paid off in monthly installments]. Taxpayer is eligible to itemize deductions.●

SINO-AMERICAN EARLY CHILDHOOD EDUCATIONAL EXCHANGE

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. MILLER of California. Mr. Speaker, between April 15 and May 10, a 14-person California Child Development Educators' Delegation will visit China to attend the second annual Sino-American Educational Exchange of Child Growth and Development. Under the leadership of Dr. Alexander Yeh, child development consultant to the California Department of Education, the California delegation will meet with representatives of the All China Women's Federation.

This exchange will provide an important opportunity for scholars from both nations to share ideas and knowledge about early childhood development. Over the past 2 years, the House Select Committee on Children, Youth, and Families, which I chair, has learned from some of this Nation's best scholars how critical the very early years of childhood are to later cognitive and emotional growth. The opportunity for dialog which this exchange occasions will undoubtedly enhance our understanding of this crucial period of child development.

Several individuals from my home district in California, including Ms. Bette Boatmun, Mr. Anthony Boatmun, Ms. Eddis Harrison, Ms. Mary Lou Helix, Ms. Mary Ann Sams, and Mr. Derek Thomas, will participate in this trip. I am certain this child development exchange will provide enrichment for educators from both nations.

Mr. Speaker, I urge my colleagues to join me in extending to both these educators from California and the All China Women's Federation our strong support for this very worthy effort.●

PERSONAL EXPLANATION

HON. DON BONKER

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. BONKER. Mr. Speaker, on Tuesday, April 2, 1985, I was necessarily absent from the House and missed several recorded votes. On that particular day I attended an Economic Summit in Olympia, WA. As chief sponsor of the summit, I felt obligated to be there for all the activities that day. The summit drew over 80 participants and 75 speakers and was a major success.

On the vote on House Resolution 21, I was paired with Representative CHENEY and would have voted "aye," in favor of referring the resolution to seat Mr. McIntyre to the House Administration Committee.

Additionally, I would have voted "aye" in favor of the following: H.R. 1239, providing emergency famine relief and recovery in Africa, H.R. 1373, designating the Phillip Burton Wilderness, H.R. 1869, repealing certain auto recordkeeping requirements, and House Concurrent Resolution 107, urging the President to take action against unfair Japanese trade practices.●

KENNETH J. DEEDY, EXEMPLARY LONG ISLANDER

HON. THOMAS J. DOWNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. DOWNEY of New York. Mr. Speaker, I rise on this day to pay tribute to an outstanding union leader, educator, and friend, Kenneth J. Deedy, on the occasion of his retirement as the first vice president of the New York State United Teachers.

Ken is being honored by his colleagues and friends in New York on April 18 at the Woodbury Country Club. It is a fitting tribute to a man who has devoted many years to advancing the goals of the the New York State United Teachers and creating a better climate for our public schools and the teaching profession.

Ken began his career as a science teacher in the Farmingdale public Schools in 1962 and rapidly established himself as an innovative force within the New York State school system. He served as the president of the Farmingdale Federation of Teachers for 13 years and in 1978 was elected to the position of first vice president of the 250,000 member New York State United Teachers. In addition, Ken has devoted 11 years as an elected vice president of the American Federation of Teachers, AFL-CIO.

In his responsibilities as a NYSUT vice president, Ken has instituted a statewide benefits trust in order to meet the needs of the teachers and other school employees of New York State. He has served on the Long Island Educational Conference Board and the Long Island Coalition for Public Education. He has also served as a liaison to the State parent teachers association. His concern for retired teachers prompted him to establish a special organizing committee for retirees to assist with protecting their rights and interests.

Throughout his career, Ken has demonstrated the vision and dedication of an outstanding leader and devoted educator. His leadership and influence in New York State has long been recognized. In 1981, Ken was listed by Newsday as one of Long Island's 50 most influential people.

Mr. Speaker, I am very pleased to have this opportunity to salute Kenneth J. Deedy for bringing great distinction to Long Island and for his untiring efforts on behalf of our public schools. I am also pleased to be able to extend my congratulations to him and to wish him well in his new postion with the City University of New York.●

TAX EXPERTS ENDORSE TAX SIMPLIFICATION PLAN

HON. JOHN J. LaFALCE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. LaFALCE. Mr. Speaker, in the past month, the Subcommittee on Economic Stabilization of the House Banking Committee, which I chair, held two hearings on the impact of the Treasury tax simplification plan on the U.S. economy as a whole, and on our manufacturing sector in particular. The findings of those hearings may be of interest to my colleagues.

Testifying at the hearings were some of our country's leading tax experts, including senior economists Roger Brinner and Nariman Behravesh from the economic consulting firms of Data Resources Inc. and Wharton Econometrics respectively, and academic economists Don Fullerton from the University of Virginia, Alan Auerbach from the University of Pennsylvania, Charles Hulten from the Urban Institute, and Jane Gravelle from the Congressional Research Service.

Each of these experts, without exception, endorsed the Treasury tax plan because it would create both a simpler, fairer Federal tax system and a more productive, internationally competitive U.S. economy.

Two of these endorsements came as a surprise. Data Resources Inc. and Wharton Econometrics had been perceived as critics of the tax simplification plans, and indeed studies by both firms had been prominently cited by opponents of the plans as evidence of the bad consequences they would have for the U.S. economy.

Yet in their testimony before the subcommittee, Roger Brinner, chief economist for Data Resources, and Nariman Behravesh, director of U.S. Services for Wharton, endorsed the Treasury plan. Both conceded that in the long run the Treasury plan would not retard overall U.S. economic growth, and might indeed increase growth. Nor did they foresee that the plan would have a particularly negative effect on manufacturing industries. They did express concern that the plan, by eliminating accelerated depreciation and the investment tax credit, would raise the cost of capital and slow investment and economic growth in the short run. But overall they felt the plan would be a plus for the U.S. economy.

In addition, another of the witnesses, Don Fullerton of the University of Virginia, shared with the subcommittee the findings of a study he has coauthorized for the American Enterprise Institute. That study measured the effective tax rates for 20 different sectors of our economy and calculated the net value of output under alternative tax programs.

The preliminary estimates of that study suggest that the Treasury plan would slightly reduce overall effective tax rates and help level the playing field for all investments. Further, under the Treasury plan the value of national output could be almost 1 percent higher, equivalent to a one-time wealth increase of over $400 billion. In other words, rather than retard economic growth, this AEI study found that the Treasury plan would increase growth by as much as 1 percent of GNP. The more neutral tax code that would be created by the Treasury plan would allow for a more efficient allocation of capital investment and a higher level of economic growth.

Further, Jane Gravelle of the Congressional Research Service shared with the subcommittee the findings of some original research she has done on the effect of the Treasury tax plan on particular sectors of the U.S. economy. Those findings are striking.

Gravelle found that under the Treasury tax plan, the effective tax rate on new investment by manufacturing industries would actually fall from 45 percent to 40 percent. For service industries, often touted as a big winner under the Treasury plan, the effective tax rate would actually rise from 36 percent to 39 percent. The larger losers under the Treasury plan, if they can be labeled as such, are the communications industry whose tax rate would rise from 23 percent to 39 percent and the transportation industry, whose tax rate would rise from 27 percent to 39 percent. The biggest winner would be trade industries, whose effective tax rate would fall from 50 percent to 40 percent. Overall, according to Gravelle's findings, the Treasury plan would equalize the effective tax rate on virtually all sectors of our economy at between 38 percent and 40 percent.

The bottom line to all this, Mr. Chairman, is that things are not always as they are portrayed. The fact is that the big econometric consulting firms, which were relied on by opponents of tax simplification for evidence of its negative economic consequences, have now endorsed the Treasury tax plan. For those opponents of tax simplification who argued that the Treasury tax plan would hurt economic growth, the conservative American Enterprise Institute has produced a study which indicates that the plan would actually boost growth by as much as $400 billion. And for those opponents of tax simplification who argued that the Treasury plan would devastate manufacturing industries, a respected tax expert with the Congressional Research Service has conducted research which shows that the Treasury plan would actually lower the ef-

fective tax rate on manufacturing industries.

Like many, I have serious concerns about several provisions of the Treasury plan. For example, I worry greatly about the consequences to my home State of New York and other States, if we eliminate the deduction for certain State and local government taxes currently provided in the Tax Code that would penalize States which have chosen to have higher levels of both taxation and services, and violate our most fundamental tenet of federalism, that is, that there should not be double taxation by the State and the Federal Government. Failure to correct this flaw in the Treasury proposal would, in my judgment, prove fatal.

In addition, if we move ahead with tax simplification, we should consider shifting some necessary Federal support for capital investment by industry from the Tax Code to the direct expenditure side of the budget where it could be made more accountable and conditional.

In the coming weeks, my Subcommittee on Economic Stabilization will hold additional hearings on the impact of tax simplification on various sectors of our economy, including real estate, services, and small business. In addition, we will hold a hearing comparing the corporate tax codes of our trading partners to out own as promoters of international economic competitiveness.

Thus far, the evidence seems to be building that a modified Treasury tax plan could create a simpler and fairer Federal tax system that could lead to a more productive and internationally competitive U.S. economy. This Congress and this President has the opportunity to make some fundamental and historic changes in the way our Government taxes its citizens. In my view, we should seize that opportunity.●

TRIBUTE TO ZEESHAN SIRAJ OF ELMHURST, NY

HON. GARY L. ACKERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. ACKERMAN. Mr. Speaker, I would like to bring to the attention of my colleagues in the U.S. House of Representatives the courageous and heroic actions of Zeeshan Siraj, an 8-year-old boy from my congressional district in Queens County, NY.

Zeeshan, a second-grader at Public School 89, agreed to undergo painful surgery to donate bone marrow to his younger brother, Kamran, who suffered from Severe Combined Immunodeficiency Disease. Kamran, who just celebrated his first birthday, could have been forced to live his life in a germ-free bubble if Zeeshan's donated bone marrow hadn't given his brother the ability to fight off the disease.

Mr. Speaker, Zeeshan did not allow that to happen. An 8-year-old boy decided that he would do everything in his power to make it possible for Kamran to live a happy, healthy life.

Zeeshan's operation involved more than 100 punctures in his pelvic bones. Surgery is a frightening prospect to any youngster, and this painful process could not have been easy for Zeeshan, his mother, Parveen, or his father, Din. But his brother's life was in danger, and Zeeshan's love for him made his choice clear.

Fortunately, this story has a happy ending. The transplant was a success. Kamran and Zeeshan are now home with their parents, a united family once more.

Mr. Speaker, the courageous actions of this boy are a poignant reminder to the Members of this body and the citizens of this Nation of what selflessness and love can achieve. Through Zeeshan's sacrifice, Kamran now has a future, and their parents have been spared endless pain and possible tragedy. I would like to ask all of my colleagues in the U.S. House of Representatives to take this moment to join with me now in paying tribute to a remarkable youngster, Zeeshan Siraj.●

KUDOS TO TIMBER POINT'S BITS AND PIECES

HON. THOMAS J. DOWNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. DOWNEY of New York. Mr. Speaker, I would like to recognize the outstanding achievement of one of the elementary schools in my congressional district, the Timber Point Elementary School in East Islip.

The Timber Point school newspaper, Bits and Pieces, was awarded a first-place rating by the Columbia University School Newspaper Contest. They received the highest rating possible among all elementary schools that competed, and will receive a gold embossed certificate for that achievement.

This achievement is indicative of the very special talents which the Timber Point Elementary School students and faculty have offered to the East Islip School District. Their hard work, energy, and competitiveness are a mark of true school spirit. I am very proud of them and wish to extend my sincere congratulations for their first-place ranking in a national competition.

The school principal, Vincent J. Sulpizio, deserves special recognition as a school administrator whose enthusiasm and devotion to his students and faculty is unmatched. Also, the past and present editors of Bits and Pieces deserve a special congratulations. They are: Elizabeth Powers, Kimberly Degen, Caitlin McCarthy, Michele Reilly, Jimmy Musa, Kristine McCarthy, Kristin Elorriaga, and Donna LaMay.

Mr. Speaker, I bring this achievement to your attention today to underscore the terrific talent and ability of the students of Timber Point Elementary School's Bits and Pieces.●

EAST BAY M.U.D. CONDEMNS APARTHEID

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. MILLER of California. Mr. Speaker, in recent months the intolerable inequities of South Africa's apartheid system of government have become increasingly well understood by this Congress and the American public. South Africa's white minority, which comprises 17.5 percent of the population, controls 70 percent of the nation's income and 87 percent of its land. The white minority controls the political process, making a mockery of the word "democracy" by denying black South Africans the right to freedom of speech and assembly, due process, fair trial, voting, travel, and land ownership.

Approximately 6,000 U.S. corporations do business in South Africa, accounting for a total financial involvement estimated at $14 billion. In fact, U.S. capital makes up 15 percent of all foreign investment in South Africa.

Many U.S. companies and interests have reassessed the moral implications of investments which support South Africa's apartheid system, directly or indirectly. I would like to call attention to a recent decision by the board of directors of the East Bay Municipal Utility District, which serves my district in California, to oppose apartheid by terminating all financial relationships with companies doing business with South Africa. Below is a copy of the board of directors resolution which describes the board's policy. I commend the East Bay Municipal Utility District for taking this bold step and urge my colleagues to examine this resolution.

RESOLUTION NO. 31,177—POLICY ON INVESTMENTS IN FIRMS DOING BUSINESS IN THE REPUBLIC OF SOUTH AFRICA

Introduced by Director Warren; Seconded by Director Simmons.

Whereas the government of South Africa pursues as national policy, political, social and economic discrimination towards its Black citizens, known as "apartheid"; and

Whereas the government of South Africa also suppresses its "colored" citizens in an only slightly less deplorable manner; and

Whereas Americans of every faith and color, humble and renowned, have struggled non-violently to preserve the right of Americans to be free of bigotry, to live in dignity and to have the opportunity to achieve political, social and economic justice without restraints imposed by their government; and

Whereas various corporations continue to do business with the government of South Africa and operate plants within South Africa thereby contributing to the economy of a government which continues to practice this unacceptable national policy known as "apartheid";

Now, Therefore, be it resolved by the Board of Directors of East Bay Municipal Utility District that it expresses publicly its unalterable opposition to the barbaric and inhumane policy of apartheid as practiced by the government of South Africa; and

Be it further resolved that the Board urges all parties who are responsible for the investment of public and private funds in private corporations which may be contributing to the policy of apartheid to use their proxy authority to protest the policy of apartheid; to express directly to such corporations their desire that the corporation withdraw from corporate activity within South Africa as rapidly as possible and, if necessary, appropriate, and consistent with their fiduciary duties, to terminate all financial relationships with such corporations in order to express their insistence that pressure be brought to bear on the government of South Africa to abandon the policy of apartheid; and

Be it further resolved that the General Manager or his designee is hereby directed to investigate and report to the Board with regard to alternative programs and policies regarding investments in South Africa; and

Be it further resolved that copies of this Resolution be forwarded to the President of the United States and State and National Legislative Representatives representing constituents residing within EBMUD's service area.

ADOPTED this 26th day of February, 1985 by the following vote:

AYES: Directors Burke, Hill, Kofman, McLean, Simmons, Warren and President Skaggs.

NOES: None.

ABSENT: None.

ABSTAIN: None.

Sanford M. Skaggs, President.

ATTEST: Paula E. Malcom, Secretary.●

A TRIBUTE TO INDEPENDENT RETAIL GROCERS

HON. BARBARA A. MIKULSKI

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Ms. MIKULSKI. Mr. Speaker, last week the House passed House Joint Resolution 74 which designates the week of September 8 through the 14 as "National Independent Retail Grocers Week." I am very pleased that the House has seen fit to honor the contributions of these fine people.

My own father was a grocer in southeast Baltimore. So I know from first hand experience how important grocers are to their communities. Carrying on this tradition in Baltimore today are Paul and Bob Santoni. The Santonis have shown time and time again their commitment to the community. For example, in a community with a growing Hispanic population, the Santonis have made every effort to accommodate Spanish-speaking customers. They are involved with Maryland food bank. And they always make an effort to provide the highest quality products for the least expense. Not only are Paul and Bob active as grocers but they are also involved in many other aspects of their local community as well.

Grocers like the Santonis are making contributions to communities throughout our country. I urge my colleagues to recognize these contributions during National Independent Retail Grocers Week in September.●

STUDENT CAMPAIGN FOR SOVIET JEWS

HON. NORMAN F. LENT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. LENT. Mr. Speaker, I'd like to take this opportunity to commend the newly established Queens College Student Struggle for Soviet Jewry, in Oceanside, NY, for its outstanding efforts on behalf of Soviet Jews. This organization was instituted by two outstanding Queen College students, Mark Himelfarb and Elynn Birnbaum. Their goal is to increase the awareness of fellow students and the community to the tragic plight of Soviet Jews.

Soviet Jews suffer persecution and oppression of the cruelest sort under the Soviet Government. They are denied basic human rights and freedoms, such as the right to emigrate and practice their religion freely. They are forbidden by law from teaching the Hebrew language and observing religious holidays.

The Queens College Student Struggle for Soviet Jewry has established an ambitious program, including the Refusenik of the Month Campaign. In April, the group will focus on Yosef Begun, a leading unofficial Jewish educator and refusenik. Begun was sentenced in 1983 to 12 years in prison for "anti-Soviet agitation and propaganda." This is his third sentence; twice before he was sent into Siberian exile. Begun's health is in serious condition due to the harsh prison conditions. The students are encouraging supporters to send letters to Begun and to the Soviet authorities requesting permission for Begun to emigrate.

Refuseniks, like Yosef Begun and so many others, are entering a dark and threatening time. The Kremlin has intensified its campaign to harass and intimidate Soviet Jews. Indifference on our part condemns these brave men and women to solitude and despair. They are counting on our human solidarity. By joining efforts together, we can bring renewed hope to Soviet Jews who persevere against hatred and persecution to keep their Jewish religion and culture alive. We do so knowing we give strength to their valiant fight.

I commend these young people for their commitment and dedication to the cause of Soviet Jews, and I extend my congratulations and best wishes for the continued success of their organization.●

TRIBUTE TO GORDON C. ANDERSON

HON. JOHN EDWARD PORTER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. PORTER. Mr. Speaker, I would like to pay deserving tribute to Gordon C. Anderson, chairman of the board of Fullerton Metals, Co., of Northbrook, IL, who retired April 1, 1985. Mr. Anderson has been a business leader and distinguished member of his community since he graduated from Northwestern University in 1942.

Born in Sherbrook, PQ, Canada, on August 22, 1920, Gordon Anderson moved to Chicago with his family in 1925. After attending Northwestern University, he studied at the University of Iowa where he concentrated on advanced chemical engineering. He then served 4 years in the U.S. Army as a 1st lieutenant.

In 1946, he joined Kaiser Aluminum and advanced to regional manager in a short 5 years. In 1952, he joined Fullerton Metals and his 33-year tenure with the company has been an outstanding success story. He was hired as vice-president of sales, and was elected to the board of directors in 1960. On December 16, 1969, he was elected to be president of the firm. He served in that capacity for 10 years when he was chosen to be the chairman of the board on October 9, 1979, and he still holds that position to this day.

Gordon Anderson has demonstrated his commitment to business growth and community services as a member of the board of directors of Roper Co., the Employers Association of Greater Chicago; and Western Gulf Association. He also served as a member of the executive council of Speel Service Center Institute and as president and board member of the Copper and Brass Servicenter Association. Gordon Anderson also served as president and member of the board of directors of the National Association of Aluminum Distributors.

Married to Marjorie (Kelty) Anderson in 1944, he has 6 children and 11 grandchildren.

Under his leadership, Fullerton Metals has thrived, now employing 300 people in Minneapolis, Chicago, St. Louis, and Miami. The firm has sales of $140 million.

I commend Gordon Anderson for his truly remarkable career with Fullerton Metals. His dedication to his family and society provide an excellent example for ourselves and future generations. We, as a nation, are indebted to men of such character and integrity.●

STRATFORD ACADEMY OBSERVES 25TH YEAR

HON. J. ROY ROWLAND

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. ROWLAND of Georgia. Mr. Speaker, Stratford Academy, a private, nonprofit, nonsectarian school located in Macon, GA, is celebrating its 25th anniversary this month.

During the past two and a half decades, Stratford Academy's enrollment has grown from 117 students to nearly 850, its curriculum has been expanded and advanced placement courses are offered in a wide range of subjects, and the school's outstanding facilities have steadily been improved upon.

But more important than the growth and size of the school, Mr. Speaker, is the commitment to educational excellence that Stratford has always given to its students.

Every school, public and private, that does its best to provide a good educational and social environment for our young people deserves our thanks and our support. Stratford Academy has a long record of dedicated service, and everyone associated with this fine school deserves our congratulations and best wishes for the future.●

FAIR'S FAIR

HON. WILLIS D. GRADISON, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. GRADISON. Mr. Speaker, along with 57 of our colleagues, I am a sponsor of H.R. 691, the Congressional and Judicial Equal Employment Opportunity Act, introduced by our colleague from Illinois, LYNN MARTIN. This legislation would fill an important gap in our antidiscrimination laws.

Why is it that employees of OMB are protected against employment discrimination but employees of CBO are not? Why do the 1,600 employees of the Executive Office of the President have protection, while the 2,200 committee staff of the House of Representatives have none? The answer is that the laws banning employment discrimination cover the executive branch, but they don't cover the legislative and judicial branches.

One can try to explain this discrepancy by arguing that congressional employees hold unique and highly sensitive jobs, that Members need total fidelity from their employees, and that nondiscrimination laws would interfere with Members' proper performance of their jobs.

But Mr. Speaker, what employers would not make these claims, or similar claims? Surely the same claims could be made for many jobs in the executive branch. And while Members of Congress are uniquely protected by the constitutional Speech or Debate clause, this protection was never intended to be a cloak for discrimination. As Chief Justice Burger stated in United States versus Brewster: "The immunities of the Speech or Debate Clause were not written into the Constitution simply for the personal or private benefit of Members of Congress, but to protect the integrity of the legislative process."

I believe that this legislation protects the integrity of the legislative process. It will ensure that the Congress has standards for its own performance as high as it sets for the rest of American employers. I urge my colleagues to give this bill their support.●

NEWSWEEK IMPORTANT FEATURE ON LIVING WITH CANCER

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. BIAGGI. Mr. Speaker, I wish to call to the attention of my colleagues an important feature story in this week's edition of Newsweek entitled "Living With Cancer."—One of the key segments of the feature article deals with life for victims of cancer including those fortunate ones who are able to conquer cancer.

I wish to quote from the Newsweek article:

Once diagnosed, cancer is forever in the lives of the victims. The disease alters family relationships, puts friendships on trial and can cost a patient his job. The cancer survivor quickly finds that society at large may have more trouble coping with the disease than he does. "Its like TB used to be or leprosy used to be, where you were stigmatized," says Dr. Jimmie Holland, chief of psychiatry at Memorial Sloan-Kettering a place cab drivers are sometimes asked to avoid driving by because of its association with cancer. "Its simply that cancer has a long history of being associated with death.

Although cancer specialists advise their patients to get back to work and on with their lives, it isn't always easy. Many face job discrimination. A survey conducted in the late 1970's and early 1980's by Francis Feldman, a professor of social work at the University of Southern California disclosed that more than half of cancer patients in white collar jobs and 84 percent of those in blue collar occupations suffered some kind of discrimination or unpleasantness when they returned to work. They failed to win promotions, were dropped from health insurance coverage or were simply shunned by co-workers.

Earlier this year I introduced legislation H.R. 1294 a bill to amend title VII of the Civil Rights Act to outlaw employment discrimination against an individual on the basis of a cancer history. There are estimates that as many as 5 million Americans have a cancer history. Of these as many as 1 million may have already fallen victim to some form of employment based discrimination. It is a real and present problem which my bill seeks to remedy. I urge my colleagues to read this article carefully and join me as a cosponsor of the Cancer Victims Employment Rights Act of 1985.

The Newsweek article follows directly:

LEARNING TO SURVIVE

ADVANCES IN TREATMENT AND CHANGES IN ATTITUDES MEAN A BETTER LIFE FOR CANCER VICTIMS

Heart attacks kill many more people. Arthritis can inflict as much pain and deformity. And there are other chronic diseases that cause great suffering and often end in death. But there is no other disease like cancer; it has a mystique all its own. The ancient Greeks gave it its name—"the crab"—and, with it, the terrifying image of something creeping and growing insidiously from within, ultimately choking and sucking the life out of the body. For centuries, a diagnosis of cancer was virtually a death sentence.

Within just a few decades, however, this dire outlook has changed dramatically. Thanks to diagnostic innovations—like mammography to detect breast cancer—and better public awareness of the danger signs, many cancers are being detected at an early, more treatable stage. At the same time, medicine has acquired more sophisticated techniques to deal with the disease. They range from highly precise surgical procedures for extracting malignant tissue to powerful radiotherapy devices, like the linear accelerator, for burning it away and, finally, potent drugs to wipe out the last vestiges of cancer cells from the body. True, cancer eventually strikes one out of every three Americans and kills almost 450,000 of them annually. But the gratifying fact remains that almost half of the nearly 1 million people in the United States diagnosed as having cancer this year will survive. Of the 5 million Americans alive today who have already been treated for cancer, 3 million have lived for at least five years without any recurrence of the disease and, therefore, are considered cured. "They have the same life expectancy as people [of the same age] who never had cancer," says Lawrence Garfinkel, the American Cancer Society's chief epidemiologist. Cancer, in fact, seems to be the first and only "chronic" disease that *is* curable. "Did you ever hear of anybody being cured of cardiovascular dis-

ease?" asks Dr. Samuel Hellman, physician-in-chief of New York's Memorial Sloan-Kettering Cancer Center.

But the chances for survival vary widely among the various types of cancer. More than 90 percent of patients with thyroid cancer are cured, but only 2 percent of those with the fortunately rare cancer of the pancreas survive five years. Lung cancer is the leading killer among men and has nearly caught up with breast cancer as a prime cause of cancer death among women. Still, the chances of recovering have improved significantly in recent years for cancer of the prostate, testis, uterus, melanoma (a form of skin cancer) and Hodgkin's disease, a cancer of the lymph system. The brightest spot of all has been the dramatic improvement in the survival of children with lymphocytic leukemia. Prior to the advent of chemotherapy, it was nearly always fatal. Today, 65 percent of its victims grow up to lead healthy lives.

All of this means that there is a growing population of men and women throughout the country who are living with cancer. And because of cancer's special mystique, they are not like those who have suffered from any other disease. They resemble more closely the survivors of some dreadful military campaign. Like the B-17 crewmen who came back from the flak-pitted skies over Germany or the grunts who made it out of the booby-trapped saw grass of Vietnam, they have stared death in the eye and escaped with their lives. None is ever quite the same again. Each carries away a special lesson from the experience. And all of these survivors are different, in various ways, in the eyes of family, friends and the rest of the world who have not yet known, in the vernacular of many a war drama, "what it was like." Michelle McKay of Larkspur, Calif., has had 23 operations, including a hysterectomy, since she was found to have cancer at the age of four. She was once given only three weeks to live but seems to be doing fine now. "It's not worth worrying about," the 16-year-old says of the possibility that her cancer will recur. "I could get hit by a truck tomorrow." It's a remark that would seem more appropriate coming from a hard-bitten veteran of Khe Sanh than an attractive teen-ager.

Stigmatized: And the hardship isn't over just because the treatment seems to work. Once diagnosed, cancer is forever in the lives of its victims. The disease alters family relationships, puts friendships on trial and can cost a patient his job. The cancer survivor quickly finds that society at large may have more trouble coping with the disease than he does. "It's like TB used to be or leprosy used to be, where you were stigmatized," says Dr. Jimmie Holland, chief of psychiatry at Memorial Sloan-Kettering, a place cab drivers are sometimes asked to avoid driving by because of its association with cancer. "It's simply that cancer has a long history of being associated with death."

Although cancer specialists advise their patients to get back to work and on with their lives, it isn't always easy. Many face job discrimination. A survey conducted in the late 1970s and early 1980s by Frances Feldman, a professor of social work at the University of Southern California, disclosed that more than half of cancer patients in white-collar jobs and 84 percent of those in blue-collar occupations suffered some kind of discrimination or unpleasantness when they returned to work. They failed to win promotions, were dropped from health-insurance coverage, or were simply shunned by co-workers. "the less education the greater the hostility," Feldman observes, which explains the higher incidence of discrimination among the blue-collar workers. Victims of childhood cancer also have problems with their careers. Some professional schools—including medical schools—won't accept anyone with a cancer history, and many young men are rejected by the military even though they have been perfectly healthy for years.

To make matters worse, cancer survivors often can't obtain private health insurance. If a patient tells the truth about his history on his insurance application, the company may specifically exclude coverage of a recurrence or treatment-related illness. Lisa Endig, a 32-year-old Los Angeles television producer, who would like a divorce, has not gone through with it because she needs her husband's insurance coverage. "Insurance companies are acting on archaic principles about cancer," says American Cancer Society president Dr. Robert McKenna of Los Angeles. "People survive and work. They need health insurance."

Cure: Survival rates are now so high that researchers have been able to investigate and measure how well victims cope with the disease and appraise the problems they might encounter after a cure. Doctors who treat cancer—members of a growing specialty called "oncology"—now understand that their job doesn't end with removal of a tumor. That, indeed, may only be the beginning. In some ways, "the physical cure is not as important as the psychosocial cure," says Dr. Jan van Eys, chairman of pediatrics at the University of Texas M. D. Anderson Hospital and Tumor Institute in Houston.

On learning that they have cancer, experts find, many people go through somewhat the same stages psychiatrist Elisabeth Kübler-Ross described among patients who are dying: denial, anger, questioning ("why me"), rearranging life priorities and, finally, getting on with living on whatever terms are left. Denial can be unhealthy and is one reason why many cancer victims delay treatment. "If somebody's going to get cancer it'll be somebody else," is what Dennis Edgeworth, a 36-year-old Birmingham, Ala., salesman said when first told he had leukemia. However, he accepted the diagnosis and went on to receive treatment. Kathy Dixon, an 18-year-old San Mateo, Calif., girl with Hodgkin's expresses the anger and anxiety typical of a cancer patient. 'I don't always see the world as rosy and happy anymore," she says. "Lots of little things get me down—the burden of coming [to the hospital] every day, the smell of the place. I'm down on myself for not feeling confident that I'll be able to handle this."

But there is a kind of denial that counsellors now recognize as a highly favorable trait in a cancer survivor. Patients who constantly worry that their cancer is going to recur don't fare as well as those who decide not to dwell on the possibility, which is a positive kind of denial. Explains Harvard Medical School psychologist Gerald P. Koocher: "The patients who use this 'adaptive denial' turn out to be the best copers."

Pity: Bernice Shultz, 74, of Carlyle, Ill., is a case in point. She spent what she calls "five wonderful years" after undergoing a radical mastectomy in 1967. Then the cancer recurred, and she had to undergo radiation therapy. Later, she had to have the other breast removed and receive hormone therapy. Two years ago, doctors discovered not only that her breast cancer had spread to her liver, but that she had developed cancer of the colon as well. Still, she stoically refuses to give in. She and her husband now live in a trailer park in Houston while she undergoes further treatment at M. D. Anderson. "People ask if I feel angry that I was chosen, and I say no," she says. "You don't need pity. You feel glad to be alive."

Children with cancer often show the same kind of courage. Stacey Cumella, 12, of Oakdale, La., is being treated for an ominous relapse of leukemia at St. Jude Children's Research Hospital in Memphis, and the long-range outlook isn't good. But when she met a fellow patient recently who had survived for more than a decade, she told her mother, "I hope that I'm as lucky." And later, when her mother asked her if she was afraid to die, the pretty, brown-haired child replied: "I don't want to die, but I'm not afraid to die."

With children, the younger the patient, the better the adaptation, Koocher and a colleague, Dr. John E. O'Malley, found in a study of victims of childhood cancer. Adolescents have a rougher time. "These kids care about missing school, having people do things to their bodies, losing their privacy," says the Harvard psychologist. Hair loss, an almost invariable side effect of chemotherapy, is one of the hardest blows for a teenage patient to handle. John Roberts, 26, of Memphis, had to have a leg amputated for bone cancer 13 years ago. "But the worst part was losing all of my hair, eyebrows and eyelashes," he recalls. "At that age I had a lot of pride, and I went through a period when I didn't want to see anybody." In their study of 120 people who had cancer as kids, Koocher and O'Malley found that the degree of physical handicap they suffered had little or no bearing on how well they fared mentally. Only 5 to 10 percent developed really serious, long-term psychological problems, while nearly half the group showed no signs of neurotic impairment. "We were thrilled that so many survivors ended up coping so well," says Koocher.

Experts emphasize that children must lead as close to normal lives as possible during therapy, especially where school is concerned. "Children with leukemia are treated for years," notes M.D. Anderson's van Eys. "If a child waits until age nine to start kindergarten, he'll probably never become a functional adult."

Needs: Some youngsters, especially those who have received cranial radiation for leukemia, may develop learning disabilities. Others may show signs of hyperactivity due to the drug prednisone, often an element in chemotherapy. John J. Spinnetta and his wife, Patricia Deasy-Spinetta, both San Diego State University psychologists, stress the need for teachers to be informed of a child's special needs in such cases.

To make their plight all the more difficult, cancer patients of any age may still run afoul of insensitive doctors. Steve Davis, now a Birmingham gynecologist, recalls the abrupt way the urologist told him he had testicular cancer just before the Easter weekend five years ago. "He came in dressed to go to the lake and said, 'Steve, you've got cancer. I'll bring you some stuff to read on Monday.' I got so mad I checked myself into another hospital." But thanks in part to the patient-education movement, most oncologists treat their patients with more consideration and respect.

Patients are also assuming more of a say in the way they are treated. When 48-year-old Mary Jean Pascual of LaGrange Park,

Ill., was told she would have to go to a hospital periodically for drug treatment of a rare and deadly cancer called leiomyosarcoma, she put her foot down. Her doctor relented, and now she wears an "auto-syringe" for continuous administration of one drug she needs and lies on the living-room couch each day while a nurse administers the other. "Cancer patients are becoming well-educated consumers," notes Katherine Billingham, director of psychological services at Chicago's Rush-Presbyterian-St Luke's Cancer Center. Joan Karafotas, a 41-year-old suburban Chicago mother of three who has lymphoma, is just such a consumer. "I've learned to assert myself," she says. "It's your body and you have to live or die with the consequences."

For their part, oncologists agree that patients should be told the truth about the diagnosis and treatment plan. "A patient who is even partially informed is better off than one who is totally ignorant," says Dr. Gary Ratkin of Barnes Hospital, St. Louis. And the new generation of oncologists is learning to regain the bedside manner. "It's important that the patient realize that you know what he's going through," says Dr. Albert F. LoBuglio, director of the University of Alabama at Birmingham Comprehensive Cancer Center. He tells his students, "don't deliver speeches from the foot of the bed, put your hand on the patient's arm" when they talk about the diagnosis. At Alabama, M.D. Anderson, Sloan-Kettering and most other major cancer centers, physicians and nurses are joined by social workers, chaplains and others to help patients manage their problem. "We try to help the family focus" not on death, but on "chronic illness," says Jeanne Dycus, director of social work at St. Jude's. The families who do well are the families who can quickly work through the negative and establish hope for themselves.

Some medical centers also sponsor self-help groups that augment a family's ability to cope. The Children's Cancer Research Institute at San Francisco's Pacific Presbyterian Medical Center, for example, provides both an in- and out-patient program specifically centered around the family. Many less formal groups outside institutions are formed to help patients with specific problems arising from cancer, such as colostomies or laryngectomies. The groups "break down the isolation all cancer patients feel," says Dr. Stephen Hersh, a Washington-area psychiatrist. "Nobody quite understands they're not the only one." But some patients have no need—or don't care—to share their experiences with others. Dan Gifford, a 38-year-old Houston television reporter who had Hodgkin's disease, tried going to group sessions but found them unrewarding. "I never identified with those people," he says. "Those people felt sorry for themselves and I wasn't going to."

Self-Help: Many patients learn their own special ways to help themselves feel better. Some, for example, try relaxation techniques and "visualization," in which they close their eyes and imagine their immune systems churning out torrents of white blood cells to attack and destroy their tumors. Karafotas takes huge doses of vitamins in addition to her regular therapy, although her doctors don't share her faith in them. Leonard Borman, 57, who founded an Evanston, Ill., based network of self-help groups, follows Norman Cousins's advice and laughs at Don Rickles and Shelley Berman tapes while getting chemotherapy for leukemia. And some patients decide to go their own way, turning down conventional therapy with its attendant side effects. Katie Murphy, a 31-year-old breast-cancer victim now living in Evanston, Ill., does yoga, rides a bicycle, practices relaxation and visualization. But she does take anti-hormone drugs recommended by an oncologist. "It's my decision," she says, "and I have to live or die with the decision." In their desperation, some patients turn totally to quack nos -ums like laetrile and "metabolic" therapy that includes coffee enemas.

It's true that the existence of cancer in a family can pose enough of a burden and cause sufficient tension to destroy a marriage. Children have particular trouble adjusting to the news that a parent has the disease. Pat McJunkin, a 41-year-old Los Altos, Calif., mother who developed lymphoma three years ago, remembers with some pain that the week her little girl was told the news, "she said 'I hate you, Mommy,' more than I'd ever heard." But more often then not, cancer seems to draw a family closer together. "It made it real obvious that spending lots of time working [at his job] to the exclusion of your family is crazy," says Dr. Ralph Lassa, 40, a Santa Rosa, Calif., plastic surgeon who developed an inoperable brain tumor three years ago. "The family is really where it's at."

And incredible as it may seem, given the painful and harrowing nature of their travail, many of those whose fate it is to come face to face with cancer find a kind of happiness and inner peace that they never knew before. Those who live with cancer are like the GI's of World War II who found that there are no atheists in foxholes."I'm a better person because of this," says Dennis Edgeworth. "I'm at peace with myself and at peace with the Lord."●

H.R. 1869, REPEAL OF CONTEMPORANEOUS RECORDKEEPING PROVISION

HON. G.V. (SONNY) MONTGOMERY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. MONTGOMERY. Mr. Speaker, I am proud of the 412 to 1 vote in the House on Tuesday to repeal the Internal Revenue Service provision on contemporaneous recordkeeping for vehicles used in business. I want to commend the Ways and Means Committee for bringing the measure quickly to the floor.

I was a cosponsor of this repeal legislation and I think its passage only makes common sense. It will bring back a more reasonable procedure for business recordkeeping and relieve the American people from the impossible paperwork burden imposed by the new guidelines.

The House repeal action Tuesday is a direct result of the many calls and letters from the people back home. They tried to obey these strict, more detailed requirements but found them to be unworkable. The unnecessary paperwork hampered the efficient operation of American business. We heard that complaint from thousands of men and women, from all across the country and in all segments of the economy.

The requirement should never have been implemented and I am proud to have played a part in the effort to repeal it.

Mr. Speaker, the passage of H.R. 1869 proves to me that the system works. The people do have a voice in this Government and their elected Representatives do respond. Passage of H.R. 1869 was the right move and I am glad action was taken on it so quickly in the 99th Congress.●

FAIR HOUSING MONTH

HON. ROBERT GARCIA

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1985

● Mr. GARCIA. Mr. Speaker, late last night the Congress passed and sent to the President, Senate Joint Resolution 79 designating April 1985 as "Fair Housing Month." To me, the passage of Senate Joint Resolution 79 signifies that this Congress is concerned about the housing discrimination still evident in our cities. I would hope that it is also evident of a new seriousness on the part of the Congress to strengthen our Nation's fair housing law.

When the President signs this resolution, I trust that we will have his pledge to support the efforts of our colleagues from both sides of the aisle and from both sides of the Capitol to undertake a new and tough rewrite of fair housing law.

Title VIII was a good first step. But it is too obvious that more needs to be done to protect families with children from housing discrimination as well as the poor and members of the minority community who still confront barriers when they seek the home of their choice.

We need to recognize that HUD and the Justice Department also need more enforcement powers and that some sort of administrative judicial system may be needed to help those who must confront the time consuming and expensive court system.

Mr. Speaker, we should not let fair housing become the forgotten American dream. I commend our colleague, Mr. FISH for his efforts on behalf of this resolution and hope that the next time we discuss fair housing it will be in celebration of a new and tougher law.●

PERSONAL EXPLANATION

HON. BRUCE A. MORRISON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. MORRISON of Connecticut. Mr. Speaker, because of longstanding commitments in my congressional district, I was unable to cast three rollcall votes on April 2, 1985. I would like to list those rollcall votes by number and state how I would have voted had I been present.

Rollcall No. 43, "yea."
Rollcall No. 44, "yea."
Rollcall No. 45, "yea."●

NEEDS-BASED APPROVAL OF GRANTS FOR STATES VETERANS' HOMES

HON. BUTLER DERRICK

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. DERRICK. Mr. Speaker, I am introducing legislation today to provide that Veterans' Administration grants to States for construction of State veterans' homes be made on the basis of need rather than by the order of application to the Veterans' Administration. Currently, the Veterans' Administration must approve such applications on a first-come, first-served basis. My legislation would allow the Veterans' Administration to approve applications for grant moneys on the basis of where it is needed most.

The State veterans' homes are facilities established by a State for providing medical or residential care mainly to veterans and are supported by either a per diem from the VA or a grant program. Under the grant program, the VA pays up to 65 percent of the costs to States for construction of new domiciliary and nursing home facilities. Grants are made also to expand and remodel existing facilities provided at least 75 percent of the beds are used for veterans. State veterans' homes have long been regarded as a cost-effective way of providing care for the Federal Government because States share in the cost.

Our Nation's veteran population is rapidly aging. We have approximately 28 million living veterans. At present 4 million veterans—14 percent—are age 65 or older. By the year 2000, this number is expected to grow to about 9 million. These men and women are the potential users of VA hospital and nursing home care. The Congressional Budget Office report entitled "Veterans Administration Health Care: Planning for Future Years," concluded that while we can anticipate a stabilization in the demand for VA hospital care, a dramatic increase in nursing home care can be expected by the year 2000. Overall, there will be a great deal of pressure placed on the health care system run by the Veterans' Administration within the next 15 years.

Studies have been made on the demographics of veterans and this data has been used to determine the location of health care facilities as well as the kinds of services available to them. Over the coming years, changes in the elderly veterans population will be large and will vary for each region, State, and local community. While every State will be affected, those States with the larger veteran populations will certainly feel the strain of caring for the aged veteran. These States should not be discouraged from seeking VA assistance for State veterans' homes by the present policy. This legislation I am introducing today would allow each State and community to present the merits of their own case to the Veterans' Administration as they make applications for VA grant funds.

Mr. Speaker, for these reasons, I believe that all our Nation's veterans could be better served if we placed a greater emphasis on those States that need the VA construction project grants the most. In light of limited construction grants funds, this legislation would offer a fair and equitable solution as we address the issue of health care for our Nation's veterans. I urge my colleagues to join me in this effort.

H.R. —

A bill to amend title 38, United States Code, to provide that Veterans' Administration grants to States for construction of State veterans' homes be made on the basis of need rather than by the order of application to the Veterans' Administration

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. APPROVAL OF GRANTS FOR STATE VETERANS' HOMES.

(a) IN GENERAL.—(1) Subsection (b) of section 5035 of title 38, United States Code, is amended—

(A) by striking out paragraph (1);

(B) by redesignating paragraph (2) as paragraph (1) and by striking out "such grant" in such paragraph and inserting in lieu thereof "the amount of the grant requested"; and

(C) by redesignating paragraphs (3) and (4) as paragraphs (2) and (3), respectively.

(2) Subsection (d)(1) of such section is amended by striking out "an application" in the first sentence and inserting in lieu thereof "the payment of a grant".

(3) Such section is further amended by adding at the end the following new subsection:

"(f) In determining which applicants whose applications have been approved will be awarded grants under this section, the Administrator—

"(1) shall consider the relative need for the projects for which applications have been approved; and

"(2) shall make awards of grants (within the amount of funds available for that purpose) based upon—

"(A) the principle of making grants first for those projects for which the need is determined to be greatest; and

"(B) such other factors as the Administrator considers appropriate to best carry out the purposes of this subchapter within the amounts of funds available for that purpose.".

(b) EFFECTIVE DATE.—The amendments made by this section shall take effect on October 1, 1985.●

COMPETITIVE BIDS ON SHUTTLE BOOSTERS COULD SAVE $1 BILLION

HON. ROBERT G. TORRICELLI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. TORRICELLI. Mr. Speaker, the NASA authorization bill contains language that encourages the agency to continue its investigation of the viability of a second source for the shuttle's solid rocket boosters.

What is at issue is cost. It is believed that through the injection of competition the cost of the boosters will drop significantly. It is estimated that competition on the boosters could save about $1 billion over a 10-year period.

However, I also believe the agency should focus on the "value" of a second source. In addition to the financial savings, the value of a second source takes several forms.

When shuttle flights reach 20 or 24 per year, I am told the present sole producer will be required to mix 1 million pounds of propellant a week. By the year 2000 the Shuttle Program will have consumed more than three times the amount of propellant used in the entire Minuteman Program. And Mr. Speaker, this is in an industry where fires and explosions are an unwelcomed fact of life.

It thus seems wise and valuable to broaden our production base to insure schedule protection and reliability for commercial users of the shuttle.

And as the Members know well, there is a significant national security function for the shuttle.

Each of these issues argue on their own merits for NASA to not only look at cost, but also the value of a second source.●

TRIBUTE TO TEXAS HIGH SCHOOL BASKETBALL CHAMPS

HON. MICHAEL A. ANDREWS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. ANDREWS. Mr. Speaker, I rise today to pay tribute to the Texas High School Basketball State Champion, the Marlins of Madison High School in Houston.

The Marlins, who were nationally ranked throughout the season, deserve our recognition on two accounts. First, they have won the Texas 5-A class basketball championship with an unblemished record of 40-0. Their prowess on the court has earned them many honors. They have further been acknowleged by many as perhaps the best high school basketball team in Texas history.

As important as their athletic achievements are, they have an equally impressive record off the court. This is the first year of new regulations in Texas that significantly increases the academic eligibility requirements for students who want to participate in athletics. Madison Coach Paul Benton, and teacher Bernard Cannariato committed themselves to emphasizing to the basketball team the importance of achievements in their academic studies. They worked all year to ensure that the whole team would travel together to Austin to play in the State championship. They encouraged the team to work as hard on their books as they did on their basketball. Their efforts paid off. Every single member of the varsity squad exceeded the tough new standards, and went to Austin to win the State championship.

Mr. Speaker, this off-the-court performance proves that the students, faculty, and administration at Madison High School can lay claim not only to athletic excellence, but to academic excellence as well.●

NATIONAL AIR TRAFFIC DAY

HON. NORMAN Y. MINETA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. MINETA. Mr. Speaker, today I am introducing on behalf of myself and Congressman JOHN PAUL HAMMERSCHMIDT, the ranking minority member of the Aviation Subcommittee of the Committee on Public Works and Transportation, a joint resolution to designate July 6, 1986, as "National Air Traffic Control Day." This date will mark the 50th anniversary of the establishment of our air traffic control system. During this period air travel has grown exponentially, but our national airspace system has remained the safest and most efficient transportation system in the world. This is due in no small part to the hard work of the thousands of air traffic control professionals who keep the system operating at all times. The resolution commemorating the 50th anniversary of the air traffic control system will give well-deserved public recognition to the fine efforts of these dedicated professionals.●

SCHUYLKILL HAVEN WINS STATE CHAMPIONSHIP

HON. GUS YATRON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. YATRON. Mr. Speaker, I rise today to pay special tribute to the Schuylkill Haven High School Class A girls' basketball team who won their first PIAA State championship on March 29, 1985, with a 47-28 victory over the Linesville Lions. I know my colleagues will join me in congratulating Coach Bert Werdt and the entire team for their exceptional achievement.

The Schuylkill Haven Hurricanes, making their first appearance ever in the PIAA Class A Championship, were in command for most of the game. With an imposing defense, the Hurricanes were able to hold their opponents scoreless for 10½ minutes, including the entire third period. In the 6 remaining minutes, they advanced their lead to 19 points. On their way to the championship, the Hurricanes scored victories in all seven postseason tournament games.●

REPEAL OF LIMITATION ON DEPOSITS OF SALES PROCEEDS UNDER POSSESSION TAX CREDIT (CODE SECTION 936 (b))

HON. ROBERT T. MATSUI

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1985

● Mr. MATSUI. Mr. Speaker, the present law tax credit for certain income earned in U.S. possessions—primarily Puerto Rico—specifically requires that income be received outside of the United States in order for it to be eligible for the credit. A bill to repeal this provision was previously introduced in the 98th Congress on March 22, 1983, as H.R. 2256 and was scheduled for hearings to be held on October 3, 1984, before the Subcommittee on Select Revenue Measures, Committee on Ways and Means. However, the bill was withdrawn from the list of hearings to allow the Treasury Department—Internal Revenue Service—additional time to attempt to resolve the issue addressed by the bill through administrative procedures. Unfortunately, after months of discussions between the IRS and taxpayer representatives it was not possible to resolve the issue satisfactorily and a legislative solution now appears to be required.

The requirement under the Puerto Rico and Possession Tax Credit that income be received outside of the United States applies in addition to the provision which limits the applicability of the credit to income from sources outside of the United States and to income predominately from sources within a possession.[1] The provision requiring that income be received outside of the United States has been part of the possession corporate tax incentives—under code section 931 and, since 1976, section 936—for as long as those incentives have been in existence, dating back to years prior to World War II. The legislative history of the possession corporate tax incentive provisions as originally enacted and as modified over the years give no rationale for the received requirements.

IRS rulings issued under current section 936 and its predecessors possession corporate tax incentives provisions, section 931, make clear that the provision serves no tax or economic policy objective, but is a requirement of form only. For example, if a U.S. company manufacturing products in Puerto Rico for sale in the United States receives a check from its U.S. purchaser in Puerto Rico, the received requirement is met whether the U.S. company deposits the check in a bank in Puerto Rico or sends the check back to the continental United States for deposit. On the other hand, if a U.S. company selling the Puerto Rican manufactured goods receives the check in the United States, the received requirement is not met even if the funds are deposited and credited to an account of that company in Puerto Rico. Further, if a U.S. bank acting as agent for the selling company receives a check from the purchasing company in the United States and credits a Puerto Rican account of the seller, the amounts are received within the United States and thereby ineligible for the tax credit, whereas if that same bank were acting as agent for the purchasing company and undertook identical actions, the amounts would be treated as received outside of the United States and thereby would be eligible for the tax credit.

The net effect of this provision is a trap for the unwary, for whom substantial amounts of income can be made ineligible for the possessions tax credit. Moreover, in some instances the rule can deprive even well-advised companies of the use of money for several days while funds are formally received in Puerto Rico and then transferred back to the United States.

For these reasons it is clear that the received requirement detracts rather than adds to the incentives provided to U.S. companies under the posses-

[1] The code requires that only income from sources outside of the United States is eligible for the credit and that only taxpayers having 80 percent or more of their gross income from sources within a possession over the prior 3 years are eligible for the credit.

sion tax credit provisions. Repeal of the requirement would not have any revenue effect, and it would assist companies attempting to establish new and expanding manufacturing operations and employment opportunities in Puerto Rico and other possessions.●

FISH INSPECTION BILL

HON. BYRON L. DORGAN

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. DORGAN of North Dakota. Mr. Speaker, I am introducing today a bill that closes a gap in consumer protection in the foods we eat. The Mandatory Fish Inspection Act of 1985 places fish and shellfish inspection on equal footing with Federal meat and poultry inspection.

STRONGER CONSUMER PROTECTION

Currently only 20 percent of the fish consumed in this country has undergone Federal inspection. There is no mandatory inspection of these products, as there is for meat and poultry. Instead, fish inspection is a hit-and-miss voluntary program, paid for by processors themselves. While the Food and Drug Administration has some oversight responsibility, their role is limited to spot checks and recall of hazardous product only after it is on the supermarket shelf.

The disparity between inspection standards for meat and poultry, on one hand, and fish and shellfish, on the other, means that consumers do not enjoy the same health protection for similar food products, nor can taxpayers feel confident that the variety of agencies and standards result in economical and effective regulation. My bill will help ensure stronger safeguards for consumers and real results for taxpayers.

A Congressional Research Service study I requested on this issue raised a number of serious questions stemming from this inspection disparity. It noted a 1980 Centers for Disease Control report, "Foodborne Disease Surveillance," which indicated that there were 605 food-related illnesses that year; 70 were linked to red meat and poultry, of which the average American consumes more than 200 pounds annually. Another 70 outbreaks were linked to fish and shellfish, which have a per capita consumption of only 17 pounds.

INCREASED EXPORT POTENTIAL

An increasing number of fish and shellfish processors favor mandatory inspection as well, realizing that it will increase their competitive standing in foreign markets. Several other exporting countries, including Canada, Norway, and Iceland, have tighter inspection standards than we do. Given our deteriorating balance of trade picture, any reasonable step which we can take to strengthen our exports should be given serious consideration.

I urge my colleagues to support mandatory fish and seafood inspection and to carefully consider the approach my bill recommends.

H.R. 1989

A bill entitled: the "Mandatory Fish Inspection Act of 1985"

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Mandatory Fish Inspection Act of 1985".

SEC. 2. (a) The Secretary of Agriculture shall initiate, within one year after the date of enactment of this Act, a mandatory program under the Department of Agriculture for the continuous inspection of the commercial processing of all freshwater and saltwater fish, shellfish, and their products, used for human consumption.

(b) The mandatory program should be similar, to the extent practical, to the currently effective system for the continuous inspection of commercially processed meat and poultry.●

VIETNAM VIGIL

HON. ROBERT G. TORRICELLI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. TORRICELLI. Mr. Speaker, it has been 10 years since the last American troops left Vietnam, yet the controversy over the prisoners of war and those missing in action stays with us today. The Vietnam war will not really be over and we will not have done justice to the courage and conviction of our soldiers until we resolve all the issues relating to their fate. America cannot forget.

On April 13 and 14, the Vietnam Veterans for America of Bergen and Rockland Counties will be holding a 24-hour vigil on behalf of our POW's and MIA's. I believe that this vigil will help tell the world that we have not forgotten the men and women who served their country in Vietnam and more importantly that we have not forgotten those who were left behind.●

A TAX TO FIGHT TOXIC WASTE

HON. RON WYDEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. WYDEN. Mr. Speaker, I am pleased to join my colleague, Mrs. SCHNEIDER, in introducing today the Hazardous Waste Reduction Act of 1985, which waste-end tax on the land disposal of hazardous wastes.

This legislation gets right to the heart of two of the most pressing environmental issues facing this Congress—ensuring adequate revenues for the Superfund Program to cleanup this Nation's most hazardous waste sites and encouraging alternatives to land disposal of these wastes.

When the Congress takes up the question of renewing the Superfund Program, it should keep in mind one paramount truth: there is no such thing as a safe landfill for disposing toxic wastes. Yet right now, land disposal is still the cheapest way to dispose of hazardous waste. The reason is clear—the current Superfund law provides no incentives to use alternatives such as recycling, recovery, or changing production methods so as not to produce the waste in the first place.

Without these incentives, all Americans are paying a heavy price. Consider recent news reports: toxic waste landfills constructed with the most modern technology are themselves leaking and posing health threats to nearby communities. In fact, these are the very landfills handling the waste from sites, such as Love Canal, which are being cleaned up with money from the Superfund.

We've got to get off this toxic waste merry-go-round, and one way to do so is with a waste-end tax, which will encourage alternatives to land disposal.

Our proposal encourages these alternative uses by taxing deep well injected wastes at $5 per ton and taxing all other land disposed waste at $20 per ton. It is the actual land disposal of hazardous wastes—such as surface impoundments, landfills, underground injection wells and ocean dumping—that would be taxed. Treatment technology that does not render the waste nonhazardous within 12 months and storage of waste for more than 12 months is also taxed.

Beyond this economic incentive to find alternatives to dumping these hazardous wastes in or on the land, our proposal also encourages alternative treatments by exempting them from any of the above taxes. Specifically, all legitimate forms of recycling and treatment approved by EPA under the Resource Conservation and Recovery Act [RCRA] and wastewater treatment permitted under the Clean Water Act are exempted from the taxes in our proposals.

The Schneider-Wyden waste-end tax is also designed to help raise the significant revenues necessary to clean up the most hazardous sites under the Superfund Program. The Environmental Protection Agency predicts the cost of cleaning up the 1,800 most dangerous toxic waste sites nationwide will total $11.7 billion. At current rates of taxation, the Superfund Program would take 40 years to raise the amount of money EPA believes is needed.

Congress must find ways to do the job quicker because we cannot in good conscience ask Americans to live with these toxic dumps for the next 40 years.

Superfund is now supported by taxes that are charged without regard to the volume or toxicity of a producer's waste. Instead, taxes are based on the amount of raw materials that go into the manufacturing process that produces the waste.

As a result, an estimated 70 percent of the taxes collected under the Superfund are paid by 12 petroleum and chemical companies, which are large consumers of raw materials. Proposals to triple or quadruple the tax liability of those firms to finance a bigger Superfund are justified on the grounds that these companies can afford it. But this misses the point. The taxes are unfair not because of their rate but because they excuse hundreds of firms that dispose of a considerable amount of waste.

The Schneider-Wyden waste-end tax is designed to be a complement to—not a replacement of—the existing chemical feedstock tax. Our proposal is conservatively estimated to raise approximately $285 million per year.

One issue that is often brought up when the waste-end tax is whether hazardous wastes should be taxed on a dry weight basis or a wet weight basis. Our bill requires that volumes of hazardous waste be computed on a wet weight basis, rather than dry weight. Under the dry weight scheme the amount of solid hazardous weight is computed and a relatively higher tax is placed on just that amount. Under the wet weight scheme, the entire volume of solids and liquids disposed are taxed at a lower rate.

We believe that the dry weight scheme should be rejected for four main reasons. First, we think it would create an undue administrative burden in implementing a waste-end tax. A December 1983 EPA study bolsters this point with a conclusion that a dry weight scheme would require more regulation and writing and impose testing costs for up to $70 per drum of waste. According to the study, a dry weight scheme would also enhance the opportunity for violation without detection, increasing the personnel and resources needed to enforce the tax.

The second reason we oppose dry weight is that the proper adjustment of tax liability between high-volume liquid waste versus solid waste can be addressed through a lower tax rate for liquid waste and through an exemption of waste water treatment that is covered under the Clean Water Act.

Third, taxing on the dry weight of a liquid waste is misleading in that it suggests there is no potential harm from the water associated with the liquid waste. There is no clear evidence to suggest this is the case.

Finally, taxing hazardous waste on a dry weight basis at the rates so far put before the Congress would dramatically reduce the revenue of the waste-end tax.

In the past, the waste-end tax has been criticized as being an unsure source of revenue, and I would admit that if a dry weight scheme were used, this criticism might have some basis. However, recent information, including an EPA study, refutes the general criticism that a waste-end tax, computed on a wet weight basis, would be an insecure revenue source.

In the summer of 1984, EPA conducted a survey of State waste-end tax programs. In six States, waste-end taxes had generated revenues between 71 and 98 percent of projections; in three States, revenues were ahead of projections. By contrast, the Superfund feedstock tax has generated between 78 and 84 percent of revenue projections over its initial 3 years.

In addition, EPA found that shortfalls in initial revenues from waste-end taxes were caused for the most part by inadequate data on actual waste volumes, economic recession during the startup period, and failure to account accurately for the cost of tax exemptions.

Our proposal also makes sense from an administrative viewpoint. The basis for recordkeeping under the tax are the documents already in place under the Resource Conservation and Recovery Act [RCRA]. In addition, our bill directs the Internal Revenue Service to further refine the reporting system for tax purposes.

The Schneider-Wyden waste-end tax is a pragmatic initiative whose time has come. Last year, final passage of Superfund legislation was put off to give EPA time to finish its study of alternative Superfund financing mechanisms. The study, which gives favorable reviews to a waste-end tax, is now complete. We have worked closely with representatives from the chemical industry, environmental groups, EPA, and the Treasury Department to refine our bill into a precise and workable piece of legislation.

We invite our colleagues on both sides of the aisle to join us in working to include this proposal in the Superfund bill this Congress will send to the President later this year.●

MICHAEL JOHNSON, PUBLIC SERVANT, RETIRES

HON. BOB EDGAR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 198:

● Mr. EDGAR. Mr. Speaker, today, I am stepping forward to honor a great man and a great Pennsylvanian—Michael Johnson. For 72 years Mr. Johnson has dedicated his vibrant life to the service of his fellow Pennsylvanians. Perhaps the most significant, if not the most memorable, period of his service has taken place during the last 9 years.

Since 1977 Michael Johnson has been the most visible of the members of the public utilities commission. Johnson looked upon his appointment to the public utilities commission as an opportunity to be a proactive representative of the public. In the fact of constant utility company rate hikes Johnson has been a consistent force for the consumer. He has nurtured the increasing consumer participation in the commission rate hearings. This increased public awareness of the utilities system has led to a sharing of the benefits of the utilities tax credits with the consumer.

Michael Johnson's career in consumer advocacy started long ago when he left the International Lady Garment Workers Union to join the AFL–CIO. As the legislative director of the Pennsylvania Committee on Political Education, Johnson worked hard for the rights of the "little guy." His efforts in improving the benefits and availability of unemployment compensation are still enjoyed by Pennsylvanians today. He has an abiding commitment to the labor movement and to all working men and women. As a bold leader he was not afraid to risk his personal reputation if it would improve worker conditions. Michael Johnson did not lose sight of the individual as he sought to enact broad social policies. The fruits of his hard work can be seen in the healthy labor environment that now exists in Pennsylvania.

Of the thousands of people that he helped, both publicly and privately, few knew how to go about thanking him. I welcome the opportunity to speak for all the Pennsylvanians and thank Michael Johnson for all his good work.

When Michael Johnson retired from the public utilities commission on March 31, the commission lost a gentleman of great integrity and character, and the people of Pennsylvania lost a true friend.●

SUGAR SUBSIDIES ARE A CONSUMER GOUGE

HON. THOMAS J. DOWNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. DOWNEY of New York. Mr. Speaker, today Congressman GRADISON and I are introducing a bill which addresses the U.S. Sugar Program. We believe that the Sugar Program, in the way it is written and in the way it is administered, is one of the worst pro-

grams in existence. This program is inconsistent with all we have been trying to accomplish in international trade policy; it distorts agricultural markets for the benefit of a very few producers; and it is adding tremendous amounts of money to the bill American consumers pay for sweeteners.

Let me take a moment, Mr. Speaker, and explain how the Sugar Program works.

Under the 1981 farm bill, the Government provides nonrecourse, low-interest loans to sugar producers with sugar as collateral. These loans are made by the Commodity Credit Corporation of the Department of Agriculture and are extended to sugar processors who use their sugar as collateral for the loans. If the domestic price for sugar exceeds the loan rate, plus shipping, handling, and storage costs, the processors will sell the sugar on the market and pay off the loan. If, however, the market price is below the price guaranteed by the Government program, the producers simply default on the loan. Since the collateral for the loan is the sugar itself, the Government ends up owning the sugar and the processor keeps the money from the loan at whatever price was set by the Government. From 1982 through 1985, the legislation required the Secretary to establish loan provisions which set a floor for sugar prices at 17 cents per pound for the 1982 crop year; 17.5 for 1983; 17.75 for 1984, and, finally, 18 cents a pound for the 1985 crop.

The problems arise because of the difference between world market prices and the loan levels set in the law. Currently raw sugar is selling at less than 5 cents per pound on the world market. Obviously, an American producer who has received a nonrecourse loan of 17.75 cents per pound will choose to forfeit on his loan and allow his sugar to pass to the Government rather than sell at the existing market price. Such forfeiture would in turn result in tremendous losses to the Government.

In order to avoid the forfeiture of sugar to the Government, the President is authorized to impose duties and fees on imported sugar. However, even the authorized duties and fees were not high enough to bridge the gap between market prices for sugar and the loan levels. Thus, in May 1982, President Reagan signed a proclamation exercising authority Congress granted him to impose quotas on imports of sugar. These quotas restrict the supply of sugar in the United States and create an American market price high enough to avoid default on loans to producers.

When the loan program was enacted by Congress, it was anticipated that the Government would protect the domestic market price at about 2 cents above the loan rate. Thus it was expected that a 17-cent loan program would result in a protected market stabilization price of about 19 cents. However, in order to make absolutely certain that there would be no defaults in loans which result in Federal Budget obligation, the administration has set the market stabilization price at nearly 4 cents above the loan levels provided in the law.

This is quite a complex program, Mr. Speaker, but I will try to describe its impact with just a few sentences. In order to subsidize American sugar producers, Congress established a loan program to ensure the producers a return far above that offered by the world market. Then, the Department of Agriculture, in administering that program, raised the price of sugar even higher than the sugar producers could have dreamed.

I have been speaking a lot in terms of pennies, Mr. Speaker. The current world market price of raw sugar is about 5 cents. The loan rate is 17.75 cents. The market stabilization price is about 22 cents. It may appear that these differences are insignificant; but let me assure you they are not. A 1-cent rise or fall in the price of raw sugar has an impact of $300 million on American consumers. Thus our sugar program, which provides a subsidy of 16 to 17 cents per pound, is costing our citizens a fortune each year.

While this program is not technically a tax, Mr. Speaker, it surely has the impact of one—and a most regressive one at that. Sugar is an essential ingredient in hundreds of our food products, and taxes on food always fall most heavily on the poor.

On the other hand, Mr. Speaker, it is not poor, struggling farmers who receive the benefits of the sugar subsidy. According to the Department of Agriculture, the American sugar industry is dominated by big companies. All told, there are fewer than 12,000 sugar producers in the United States, a mere handful compared to 446,000 wheat producers, 715,000 corn growers, or 324,000 dairy farmers. And these few producers are exacting a high price from all of us.

No other farm program comes close to being as generous as the sugar program. During 1982, in Minnesota and North Dakota, for example, the return over variable cost from sugar beets was $411 per acre, while the corn return was $121 per acre. It would take a reduction of 7 cents per pound in sugar prices to achieve an equal return. Similarly, in Louisiana, the return for sugarcane was $458 per acre, while the soybean return was $69 per acre—again a reduction of roughly 7 cents per pound for sugar would achieve an equal return.

Further, as I mentioned earlier, the sugar program has required the imposition of strict, country-by-country quotas on sugar brought into the United States. This is the most extreme and the most disruptive form of market protection and in direct contradiction to U.S. trade policy.

Sugar import quotas legitimize every other country's attempt to restrict its imports of U.S. products. They undermine our efforts to remove trade restrictions imposed by the European Community, Japan, and other trading nations. Moreover, they have shaken the economic foundations of many countries in the Caribbean and in Latin America. Those countries depend on sugar for their dollar earnings. The sugar program has reduced those earnings by 60 percent since 1981. We must remember, Mr. Speaker, that countries cannot buy from us if they have no export earnings. Further, our actions in regard to sugar are undermining our efforts to help stabilize this region which is so critical to our national security.

Clearly, Mr. Speaker, Congress should address and reconsider the sugar program. The bill we introduce does so. It will eliminate sugar quotas, which in my opinion have no place in our trade policy and have been so restrictively utilized to drive prices far above where they should be. Further, the bill reduces sugar loan rates by 5 cents on October 1 of this year, 3 cents further next year and 1 cent further each of the following 2 years. These reductions are only fair, Mr. Speaker. As I mentioned earlier, it will take at least a 7-cent reduction in loan levels for sugar to make the sugar program comparable to other farm programs. Additional reductions in the sugar loan level should roughly parallel future reductions in other programs which are currently being considered. Finally, Mr. Speaker, the bill authorizes the President to rebate fees in order that he can assist nations such as those in Latin America whose economic stability is of great importance to our country.

I hope my colleagues will consider the sugar program and our bill and lend their support to our efforts. We cannot allow this program to continue.●

WELCOMING PRIME MINISTER OZAL TO WASHINGTON

HON. STEPHEN J. SOLARZ

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. SOLARZ. Mr. Speaker, I would like to call to my colleagues attention the presence of a very distinguished visitor to Washington this week: Prime Minister Turgut Ozal of Turkey. Although Turkey is a NATO ally of great strategic importance and a nation with which the United States has enjoyed excellent relations in

recent years, no Turkish Prime Minister has visited the United States in 14 years.

While Prime Minister Ozal's visit is not yet over, it has already proved to be quite productive. In meetings with both the executive branch and Congress, he has strongly emphasized Turkey's desire to negotiate its differences with Greece. Minister Ozal has stated that he is "ready to meet any time, anywhere" with Greek Prime Minister Papandreou to relieve Greek-Turkish tensions, and has offered to sign an agreement of "friendship, good-neighborliness, conciliation and cooperation." I think that all of us in the Congress would welcome a better relationship between our two NATO allies in the eastern Mediterranean, and I certainly would hope that Prime Minister Papandreou would accept Mr. Ozal's offer for a summit meeting.

Prime Minister Ozal has also reiterated during the course of his visit that Turkey fully supports a negotiated political settlement on Cyprus. In this regard, I would point out that U.N. Secretary General Perez de Cuellar has praised the Turkish Cypriots' acceptance of his latest negotiating proposals. It is clear that neither Turkey nor the Turkish Cypriots are impeding a search for a settlement.

During his visit, the Prime Minister has raised the issue of U.S. foreign aid levels to his country. Although Turkey is already the third largest recipient of U.S. aid, it is indisputable that it needs and could absorb more than twice the level of aid it is already getting in order to modernize its armed forces. Unfortunately, however, despite Turkey's clear need for military assistance, the Congress has repeatedly cut the administration's aid requests. This year, for example, the Foreign Affairs Committee cut the administration's request for $785 million in military aid by $49 million, to $736 million.

I believe that such cuts are counterproductive. Turkey has a unique strategic role in NATO. Following the Soviet invasion of Afghanistan and the overthrow of the Shah in Iran, Turkey has clearly become the key to the defense of the southern flank of NATO, and an important barrier to a potential Soviet move against our friends in the Middle East. With the second largest army in NATO, Turkey helps to tie down 26 Warsaw Pact divisions that might otherwise be directed against NATO's central front. Because it controls the Bosphorus and the Dardanelles, in a time of crisis, Turkey could bottle up the Soviet fleet in the Black Sea and prevent it from sailing into the Mediterranean, where it would threaten our own 6th Fleet. Turkey's air defense and radar system provide an invaluable warning time to American naval units in the eastern Mediterranean that would otherwise be far more vulnerable to a surprise Soviet air attack. Finally, Turkey permits the United States to operate important intelligence facilities on its territory which help us considerably in tracking strategic programs and troop deployments in the Soviet Union.

In view of all of these considerations, I would hope that when the foreign aid authorization bill comes up on the House floor in the next few weeks, we will restore the $49 million military aid that was cut in the House Foreign Affairs Committee.●

PETER PERO HONORED

HON. ROBERT G. TORRICELLI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. TORRICELLI. Mr. Speaker, on April 13, 1985 the Joint Legislative Council for Veterans Affairs of Bergen County will honor Peter Pero for his tireless service on behalf of his fellow veterans. Mr. Pero has served as chairman and has been one of the moving forces of the joint legislative council for the past 7 years.

Prior to working for the Veterans of Bergen County, Peter Pero served his country with honor and distinction in two wars: World War II and the Korean War. During World War II Mr. Pero served as 1st class petty officer on the U.S.S. *Matthews* in the Pacific theater. Following his discharge after World War II, Peter stayed on to serve his country in the Naval reserve. However, as soon as America needed his service in the Korean conflict, Peter Pero was there defending America on the U.S.S. *Wisconsin.*

Whether in war or peace, Peter Pero has served his country proudly. His tireless efforts on behalf of his fellow veterans and his fellow countrymen will never be forgotten.●

MY PLEDGE TO AMERICA

HON. TIMOTHY E. WIRTH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. WIRTH. Mr. Speaker, it is my honor to share with my colleagues the first place script from the State of Colorado in the Veterans of Foreign Wars of the United States and its Ladies' Auxiliary's Voice of America scriptwriting contest. The winning script entitled "My Pledge to America," was written by Ms. Joan Lotz of Westminster, CO, a senior at Holy Family High School in Denver.

Mr. Speaker, the words of her script should serve as an inspiration to all Americans. I would like to take this opportunity to commend the time and effort Joan put into its preparation, and to enter her script in the RECORD.

MY PLEDGE TO AMERICA

Imagine—the Grand Canyon glowing in the sunset; the vast prairies rippling in the sunrise; the mighty Mississippi flowing on its course; the oceans lapping sandy white beaches; the stately Statue of Liberty gleaming its welcome in New York Harbor. This is America—the land of opportunity—hope—freedom. The land we love. What kind of commitment can we make to her to keep her strong and her values alive? To ensure her privileges to ourselves and our posterity?

Being a good American citizen is the best promise I can think of. Therefore, my own pledge to America—is to be a good ball player—figuratively, that is.

First, like any good ball player, there is a time for practice. No athlete can be an expert without practice, just as no American can be a good citizen without staying informed. Thus, the first part of my pledge includes a knowledge of the past and of the present. It means learning about the history of our country, and our relationship with other countries. Perfection takes hours and hours of practice and continuous attention to detail. Just so must be my study of America. It will be hard and arduous, but well worth the results.

Any good athlete realizes that following practice and preceding the game, comes warm up time. Without this vital period, muscles may be pulled and injuries may result. Skipping this stage as an American citizen may well result in a catastrophe. In this section of my pledge, I will be stretching out toward the issues and warming up to the candidates. I need to become acquainted with their views and opinions, and the party views they back. I will also need to know what they have done in preceding years and how well they have served their constituents.

After all this preparation, I, as an athlete-citizen, am finally ready for the big game. It's time to get involved with my public teammates by campaigning for them, or voting with them. No citizen should be a benchwarmer. Therefore, my pledge includes a promise always to be part of the game—to write my Congressman with suggestions or complaints, to give speeches or sign petitions when I hold a strong, informed opinion, to march for or in protest of an issue which is important, and to run for an office myself, if my teammates think that I would be best for the job.

Another part of my pledge means that I also keep the team going. This I can do by paying taxes and electing persons I think are best for their offices.

Ask any athlete, he'll tell you—there's more to a sport than just the game. He must start at the beginning with hours of tedious practice. Then there is warm-up, and finally, the game. Likewise, no American citizen is automatically a good citizen.

He must learn about this government, study up on the issues and keep America secure. Therefore, I pledge to be a good American citizen. I pledge to get out there and pass, punt, block, catch, hit or run with the ball, whichever seems right, so that, as Katherine Bate's well-known song declares, America will stand firm "from sea to shining sea".●

THE RENEWABLE ENERGY AND CONSERVATION TRANSITION ACT OF 1985

HON. CECIL (CEC) HEFTEL

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. HEFTEL of Hawaii. Mr. Speaker, today I am pleased to introduce with 47 of my colleagues legislation to extend the tax incentives for investment in renewable energy and conservation equipment beyond their 1985 expiration date. This legislation is essential to our efforts to advance the development of our domestic renewable energy sources and accelerate the conservation of our precious fossil fuel reserves.

Although we have been enjoying a brief period of relative plenty in terms of our national and worldwide energy supplies, it is clear that another energy crisis, whether due to an embargo, a Middle East war, or other cause, is a very real possibility in the years ahead. If we learned nothing else from the embargo of the early 1970's, we learned how fragile our economy is and how reliant we are on imported energy from unstable foreign sources.

The legislation my colleagues and I are introducing today would provide the renewable energy industry with the assurance that tax incentives to encourage its continued growth will be available beyond the 1985 expiration date. This extension is consistent with efforts to reform the Tax Code since reform is likely to be accompanied by a transition period of several years' duration if we do implement a new tax system.

Mr. Speaker, my colleagues and I with the advice and counsel of the renewable energy industry, have labored long and hard to develop an acceptable extension package that provides the needed incentives for the continued growth and commercialization of renewable energy sources. At the same time, we recognize the serious constraints of the budget process and the need to be compatible with the tax reform effort that lies ahead. I am satisfied with the restraint in the tax extensions that are being sought.

The incentives for most of the renewable energy technologies, namely wind, geothermal, and biomass are extended for 3 years, from 1985 to 1988, but at percentage rates that decline from the current 15- and 10-percent levels on the business side, and from 40 percent to 20 or 25 percent on the residential side. The solar and photovoltaic business and residential credits are extended for 5 years to 1990. The solar residential incentives, like the other renewable credits, are phased down over the period of the extension. The residential conservation incentives are extended for 3 years and the credit level increased from 15 to 25 percent, however, the maximum expenditure for which the credit may be claimed has been reduced from $2,000 to $700.

Our energy supply and our economy are not so strong that we can afford to eliminate the only significant remaining targeted Federal incentive for renewable energy development. Moreover, the same compelling reasons that prompted the Congress to enact the energy tax credits still exist today. This legislation has the backing of every significant renewable energy and public interest organization in the country including the American Wind Energy Association, Citizen/Labor Energy Coalition, Environmental Action, Environmental Policy Institute, Friends of the Earth, National Audubon Society, Public Citizen, Renewable Energy Institute, Renewable Fuels Association, Sierra Club, Solar Energy Industries Association, Solar Lobby, and the Union of Concerned Scientists.

Mr. Speaker, this legislation will send a clear signal to the investment community and to the country that Congress is not about to back down from its commitment to full scale renewable energy development. Now we must follow up on that signal and act quickly to pass this bill.●

THE CUBAN REVOLUTION 25 YEARS LATER

HON. GUS YATRON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. YATRON. Mr. Speaker, I want to take this opportunity to bring to the attention of my colleagues a recent study entitled "The Cuban Revolution 25 Years Later," published in cooperation with the Center for Strategic and International Studies of Georgetown University.

The booklet was provided to me by the Cuban American National Foundation, which has done an outstanding job of revealing human rights abuses and other injustices of Castro's regime, and in helping the oppressed Cuban people.

Clearly, 25 years after Castro's rise to power, Cuba continues to be of great concern to American policymakers. The CSIS project is quite timely and it represents, I think, an important contribution to the development of a realistic, long-term strategy for the area; a strategy reflecting American interests, recognizing regional conditions, and meriting the support of our people.

The authors' main conclusion is that politics, culture, and the economy in Cuba have become and remain rigid, stagnant, enormously militarized, and ideologically absolute under Castro's rule.

Because I believe the report is of such great value, I am submitting for the RECORD a portion of the introduction which provides an overview of the study's major findings.

THE CUBAN REVOLUTION 25 YEARS LATER

Events in the Caribbean Basin are at a critical juncture. Rising above the tide of rhetoric are dangerous trends for the regions's political security and economic viability. At the epicenter of this geopolitical environment stands Cuba—foe to some, model to others.

The Castro revolution of 1959 now stands as a decisive landmark in the modern history of Latin America. Throughout Latin America the magnetism of Castro's personality, the indoctrination and regimentation of Cuban society, the communization of the economy, and the ruthlessness of the political system have aroused deep sentiments and caused striking developments within the region. Moreover, Cuba's impact over the last 25 years has acquired extra-hemispheric dimensions. In political and military affairs Havana has become a major influence in Third World radicalism and a key component of Soviet global strategy.

A reevaluation of the Castro regime is apropos on the occasion of the Cuban revolution's silver jubilee. In particular the question arises: what is the extent and significance of the thorough permutation of Cuba under Castro? In this period of reappraisals, the Cuban government remains eager to maintain and disseminate a self-created and assiduously cultivated image of constant positive achievements. The domestic transformation of Cuba's society has in fact been widely viewed as moving toward the development of a socialist environment. Although no longer viewed as a panacea for the problems of the developing world it is still widely proposed as a problem-solver for Latin America's social ills, if not those of the entire Third World. But to what degree are these much-publicized images myths? What are the significant feats of the Cuban regime since 1959?

Attention to these issues is essential to understanding one of the major challenges to the United States in the last quarter of the twentieth century. Ultimately, an assessment of Cuban dynamics is basic to an appreciation of the tasks this nation faces in Central America and elsewhere. Revolutionary overturns in the region as a whole have placed the Caribbean Basin at the very center of world politics. Thus, the comfortable historical circumstances that have allowed American people largely to ignore and to deal ineffectually with the region, including Cuba, no longer exist.

Current foreign and domestic policy circumstances mandate an effort not only to highlight traditional concerns with Cuba, but also to reach and educate a wider public regarding Cuba's domestic condition in the 1980's. It is, after all, inconsistent for the United States to count human rights as a key issue in its Central American policy and ignore or neglect the systematic violations of human rights by the Castro regime. The CSIS Cuba Project thus constitutes the only full-scale effort, in and out of government, to address the Cuban revolution in all of its complex dimensions. Believing that an evaluation of Cuban international behavior first requires a baseline assessment of the na-

tion's internal dynamics, the project has formed four Working Groups of distinguished experts to review the *domestic* sources of Cuban policy and conduct. It is this last aspect of the Cuban revolution that is the subject of this volume.

This review of Cuba's domestic revolution yields significant conclusions, including the following salient points:

1. The promised creation of a pluralistic society with elections and reforms of a social democratic nature based on the Cuban Constitution of 1940 never materialized;

2. Fidel Castro has radically and systematically transformed Cuba into a self-styled Marxist-Leninist dictatorship closely allied with and fully dependent on the Soviet Union for its short and long-term survival;

3. The argument that the U.S. somehow forced Castro to adopt Marxism-Leninism and align Cuba with the USSR is a historical fallacy;

4. The militarization of society appears to be the most striking accomplishment of the Cuban regime—the ideology has evolved into a mere justification of the militarization of society;

5. Fidel Castro's political priorities have remained fairly constant: maintaining undiluted power; making Cuba a world class actor on the basis of an extension of its own revolutionary activity; and institutionalizing a philosophy of anti-Americanism;

6. The lack of financial discipline, the erratic planning decisions, and the whimsical advocacy of unlikely products are prime causes for Cuba's relative economic failure since 1960. In effect the island has become the sugar cane plantation of the Soviet bloc;

7. Despite claims of extensive socioeconomic improvements, comparable and sometimes superior progress has occurred elsewhere in Latin America without the concomitant loss of political and economic freedoms;

8. As in other Communist states, the rights and interests of the individual have become subservient to the rights and interests of the state; laws and procedures encourage individual conformity, discourage individualism, and punish dissent. In effect, the Council of Ministers headed by Castro makes, interprets and enforces the law;

9. The Cuban revolution cannot offer a single notable novelist, a famous poet, a penetrating essayist, not even a fresh contribution to Marxist analysis.●

A BILL TO ELIMINATE INTERIOR'S ANNUAL REPORT ON SHUT-IN OCS WELLS AND OTHER REPORTING REQUIREMENTS

HON. WALTER B. JONES

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. JONES of North Carolina. Mr. Speaker, I am introducing a bill, based on recommendations from the General Accounting Office [GAO], to eliminate certain reporting requirements of the Department of the Interior contained in section 15(1)(D) of the Outer Continental Shelf Lands Act [OCSLA], as amended, and sections 601 and 606 of the Outer Continental Shelf Lands Act Amendments of 1978 [OCSLAA]. The purpose of this bill is to eliminate unnecessary paperwork, resulting in a reallocation of resources to other important OCS activities, and direct savings for both government and industry.

The bill is identical to H.R. 6189, which was introduced in the 98th Congress on September 5, 1984, and referred jointly to the Committee on Interior and Insular Affairs and Merchant Marine and Fisheries. The bill has bipartisan support from both committees of jurisdiction, and I know of no opposition to the proposal.

Section 15(1)(D) of the OCSLA and section 601 of the OCSLAA require the Secretary of the Interior to submit annually a list of all shut-in—not producing—oil and gas wells, and wells flaring—burning off—natural gas on leases issued under OCSLA, and to indicate why each well is shut-in or flaring and the actions the Secretary intends to take with respect to such wells. In addition, the Comptroller General is required to evaluate Interior's report every year and report his findings and recommendations to the Congress. Section 606 of the OCSLAA requires the Secretary of the Interior to conduct a continuing investigation of the availability of OCS oil and gas resources, including a determination of the maximum attainable rate of production [MAR] of oil and gas from significant OCS fields; an analysis of whether the actual production has been less than the MAR and why; an estimate of the total discovered and undiscovered OCS oil and gas resources; and an independent evaluation of trade association procedures for estimating OCS reserves and production capacity.

Since enactment of the Outer Continental Shelf Lands Act Amendments of 1978, GAO has issued six reports to Congress reviewing and evaluating Interior's OCS shut-in and flaring well reports. In its reports, GAO has questioned whether the Interior Department's reports have fulfilled the intent of the Congress and whether continuing to require such reports would serve a useful purpose. In its report of October 24, 1983, the GAO found that Interior's report is less necessary in light of the full decontrol of oil prices in 1981 and since controls over natural gas prices were being phased out; that Interior had implemented GAO's past recommendations to improve it; that the report is expensive to prepare and the resources spent could be better utilized; and that eliminating the reporting requirement would not diminish Interior's responsibility for monitoring and regulating OCS lease activities to ensure efficient development of oil and gas resources. In its most recent report of October 30, 1984, the GAO continued to recommend the elimination of the reporting requirement for the same reasons, indicating that Interior's methodology for allowing offshore oil and gas wells to be shut-in or to flare natural gas is reasonable, its procedures are adequate to effectively monitor such activities, and Interior intends to continue this oversight even if the annual reporting requirement is repealed.

The Department of the Interior has testified that the substantial time, money, and effort required to prepare the shut-in and flaring well report is an unnecessary burden, and the elimination of the report would release resources to serve higher priority needs. It is estimated that the elimination of the requirement to prepare and review the report would result in a cost savings for both the Department of the Interior and the GAO of about $45,000 annually. Prior GAO reports have estimated the combined annual cost savings at $280,000 and later $250,000; however, apparently since the new shut-in and flaring review portion of the inspection system has been fully implemented, the potential cost savings are less, particularly for the Interior Department. GAO estimates that its section 601 review and report to Congress cost $48,000 in 1982, $28,000 in 1983, and $29,000 in 1984.

Another GAO report, issued on September 10, 1982, has recommended the repeal of section 606 of the OCSLAA to eliminate the data gathering and reporting requirements related to the maximum attainable rate of production [MAR] of oil and gas from significant fields on the OCS. GAO's report found that most of Interior's rate setting effort is not useful or necessary and could be curtailed; indicated that the production rate for significant fields, the MAR, is a hypothetical number of little practical value; and found that no apparent use was made of the MAR reports and there was no interest in having them continued.

Although exact figures are not available, the costs on the part of both the Minerals Management Service [MMS], which manages the OCS leasing program, and industry to collect and report on the production rates are significant. MMS currently estimates it spends about $300,000 yearly on OCS production rate activities, and GAO inquiries placed with just seven of the many oil and gas companies that operate on the OCS indicated their expenditures to be $426,500 annually.

Previously, H.R. 7076, reported by the Merchant Marine and Fisheries Committee in the 97th Congress on October 7, 1982, would have eliminated the above mentioned reporting requirements; however, no other action was taken on the bill.

Eliminating these costly reports would not remove the requirement of the Interior Department to report annually on the OCS leasing program, or its responsibility to ensure prompt and

efficient OCS exploration and development. It would, however, reduce Government costs, allowing taxpayers' money to be put to better use, and reduce industry costs. In times of mounting budget deficits and program reductions, we should not overlook the opportunity to economize and eliminate the recurring expense entailed in preparing and reviewing these reports.●

WHAT'S REALLY BEHIND THEIR REASON TO CLOSE GLENWOOD, IA, AND SIOUX CITY, IA, PORK PLANTS

HON. BERKLEY BEDELL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. BEDELL. Mr. Speaker, the Swift Independent Packing Co. announced on February 21 that it would close its plants in Sioux City and Glenwood, IA, this fall. Some 660 jobs will be lost.

Naturally, the announcement has caused very strong emotions. A great deal of anguish and hardship is involved for these workers, their families, and neighbors. The union which represents the workers, the United Food & Commercial Workers, has sent me a statement giving its point of view on the closing.

The UFCW statement deserves our consideration. The text follows:

On February 21, 1985, Swift Independent Packing Co. announced plans to close its pork plants in Glenwood, Iowa and Sioux City, Iowa. A corporate decision that will destroy a combined 660 jobs in these two communities.

What is really behind this corporate decision to announce a plant closing of these two facilities? Management officials cite overproduction capacity as the reason. However, in the fall of 1983, Swift Independent Packing Co. used the announced closing of their meat packing plants to extract millions of dollars in wage and benefit concessions from its employees. It certainly would appear that management is using these same tactics in preparation for contract talks this fall. At best it's highly suspicious that the planned closing date of the Glenwood and Sioux City plants happen to fall on the date the labor agreement with the United Food & Commercial Workers expires.

SWIFT INDEPENDENT WORKERS MAKE MAJOR ECONOMIC SACRIFICES

In the fall of 1983, Corporate officials announced they would close their pork plants in Sioux City, Iowa, Glenwood, Iowa and E. St. Louis, Illinois unless they received wage and benefit concessions from its employees. Hoping to avoid a plant closing, and achieve long-term job security, employees at these plants cut their hourly wage by $2.44 an hour. This translated into a weekly wage reduction of $97.60, or an annual wage loss of $5,075.20. As a result of these worker wage cuts the company realized almost a $7 million savings.

In addition to the hourly wage cut, Swift Independent packing employees were forced to cut their health insurance coverage, which means workers now have to pay more money out of their own pocket when the need arises for medical treatment. Weekly sick leave benefits were also slashed thus reducing income for workers who suffer from illnesses which are often caused by conditions at the place of employment, but are not recognized by management as job related. These along with other cuts in vacations, holidays and pension benefits have resulted in millions of dollars in savings to Swift Independent Packing Co.

SWIFT INDEPENDENT WORKERS ENDURE 3½ YEARS OF HARDSHIP

The last time Swift Independent workers received an hourly wage increase was in September, 1981. This coupled with a 23-percent wage cut in 1983 has caused a terrible economic hardship on the workers and their families. During this period of time the quality of life and standard of living for Swift Independent employees have been substantially eroded. Due to the sharply reduced hourly wage, many of these workers are eligible for food stamps. Tragedy has beset many workers in the form of divorces, bankrupteies, and the loss of homes and cars. In many cases spouses have found it necessary to go to work just to make ends meet from week to week.

LOW PAY FOR DANGEROUS, DIRTY, DIFFICULT WORK

Over the past 40 years, workers in the meat packing industry have struggled through their union to establish a decent level of wages and benefits to compensate for working in an industry where the work is fast, dirty, difficult, and extremely dangerous. According to the National Institute of Occupational Safety and Health, NIOSH, meat packing remains one of the most hazardous occupations in the United States. During a four-year period NIOSH established that 20,000 workers in this industry were either permanently disabled, or killed because of an on-the-job injury. For every 100 workers employed full time, 31.4 workers are injured each year. Workers in the meat packing industry have one of the highest rates of arthritis and tendonitis in all U.S. industries. Meat packing employers such as Swift Independent are not only attacking employee wages and benefits, but it is obvious very little has been done in the way of creating a safe place of employment.

WORKER PRODUCTIVITY UP IN MEAT PACKING INDUSTRY

Packinghouse workers have increased their average production output per pound of red meat from 166.3 lbs. in 1980 to 205.7 lbs. in 1983 according to the Bureau of Labor Statistics and the U.S. Department of Agriculture. And while productivity has increased the wage cost per pound has gone down. In 1980 the wage cost per pound was 5.11 cents. In 1983 the cost was 4.17 cents. Just slightly over 4 cents per pound.

SWIFT INDEPENDENT RECORDS PROFITS EVERY YEAR

Since Swift Independent was formed in 1981 they have never had a year in which they did not make profits. From 1981 through 1984 Swift Independent reported profits of some $59 million.

In addition Swift Independent maintains a strong and aggressive position in both the pork and beef sectors of the meat industry. The company is the number one hog slaughterer in the nation and ranks number three in beef slaughtering. During this same period of time corporate officials continued to receive excellent salaries in the hundreds of thousands of dollars and stockholders continue to receive enormous dividends.

THE TIME HAS COME TO STOP SUCH CORPORATE IRRESPONSIBILITY AND ABUSE OF EMPLOYEES

Swift Independent's announced plan to close the Glenwood, Iowa and Sioux City, Iowa pork plants is yet another maneuver to gain more concessions from the employees. The Swift Independent workers cannot afford to give up any more wages, benefits, or even stand still. Swift Independent has a responsibility to keep the Glenwood, Iowa and Sioux City plants open and at a decent wage.

This is not a union/management dispute. It's a people issue. It's an issue that centers around stopping employers, such as Swift Independent, from eroding the basic American work ethics and values of the right to steady employment under safe working conditions at a decent wage. We ask that all workers, unions, farmers and the community join with us in protecting these very basic rights.●

TECHNICAL AMENDMENTS BILL

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. FORD of Michigan. Mr. Speaker, today I am introducing a technical amendments bill which deals with three programs under the jurisdiction of the Subcommittee on Postsecondary Education—the Library Services and Construction Act, the Minority Institutions Science Improvement Program, and the Harry S. Truman Memorial Scholarship Act. These amendments do not increase Federal expenditures for the programs.

Section 1 of the bill concerns technical amendments to the Library Services and Construction Act [LSCA]. First enacted in 1957, the act provides funding to local public libraries to assist them in serving special populations, construction of library facilities and interlibrary linkages. During the reauthorization of the act last year, it was expanded to include programs that would provide grants to Indian tribes which were developing library programs and special grants for literacy programs and acquisition of foreign language materials.

Shortly after the reauthorization bill was signed into law, representatives of the Department of Education and the library community contacted my office to ask for clarification of certain points in the new law which the Department considered open to interpretation or in conflict with other sections of the law. After lengthy discussions between my staff and Department officials, it became clear that additional legislative language was required.

There are seven technical and conforming amendments to LSCA. The first is a conforming amendment clari-

fying that a long-range program may be from 3 to 5 years in length. Previous to the 1984 amendments long-range programs were all 5 years in length. The 1984 act allowed plans to range between 3 and 5 years, but the definition of long-range program was not changed accordingly. This amendment changes that definition to conform with other references in the 1984 act.

The second amendment clarifies that the Secretary of Education may only make grants to Indian tribes that are recognized by the Secretary of the Interior. The 1984 act only required that the Secretary of Education consult with the Secretary of the Interior. It did not mandate that grants be awarded only to approved tribes. The amendment language is more concise and leaves no question as to the role of the Secretary of the Interior.

The third LSCA amendment is conforming in nature. In addition to awarding grants to Indian tribes, the 1984 LSCA amendments also required that grants be made available to native Hawaiians under the same guidelines as they are made to Indian tribes. However, one of the requirements, maintenance of existing effort, was omitted from the statutory language. This amendment requires Native Hawaiians to maintain the same level of expenditure for library materials if they receive a Federal grant under LSCA as they did prior to receiving the grant.

The term "limited English-speaking proficiency" is defined to have the same meaning in the Library Services and Construction Act as it does in the Bilingual Education Act by the fourth LSCA amendment. Department of Education representatives were concerned that the lack of definition of the term could lead to confusion and lack of consistency in reviewing applications for grants.

The fifth LSCA amendment is required because of a misinterpretation by the Department of Education of congressional intent with respect to the amount of administrative costs allowed to States under the program. Prior to the 1984 amendments, there was no limit on the amount of LSCA funds the State could use for administrative purposes or the types of activities that could be funded through administrative costs. As a result, during the reauthorization hearings for LSCA, the subcommittee repeatedly heard from librarians that inordinantly large portions of Federal LSCA dollars were being held by State libraries instead of being allocated to local libraries as was intended by the Congress. In one case, a State was using over 50 percent of its Federal dollars to pay for upkeep and maintenance of the State library building. In order to prevent these obvious abuses, the LSCA amendments required that no more than 6 percent of $60,000—whichever is greater—of the amount allocated to States under titles I, II, and III of LSCA could be used for administrative purposes. However, because title III deals with long-range planning and interlibrary cooperation, the legislation required that the allowable administrative costs be taken from titles I and II funds, but the amount be equal to the 6 percent of all three titles. The Department has chosen to ignore the clear statutory construction of the administrative cost provision and is interpreting it to allow only 6 percent of titles I and II. This amendment clarifies that the amount that may be used for administrative costs is calculated by using the allocations from all three titles.

The Library Services and Construction Act requires that if more than $60 million is appropriated for title I, the amount in excess of $60 million will be used for libraries in cities with populations exceeding 100,000. The sixth LSCA amendment provides that the $60 million does not include the required 1.5 percent set-aside for Indian tribes or the 0.5 percent for native Hawaiians.

The final LSCA amendment clarifies the intent of Congress in requiring that grants be made to Indians living on or near reservations. The purpose of the original language was to ensure that Indians dwelling in urban areas not receive grants because they have access to already existing public libraries. However, Indians and Indian tribes in Oklahoma, California, and Alaska do not live on reservations and therefore, in strict legal terms, would be ineligible to receive grants. The amendment exempts Indians in those States from the requirement that they must live on or near reservations.

Section 2 of the technical amendments bill incorporates the provisions of H.R. 32, introduced by Chairman HAWKINS on January 3, 1985, which extend the authorization of the Minority Institutions Science Improvement Program through fiscal years 1985 and 1986 with a maximum appropriation level of $5 million for each year.

The Minority Institutions Science Improvement Program [MISIP] supports activities to improve the quality of science education at postsecondary education institutions which serve large populations of minority students and to stimulate interest in science careers for minorities. Institutions may use MISIP funds for improvement of their own science facilities and faculties or they may form cooperatives with local secondary school districts to improve science education at the precollege level. Originally enacted as part of the National Science Foundation Act, MISIP was transferred to the Department of Education in 1979 by the Department of Education Organization Act. The program's authorization expired at the end of fiscal year 1984.

The program was reauthorized through fiscal year 1985 by the House-passed version of the Emergency Science and Mathematics Education Act of 1983, but failed to be included in the Senate version of the act which was eventually signed into law. Although MISIP lacks authorization for fiscal year 1985, the Appropriations Committee did appropriate $5 million for the program in anticipation of an extension and the President's budget requests for both fiscal year 1985 and fiscal year 1986 have supported continued funding for the program at the $5 million level. It is expected that any further extension or modifications of MISIP will be incorporated in the reauthorization of the Higher Education Act.

Section 3 of the technical amendments bill eliminates the maximum amount for the Harry S Truman Scholarship and allows the board of trustees the authority to set the maximum stipend. The language of the amendment is identical to that of H.R. 1227 introduced by Representative IKE SKELTON on February 21, 1985.

The Harry S Truman Scholarship Foundation was established as an official Federal memorial to honor President Truman. The foundation operates a permanent scholarship program for outstanding students pursuing careers in public service at all levels of government. Funding for the program comes from the proceeds of a $30 million Federal appropriation provided when the foundation was created in 1975. The board of trustees in its last two annual reports to Congress has requested that the $5,000 maximum award set by the enacting statute be changed or eliminated. When the scholarship program started, $5,000 was an ample amount to cover the annual education costs of the scholars. However, because of sharply rising educational expenses most students incur costs well above the statutory maximum and as of 1984, 83 percent of the Truman scholars failed to receive the intended full scholarship.

I urge my colleagues to join me in cosponsoring this necessary legislation.●

ARTISTIC PATRIOTISM

HON. DOUG WALGREN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. WALGREN. Mr. Speaker, with all the talk about the need to balance the budget, we sometimes forget to consider the special contribution that modest Government funding can make.

In this regard, I refer specifically to President Reagan's proposals that threaten the arts and direct the attention of my colleagues to the excellent following piece by Sam Hazo, president and director of the International Poetry Forum:

ARTISTIC PATRIOTISM

The recent recommendation of the Reagan administration to cut the budget of the National Endowment for the Arts by 11.7 percent should not be considered merely as another form of savings.

Under the sword of the present deficit, the administration claims that across-the-board cuts are in order. If everything else is to be cut back, why not the National Endowment for the Arts? Such a view of the endowment is purely statistical; it does not address itself to how important the arts are to American society. And that importance is directly related to our stature and spirit as a people, money notwithstanding.

First, some preliminary brush-clearing. With those who say that the survival of the arts does not depend upon governmental assistance I have no argument. Poems would continue to be written, paintings painted, sculptures sculpted and dances danced if the NEA disappeared completely. After all, the NEA is only 19 years old, and the arts in America certainly existed before that.

The fact remains, however, that it became apparent to the federal government in the mid-'60s (and to the private sector a decade earlier) that a truly humane society was one that did not ignore the arts.

President Kennedy laid some of the foundation for this in October of 1963 at Amherst when he said: "I look forward to an America which will reward achievement in the arts as we reward achievement in business or statecraft.

"I look forward to an America which will steadily raise the standards of artistic accomplishment and which will steadily enlarge cultural opportunities for all our citizens. And I look forward to an America which commands not only for its strength but for its civilization as well."

The philosophy behind the creation of the National Endowment for the Arts was that government could have a role to play in enlarging "Cultural opportunities for all our citizens."

Programs were thus initiated that provided for funding of literary and other centers for audience-development efforts, for challenge-grant support and even for followship subsidies of writers and other artists. As with all government efforts, there was waste and misdirection.

Quality was periodically ignored, and the mediocre was often rewarded. And I, for one, still have reservations about subsidizing artists. It has the ring of patronage. In saying this, I do not denigrate many of the fine artists who have received such subsidies. I just think that there is a taming institutional risk associated with this as with the poet-laureatship of Great Britain. There are some gifts that it may be wise not to accept.

Second, some facts. In the early '80s, the NEA's annual budget was $159 million. This, in effect, was two one-hundredths of one percent of the federal budget. In 1985 the projected budget is $163.7 million. If the proposed cut of 11.7 percent is made, the working budget will be $144.5 million. For those who like comparisons, this would have financed the decade-long Vietnam war for 53 hours. In nearer and dearer terms, it would have underwritten two hours and 39 minutes of Superbowl television time.

But playing the game of equivalence is not the answer. What is at issue here is that the miniscule percentage of government capital that is devoted to the arts says much about our government's attitude to the arts. That is the real equivalence.

For those who say that support of the arts should be left to the private sector, the answer is that it is, by and large. Only 10 percent of money for the arts nationally comes from the government while the remaining 90 percent comes from private sources. But the 10 percent that comes from the government does underwrite those very things that private foundations are loath to fund, i.e., endowments and purely operational costs.

To remove or emasculate government's role in the equation of support for the arts is to hurt not only the artistic organizations so supported, but the society they serve.

If Canada, a country of approximately 29 million people, allocates more than 10 percent of its national budget for art and culture, that says something about that government's view of the importance of art and culture to Canada. In the mid-'80s, Australia allocated $32.1 million (translated into American dollars) to the same purpose, which was the equivalent of $2.14 per capita. By the same standard, France allocated $911.7 million, or $16.81 per capita; Italy $189.6 million, or $3.37 per capita; Sweden $111 million or $13.32 per capita; Great Britain, $130 million, or $2.33 per capita.

In contrast, the United States allocated two one-hundredths of one percent to the same purpose and proposes to allocate less in 1985. In either case, our commitment to the arts is perceived internationally as being measured in a fraction of a fraction or approximately 62 cents per capita.

In a nation's priorities, every chief executive must provide for the common defense, promote the general welfare and ensure domestic tranquility. The first and third of these injunctions have been well served by this and preceeding administrations. If one questions the defense budget, for example, one does so at the risk of having one's patriotism questioned since this is regarded by some as tampering with our survival. But too little attention is given to *how* we are to survive as a people, and that is certainly part of our "general welfare," and the arts are an essential part of that.

"A nation can survive on junk art as it can on junk food," wrote Edwin Wilson in The Wall Street Journal a few years ago, but he quickly added: "Some societies, however, have recognized the profound possibilities of art and have gone for the best. This was the case with the Greeks in the 5th century B.C., who built the Parthenon and produced the plays of Aeschylus and Sophocles, with the people of Medieval France who built the cathedral of Chartres and with the Medicis, the great patrons of the arts in Renaissance Florence."

Anyone with any artistic patriotism would certainly hope to see the United States included historically in that company.●

TRIBUTE TO DR. RAYMOND L. BISPLINGHOFF

HON. DON FUQUA

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. FUQUA. Mr. Speaker, Dr. Raymond L. Bisplinghoff, former Chairman of the Air Force Scientific Advisory Board, passed away in Boston, MA, on the 5th of March 1985. Dr. Bisplinghoff contributed extensively to the Air Force and to the Board in various capacities spanning a period of over 27 years.

In 1982 Dr. Bisplinghoff received the Decoration for Exceptional Civilian Service, the highest civilian decoration given by the Air Force, for his work as Chairman of that service's Scientific Advisory Board from September 1979 to July 1982. The citation accompanying the medal, presented by Secretary of the Air Force, Verne Orr, stated in part:

Through his rare combination of scientific ability and insight, leadership capability and the highest personal integrity, Dr. Bisplinghoff has personified the scientific patriot envisioned by General Arnold and Dr. von Karman more than 30 years ago when they established the Scientific Advisory Board. Dr. Bisplinghoff's sincere, selfless dedication and highly significant personal contributions reflect the highest credit upon himself and the United States Air Force.

While addressed to Dr. Bisplinghoff's service on behalf of the Air Force, these words also describe his dedication and selfless contributions to this country through his service to the National Science Foundation, NASA and the FAA as well as his active participation in numerous other senior advisory roles.

Dr. Bisplinghoff's association with the Air Force and its Scientific Advisory Board began in 1956 when he was appointed a member of the Board's Aircraft Panel—later to become the Aerospace Vehicles Panel—a position he held until 1959. He was again appointed to the Board in 1976 assuming chairmanship in 1978, a position he held until July 1982. He continued his active involvement in Board affairs until his death. Among the many studies he either chaired or participated in were C-5A; B-1 Program; cruise missile technology; C-5A structures; structural fatigue problems and most recently, chaired the study on advanced tactical fighter technologies.

Dr. Bisplinghoff had served on the faculty of MIT for 24 years. He headed its department of aeronautics and astronautics and was dean of the College of Engineering from 1968 to 1970. He was appointed Deputy Director of the National Science Foundation in 1970. From 1962 until 1966, he was with the National Aeronautics and

Space Administration [NASA], first as Director of the Office of Advanced Research and Technology, then as Associate Administrator for Advanced Research and Technology and Special Assistant to the NASA Administrator. Dr. Bisplinghoff served as Chief Scientific Advisor to the Adminstrator of the Federal Aviation Administration and as a member of the board of directors of Allied Associates of Concord, MA. He was a fellow of the American Academy of Arts and Sciences, American Association for the Advancement of Science, Royal Aeronautical Society, American Astronautical Society and an honorary fellow of the American Institute of Aeronautics and Astronautics. He was also a member of the National Academy of Sciences, National Academy of Engineering, New York Academy of Science and the Defense Science Board.

I believe it is evident that the Nation has lost a remarkable and exemplary scientist and engineer whose leadership spanned academic, industrial, and Government activities.

I ask that the details of Dr. Bisplinghoff's career as documented in who's who in America and in the obituary which appeared in the Boston Globe, be entered in the CONGRESSIONAL RECORD.

R.L. BISPLINGHOFF, MIT PROFESSOR WHO HELPED PLAN APOLLO FLIGHTS; 68

COTUIT.—Raymond L. Bisplinghoff of Cotuit and North Hampton, N.H., a world-renowned aeronautical engineer who helped plan several Apollo space flights, died Tuesday night in New England Baptist Hospital in Boston after a brief illness. He was 68.

Mr. Bisplinghoff began his 50 year career as an educator, researcher and national policymaker in science and engineering when he was a student engineer at the Aeronca Aircraft Corp. in Cincinnati, and later, during World War II, as an engineer at the Navy Bureau of Aeronautics.

Mr. Bisplinghoff, a thin, quiet, sandy-haired man whose first love was teaching, moved to Boston in 1946 to accept a post as assistant professor of aeronautics at the Massachusetts Institute of Technology. He was made a full professor in 1953 and deputy head of the department of aeronautics and astronautics in 1957.

He also headed the department's Aeroelastic and Space Structures Laboratory and chaired the Aerospace Research Division, where he developed research and instruction in flight vehicle structures.

With H. Guyford Stever, he carried out a three-year study on the effects of nuclear blasts on aircraft. He and Stever took part in the Eniwetok atoll bomb tests of 1951-52 and were awarded certificates of merit by the Air Force.

In 1962, Mr. Bisplinghoff took a leave of absence from teaching to direct advanced research and technology at the National Aeronautics and Space Administration in Washington, D.C. In 1965, he was named special assistant to NASA director James Webb.

Mr. Bisplinghoff returned to MIT a year later to succeed Charles S. Draper as head of the department of aeronautics and astronautics. He was the third person to head the department, which was the first of its kind in an American university when it was established in the early 1900s.

At MIT, Mr. Bisplinghoff worked with Apollo 8 astronaut James Lovell in "using the hardware aboard the Apollo to the best possible advantage," he once said. His work helped the Apollo 8 crew to circle the Moon and come back to Earth with only a tiny fraction of error in calculation. He also worked with NASA on plans for Apollo flights 9, 10, 11 and 12.

In 1968, he was appointed dean of the College of Engineering at MIT and head of the new Research and Technology Council at NASA. He went back to Washington, D.C., in 1970 to become deputy director of the National Science Foundation.

Mr. Bisplinghoff was named chancellor of the University of Missouri at Rolla in 1974, and three years later left to accept a position as senior vice president for research and development at Tyco Laboratories In Exeter, N.H. He retired last fall.

Among the many awards he received were a distinguished service award from the National Science Foundation, and extraordinary service medal from the FAA and a distinguished service medal from NASA.

He was internationally known for his textbooks "Aeroelasticity" (1955) and "Principles of Aeroelasticity" (1962).

He leaves two sons, Ross L. of Wellesley and Ron S. Bisplinghoff of Boston; and a sister, Ann Gillespie of Hamilton, Ohio.

A memorial service will be conducted at 7 p.m. Thursday in MIT Chapel, Massachusetts Avenue.

BISPLINGHOFF, Raymond L.—B: Feb. 7, 1917, Hamilton, OH, *Dir. and VP for Research*, Tyco Laboratories; PRIM AV/AERO ACT: Military Aviation, Aerospace Engineer, Aerospace Mfg, Research/Experimentation, Profl Assn Admin; PREV EMPLOY: Engr., Aeronca A/C Corp., 1937-1940; Engr., Wright Field, 1940-1941; Naval Officer, Bureau of Aeronautics, 1943-1946; Prof., MIT, 1946-1962; Assoc. Admin., NASA, 1962-1966; Head, Dept. of Aeronautics and Astronautics and Dean, School of Engrg., MIT, 1966-1970; Dep. Dir., Nat. Sci. Found., 1970-1974; Chancellor, Univ. of MO-Rolla, 1974-1977; Dir. and VP for Research, Tyco Labs., 1977-present. Also Dir., Gen. A/C Corp.; Dir., Commuter A/C Corp.; Dir., MITRE Corp.; Chmn., USAF Scientific Advisory Bd.; PROFL AFFIL & HONORS: Honorary Fellow, AIAA; Fellow Royal Aeronautical Soc.; Pres., Intl. Council of Aeronautical Scis.; Fellow, Amer. Acad. of Arts and Scis., Member, Nat. Acad. of Scis.; Member, Nat. Acad. of Engrs.; DSM; NASA, Extraordinary Serv. RETIRED STAFF OF INTERNATIONAL ORGANIZATIONS DESERVE PERMANENT RESIDENCE

HON. HAMILTON FISH, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. FISH. Mr. Speaker, the bill I introduce today is designed to grant permanent residence to the members, spouses, and children of international organizations located in the United States. According to 1982 data from the Department of State, there are approximately 10,000 regular foreign staff members of international institutions such as the United Nations, International Monetary Fund, and the World Bank which are located in the United States. These individuals spend their professional lives in this country and their children and spouses become accustomed over time to the benefits offered by our society. Legislative efforts to grant them permanent residence have been supported by our Government, and by presidents, and former presidents of the World Bank, as well as other affected organizations.

I have been an historic supporter of this legislation, and provisions akin to what I am introducing today have been passed by both Houses of Congress as part of the Simpson-Mazzoli comprehensive immigration bill. Unfortunately, Congress failed to produce a compromise in either of the past two Congresses and, while I hope the result of congressional deliberations will be different this time around, I think it is wise for us to consider a parallel track.

Most international workers remain in the United States for relatively short periods, after which they return to their home countries. A number of others, due principally to their extensive expertise, remain in the United States indefinitely, and often end their employment by retirement in this country. Without the right to remain here, they often find themselves stripped of their friends, and family, and forced to return into a country which in many cases they have not seen for many years. This works a hardship on women whose husbands die before retirement, and it similarly affects children who have been brought up in the United States and consider it home.

Mr. Speaker, I encourage my colleagues to support this legislation. It has enjoyed nearly universal support in past years, and I trust this trend will continue.●

TRIBUTE TO CHARLES A. TILLMAN

HON. FORTNEY H. (PETE) STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. STARK. Mr. Speaker, the Community Adult Day Health Services board of directors will host their first annual awards dinner in Oakland, CA, on April 9, 1985. Mr. Charles A. Tillman will be the honoree.

Mr. Tillman justly deserves this tribute. He has contributed tirelessly to improve the health and welfare of senior citizens. Because of Mr. Tillman's hard work and perseverance, the Community Adult Day Health Services at Highland General Hospital in Oakland is a reality.

But this is just the most recent success for Mr. Tillman in assisting the elderly. He has served on the State of California Commission on Aging, the Alameda County Commission on Aging, and the city of Alameda Senior Citizens Council. He has been active in numerous fraternal and civic organizations including the Alameda and Isle City American Association of Retired Persons.

Charlie Tillman has helped create numerous programs to help improve the life of senior citizens in the city of Alameda. He organized the first Meals on Wheels Program, introduced the Senior Citizens Taxi Script Program, was instrumental in developing senior housing in Alameda, and most recently spearheaded free transportation of Alameda's elderly to the Community Adult Day Health Services Center.

With all of these accomplishments on his record, Mr. Tillman remains modest about his contributions. He is constantly looking for new opportunities to improve live for the elderly.

I join Charlie Tillman's friends, who will pay tribute to him on April 9, in saying thank you for his contributions. He is truly a man of compassion and vision.●

BLUE ANGELS

HON. DUNCAN HUNTER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. HUNTER. Mr. Speaker, today I am introducing legislation which would direct the Postmaster General to issue a commemorative postage stamp honoring the U.S. Navy Flight Demonstration Squadron, known as the Blue Angels on the occasion of their 40th anniversary. The Blue Angels have been entertaining audiences all over the world since 1945. They have demonstrated the power of naval aviation to more than 186 million people.

The Blue Angels have had a profound impact on our Nation's youth, attracting the highest caliber of young people to serve in our Nation's Armed Forces. The Blue Angels have set outstanding examples of the value of hard work, disciplined training, and the merit of teamwork in achieving goals.

My district has had the honor of hosting the Blue Angels during their winter training in Imperial County for the past 19 years. During that time, they have inspired the residents of the valley with their precision maneuvers and with their dedication and determination to be the best.

Mr. Speaker, I urge all of my colleagues to join with me in honoring this dedicated group of professionals. A postage stamp commemorating their 40th anniversary is a fitting way to pay tribute to this deserving group.●

THE TIDE SHIFTS TOWARD TAX REFORM

HON. BRIAN J. DONNELLY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. DONNELLY. Mr. Speaker, I am today submitting for the record an article by Albert Hunt which appeared in the Wall Street Journal on March 22, 1985, entitled, "The Tide Shifts Toward Tax Reform."

As a strong supporter of tax reform, I am delighted to see this shifting tide. Support for tax reform is clearly building among the 70 percent of taxpayers who do not itemize and would therefore benefit from legislation lowering the tax rates and broadening the base. In their responses to my recent questionnaire, my constituents enthusiastically support tax reform because it would satisfy their demand that all taxpayers, individuals and corporations alike, pay their fair share of taxes. I congratulate Mr. ROSTENKOWSKI, chairman of the Ways and Means Committee, for taking the lead as a proponent of tax reform.

I commend this article to my colleagues' attention, particularly its analysis of some of the arguments used by critics of the major tax reform proposals. It is encouraging that the taxpayers apparently know better.

[From the Wall Street Journal Mar. 22, 1985]

THE TIDE SHIFTS TOWARD TAX REFORM

(By Albert R. Hunt)

Oscar Wilde once noted that "a man cannot be too careful in the choice of his enemies." That probably occurred to Jim Baker at his recent confirmation hearings before the Senate Finance Committee.

The incoming Treasury secretary was greeted warmly, but the department's tax-simplification plan—which would lower individual and corporate tax rates and broaden the base by eliminating most write-offs—picked up almost as many enemies as there were senators there.

Committee Chairman Bob Packwood (R. Ore.) criticized proposed taxes on fringe benefits; New York Democrat Daniel P. Moynihan complained about not permitting deductions for state and local taxes; David Boren, Oklahoma Democrat, warned that the measure would hurt the oil and gas industry, endangering National Security; Steve Symms, Idaho Republican, complained about the effects on the life-insurance industry; and Sen. Spark Matsunaga, Hawaii Democrat, warned that under such a plan the macadamia nut industry never would have flourished.

With so many enemies, the conventional wisdom—on Wall Street as well as in Washington—is that any tax-overhaul scheme won't fly.

Don' bet on it. Actually, the odds are improving for some combination of a revised Treasury plan with the Democratic Bradley-Gephardt and GOP Kemp-Kasten bills. Despite the vehement protest from affected interests, public support is there for these concepts.

PUBLIC DESIRE FOR CHANGE

"There clearly is a public desire for tax change," says Republican poll taker Bob Teeter, "and the fundamental idea of less deductions and lower rates is gaining acceptance. Public Opinion is moving very fast the last couple of weeks. This is an idea whose time is coming."

Mr. Teeter's Democratic counterpart, Peter Hart, agrees "The public thinks the current tax system is unfair, doesn't work very well and is too complicated," he says. The Treasury and congressional tax-simplification schemes "fit in the broader theme of reducing special privileges, which has a huge amount of popular support, whether it's getting welfare queens or big boys ripping off the tax system.

Both agree that the keys are Mr. Reagan's active support for a tax measure and its proponents' ability to capitalize on the fairness issue. "The strongest desire here isn't for simplification but for fairer taxes," says Mr. Teeter. "Much of the public feels, not so much that they are paying too much, but that a lot of people get away without paying their fair share."

The public resentment is illustrated by some of the exaggerations and distortions paraded forth by tax-overhaul critics in recent weeks. A major theme is that any plan would cause cataclysmic dislocations. Sen. Bill Bradley of New Jersey, the main Democratic proponent of tax change, responds simply: "You don't find all the people who're going to get tax cuts complaining about dislocation."

A quick glance at the critics underscores this point. The National Associaton of Manufacturers, for example, recently released a study on the effects of the Treasury plan, using a model prepared by Wharton Econometric Forecasting Associates. The study concluded that by curbing accelerated depreciation and other tax breaks, the proposal would cause a substantial reduction in business investment.

But this study gave the back of its hand to an economically attractive feature of the proposal: Its neutral treatment of different sorts of income, which should channel some capital out of tax-sheltered enterprises and into more productive ones. Moreover, models such as Wharton's "are designed only to look at short-run effects," says Harvey Galper, an economist at the Brook-

ings Institution. "They are not designed to capture structural changes such as the Treasury plan."

To be sure, even some champions of tax simplification acknowledge that some investment could be stifled. So, they say, some adjustments are necessary. But as long as major companies like General Electric, General Dynamics, and W.R. Grace haven't been paying federal income taxes—whatever the economic justifications—the average taxpayer will think the system is unfair.

The NAM's criticism pales next to the rhetoric of the National Association of Realtors. The Realtors claim that, in embracing the tax-simplification proposal, then Treasury Secretary Donald Regan "was reneging on President Reagan's commitment . . . to preserve the home mortgage interest deduction."

Mr. Regan's egregious offense here wasn't that he touched the basic home mortgage interest deduction, which the Treasury would leave intact. What upset the Realtors is the proposal to limit this write-off for second or vacation homes. Now, my wife and I recently bought a weekend home, which we expect to enjoy immensely. But to expect taxpayers to underwrite this enjoyment is ludicrous. The Treasury should eliminate, not just modify, this $700 million annual subsidy of vacation homes.

Some critics also express concern at taking away the deductions for state and local taxes, especially in high tax states such as New York. Gov. Mario Cuomo denounces this proposal as unfair to his state's poor working citizens.

The governor overlooks some facts. In 1986, according to Treasury calculations, the median family income in New York State will be $35,160. Under the current code, the average Empire State citizen would pay $3,205 taxes on that income; under the Treasury proposal—even without deductions for State and local taxes—this average taxpayer would pay $3,182, or $23 *less*. The marginal tax rate of this average New Yorker would drop to 15% from 22%. Moreover, Gov. Cuomo usually neglects to point out that 60% of New Yorkers don't itemize state and local deductions, and thus those he champions so fervently are predominantly upper-income taxpayers. (Nationally, two-thirds of all taxpayers don't itemize.)

Critics also distort public opinion. Recently, a group called the Committee for a Responsible Tax Policy released a survey by New York pollsters Penn & Schoen concluding that "when given the outlines of the proposed Treasury tax revision, U.S. voters reject the plan by a wide margin"—better than 2 to 1 against.

Consider, though, the question: "The Treasury Department has proposed changing the tax system. Three tax brackets would be created but most current deductions from income would be eliminated. Non-federal income taxes and property taxes would not be deductible, and many deductions would be limited. Do you favor or oppose this proposal?" There's no mention that rates would be cut sharply or that personal exemption would double. The only surprise is that 27% of the respondents actually supported the position as stated.

Pollsters Teeter and Hart say that public opinion decidedly favors any proposal that cuts rates, broadens the tax base and reduces the number of tax brackets from 15 to three.

Still, there are big hurdles. Mr. Reagan must make this a top priority; his abysmal ignorance of the Treasury proposal in a recent interview with this newspaper wasn't an auspicious sign. And if Jim Baker, a superb politician with a penchant for compromise, is perceived to be taking care of groups like his Texas oil buddies, public support "could bleed from a thousand cuts," warns Mr. Hart.

Nevertheless, the more these proposals are aired, the more support they pick up. This is evident in a small, but growing, segment of the business community that is impressed by the idea of simplicity and by the cut in the corporate tax rate from 46% (the effective rate paid now is only about half that) to 30% or 35% under various proposals.

Two weeks ago the four principal congressional sponsors—Sens. Bill Bradley and Robert Kasten and Congressman Jack Kemp and Richard Gephardt—trotted out endorsements from more than a dozen executives for the concept of lowering rates and broadening the base. There was impressive diversity, ranging from the chief executive officers of such major companies as IBM and Singer to J. McDonald Williams, managing partner of Trammell Crow Co., the huge Dallas-based real-estate concern.

Real-estate write-offs supposedly are clobbered by tax simplification, but Mr. Williams offered a cogent case for his support. "The real-estate industry has too much tax-driven investments, and that's resulting in overbuilding and a series of problems," he said. Under tax simplification, if "there's is a fair comparision of returns in real estate vs. other investments then we can pay more taxes. . . . In the long run, that will be healthier for our industry, although in the short run it's difficult and means higher taxes."

FAVORABLE POLITICAL WINDS

David McLaughlin, president of Dartmouth College, took a similarly long-range view on the issues of limiting charitable contributions. "In the short run, undoubtedly, there are effects . . . that would have some negative consequences to an institution like Dartmouth," he said. But, he argued, "tax simplification and tax revision make a stronger economy," which in the long run will help such institutions.

There are favorable political winds, too, especially in House Ways and Means Chairman Dan Rostenkowski's enthusiasm for passing a tax measure this year. Privately, more and more Democrats lament the disastrous blunder Walter F. Mondale made last year when he flatly rejected making the Bradley-Gephardt bill a centerpiece of his campaign.

Finally, the similarities between the Treasury proposal and the two major congressional initiatives are far more striking than are the differences. That will facilitate any compromise. "The thrust in all three is the same," says Ronald A. Pearlman, acting assistant treasury secretary for tax policy. "Everyone wants rates down and the base broadened."

A few months ago, optimists were saying that tax simplification was an idea whose time was coming. A few months from now, it may have arrived.●

STUDENTS AND FAMILIES RESPOND TO THE PRESIDENT'S STUDENT AID BUDGET CUTS

HON. WILLIAM D. FORD

OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. FORD of Michigan. Mr. Speaker, over the past couple of months I have received several hundred letters from students and parents who describe in their own words what effect the President's proposed budget cuts in the federally funded student financial assistance programs would have on each of their lives. These letters express personal feelings of frustration and betrayal at the barriers being thrown heedlessly into the paths of their futures. These letters are from hard-working people who have never taken a college education for granted and who have already made significant financial sacrifices to improve their, and their children's, lives through education. These letters reflect a cross section of this country's students who would be hurt by student aid cuts.

While we continue to debate how to come to terms with the Nation's budget deficit, I think it would be well to look into the faces of a few of those families whose futures would be dramatically altered if we heeded the President's proposals.

The letters follow:

LETTERS

My family and I have decided to write our first letter ever to a President. We have supported the Republican philosophy and candidates since the Eisenhower years . . . as a matter of fact, went to President Nixon's inauguration ceremony and ball. I have been chairman of a local Republican Club and a Republican precinct delegate for 18 years. After taxes, we net approximately $24,000 and are not capable of starting an IRA or keeping a savings account with house payments, food, clothing * * * Our family strongly objects to the proposed cut-off of student loans to families in the middle income bracket (like ours). I will support all of (the President's) programs but (not his proposed cut in student aid.—Parent in Michigan

Presently my father is retired and I have no source of income. And I am not the only person in my family attending college. I come from a family of eleven children. I want to pursue a career in teaching junior high school and coaching young adults in sports, but without a college degree this dream will never be fulfilled.—Student in Michigan.

I am taking time out of my schedule to write to you on behalf of my family and every family with children in college. Where does this man, who by the way in his early days was once a liberal democrat, in the days of Harry Truman his idol, get the audacity to take from students . . . this man in the White House has no compassion. No matter what you earn now-a-days the cost of an education is astronomical, even at a state school.—Parent in New York.

My family and I are all working hard to make it possible for me to finish my education at Simmons College. During school I have a part-time job, and I also work during school breaks and summer vacations. Since my brother is also in college, even with my working and my parents giving me as much as they can, it is impossible for us to come up with the $13,000 a year I need to continue my education here if the income caps on aid and the Guaranteed Student Loan program go into effect.—Student in Massachusetts.

I am a first year medical student at the University of Chicago and the tuition here is $10,000. I also have a brother who just graduated from college and plans on attending law school in the fall with another brother who is a freshman at Notre Dame. As you can see, there is a lot of money being used for education in our family. My father does make more than $30,000 a year, but if we are denied the Guaranteed Student Loans I'm not certain all three of us could attend school at the same time.—Student in Illinois.

I am writing to you even though I am not in your district. Our daughter is in her last year of college and our son in his first year of podiatry school. If this proposal is passed how can we tell him he can't go back to school? Does the President think we enjoy borrowing money to send our children to college? It is a matter of necessity so they can have a better future and add to this country of ours. We consider ourselves good citizens, we pay our taxes and try to provide an education for our children and with these loans it helps. We do not think of this as free money * * *.—Parent in Michigan

I'm a public school teacher, and I work at a second job in the evenings, and a third job during the summers. My wife is a full-time wife, housekeeper, mother and has a small part-time job. We have used up our savings and investments over the last three years to help send our three sons to college. These boys work while at school and during their summer vacations, and they always have. They do not spend three weeks at the beach * * *. We need continued support for the student loans.—Parent in Michigan.

I am an independent student who lives with my elderly grandmother and attend a college in Connecticut. My grandmother has raised me and helps to support and maintain me in college. I help her by doing as much as I can for her, especially during school breaks and summer, and I also help by working to pay some of my college expenses. If it were not for Federal aid and the GSL program I could not attend college. My course of study is not offered at all colleges, and I attend the closest university to my home. I understand the "independent student status" is in jeopardy; the President wants to abolish it for all students under the age of 22 years old. Please do not let this happen. I would like to complete college, repay my government loans, and help my grandmother who has sacrificed so much for me.—Student in Connecticut.

Mr. President: Our son Jay is attending the University of the South, Sewanne, Tennessee, where he is a freshman. If it were not for financial aid he could not attend. I've always tried to impress on Jay how important an education is * * * that it is the one thing no one could take away. So please, not only for him, but for all students whose future depends on college, please reevaluate your budget cuts.—Parent in Florida.

I was told by many that I would never make it in architecture, much less get into a school of architecture. Acceptance into the School of Architecture was competitive, only 30% of the applicants were admitted * * * (After being rejected from 4 schools), on my third attempt my application was accepted and I was graduated with a 3.9 grade point in my senior year. (I was subsequently accepted) at the Harvard Graduate School of Design. My education (there) has been possible largely because of the student loans I have received. My parents income hovers around $31-$32,000 a year and it is very difficult for them to assist me financially. My father was forced to retire early from the government because of two successive heart attacks, and a stroke. Medical costs continue to climb * * * my mother works part-time at a Hospital (but) her modest income coupled with my father's retirement barely keeps them afloat. I work two summer jobs in an attempt to dent the tuition barrier which is now cresting at $10,145 a year * * * .—Student from Maryland.

As a law Student at Oklahoma. City University School of Law, I am frightened about the possibility of reductions in financial student aid. I will have to quit law school in the middle of my second year and (hopefully) * * * graduate with my degree in the future.—Student in Oklahoma

As a freshman at the University of Rochester who relies heavily on financial aid, I would like to express my complete disbelief toward President Reagan's recently proposed Federal student aid cuts. * * * It seems ironic that a man who has received such strong support from young voters would be so quick to forget the backing * * * If President Reagan wishes to trim the Federal budget and diminish our national debt he should consider other major contributors to this country's financial problems, like large corporations and the staggering defense budget, instead of directing his assault on our nation's students.—Student in New York.

I am an 18 year old college freshman at a community college * * * my brother attends Michigan State, but could not do so without a student loan. We both work during the summer and school year to help our family afford a college education. In 1984 I voted (Republican) in my first Presidential election * * * (but) I will be in desperate need of the Student Loan Program.* * * (and) I urge you to block any attempt at cutting and minimizing the Student Loan Program.—Student in Michigan.

I am a law student at the Ohio State University College of Law * * *. I urge you to oppose cutbacks in the guaranteed student loan program. Tuition levels at professional schools have dramatically increased, as have living expenses and other costs accompanying programs of professional study. The financial aid cutbacks proposed by the Administration will, if enacted, severely jeopardize the ability of many law students to finance their professional education. This reduction will significantly affect greater than half of the law students at Ohio State University * * *.—Student in Ohio.

I have a brother and sister graduating from high school this year, and another brother who is a sophomore in college. I am a year and a half away from graduating from college, but with four of us in college at the same time, I will not be able to complete my course at my present college unless I have a student loan.—Student in Massachusetts.

We have a daughter and a son attending high school and our oldest son is working days at McDonald's and going 2 nights a week to Wayne State * * *. Next fall he planned to apply for a guaranteed student loan to be able to go to college full time. If President Reagan gets his way, plans to go to college full time for our son—in fact, for all our children—and for many other young people will be just about impossible.—Parent in Michigan.

There was once a day when education was only for the rich. Please don't let that day come again.●

CBS-WESTMORELAND TRIAL: JOHNSON NOT DECEIVED BY WESTMORELAND

HON. J.J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. PICKLE. Mr. Speaker, the recent libel trial between CBS and Gen. William Westmoreland ended with both sides claiming victory. It's unfortunate that the trial ended as it did, with no clear resolution of the issues. Because the trial ended as it did, it will be up to future historians to determine the merits of the case. Regardless of the trial outcome, this whole episode cannot be viewed as a jewel in the journalistic crown of CBS.

Mr. Speaker, because the verdict in this trial will be left to future generations, I would like to insert in the RECORD, an article by Prof. Walt Rostow, now with the University of Texas at Austin and former National Security Adviser to President Johnson during the period in question. Professor Rostow presents a clear and convincing case that President Johnson was not deceived by General Westmoreland, one of our Nation's great military leaders.

TRIAL REFLECTION: JOHNSON NOT DECEIVED

(By Walt Rostow)

There is wisdom in Judge Pierre Leval's observation that we should leave the verdict on the Westmoreland-CBS trial to history; although he might have added that historians will view it in different ways and their focus will shift and change with the passage of time. In responding now to requests to set down my reflections on the trial, I am, therefore, conscious that what I have to say is, simply, one individual's current perspective.

I begin with a re-statement of the purpose of the CBS broadcast, as summarized in a *New York Times* editorial published the day after the disputed television show (Jan. 24, 1982): "The CBS documentary on Vietnam last night . . . showed that Lyndon Johnson himself was victimized by mendacious intelligence." The critical questions for historians are, therefore: Did General Westmoreland deceive President Johnson? Was General Westmoreland's evaluation of enemy strength mendacious?

WHAT PRESIDENT JOHNSON KNEW

We do not know how the lawyers for each side would have summarized their cases for the jury; but it seems clear from their choice of witnesses and their direct examination that the CBS lawyers essentially

abandoned the effort to prove Westmoreland deceived President Johnson. They had good reason to do so.

As a result of a CBS subpoena, a large body of documentary evidence is now available which proves that: President Johnson knew of the difference of view within the intelligence community by Jan. 20, 1967, at the latest; that the President's National Security Adviser took the initiative at that time in suggesting to the Chairman of the Joint Chiefs of Staff that the contesting parties meet to thrash out their differences in Honolulu; that the chairman immediately supported the suggestion in a cable to Westmoreland; that a series of four meetings on the subject took place over the next ten months, of which every major official working on national security affairs was informed, including the President; that Westmoreland briefed his civilian and military colleagues on the range of figures being debated, assuring that all chains of command were knowledgeable; that the intelligence data bearing on the debate consisted of captured documents of low classification and were spread broadside to all intelligence agencies, civil and military; and that the Special National Intelligence Estimate (SNIE), dated 13 November 1967, entitled "Capabilities of the Vietnamese Communists for Fighting in South Vietnam," was a collective document produced and distributed widely by the multi-agency United States Intelligence Board. Most of this was known to CBS before its broadcast from, among other sources, a three-hour unused taped interview with me; or it could easily have been ascertained if they had followed advice from several directions to interview Ellsworth Bunker, Robert Komer, Philip Davidson and other knowledgeable officials of the time.

WERE WESTMORELAND'S INTELLIGENCE ESTIMATES MENDACIOUS?

As nearly as one can make out at a distance, the trial came to rest on the issue of whether the conclusions of the SNIE were an honest reflection of the intelligence data of the time or corrupted by political objectives. Although, initially, historians will find it hard to believe, this question in turn narrows down to the following: Should the Vietcong home guard (self-defense forces and secret self-defense forces) be presented as a solid statistical estimate, in a table including the North Vietnamese regulars, VC main force units, and guerrillas; or, should their scale, functions, and limitations be discussed separately?

Given the controversy, it is worth publishing in the press (I believe for the first time) what the SNIE actually had to say about the home guards:

"The self-defense force is described by the Communists as a military organization. It is clear, however, that its organization and mission differ from that of village and hamlet guerrillas. Self-defense forces include people of all ages and a substantial percentage of them are females. They are largely unarmed and only partially trained. The duties of self-defense units include the maintenance of law and order, the construction of bunkers and strong points, warning against the approach of allied forces, and the defense of villages and hamlets in VC-controlled territory. Self-defense forces do not leave their home areas, and members generally perform their duties part-time. Their existence poses an impediment to allied sweeps and pacification, however, and in their defensive role, they inflict casualties on allied forces.

"Another element, the secret self-defense forces, operates in government-controlled and contested areas. They provide a residual Communist presence in such areas and support the Communist effort primarily by clandestine intelligence activities.

"Our current evidence does not enable us to estimate the present size of these groups . . . with any measure of confidence. Some documents suggest that in early 1966 the aggregate size of the self-defense force was on the order of 150,000. This force and the other groups, however, have unquestionably suffered substantial attrition since that time, as well as an appreciable decline in quality, because of losses, recruiting of some of their members into the guerrillas or other VC military components and, particularly, the shrinkage in VC control of populated areas. Though in aggregate numbers these groups are still large and constitute a part of the overall Communist effort, they are not offensive military forces. Hence, they are not included in the military order of battle total. Nevertheless, some of their members account for a part of the total Communist military losses.

"In sum, the Communist military and political organization is complex, and its aggregate numerical size cannot be estimated with confidence. Moreover, any such aggregate total would be misleading since it would involve adding components that have widely different missions and degrees of skill or dedication. The VC/NVA Military Force . . . can be meaningfully presented in numerical totals and . . . we estimate that this Military Force is now at least 223,000–248,000. It must be recognized, however, that this Military Force constitutes but one component of the total Communist organization. Any comprehensive judgment of Communist capabilities in South Vietnam must embrace the effectiveness of all the elements which comprise that organization, the total size of which is of course considerably greater than the figure given for the Military force."

There is no intelligence officer of whom I am aware who would challenge the essential accuracy of that summary, including those who testified for CBS. Indeed, several CBS witnesses are on record as supporting every basic point made in the SNIE about the home guards, including the uncertain character of the evidence bearing on them.

What, then, is the source of the intense controversy? Why, after 17 years, have some men continued to regard it as an act of knavery to discuss the home guards in this measured and accurate way rather than inserting a dubious number in the order of battle table?

I believe their passion (which may well have impressed the jury) derives from two sources. First, in a familiar bureaucratic process they developed a proprietary interest in the new estimates they had made and wished to see them formally incorporated in the military order of battle table; although they fully understood the weakness and ambiguity of those estimates. Second, they concluded that the decision on how to present the home guards in the SNIE had been made on political, rather than technical, grounds.

Was there a political element in Westmoreland's decision? As he freely acknowledged, there was. Westmoreland feared that simply putting a number in a table would not only lump together forces of very different capabilities, but would also make it impossible for the media to sort out three agreed facts: (1) the old home guard estimate of 1965, inherited from the South Vietnamese, was too low; (2) in 1966–1967 the total size of the home guard units had been declining; (3) the home guards were probably larger than the previous estimate, despite their 1966–1967 decline. Westmoreland feared that press reports would be, simply, that the size of the Communist forces had increased in 1966–1967, which was not true. He therefore sought a resolution which would combine accuracy with an avoidance of media misinterpretation of which there was a good deal at the time as Don Oberdorfer ("Tet") and Peter Braestrup ("Big Story") have carefully documented.

When agreement was reached between the CIA and Westmoreland about a separate discussion for the home guards, the SNIE was completed, and the press carefully briefed. Quite accurate reports of the briefing, including its candid acknowledgement of previous underestimate of the home guards, appeared in the Washington Post (Nov. 25, 1967), New Republic (Dec. 16, 1967), and the New York Times (Sept. 20, 1967).

One can debate whether General Westmoreland's agreement with the CIA was wise or unwise. I, for example, suggested at the time that there should be both a discussion like that in the SNIE plus a retrospective estimate of how we thought the size of the home guards had evolved since 1965. But I am not sure that the agreement between CIA and Westmoreland was not a better solution, given the poor quality of the statistics on the home guards. The fact is that what was said in the SNIE and at the press briefing was as accurate as intelligence permitted; and it was more or less accurately reported in the media.

In short, I am confident that historians will find that Westmoreland did not deceive President Johnson and his intelligence evaluation was not mendacious.

Assume for a moment that my summary is as faithful to the factual record as I have tried to make it, what conclusions might a historian draw from this tale?

Many are possible, but I would suggest three.

First, we should all be conscious that in the intelligence business (as well as in academic life) some human beings can become so deeply committed to the intellectual positions they adopt that they are literally incapable of judging that their adversaries are in good faith. I have seen a good deal of the intelligence community since I joined OSS in the late summer of 1941. I have observed (and occasionally participated in) a number of debates of the kind that flared up in 1967 over the VC home guards. They go on virtually every day in every intelligence system. And, if kept under control, such debates are valuable, for no one is wise enough to be granted a monopoly in intelligence. Debate is as essential in intelligence as in academic life. That is why I suggested to the Chairman of the JCS that the contestants be brought together in Honolulu. I'm confident the SNIE of November 1967, which I believe historians will respect, was a better document than it would have been without ten months of debate. What is sad is that this perfectly normal, if somewhat noisy, intelligence debate was portrayed to the nation as a conspiratorial deception, which it certainly was not.

Second, the CBS broadcast, aside from its other elements, tended to play on a rather dangerous national weakness; that is, the tendency to reach for simple, conspirational theories to explain unpleasant events. The

war in Southeast Asia was a profoundly disturbing national experience. We shall, in time, have to come to understand why we did what we did. As with other major passages of history, the answers will be complex. It was not wise or helpful for CBS to project as truth the conspirational interpretation of a small group of intelligence officers who are still burning with frustration because they wanted passionately to see a number in a table rather than a carefully-drafted piece of prose.

Third, historians will find that the debate over the home guards was an exceedingly minor matter, quite unrelated to our ability to anticipate and deal with the Tet offensive of late January 1968. That maximum Communist effort was anticipated in Saigon and Washington for at least two months, prepared for, and crushed in the field, as Mr. Crile of CBS acknowledged to me in a letter of Jan. 15, 1982, five days before the broadcast.

We as a nation have a good deal of thinking to do about our past experience in Southeast Asia and about appropriate future policy; for Southeast Asia will not go away. At the time of the show (and now) important elements of the Soviet Far Eastern fleet were based at Cam Ranh Bay, the Soviet Air Force was flying patrols out of the Danang air bases. Vietnam's forces were on the borders of Thailand, and President Carter and Reagan had re-affirmed our military commitments to Thailand. In these circumstances, calling for serious reflection on the past and sober debate about the future, I find it unfortunate that 90 minutes of network prime time on a Saturday night were used in ways that defamed an honorable man and confused the nation rather than assisted it in finding its bearings in a still important part of the world.

(Rostow, former adviser to Presidents Kennedy and Johnson, is now professor of political economics and history at the University of Texas at Austin.)

JOHN A. BANNES TO RETIRE

HON. HARRIS W. FAWELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. FAWELL. Mr. Speaker, this June the superintendent of Kirby School District 140 in Cook County, IL, John A. Bannes, will retire after dedicating 35 years to educating our young people.

Mr. Bannes' career in guiding the mental and physical development of children has been a long and distinguished one. While working with the Boys Club in 1950, Mr. Bannes became a substitute teacher in Chicago; 1 year later he accepted a teaching position with school district 118 in Palos Park and began teaching fourth graders. After a few years of teaching, Mr. Bannes instructed physical education classes and coached.

During his years with the Palos Park school district, Mr. Bannes played an active role in enhancing the elementary curriculum. In addition to upgrading elementary studies, he introduced foreign language instruction in the school district. It was only natural that Mr. Bannes, after spending 10 years in improving the quality of education for school district 118, would become superintendent of schools of the Tinley Park School District 140.

Mr. Bannes has engineered many changes in his capacity as superintendent over the past 25 years which have helped to provide the best public education to Tinley Park-area students. Some of the significant improvements directed by Mr. Bannes include measures to upgrade gifted and remedial programs, organize centralized libraries and material centers in the schools, and establish a district-operated transportation and mutual trust of the community, faculty, and parents.

During his years as superintendent, Mr. Bannes has been honored on many occasions for his service to the Tinley Park community. In 1972, the Tinley Park Chamber of Commerce commemorated him for his untiring efforts to improve the educational standards of school district 140. In 1980, he was recognized for the service he provided to the handicapped children of the Southwest Cook County Cooperative Association for Special Education. For his constant dedication and service, the PTA has established the John A. Bannes Scholarship Fund.

There is no doubt that Mr. Bannes will be sorely missed as superintendent. He has helped each child grow to his or her potential. I commend Mr. Bannes for his unselfish contributions over the years to public education and wish him the best for the future.●

NO NEW FOOD STAMP FEES FOR GROCERS

HON. EDWARD F. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. FEIGHAN. Mr. Speaker, hunger has returned to America. That is the principal conclusion of a study recently undertaken by a task force of physicians at the Harvard School of Public Health. The Harvard study, carried out over the course of a year with the aid of doctors and health officials from across the country, is one of a group of reports that have appeared over the last 2 years which document a growing epidemic of malnutrition in our country.

Yet, in the face of mounting evidence of the increasing number of hungry people in our Nation, the Reagan administration has worked to make access to Federal nutrition programs more difficult. Having tried a number of direct means of reducing the availability of food stamps, including funding cuts, tougher eligibility requirements for recipients, and tighter standards for participating retailers, the administration is now considering a new tack: punish the grocers. The Food and Nutrition Service of the Department of Agriculture, the agency which oversees the Food Stamp Program, is considering imposing a $50 annual fee on all stores participating in the program. I believe they should think again.

As the rapid deregulation of the savings industry has proceeded, many banks have begun to charge grocers sizable fees for the processing of food stamps. These fees have ranged from $1.50 per bundle of 100 coupons to 5 cents per coupon. The fee being considered by the USDA would place an additional financial burden on grocers already struggling to cope with fees charged by the bankers.

I recently wrote a letter to Mr. Robert E. Leard, the Administrator of the Food Stamp Program, expressing my opposition to the imposition of new fees on grocers in the program and urging him to reject what would be an unfair and ineffective measure. I ask that a copy of the letter be inserted in the RECORD at the end of my statement:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, DC, March 28, 1985.

Mr. ROBERT LEARD,
Administrator, Food and Nutrition Service, U.S. Department of Agriculture, Washington, DC.

DEAR MR. LEARD: It has been brought to my attention that among its legislative proposals, the Department of Agriculture is considering the imposition of a $50 fee for retailers participating in the Food Stamp program.

I believe that such a fee would create an unfair burden for many of the grocers in the program, and would be an ineffective means of screening out participants who are considered undesirable for legitimate reasons. I, and many of my colleagues I am sure, would oppose such a fee if it were to be embodied in a piece of legislation.

As you are no doubt aware, since the deregulation of the savings industry, many banks have begun to charge grocers fees for the processing of food stamps. These fees have already added significantly to the financial burdens of retailers participating in the Food Stamp program.

The fee being considered by the Department cannot, I believe, be justified as a means of discouraging so-called party stores from participating in the program. Since 1981, only stores at least 50% of whose total food sales consist of staple items have been allowed to participate in the program. Unlike the 50% staples requirement, a flat annual fee would make no distinction between participants on the basis of the type of items they sell. It would simply punish all participants, and smaller participants most of all. Retailers with relatively small sales volumes, already under fierce pressure from their larger competitors, would be saddled with an additional financial handicap. If the Department wants to exclude from the Food Stamp program stores whose primary purpose is not selling groceries, then it should draft a more precise definition of such stores, not resort to an arbitrary fee.

I urge you to reject what would be an unfair and ineffective measure.

Thank you very much for your time and consideration.

Sincerely,

EDWARD F. FEIGHAN,
Member of Congress.●

AUTOMOBILE RECORDKEEPING RULES CHANGED

HON. J.J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1985

● Mr. PICKLE. Mr. Speaker, if we don't have voluntary income tax compliance, we are in serious trouble. In fact, I would say voluntary compliance is the very heart of our income tax system. When IRS issued its onerous contemporaneous recordkeeping regulations, I made the observation that we were cutting off our nose to spite our face. The IRS simply went overboard in its zeal to police the personal use of business property. The result was so frustrating to taxpayers that many just threw up their hands and said they could not comply.

So I am pleased the Ways and Means Committee and the House of Representatives restored some reason and rationale to this whole matter by passing legislation and providing committee language which will give clear guidelines on how taxpayers can maintain records regarding property used for business purposes.

The new bill, which I cosponsored, repeals the contemporaneous recordkeeping requirements and makes the previously issued IRS regulations invalid. This action generally returns substantiation of automobile business deductions to prior law, except for the addition of a requirement that there be some written evidence corroborating the taxpayer's own statement regarding the use of the automobile. The bill provides a number of ways to provide the written evidence such as through diaries, logs, receipts, trip sheets, etc. The revised substantiation guidelines will go into effect in 1986. For 1985, the recordkeeping law that applied prior to the 1984 tax bill will continue to apply.

Some types of vehicles which receive only a very small amount of personal use will be exempt from the recordkeeping requirements. Most delivery trucks, buses, marked fire and police vehicles, ambulances, hearses, and vehicles designed to carry cargo with a loaded gross vehicle weight of over 14,000 pounds are excluded.

Because the changes will result in a revenue loss, the House-passed bill reduced the amount of investment tax credit and depreciation for luxury automobiles used for business. Under the House bill, the investment tax credit is reduced from $1,000 to $675 and depreciation deductions are limited to $3,600 in the first year and $5,400 in any subsequent year. This proposed change is intended to offset the revenue loss associated with changing the recordkeeping rules. Because the Senate-passed bill does not contain such a revenue offset, we will have to go to conference to reconcile the differences.

In addition to the legislation passed, we also have taken steps to address other concerns raised at our hearing on the recordkeeping rules. With regard to IRS valuation rules for personal use of vehicles and private airplanes, the Ways and Means Committee wrote Treasury Secretary Baker urging his review of the issues involved. Secretary Baker also was asked to look into the mileage allowance for rural letter carriers.

Mr. Speaker, we do ourselves a disservice when we overburden our taxpayers with heavy regulation. I am glad we made amends with regard to the IRS recordkeeping rules and I hope we can quickly work out the differences with the Senate bill to put this matter behind us once and for all.●

PROJECT WILD

HON. GARY L. ACKERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. ACKERMAN. Mr. Speaker, I would like to draw the attention of my colleagues to Project Wild, a disturbing educational program that promotes hunting and trapping as wholesome outdoor activities. This curriculum advances the ethic that animals should be thought of in terms of their value to mankind as a natural resource, just as we think of corn or wheat.

The lesson plans, developed by the Western Association of Fish & Game Agencies, and the Western Regional Environmental Education Council, present controversial views of wildlife as neutral and accepted environmental principles. They appear not as opinion, but as fact. In this way, Project Wild manipulates children's perceptions of their relationships with other animals.

The project defines animals as "renewable resources." This representation desensitizes the student to the intelligence, social behavior and pain sensory mechanisms that game animals possess.

One of the most offensive sections of the teaching material is entitled "What You Wear Is What They Were." It suggests that synthetic clothing, a "nonrenewable resource," is more harmful to the environment than clothing made from "renewable resources." The obvious inference from this is that children should wear clothes made from leather, wool, and fur, rather than those made from polyester, nylon, and acrylic.

Friends of Animals and other environmental and animal-welfare groups have attacked this curriculum as biased and self-serving, and as attempting to indoctrinate children with the view that animals are objects to be harvested for our pleasure.

Mr. Speaker, I propose that if the Western Association of Fish & Game Agencies and the Western Regional Environmental Education Council wish to present their attitude on wildlife in our classrooms, they should acknowledge that many Americans have opposing views. Studies have shown that most people in the United States oppose hunting and trapping for sport. A 1979 survey by the Yale School of Environmental Studies, for example, found that 78 percent of the American populace oppose the use of the steel-jaw leg-hold trap. A 1983 study by Doyle Dane Bernbach revealed that between 50 and 70 percent of the American public disputes the legitimacy of hunting animals for sport or for their skins or pelts, or raising animals for their skins or pelts. Despite these figures, or perhaps because of them, our children are being subjected to a program—in the guise of education—designed to alter their perceptions of sport hunting and trapping.

Project Wild tarnishes the integrity of our educational system. It couches as neutral material that is highly controversial. This stance should not be presented as fact in a curriculum protected by the umbrella of presumed objectivity.●

ARMS CONTROL WORKSHOPS

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1985

● Mr. FASCELL. Mr. Speaker, I would like to inform my colleagues about the first two arms control workshops that the Committee on Foreign Affairs held in conjunction with the Congressional Research Service. These workshops are part of an effort that I am making to carry out a comprehensive review and study of our country's nuclear arms control policy and its role in our national security. The first workshop focused on the history of nuclear arms control negotiations and its importance to U.S. national security. The second workshop dealt specifically with the goals of U.S. nuclear arms control policy. These workshops are informal and off the record, they have been well attended and they are open to all Members. The third workshop will be held on April 16, at 2 p.m., in 2172 Rayburn, and it will elicit arms control policy answers to the questions

of what nuclear arms to control and how to control them.

At the first arms control workshop on February 6, 1985, Colin Gray and Herbert Scoville were the experts who were asked by the moderator, Stan Heginbotham of CRS, to present their assessments of how effectively the United States has balanced the need for nuclear force development and the pursuit of arms control agreements in order to counter the Soviet threat. They commented on whether past arms control policies have shown adequate concern for verifying Soviet compliance to existing arms control agreements. They also assessed whether past arms control efforts had been able to place constraints on new weapons technologies or simply pushed those technological advances into other areas not governed by treaties or agreements. They concluded by evaluating past piecemeal and comprehensive approaches to nuclear arms control and by offering their recommendations for future U.S. policy.

The questions and comments from the Members attending focused on three themes: Soviet compliance with existing treaties; arms control's contribution to U.S. security interests; and the relative costs and benefits of defensive versus offensive weapons systems.

The discussion regarding Soviet compliance to existing treaties and agreements illustrated that there is no consensus about the historical record of Soviet compliance and pointed out the need to have that record clarified. There was uncertainty expressed as to what actually constitutes a violation. Specific concerns focused on the Siberian radar and differences of opinion arose as to that radar's capabilities and when and how it will violate the ABM Treaty. The issues of encryption of telemetry was also raised. There was some interest expressed in having a comparison of United States and Soviet compliance and an evaluation of the effectiveness of the Standing Consultative Commission.

It was evident from the questions raised about exactly how arms control has served American security interests that there needs to be a fairly specific appraisal of the security benefits which have accured to the United States as a result of various arms control treaties and agreements. The debate about the strategic defense initiative also triggered a debate about the merits and costs of offensive and defensive weapons systems. Many specific questions were asked about the ABM Treaty.

The second arms control workshop was held on March 4, 1985. The moderator, Mark Lowenthal, of CRS, presented a survey of the issues covered in the CRS study on the goals of U.S. nuclear arms control policy. He emphasized that arms control goals are a reflection of political, strategic, and economic considerations. He noted that strategic stability is the U.S. goal of arms control, and can be achieved by reducing or limiting the quantity or quality of nuclear weapons. Economic savings are often sought by limiting the arms race but he stated that these savings are seldom realized.

Eugene Rostow and David Aaron were the visiting experts at this workshop. It was noted that the Soviet Union and the United States may have diametrically opposed views about the goals of nuclear arms control.

Three main principles were emphasized in the discussion. The first was that in arms control negotiations efforts to achieve the best conceivable agreement often get in the way of concluding less satisfactory, albeit good agreements. The United States also should not attempt to achieve those military goals through arms control negotiations that it is not willing to pursue in the absence of an arms control agreement. The third point was that the United States and the Soviet Union often have the same goals in arms control negotiations, but at different times. The political relationship between the United States and the Soviet Union was regarded as the main factor in arms control efforts.
